LETTER FROM THE PUBLISHER

A little over five years ago, we did a cover story on the then growing troubles in Punjab. But rather than look at the political aspects, which even then made headlines daily, we looked at the situation from an economic and business point of view.

It is now well accepted that initially the problems stemmed from essentially economic grievances. The Jat Sikhs, who are the landed farmers, demanded more power, water and other agricultural inputs at cheaper rates. They also wanted higher procurement prices for wheat and rice, and in these demands they were naturally supported by the middle and even marginal farmers. This was the backbone of the Akali support. And while Punjab had a fair share of small and medium industries, it sorely lacked investments in heavy industry, large projects and the newer industries such as petrochemicals and electronics.

Undoubtedly, after Operation Bluestar, the assassination of Mrs. Gandhi, the killing of Sikhs in Delhi and elsewhere in the aftermath and the killing of Longowal, political considerations have come to the fore. But behind the political issues there are also the economic realities which persist.

With the success of agriculture, mechanisation and prosperity, large numbers of Sikh youths are not really required on the farm. More than a million youths have been added to the workforce in the last 5 years, but have not been truly absorbed. While Punjab continues to supply wheat and rice to the nation, there is little investment in higher value agricultural products, such as fruits and vegetables. There is also still little emphasis on industry.

For this time's cover story, our correspondent Anoop Saxena travelled to different parts of Punjab and reported on day-to-day life in the state. The people of Punjab, both Hindus and Sikhs, have faced these troubled times with their usual courage.

Undoubtedly, business has been badly hit, particularly in the northern-most districts of the state, namely Amritsar, Gurdaspur and Faridkot. The southern districts have been affected much less so by terrorist activities. Without going into the politics, clearly an honourable settlement will have to be worked out.

But, at the same time the Punjab economy continues to grow strongly. Reportedly, in this last year, it grew by 7.5 per cent, compared with the estimate of a little under 9 per cent for the national economy. In fact, most outsiders are surprised to learn, that in spite of the strife, agriculture, trade and industry, with some necessary adjustments, continue to function and grow.

It is truly a story of amazing resilience.

Ashok H. Advani

• Incorrect picture of Nagarjuna

The article on the Nagarjuna group (22 August) presents a wholly incorrect picture. As your correspondent has repeatedly stated that most or all of the companies in the group are performing poorly, we would like to state the factual position regarding each company so that your readers may judge for themselves.

The group's flagship company, Nagarjuna Steels Limited (NSL) which went on stream in 1977-78 with the production of cold rolled steel strips was able to exceed the rated capacity in the tenth month of its operations and declare a dividend in the second year itself.

In the last five years, the company's turnover rose from Rs.12.66 crores to Rs.43.28 crores and the profit before tax (PBT) for the same period showed a compounded annual growth rate of 28 per cent. Nagarjuna Finance Limited (NFL) which commenced operations in 1983-84 with disbursals of Rs.8.63 crores has registered an annual compounded growth rate of 33 per cent.

Nagarjuna Investment Trust Limited (NIT) and its wholly-owned subsidiary, Nagarjuna Hire Purchase Limited, commenced operations in 1983-84. The gross disbursals increased from Rs.5.13 crores in 1985 (the first full year of operations) to Rs.7.59 crores in 1987 and PBT during the same period from Rs.94 lakhs to Rs.1.16 crores.

Nagarjuna Signode Limited (NSG) which accounted for a turnover of only Rs.4.26 crores (in its first full year of operations) has touched Rs.14.98 crores in 1987-88, ie, an annual compounded growth rate of 52 per cent.

From an operating loss of Rs.1.27 crores in the first year, NSG has done well to turn the corner and report a PBT of Rs.99 lakhs in 1987-88.

Nagarjuna Coated Tubes Limited (NCT) which specialises in the manufacture of high-strength on-line coated tubes is one company in the group which is yet to make profits. A rehabilitation plan was approved by the financial institutions in April 1987 and this had an immediate impact. The turnover doubled from Rs.4.98 crores in 1986-87 to Rs.9.56 crores in 1987-88.

The group had in 1979 set for itself a target of Rs.100 crores turnover to be achieved in ten years, ie, by 1989. This target was, in fact, exceeded in the eighth year itself. It is, therefore, not at all correct to say: "So a group which had projected total sales of Rs.200 crores by 1989 has limped along to touch Rs.75 crores."

The group bid for the fertiliser project at Kakinada because it was confident of raising the funds required as promoter's contribution. It may be worth mentioning here that ventures promoted by the group in the past had received favourable investor response. The group is well on target for raising the funds required for the fertiliser project. The statement attributed to K.S. Raju — "raising cash has been a nightmare" — was never made by him.

With the long-awaited clearances and financial sanctions having been received, NFCL is now set to implement the project and make up at least a part of the lost time. NFCL's success is bound to inspire first-generation entrepreneurs to shoot high.

K.V.K. RAJU
Nagarjuna Fertilizers and Chemicals Ltd
Hyderabad

Our correspondent replies:

The statistics provided by K.V.K. Raju are interesting, but they do not tell the entire story. Since 1984, Nagarjuna Steel's net profit has followed an erratic trend — Rs.47 lakhs (1984), Rs.59 lakhs (1985), Rs.2.28 crores (1986) and Rs.1.61 crores (1987). No dividend was paid in 1985. The dividend paid in 1986 was 16 per cent. It was 12 per cent in 1987.

Nagarjuna Signode and Nagarjuna Coated Tubes may be performing well today but both companies are very much in the red; Nagarjuna Signode has accumulated losses of Rs.2 crores and expects to pay a dividend only in 1991. The accumulated losses of Nagarjuna Coated Tubes are Rs.8 crore and a dividend date is not in sight. So are these companies performing well, as Raju suggests, or poorly? When K.S. Raju was asked whether raising funds for the promoters contribution of Nagarjuna Fertilisers was difficult, he did say: "It has been a nightmare".

• The Nagarjuna group's losses quoted by you do not tell the whole story. The figures put out are the result of the practice of capitalising interest on long term loans, not providing full depreciation as per the law, and deferring revenue expenditure. For instance, in the case of Nagarjuna Coated Tubes (NCT) the actual loss as on 31 March 1988 was a staggering Rs.13.5 crores, as per the auditors' report, compared with Rs.10.4 crores given in the published accounts, while you have quoted a figure of only Rs.7.08 crores.

Thus the diversification even into the familiar business of steel has proved to

LIKE FATHER, UNLIKE SON

by Jorai

Daddy. I've decided to set up my own business!
I don't need your money!
I don't need your house!

Listen, Manu Chhabria!

refer to your corporate report on L&T
5 September) wherein you mention
eports that Manu Chhabria, NRI
orporate raider, has acquired a 1.5 per
ent stake in L&T. Chhabria's golden
ouch seems to be confined to cash-rich
ompanies like Shaw Wallace, Mather &
latt, Hindustan Dorr Oliver, Dunlop,
tc. If these companies are reporting
xcellent results it is not on account of
ny entrepreneurial skills of Manu
hhabria but because they are
rofessionally managed and function on
sound financial principles.

To win a niche in the Indian
corporate world he should take over
loss-making companies like LML or
companies like Delton Cables which
have not paid their shareholders any
dividend since their inception or
companies like Modern Insulators
which are yet to start viable
commercial production. If he can
manage these companies successfully,
he deserves not only bouquets for his
managerial competence but also thanks
from the unfortunate small investors
who have invested their hard-earned
savings in these companies.

The Nihon Electronics scrip was
quoted at Rs.44 last year; it has now
touched rock bottom at Rs.14. So, may I
request Manu Chhabria to concentrate
on Nihon Electronics? Are you listening,
Manu Chhabria?

R.G. SESHACHALAM
Bangalore

• The mega issue

This refers to the cover feature on the Reliance debenture issue (8 August). It is too early to say anything about the performance of Reliance Petrochemicals. The various plus points mentioned by the authors are those that the company's management has been talking about. We expect a more unbiased and studied view from *Business India*. Let the projects be implemented; we can then — and only then — evaluate the performance of the company.

There is no mention of the fact that investors can be taken for a ride because the upper limits for premium payable on conversion of parts A and B of the debenture certificate have not been specified. The Bombay Shareholders' Association has already cautioned investors about this.

Lastly a word about the most outlandish guesswork about the dividend the company may pay from the very first year! The interest earned on investments made out of surplus funds cannot be used for dividend but will have to be adjusted against interest paid (payable) on debentures (which will in all probability be capitalised).

NARENDRA M. APTE
Bombay

•Unjustified statement by Makers

This refers to your recent report on Iran and Iraq, "Good prospects for project exports" (Overseas, 5 Sept).

The statement by K.G. Shenoy, President, corporate division, of Makers Development Services is quite vague and unjustified. It is well known that construction companies do not show profits until the construction work is completed; until completion, the net project expenditure is treated as "work in progress". The statement that the company had to carry an additional interest burden of Rs.35 crores is a grossly exaggerated one. It is well known that the interest differential which is only 6 per cent on rupee loans and 1 per cent on US dollar loans, is to be borne by the company; on an outstanding figure of Rs.60 crores, this interest differential can in no way be Rs.35 crores.

It is also well known that a net loss may arise in a variety of ways. How can a company make a statement of this kind when:

The total amount receivable from the client has not been determined as the bills and claims have not yet been approved and certified.

Variation orders from the contractor still remain to be completed.

War claims have not been settled.

The loss has not yet been determined in the financial statements which show "work in progress" to the tune of Rs.196 crores.

The financial statements of 1986 show that Makers had received interest of Rs.5 crores on surplus funds. This would indicate that the surplus funds are approximately Rs.30 crores. The company has also got fixed assets directly used in the project which were worth approximately Rs.15 crores by way of plant and machineries, computer systems, caravans, etc.

It is need foolhardy to say that Makers Development Services burnt their fingers in Iraq and would never go back.

B.J. MISTRY
Intertrade and Developers Ltd,
London

• Insult to women

You claim to be a magazine for the corporate world. Does this corporate world consist only of men? If not, why is there a section entitled "Businessmen in the News". Is it because there are no businesswomen worth reporting about or is your magazine only for men?

As it happens, you have a write-up on Gnanamgari Sakunthala in your 22 August issue under the title "Businessmen in the News", thereby insulting not only Sakunthala, but all of us businesswomen.

I know the majority of your readers are men, but you need not insult or alienate your women readers by such a blatant display of sexism.

CHANDA NARANG
New Delhi

• First things first

This is with reference to your Focus item "Pawar's Perestroika" (5 September) in which mention was made of implementing the West Island Freeway Project to ease Bombay's traffic problem.

While it may be implemented in time to come, will it not be appropriate to first look at the exit points of major stations of suburban trains and redesign them with overbridges and subways? This will considerably smooth the flow of vehicular and pedestrian traffic.

DINESH MEHTA
Bombay

• Correction

In our last issue we inadvertently misspelt the name of the new in-charge of Peico India as J. Bergrett. It should read J. Bergvelt. The error is regretted.

A pragmatic approach

The recent railway tragedy at the Perumon bridge near Quilon in Kerala drew the sympathy of not only the people of the state, but also the rest of the country. True to the best of style, the state government decided to give cash awards of Rs.1,000 each to the individuals who had helped during the rescue operations. For this, the state government officials prepared a list of 450 persons. However, they were compelled to revise the list by adding another 165 names due to political pressure. Subsequently, the awards were given in secrecy. Opposition parties also not to be left behind, submitted another list of 1,071 more names. As is to be expected, many of the people recommended for the award, by both the ruling party and the opposition are not even remotely connected with the rescue operations. Such are our political parties, who are supposedly wedded to public cause!

Meanwhile, the people at Perumon, who had actually done the job, have told government officials that they would rather have a footpath parallel to the rail bridge than the cash awards.

M. HARIDASAN, *Ahmedabad*

The other, please!

Nothing, may make Indian Airlines change its ways. Service, it seems, is anathema to the country's domestic airline. Recently, Field Marshal K.M. Cariappa had a taste of this — or rather of the bitter beverage that is served on board. A sip, it is reported, left him spluttering in despair at the hostess. "My dear, if it is coffee, get me some tea. And if it is tea, get me some coffee!"

MENA BHARANIA, *Porbunder*

Selling to ET?

Clavcosmos, the space organisation which is responsible for Soviet space launches, has decided to allow foreign and Soviet firms to place advertisement messages on rockets and space vessels "at reasonable prices". The names of two non-Soviet metal companies, Vesta Alpine from Austria and Danielli from Italy, appeared on the proton rocket which sent an interplanetary searcher, Probos, to Mars. So what does that make the ETs out there? An unexplored target audience?

V. THIAGARAJAN, *Bangalore*

Suggestions and personal attacks

In the Karnataka government enterprise where I work, the secretary of the union was promoted to purchase officer (PO). He is in charge of stores and purchases.

As a sales officer, I had frequent dealings with the PO. In time, I found that there was considerable delay in dispatching materials due to shortage of packing materials. So I wrote to the general manager and suggested an inventory control system that would fix stock levels of packing materials. The GM passed the note on to the PO for necessary action.

The PO, however, took the matter to heart and asked me, "Do you think we don't know anything?" I said that I had only made a suggestion and that it was up to him to consider or ignore it. His reply was, "It is a remark on me. What about my position? If I had the money, I would purchase and store materials lasting for 10 years." He also warned me not to write such notes in future.

If a union leader, whose leadership is based on consensus and the wishes of other people, can't accept a suggestion without considering it a personal attack, I wonder who can.

KURUBAR RAMACHANDRA, *Bangalore*

Lawful transport

The Dharwar Bar Association volunteers are setting an example in social work. Around six of them, lawyers all, go to the station every morning to meet the Bangalore-Miraj-Kittur Express and help passengers who have difficulty in getting autorikshaws. These lawyers come on their two-wheelers but a car is also kept handy, to transport luggage. This free service was triggered off by the frequent refusal of autorikshaw drivers to ply on certain routes or their demands for exorbitant fares. The campaign was launched to teach rude auto drivers a lesson.

There had been many complaints and, after a meeting between the Road Transport Office, the police chief and the commissioner, auto fares were revised and the installation of meters was made compulsory. Initially, the auto drivers' union accepted the new rates and other norms but later reneged on the agreement and went on strike.

In response to an appeal for public co-operation, the Dharwar Bar offered free transport to hapless passengers. The campaign, originally slated for a week, met with resistance on the first day when a group of the lawyers went to the station. Two auto drivers — said to be leaders — abused the lawyers and manhandled one of them. The lawyers stood firm, made a written complaint to the police and the drivers were arrested.

The free transport service was extended beyond the original one week and has attracted much gratitude and support from the public.

Business India invites readers to send original, unpublished contributions to this page. The snippets can be humorous, insightful, outrageous or simply, informative. Each snippet must carry this coupon.

Rs.50 paid for each published contribution.

Filing fit

Our materials manager is known for his wit and tact in putting down his men when they seek a favour. A filing clerk once approached him with a request for leave to attend his cousin's marriage. The manager began narrating the story of Tanaji, whose son was getting married during a crucial battle. The manager said, "You know, what Tanaji said when called upon by Shivaji to recapture a Maratha fort? Tanaji said, 'The wedding of my son can wait; fighting for my country comes first'."

The clerk listened in silence and then replied, "In that case, sir, give me fighting work, not filing."

L.M. DIXIT, *Bombay*

Smoking is deleterious to your career

If you are a non-smoker, your chances of getting certain jobs in New Zealand are better than a smoker's. Job ads in newspapers in that country often state categorically that "applications from non-smokers only will be entertained", or "the group has a preference for a non-smoker", or "we provide you a smoke-free environment".

With things being carried this far in other countries, the Indian government too has initiated programmes to curb tobacco habits. The Maharashtra government, in a path-breaking ruling, has banned cigarette smoking in all government establishments. Other states, like West Bengal, are expected to follow suit soon. As a part of the programme, the government will, among other steps, ban advertisements of cigarettes, *bidis*, tobacco-based *paan masala*, etc.

In fact, there is no need to ban advertisements of cigarettes, etc. The existing statutory warning on cigarette packets, advertisements, hoardings — "Cigarette Smoking Is Injurious To Health" — is more than enough. What is actually needed is a grassroots handling of the problem, with emphasis on dissuading young people from smoking.

Bullock carts — the old reliable

Sub-contractors who supply fabricated items to the seamless steel tube plant of BHEL Trichy unit, were having a lot of trouble moving steel pipes in and out of the factory. They were at the mercy of the company's fork lift carrier operators and found it very difficult to get things done by them. Finally, they made a representation to the factory administration to bring their own bullock carts into the factory premises for loading and unloading the pipes!

It seems we can't write off the bullock carts even as we enter the twentyfirst century.

Road fatality on the rise in India

Perhaps the most recent addition to the long list of dubious distinctions registered by India is the largest number of road accidents and casualties in the world — around 200,000 accidents occurring on a 1.6 million km network of roads resulting in 40,000 deaths and injuries to more than 170,000 people a year. According to N.S. Srinivasan, executive director of the National Transportation Planning and Research Centre (NATPAC), the number of road accidents in India is three times higher than that prevailing in developed countries. The number of accidents per 1,000 vehicle population is as high as 35 in India, while the figure ranges from four to ten in developed countries. For instance, in Japan, the number of fatalities have been reduced to 12,919 in 1983 from a high of 21,535 in 1970. This is notwithstanding the increase in vehicle population by 133 per cent during the corresponding period. The number of vehicles in India have increased from 186,000 in the early seventies to about 450,000 now. Subsequently, road crash fatalities have increased by 300 per cent — from around 10,000 in 1970 to over 40,000 today.

At the current rate of road accidents and consequent fatalities, it is calculated that road mishaps would claim one life every minute in the country by the turn of the century. No wonder, along with industrial fatalities, road accidents have become the third largest killer in the country, after heart diseases and cancer. Accidents also cause an estimated loss of Rs.350 crores every year to the country's economy.

According to Srinivasan, about 75 per cent of the accidents occur on urban roads which account for only 6 per cent of the total road network of the country. What's more, ten big cities account for about 40 per cent of the road accidents.

Major accidents in big cities invariably involve pedestrians. For instance, in Bangalore, indisciplined pedestrians were responsible for around 200 accidents last year. A study of the high accident frequency locations in New Delhi has revealed that at these locations 88 per cent of the fatal and severe injury occurred due to driving error. New Delhi, in fact, has the highest rate of road accidents in the country. Other major causes of road accidents are: poorly maintained roads, defective vehicles and unpleasant environment.

In India, not only is the accident rate high, but also the resulting damage to people, especially fatalities, when compared with the figures in other countries. India averages 5.5 deaths per 1,000 vehicles as against 0.36 in UK, 0.432 in the US and 0.40 in France. The congestion of population, the concentration of industries and workspots, increasing vehicular density and erratic pedestrian rules conspire to make India a highly accident prone country.

RADHAKRISHNA RAO, *Bangalore*

IDBI Capital Bonds
A new instrument for exemption from Capital Gains Tax.

IDBI offers for sale a new series of 3 year bonds. Amounts invested in the bonds are eligible for claiming exemption from capital gains tax under section 54 E of the Income Tax Act, 1961.

Other benefits available for investments in the Bonds are **non-deduction of tax at source** on interest paid on the bonds; **exemption from Wealth Tax** (under section 5(1) xvie of the Wealth Tax Act, 1957) and **Income Tax benefit under Section 80L.**

Individuals, HUFs, Firms and Companies are eligible to invest in the bonds. The bonds can be applied for at any time and are available throughout the year. Applications have to be for a minimum amount of Rs. 1000 and in multiples thereof. (Outstation cheques are also accepted and cost of collection of the cheques will be borne by IDBI.)

The bonds carry interest at **9% p.a. payable half yearly.** Interest coupons for the entire 3 year period of investment will be given at the time of investment itself.

At the investor's option, **interest for the full period of 3 years could be paid in advance on discounted basis.** Under this option, the investor will receive for every Rs. 1000 invested, an amount of Rs. 235 by way of interest payment soon after investment.

INDUSTRIAL DEVELOPMENT BANK OF INDIA
Jolly Maker Chambers No. 2 225, Vinay K. Shah Marg, Nariman Point, Bombay 400 021.

Phadnis quits Nirlon board

The rehabilitation of the sick Nirlon Synthetic Fibres & Chemicals Ltd has suffered a fresh setback, with the resignation last fortnight of C.B. Phadnis, the company's finance director who represented the lead bankers, the State Bank of India. Phadnis, who took charge in May this year and tightened up the finance function to the discomfort of many in the company, is believed to have developed serious differences with Nirlon's chairman, M.R.B. Punja.

Phadnis' withdrawal from Nirlon may impact the scope of the latter's relationship with the SBI, say sources. All eyes, however, are on the crucial meeting of the Board for Financial and Industrial Reconstruction scheduled for 3 October.

Canara Bank to manage NRI bank

Canara Bank is planning to manage the services of an NRI bank both in India and the rest of the world. Though the Reserve Bank has been chary about allowing branches of foreign banks to operate in India, they are taking a more liberal approach to this particular bank, because of the possibility of using it to garner non-resident Indian deposits.

New products from Xerox

The undisputed leader of the copiers business, Modi Xerox Ltd, is all set to launch three new products. These are a low priced personal copier, a fax machine and a blueprint copier. The company which is managed by B.K. Modi is expected to announce its diversification plans in a couple of weeks.

After a troublesome start in the first year of operations, the company has never had to look back. The last two years have seen a quantum jump in sales and market share. Last year ended April 1988, the company posted sales of Rs.78.5 crores and a net profit of Rs.5.1 crores. This year, sales are expected to be close to Rs.100 crores. All accumulated losses will also be wiped out and a maiden dividend is very likely. Already, out of every three copiers sold in the country,

Modi: all set to launch new products

one is a Modi Xerox machine.

Given such a scenario, the launching of new products with a large demand potential means an even more exciting future for the companay. And for the country's fledgling office automation industry too.

Dark house

Major changes are in the offing in the sports shoes industry. While Bata and Carona take their time acting on their long planned tie-up with the German giants Addidas and Puma, it now appears that Lotto, the reputed Italian manufacturer, might sneak into the country much before them, in fact in the next few months.

Bhor Industries, one of the largest synthetic leather manufacturers in the country — the kind used in making sport shoes — will make Lotto shoes in India. And close on the heels of the Italians, market sources say, are the Americans. Reebok is said to be looking at the Indian market closely although it is not yet known as to who their local partner will be. Among names being mentioned is that of Lupin Laboratories, which recently set up a fully owned synthetic leather manufacturing subsidiary in Goa.

After the recent mega star rock concert in Delhi, Reebok, which underwrote the expenditure for the worldwide tour, earned quite a lot of goodwill in India.

Sale and lease DAP

The public sector Mangalore Chemicals and Fertilisers has entered into a unique Rs.25 crore sale and lease back arrangement on its ageing di-ammonium phosphate (DAP) plant. Due to technical problems the DAP plant has consistently functioned at barely 40 per cent capacity. So MCF decided to acquire a new DAP plant from the same suppliers, Toyo Engineering of Japan, on the condition that the existing plant would be revamped.

Last year the company faced a cash crunch and approached several leasing companies for a sale and lease back arrangement on its old DAP plant, valued at Rs.25 crores. The package which was recently cleared was put together by the Bangalore based International Leasing (and participating in the lease consortium are Canbank Financial Services and several private sector leasing companies).

Under the terms MCF would receive Rs.25 crores and in turn pay the leasing companies a rental of Rs.26 per Rs.1000 per month. The leasing consortium has also secured bank guarantees of Rs.20 crores for realisation of their rentals. This is not the first time that a sale and lease back arrangement has taken place in the country, but it is definitely one of the largest.

Unworthy victims

Public sector banks are in a sorry plight. Once again they are victims of a decision thrust on them. Recently, a Reserve Bank committee consisting of representatives from RBI, CMC, the Department of Electronics and State Bank of India identified two manufacturers who will supply computer mainframes for installation in each of the head offices of 20 public sector banks.

What is galling, say bankers, is that the decision, which will mean an investment of Rs.2 crores plus per bank, was taken without the banks themselves being consulted.

Curiously, both RBI and SBI have installed IBM machines and imported software, but the committee has recommended that the public sector banks must buy locally — ie, either ECIL or ICIM. Being in the dark about the criteria, bankers wonder whether either of the machines can take care of their specific needs, and whether either CDC or ICL, the collaborators for ECIL and ICIM respectively, have a proven track record in developing banking software.

Taking advantage of the bankers' confusion, CMC (ironically a member of the committee) is reportedly independently bidding to import CDC machines and supply them to banks with 'value added' software.

Rapid environmental clearance

The union government has decided to clear projects simultaneously from the point of view of the environment and forestry, by using a single window concept. A press release issued by the ministry of environment and forests said that project clearance would be given within six weeks of the receipt of a proposal if all details are included. Hereafter, project proposals will be rejected if project authorities do not provide missing information about the environment within three months and regarding forest within six weeks of a request of the ministry. However, cases rejected because of inadequate information can be reopened if a suitable explanation is offered.

Additional CCS for textiles

Union government has decided to grant additional cash compensatory support (CCS) of 5 per cent on exports to quota countries on non-quota textile items and garments, including handloom. It has also decided to give 8 per cent CCS on exports of blended yarn for both quota and non-quota countries.

These rates will be applicable to orders or contracts received after 22 September 1988 and the rates will remain in force till 31 December 1988.

Indo-French mining protocol

India and France have signed a protocol for co-operation in the field of mineral exploration and development. It was concluded at the end of the first meeting of the Indo-French working group on mineral exploration and development in New Delhi recently. The protocol was signed by P.K. Lahiri, additional secretary, department of mines, on behalf of the Indian government while André Ribeiere, additional secretary, ministry of industry, signed for the French government.

Progress has been made so far in planning projects for the exploration and development of tin and tungsten in India. If the projects are successfully implemented they could succeed in augmentation of off scarce resources in the country.

Credit relief to Punjab

Reserve Bank of India (RBI) has announced a series of measures amounting to a relaxation of credit policies relating to industries in the state of Punjab. RBI has authorised bank officials to sanction additional limits to the extent of 50 per cent of the required working capital, upto a ceiling of Rs.20 lakhs. The earlier ceiling was Rs.10 lakhs.

The RBI has also specified that for limits in excess of Rs.20 lakhs, clearance should be obtained from higher authorities within a period of two weeks. In addition, the RBI has also reduced the margin on advances to mills and processing units against purchases of wheat from the existing 45 per cent to 30 per cent.

Envirotech '88 held in Bombay

The third exhibition and international conference on industrial pollution control and safety, Envirotech '88, sponsored by the Central Pollution Control Board and organised by the Chemtech Foundation was held at the Nehru Centre in Bombay between 21 and 26 September 1988.

At the exhibition, there were 46 stalls and a pavillion sponsored by the Maharashtra Small Scale Industries Development Corporation, which contained 20 individual exhibitors. A wide range of pollution control equipment was displayed. Among the major exhibitors were Empire Instrumentation, which is an agent for a range of stack, ambient air and gas analysers, and displayed area quality monitors and particle size analysers; Indian Oxygen Ltd, which displayed photographs of its waste water treatment process; Flakt India Ltd, manufacturers of pollution control equipment like electrostratic precipitating fans and blowers; and L.G. Balakrishnan and Bros, which displayed oxygen analysers and capacity monitors.

Besides the exhibition, workshops and seminars were held on a variety of subjects relating to pollution control. The major symposium were on air and water pollution and on disaster prevention and crisis management.

S.S. Morakhia resigns from BSE board

Shreepal S. Morakhia is understood to have resigned from the governing board of the Bombay Stock Exchange (BSE) for reasons he has described as personal. It is also understood that he was critical of the sudden shifting of trading in Reliance shares to spot delivery basis. It may be recalled that Morakhia was a candidate sponsored by a group of operators at the last annual elections.

Seeds import policy eased

In an effort to boost farm yield and ensure a higher income for the grower, the government has announced a "new seed policy", liberalising procedures for import of seeds and manufacturing equipment.

The new seed policy, which comes into effect from 1 October 1988, drastically reduces the import duty on seeds for sowing to 15 per cent, from the existing 90 to 95 per cent. The policy will prevent companies from importing seeds to make a "fast buck" and thus leaving the farmer out in the cold. Instead, now there will be a commitment on the part of the company to ensure steady seeds supply to farmers.

The new seeds policy takes further the strategy formulated by the prime minister, for organising cropping pattern suitable for each agro climatic zone, taking into consideration soil type, climate and water resources.

Panel to review category I drugs

An eight member committee has been constituted by the union health and family welfare ministry to review the list of drugs which come under category I of the Drugs Price Control Order (DPCO) 1987. H.H. Siddiqui, who is an associate professor of pharmacology at the All India Institute of Medical Sciences (AIIMS) and heads the committee, said they will review the list of drugs included under category I of DPCO 1987 and examine any other representations and suggestions for inclusion of essential drugs under this category. The committee will submit its report in one month's time.

More spinning machinery on OGL

In a move to bring about modernisation, the government has permitted textile mills to import three more machinery items at a concessional duty of 25 per cent. These imports will be subject to an export obligation.

The export obligation will be equivalent to 75 per cent of the total production on the machinery items for 5 years. On the other hand, the obligation can be fulfilled by exporting five times the value of machinery for five years.

Already, 118 items of machinery are allowed to be imported by garment exporters at a concessional duty, which are not subject to an export obligation.

Exchange risk cover widened

The Export Credit Guarantee

Corporation of India (ECGC), has now expanded the scheme of exchange fluctuation risk, floated in August 1980, to cover risks in respect of export receivables over a period not exceeding 12 months. It will now include two more types of transactions; payment for import of raw materials or components, for use in manufacture of goods for export, the import being effected on deferred terms of payment or on cash terms spread over a period longer than 12 months; and advance payment received from a foreign party, on condition that it should be repaid over a period longer than 12 months by way of export of goods.

The scheme, it may be noted, provided cover within certain limits. The first loss or gain upto 5 per cent shall be to the account of the Indian exporter. Loss or gain in excess of five per cent but not exceeding 35 per cent will be covered by the ECGC, and thereafter any loss or gain shall go against the account of the exporter. Besides, exchange fluctuation risk cover will be available if the payment for import or the advance payment for export was designated in any of the seven currencies: the US dollar, pound sterling, deutschmark, French franc, Swiss franc, yen and the Australian dollar.

With this, certain export linked import transactions and advance payments received from foreign buyers could now be covered with the ECGC, against exchange fluctuation risk.

Indian electronics fair at Hannover

The Hannover Trade Fair Corporation and the Trade Fair Authority of India (TFAI), who are jointly organising an International CeBIT Forum-Business with India, at Hannover in FRG between 8 and 15 March 1989, say that the response from Indian companies has been good. The CeBIT fair is the world's largest for the office automation, information and telecommunications technology business. And the international CeBIT Forum with India as a partner), which will be launched for the first time, has firm participation from 50 Indian companies.

They include private sector hardware and software companies, C-Dot, and the department of electronics and telecommunications. In all, over 2,900 companies are expected to display their products at the fair and attract a record 500,000 visitors. Thirty six per cent of these exhibitors will be from outside West Germany.

Salt for priority sector

The government has decided to include the salt industry under the classification of priority sector for financial assistance. This is in response to a long standing demand from the industry. It is expected to provide a boost to an industry, which employs thousands of people in rural areas.

HPCL poised for major expansion

Hindustan Petroleum Corporation Ltd (HPCL) is co-promoting a new joint venture company, Mangalore Refinery and Petrochemicals Ltd (MRPL), with 26 per cent equity participation, with Indian Rayon and Industries (also 26 per cent equity participation). The company, incorporated in March 1988, is expected to be completed by early 1989. Apart from refining 3 million tonnes of indigenous/imported crude oil, the proposed MRPL envisages a naphtha cracker to produce base blocks for petrochemicals.

HPCL has Rs.506 crores worth of projects under implementation or consideration which includes a Rs.227 crore project for additional crude oil and product tankage.

In the Eight Plan, the projects which are to be reviewed by the government include a grass roots refinery at Hazira with 6 million tonnes per annum (MTPA) capacity expandable to 12 MTPA at an estimated cost of Rs.9,500 crores. The other projects are estimated at Rs.9,400 crores.

For the year 1987-88, HPCL has registerd an impressive performance and earned a net profit of Rs.101.57 crores (110 per cent increase over the previous year). In January 1988, HPCL was presented the prestigious "Award for Excellence" in performance for the year 1985-86 in the oil sector. It has also earned the distinction of making an entry into the "Fortune International 500" list of the largest non-US industrial corporations in the world, ranked at 291.

Canfina inaugurates issue house

In its six years of involvement with the capital markets, Canbank Financial Services Ltd (Canfina) has acquainted itself with the numerous problems faced by issuers as well as investors at the post-issue stage. This acquaintance brought about the realisation that a number of critical areas in the post-issue management do not get the priority of attention they deserve. This realisation prompted Canfina to set up a separate independent Issue House Group as soon as it was incorporated as a separate company in mid-1987.

The group, located at Bombay and headed by K.C. Poulose, senior vice-president, went about the task of setting up the "Issue House and In-house Data Processing Centre" in two stages. In the first stage, the group handled the registrars to the issue services upto the stage of allotment and refund, utilising the computer facilities of certain established issue houses. This provided hands-on experience, apart from co-ordination of critical areas in post-issue management.

At the second stage, by inducting experts headed by N. Satish, chief consultant, an experienced engineer in computers, in-house data processing capability was built up. This group will function from Bombay for the present.

The city office, from where the Issue House Group has been functioning, will continue to be the front office within the reach of companies and the stock exchange. The office, located at Mahim in Bombay, and housing the computer systems, will provide the necessary back-up.

New DBMS to be released

INGRES, a new relations database management system (DBMS), will soon be entering the Indian market. A product of Relational Technology Inc (RTI), a US company working primarily with databases, it will be marketed and supported by MASTEK, a software house based in Bombay.

Alan Jervis, managing director of RTI for the Asia-Pacific region, was in India recently to announce the release of INGRES's new high throughput On-Line-Transaction Processing version. This version can be used in application are as such as reservation systems, banking, and trading, where the number of transactions per second are high.

In India, INGRES will be competing with ORACLE, another relations DBMS. ORACLE is marketed by Tata Consultancy Services which recently announced its own high throughput product, the ORACLE TPS.

According to Jervis, INGRES has been proved technologically superior to ORACLE. MASTEK has already secured a order from Reliance and are expecting a couple of big contracts.

INGRES runs on a wide range of machines, including IBM, UNIX-based and VAX machines. Its compatibility and networking features makes it easier to work with even geographically distributed databases and dissimilar systems. It offers sophisiticated integrated tools for application development and decision support tools for the end user.

Indo-German software contract signed

Nixdorf Computer AG of West Germany have placed their first software development order for the banking industry in the Asian market worth US $ 200,000 with Kale Consultants Pvt Ltd (KCPL), of India. An integrated branch level banking package will be developed by KCPL, covering all vital functions of both front and back offices. KCPL will develop the package on the UNIX-based Targon family of Nixdorf machines.

According to B. Kannapee, Nixdorf vice-president, overseas region, this order is a follow-up of the recently announced tie-up for computer software between Nixdorf and KCPL. The current US $ 200,000 project order is expected to be delivered in phases as per the priorities assigned, with the first phase due in 8 to 10 months' time.

Narendra Kale of KCPL disclosed that the two companies are planning to use the latter's hospitals' system for their Asian markets which, according to Nixdorf, have a great potential. Technical discussions with Nixdorf in Germany and Singapore are under way for the planned development of the package. KCPL is already the market leader in healthcare software in the country with installations at Breach Candy Hospital, Cumballa Hill Hospital, Hurkisondas Nurrotamdas Hospital and Kothari Hospital, all at Bombay.

Venture fund backs Jay Bharat Maruti

India Investment Fund Ltd, the NRI venture capital fund advised by Grindlays Bank, has announced its intention to participate in the NRI public issue of Jay Bharat Maruti Ltd (JBML). JMBL is a joint venture project being promoted by Maruti Udyog at Gurgaon for the manufacture of sheet metal components, assemblies and sub-assemblies. The project has been set up at a cost of Rs.14.09 crores and has commenced commercial production.

The Fund has already invested in the equity of Samtel Color, Maharashtra Weldaids and India Glycols. Several other potential investments are in the pipeline.

SBI gets an MD

After nine months of speculation, V. Atal, has finally been appointed managing director at the State Bank of India. Having joined the Imperial Bank in 1952, Atal has held many important positions in SBI, including being incharge of the bank's Frankfurt office. After his return from overseas, Atal has been, till now, the deputy managing director in charge of personnel and systems.

Canara Bank, had also been without a chairman and managing director ever since B. Ratnakar's term ended in June this year. N.D. Prabhu, executive director of the bank, who was holding charge as CMD, has also been officially appointed.

Meanwhile, at the time of going to press, it is learnt that B. Ratnakar has been appointed part time joint chairman of STC and MMTC, although an official announcement is awaited.

State Bank's SBINET inaugurated

Eduardo Faleiro, minister of state for finance, inaugurated last month the Integrated Telecommunication Network (SBINET) of the State Bank of India (SBI) for voice, FAX and text transmission. On commissioning the network, Faleiro spoke to Sharad Pawar, chief minister of Maharashtra at Bombay and Pratap Sinh Rane, chief minister of Goa, at Panaji and with bank officials located in other centres.

Addressing a press conference later during the day, D.N.

Ghosh, chairman of SBI, indicated that by utilising the capabilities of this network, the bank would be able to implement a rapid remittance facility for its customers located in 64 cities, for transfer of funds within a day. The network would also facilitate faster realisation of outstation cheques and exchange of other financial messages such as letters of credit. It would also help improve the bank's internal operations in the areas of funds management and in exchange of administrative messages. Collection of management information would also be speeded up.

SBINET will enable the bank to participate in the SWIFT (global inter-bank network) operations far more effectively. Interface with the proposed BANKNET (RBI network) will also be greatly facilitated by the establishment of this network.

While the network will be initially based on voice grade lines leased from the department of telecommunications (DoT), arrangments are already in hand to avail of satellite communications as soon as they become available and to link up into the public switched data network the moment it commences operations. It is also planned to have international gateways for communication with the bank's branches overseas and also with correspondent banks.

Award for Mudra

Mudra Communications' televison commercial for Vimal Fabrics has won an award at the prestigious 1988 PATERS. The PATERS are world media awards, held this year in conjunction with the State of Queensland's Bicentennial Celebrations.

This year, for the seventh PATERS, a total of 1,660 entries were submitted from radio, television, film networks and advertising agencies from over 40 countries. They were judged by a panel of judges from 14 countries. At the Awards ceremony on September 10, 1988 Mudra Communications was represented by their international associate, DDB Needham Worldwide.

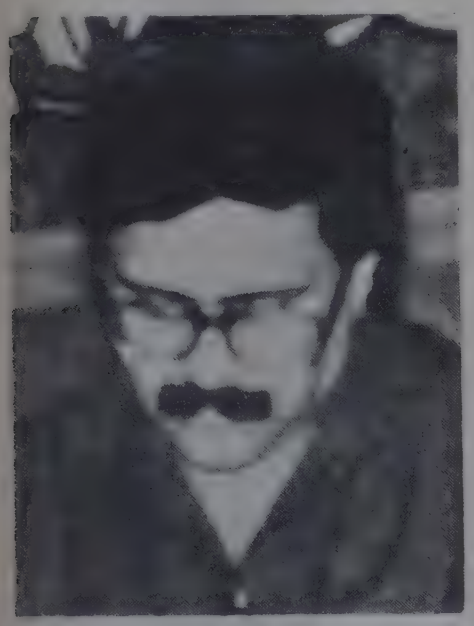
SANJIV NARAYAN

"The production target of Rs.2,000 crores for electronic components will be reached by the end of the Seventh Plan period," asserts Sanjiv Narayan, president, Electronic Component Industries Association (ELCINA).

"However, a strong component base can only be created with economies of scale in production," he observes. There is an urgent need to allow existing



companies to expand production facilities by removing stipulations regarding the location of new capacity. "Component manufacturing activity should also be delinked from demand arising only from the indigenous equipment industry. Incentives should be provided to make Indian components competitive in the world market," he adds.

ELCINA also wants changes in the export-import policy. "Under the existing system, the actual user condition has been dispensed with," complains Narayan. The resultant large-scale import of components under replenishment licences will damage the indigenous industry. "Such imports will amount to Rs.150 crores per year," he maintains. "Export realisation will also be affected due to the fall in premium on replenishment licences from 150 per cent to 20 per cent," he adds

ELCINA is keen on encouraging the design of electronic equipment indigenously. We anticipate an investment of Rs.10,000 crores in this sector over the next 12 years," says Narayan.

RAJESH VACHHER

In the single largest order of its kind, the Mining and Allied Machinery Corporation of India (MAMC) has signed an agreement with the Soviet Union to export conveyors valued at Rs.11 crores. "Once we show that we can execute it successfully, we hope that the order will be repeated annually," says Rajesh Vachher, director (marketing) of the MAMC.

Though exports to Russia are a routine affair for MAMC and other government organisations Vachher points out that no similar organisation has signed such a large order before. The order is for 15 sets of conveyors, each one kilometre long. The conveyors will be used to transport coal in underground mines; they are required to be manufactured under stringent specifications for Siberian conditions.

With this, MAMC's export or-

ders are expected to jump to Rs.34 crores. Currently its total orders are valued at Rs.200 crores. The organisation's turnover target for 1988-89 is Rs.100 crores, as against Rs.76 crores achieved last year.

MAMC has just completed 25 years of manufacturing and enjoys the distinction of being the largest exporter of engineering goods in the eastern region. For the fifth consecutive time, the company bagged the EEPC trophy for the largest exporter.

J.M. RAJAN PILLAI

"Nabisco Brands views India as one of its key opportunities," says J.M. Rajan Pillai, area president, Africa/Asia/ Pacific of International Nabisco Brands Inc, and chairman and chief executive officer of Nabisco Commodities Ltd, both of London.

As a dynamic multinational, the US-based RJR Nabisco (turnover: US $ 17 billion) views India as a great potential market. According to Pillai, Nabisco Brands is pleased with the progress it has made in India and is aiming for more. "For Nabisco Brands, participating in the growth of the Indian economy is a commitment," says Pillai. As an example, he points to how Britannia Industries, already the market leader in branded biscuits and cakes, is rapidly expanding into snacks, confectionery products and protein foods. And why not, when the Indian middle class market is over 80 million, more than the entire population of most European nations. Pillai stresses that by letting more Indian consumer goods companies collaborate with foreign firms and allowing import of foreign technologies, India is seeing a drop in prices and a general strengthening of the consumer markets.

Pillai believes that India's potential can carry it into the ranks of the world's great industrial powers. "As a businessman, I openly applaud the steps our government has taken, particularly in improving the climate for foreign investment," adds Pillai. He thinks that India is marching more or less in step with the rest of the world.

V.K. JAIN

Gujarat Fluorochemicals, a company promoted by Industrial Oxygen Company Ltd (INOX) and Gujarat Industrial Investment Corporation, will be entering the capital market on 12 October with a public issue of 3.92 million equity shares of Rs.10 each for cash at par. Of this 1.57 million equity shares are reserved for preferential allotment to NRIs and 40,000 shares for employees and working directors.

According to Vivek Kumar Jain, managing director, the company will manufacture 5,000 tpa of chlorofluorocarbon refrigerant gases and 2,200 tpa of anhydrous hydrofluoric acid.

The company has entered into a collaboration with Stearns Catalytic Corporation of USA for incorporating the latest technology. Process know-how to be used for the manufacture of refrigerant gases will be developed by Pennwalt Corporation, USA. The process know-how to manufacture anhydrous hydrofluoric acid will be developed by Stauffer Chemical Company, USA.

Says Jain, "Taking into account the fast pace of industrialisation and applications in several key growth areas the demand for refrigerant gases is expected to maintain a high growth rate."

INOX's experience in the field of manufacture and distribution of industrial gases will greatly benefit GFL. Another advantage the new company has is its proximity to major raw material suppliers.

FRANCIS LORENTZ

While giant US computer makers tend to dominate collaboration agreements in India, the French giant Bull is making a quiet entry. Francis Lorentz, president of Bull, was in New Delhi last week to tie-up with PSI Computers to set up an R&D operation in Bangalore.

Though the R & D centre begins with a modest Rs.1-crore funding, PSI expects that in three years over 500 specialists will undertake state of the art research in mainframe computing at the centre. Over Rs.45 crores of research projects are likely to be subcontracted to PSI in the next 5 years. The logic, says Lorentz, "is to transfer to India the systems that Bull uses and to utilise Indian scientists to get further ahead." Given that Bull spends over Rs.550 crores annually on R&D, for PSI the opportunities are immense.

Besides research, the Bull link-up will result in PSI having a new range of computers that Lorentz hopes will "transform the shape of the Indian mainframe market".

BO SVENTE SANDQVIST

ESAB AB, the Swedish world leader of welding and cutting equipment, has promoted a new company, ESAB India Ltd, through its subsidiary ESAB Holdings UK. Also, a few years ago ESAB AB had bought over the welding operations of Philips in Europe. In turn ESAB India acquired the only welding unit of Peico Electricals & Electronics' (formerly Philips India) in a north-east Bombay suburb in June 1987.

"We are seriously thinking of expanding our operations outside Europe," says Sandqvist, who was in Bombay recently. "In the next few years, we hope to see south east Asia emerge as a major part of our worldwide operations," he says.

Sandqvist is confident that ESAB India will soon enter the export market: "With the strong trading ties that India has with Russia we hope to capture a large part of that market."

ESAB India (turnover in 1987: Rs.10 crores) is going public in October 1988. ESAB Holdings Ltd, UK will participate in the equity of the new company to the extent of Rs.1.99 crores (39.9 per cent). It will also transfer the requisite technology on an ongoing basis. Says Sandqvist, "The big advantage we have is that the project has no gestation period since the company is already in business."

SVEN RISKAER

"We, by and large, participate in high risk ventures, even if it is at the cost of a relatively low return on our investment," explains Sven Riskaer, managing director of Investment Fund for Developing Countries (IFU),

who was in Bombay last week. The Danish fund was established in 1967 by an act of Parliament, and is a self-governing institution which forms a part of Denmark's efforts in promoting development in the Third World. The IFU acts as a catalyst for the establishment of new ventures between Danish companies and their counterparts in developing nations by contributing to the equity and providing loans

The fund was started with US $ 50 million and had grown to US $ 200 million by 1987. Riskaer says that most of this appreciation has accrued from investments made in Danish bonds and not from those made in companies in developing countries. "We don't make too much money in the latter because we invariably pull out once the company starts doing well. We are very active during the initial periods of small or no profits, when the joint venture needs our help most," says Riskaer.

The IFU has participated in 130 projects in 45 countries and is very keen to come to India. Of his first formal visit to India, Riskaer says "The awareness among small and middle size Danish companies of investment opportunities in India and other developing countries is almost non-existent; their perception of the world market is largely restricted to Europe and North America. We hope to rectify this and mobilise Danish investment in developing countries where the potential for growth is tremendous."

ROBERTO ZANIBONI

The SM group is diversifying into food products after doing rather well in speciality chemicals. An agreement was signed with Mapimpianti of Italy, Western Europe's leading supplier of food-processing equipment and technology. "The plant and equipment we have supplied the SM group incorporate state-of-the-art technology and is highly automated," says Roberto Zaniboni, a director of Mapimpianti Spa.

The automation of the plant will ensure a high level of consistency and hygiene. Electronic sensors continuously monitor the various stages — mixing, extrusion drying, frying, roasting and packaging. Says Zaniboni, "The metallised polyester packaging is designed to instil longer shelf-life in the product without any loss of crispness, flavour and taste."

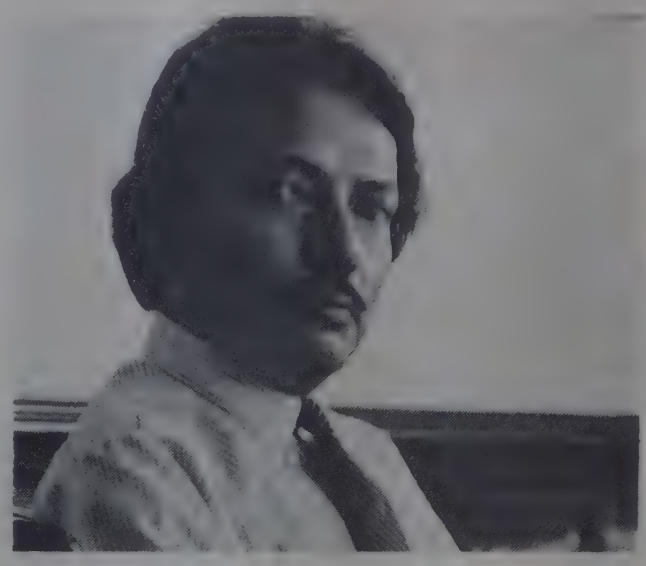
Mapimpianti is a medium size company with sales of about US$ 100 million. It produces machinery for instant soups, baby foods, etc.

According to Zaniboni, Mapimpianti has already supplied a number of machines to different companies in India. Some of the better known ones are TTK Pharma, and Shree Foods.

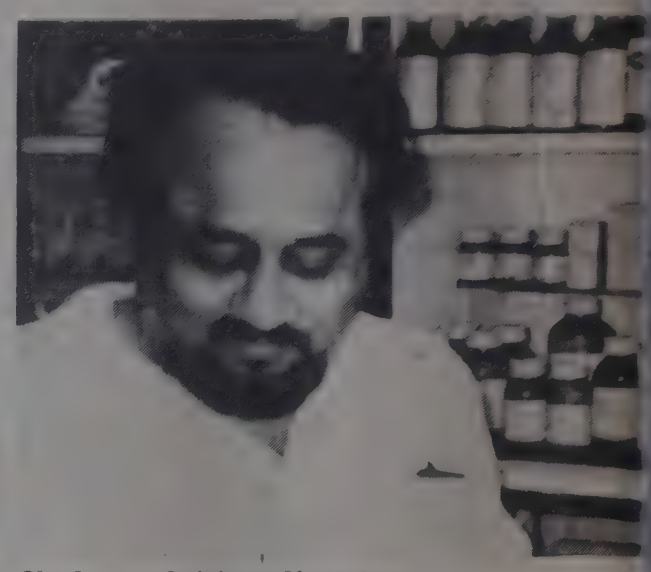
Zaniboni is of the opinion that the potential for ready-to eat foods in India is enormous; he is looking forward to doing more business with Indian companies in future.

BURROUGHS WELLCOME

Next AIOCD target?



Bose: "ridiculous allegations"



Shah: exploiting disunity

The All India Organisation of Chemists and Druggists (AIOCD) is about to flex its muscles once again. And Burroughs Wellcome (BW) could be the next target of a nationwide boycott by pharmaceutical wholesalers and retailers. In that event the Rs.70-crore (estimated sales for 1987-88) multinational's products could start disappearing from traders' shelves as early as next month, according to Kishore Shah, the powerful vice-president of the AIOCD. Shah had earlier masterminded the four-month-long trade boycott of the pharmaceutical giant Glindia, which was called off recently after the company agreed to raise its wholesaler margin by 1 per cent.

But Shah's reasons for the proposed boycott of BW products are far from convincing. The company already pays its wholesalers a margin of around 10 per cent on most of its products which is much higher than the industry average. In comparison Glindia pays around 6 per cent, Pfizer 5.5 per cent and Alembic around 8 per cent. According to Shah, Burroughs needs to be taught a lesson because its president D.K. Bose "tried to use his influence in the West Bengal government and break the Glindia boycott in Calcutta". "He tried to bring about disunity in our organisation and he will have to suffer the consequences," Shah adds.

Unreasonable boycott. Bose, however, says that this is a "ridiculous allegation". "I held some informal discussions with the Bengal chemists' association in my capacity as the vice-president of the Organisation of Pharmaceutical Producers of India," he says, "and not as a representative of Burroughs Wellcome. Since our company margins are higher than the industry average, it would be unreasonable for the chemists to boycott our products." Shah, however, is adamant. "We will demand that they increase their margin from 10 to 12 per cent and if they don't they will have to bear the consequences."

Shah says it won't be long before Burroughs capitulates. In his opinion, Burroughs, being a smaller company, lacks the kind of sustaining power that helped Glindia withstand the trade boycott for four months. "But more important," according to Shah, "Burroughs will buckle down because of the disunity that prevails among the manufacturers. Nobody came to help Glindia during its crisis. In fact others took advantage of the boycott; nobody is going to help Burroughs."

The Glindia boycott was sparked off after a government amendment in April this year to the 1987 DPCO; as a result the 16 per cent retail trade margin for controlled category drugs was made exclusive of excise duty. The traders said that this was unfair since it brought down their revenues substantially. Since the original DPCO does not mention anything about the excise duty they had taken for granted that the margins were inclusive of the excise duty. The traders were piqued by the fact that the new DPCO had not raised wholesalers margins.

Selective attack. Glindia was chosen by the traders as their first victim because it is the largest pharmaceutical company in the country. Shah knew that there was no way he could force the government to change its decision; all he could do was plead and make representations. The alternative was to force the manufacturers themselves to give higher margins. He was also aware that if he launched a general boycott against all the pharmaceutical companies he would lose public sympathy on account of non-availability of drugs. On the other hand, if he would boycott only Glindia products, it would badly affect the company, but would not really bother the consumers since most of the drugs manufactured by the company are also manufactured by competitors.

The Glindia boycott began in West Bengal in June, and in the course of the next few weeks spread across the country. But despite mounting inventories and reduced sales, the company stood its ground and refused to give in to the traders' demand. "It was a question of standing by your principles," Glindia's deputy managing director Humayun Dhanrajgir had said, "and we were not prepared to give in on that." But four months into the boycott Glindia found that all was not fair in this war.

Isolated. It opened up negotiations with the traders apparently after realising that the company's competitors were taking unfair advantage of the situation and pushing their products in areas where Glindia products were being boycotted. The oft-projected facade of unity among manufacturers was just a farce, Glindia found out. While it suffered because of something that concerned the entire industry, fellow manufacturers had no qualms about harvesting the benefits flowing from its misery. "We felt isolated," Dhanrajgir says bitterly.

But despite Shah's claims of having brought Glindia "to its knees", it is clear that he has managed to achieve virtually nothing for his main constituency of disgruntled boycotters — the retail chemists. Their margins have remained unchanged. In fact, despite speculations to the contrary, Glindia refused to concede the traders' demand for higher retailers' margin on even decontrolled products which constitute about 30 per cent of all drugs sold in the country.

Glindia's firm position on the retailers' margin was a big relief to the industry as a whole. "If they had raised the retailer margin everyone else would have been forced to follow," says Arvind Nair, a spokesman of the Organisation of Pharmaceutical Producers of India. And as for Glindia agreeing to raise its wholesaler margin, Nair maintains that it would have no effect on the other companies since most of them are anyway paying higher margins. But the proposed boycott may disprove this contention.

Meditate on how world travellers seek bliss on their way westward or eastward.

The answer becomes obvious once you know the pulse of the world opinion on airlines. For six years in succession, business travellers everywhere have voted the same carrier as the best airline worldwide in the Business Traveller magazine's global survey. This airline flies to over 100 destinations, is universally admired for exceptional punctuality and hospitality and consistently offers a choice of three classes on all its aircraft.

EC-TV introduces a mini theatre for your office, home or anywhere.

The EC-TV Spectravision Series is a new concept in televiewing. It projects TV pictures to giant size.

Pictures of perfect clarity and brilliant resolution. For your family or even an audience of over 500 people.

EC-TV Spectravision incorporates its superior technology in two models. The EC T-3000 and EC T-3015.

Apart from giving a clear reception of Doordarshan, they can be integrated with your video camera, VCR and video disk.

The EC T-3015 can also be linked up to your computer.

Compact and mobile, both these models are easy to set up and use.

Little wonder the EC-TV Spectravision Series is ideal for use anywhere.

At home, education institutes, exhibitions. At conferences and video parlours. Even in rural communities.

In addition, the EC-TV Spectravision Series comes to you with the EC assurance of reliable and efficient after- sales service.

However, to get the complete picture of the EC-TV Spectravision Series, come across for a live demonstration. It's worth more than a thousand words.

BANK EMPLOYEES

Points of discord

When Eduardo Faleiro, minister of state for finance, failed to resolve the deadlock between the bank employees and the Indian Bank Association (IBA) on 22 September, the unions confirmed their decision to strike work for a day. The two unions, All India Bank Employees' Association (AIBEA) and the National Confederation of Bank Employees (NCBE) — which according to the IBA, represent 95 per cent of the bank workers — have jointly called the strike on 28 September to press for their wage revision demands at the fifth bipartite negotiations.

New equations. Besides these two 'recognised' unions there are three more clerical or award staff unions in the banking sector. Of these, the Congress(I) affiliated INBEF and the BJP affiliated NOBW may not support the strike. The CPI(M) affiliated BEFI is reported to have sunk its differences with the recognised unions temporarily to support the strike.

The term of the fourth bipartite agreement ended in July 1987 and, ever since, the IBA has been negotiating with the unions to come to a new settlement. The delay has been due to court injunctions brought by the unrecognised unions in order to get IBA to include them in the fifth bipartite.

Over the last 14 months, both the recognised unions and IBA have revised their initial proposals but even now differences remain. The unions had originally demanded a package of Rs.500 crores but have now pegged down the figure at Rs.306 crores. Against this, the IBA has offered a package of Rs.200 crores. "However the chapter is not closed as far as IBA is concerned," says R. Srinivasan, chairman of IBA.

In terms of specifics, the points of mismatch are:

● **Scales of pay.** The unions are demanding a maximum increment of Rs.140 (revised from Rs.165) for the clerical staff while the IBA is unwilling to give them more than Rs.110 (revised from Rs.100). This, Srinivasan feels, is a substantial increase from the previous maximum increment of Rs.95 given at the fourth bipartite.

● **Graduation allowance.** The IBA has proposed the withdrawal of the two-increment graduation incentives which it thinks is outdated since most of the clerical staff today are graduates. However, to ensure that the stafrf does not lose salary, it has suggested a higher starting salary. The unions have rejected this offer, says Srinivasan.

● **Dearness allowance.** The IBA has offered a DA package which it feels is much better than the existing DA formula. Besides, it has suggested the introduction of a six point cycle for computing the payment of DA instead of the present four point cycle, taking into consideration easier calculations and faster movement of the consumer price index (CPI).

The union leaders, however, feel that Srinivasan is trying distort the issues. It is not merely the question of the maximum increment but of drawing up of an entire pay scale and the introduction of what they see as a retrogade DA scheme.

The unions explain that, after the fourth bipartite, the basic pay scale for the award staff ranged from Rs.560 to Rs.1,660 (calculated on the basis of merging 332 points of the CPI). For the fifth bipartite, the unions had asked for a merger of 660 points but, after negotiations, had agreed to 600 points. On the basis of this, the pay scale would range from Rs.896 to Rs.2,861 over a period of 20 years. But this would necessarily imply a maximum increment of Rs.140 somewhere in the next 20 years. So, if the IBA agrees to a 600 point merger, then it has to also agree to a maximum increment of Rs.140. However, the IBA proposes to increase the slab from 20 to 22 years so that the maximum increment will be Rs.110.

With the CPI at 772 points in the second quarter of this year, taken as the basis for the negotiations, the merger of 600 points leaves 172 points. These, according to the present system of DA calculation, will be divided into 43 slabs of four points each. Thus, the staff will get compensated for 43 slabs instead of just 28 slabs if the six point cycle is introduced, the union leaders feel.

"Cannot surrender". Regarding the graduation allowance, the employees find the IBA's offer to replace the two increments by a higher starting salary unacceptable, if it insists on extending the span of the scale by two years. This will mean a reduction in total salaries in real terms, as the number of new recruits is fast dwindling due to computerisation. "We have reduced the span from 25 years to the present 20 after a great struggle during the second bipartite negotiations," says S.D. Bhopeshwarker, general secretary of the Maharashtra wing of AIBEA. "We can't surrender this benefit."

The employees feel that the IBA is seeking to reduce the staff salary bill even as the expenditure of banks is reducing and the profits are increasing.

What Srinivasan fears, however, is the cascading effect an increase in staff salaries will have on those of the officers. The bank officers' organisations are already waiting in the wings to begin their wage negotiations as soon as the staff demands are settled.

■ ALOYSIUS FERNANDEZ

CAUVERY WATER DISPUTE

No give and no take

When the talks between the Karnataka chief minister, S.R. Bommai, and the Tamil Nadu governor, P.C. Alexander, on the sharing of the Cauvery waters broke down recently, nobody was very surprised. The dispute, which has been going on for almost two decades, does not seem anywhere near an amicable solution. According to Alexander, there was no meeting ground on any of the points raised. But Bommai is still optimistic about a solution. Like most issues of this sort the situation appears to be inextricably politicised. But the failure to come to an agreement has clear economic and human consequences.

Alexander: no meeting point

Oxygen/Nitrogen
Gas plants from
INDCON

Molecular Sieves based Packaged Units to produce High Purity Oxygen/Nitrogen Gases at less than Rs. 2.00 per cu. meter.

Branches: **Calcutta ▪ Bombay ▪ Madras ▪ Hyderabad ▪ Bangalore ▪ Baroda**

Heavy losses. According to the Cauvery Delta Farmers' Association, between 1974 and 1987 the total loss of production of foodgrains in the region amounted to Rs.150 crores and the loss of wages to Rs.50 crores. Over one million landless labourers in the region have been hit badly. Agriculture in the delta has become a gamble given the vagaries of the monsoon.

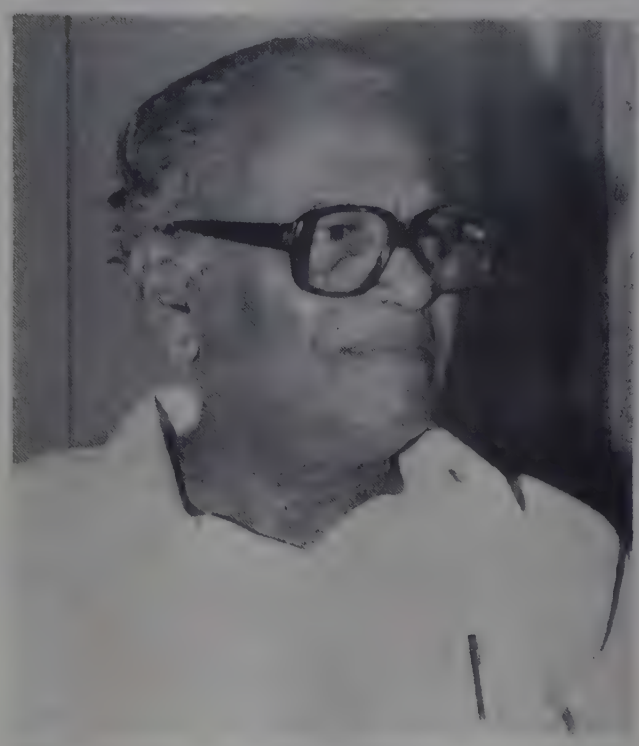
The Cauvery originates in Karnataka. The Cauvery basin extending over an area of 88,000 sq km is shared among Tamil Nadu (49,000 sq km), Karnataka (36,000 sq km), and Kerala (3,000 sq km). After splitting into several branches in Tamil Nadu, the branch which retains the name Cauvery eventually joins the sea in Kerala. The Cauvery basin is especially important for Tamil Nadu because it accounts for nearly 64 per cent of the gross irrigated area in the state.

It is Karnataka's contention that though the river originates in the state it has never received its proper share of water. The way the waters of the Cauvery were to be used was decided in agreements in 1892 and in 1924 between the government of the old Madras presidency and the former princely state of Mysore.

Karnataka, however, says that the 1924 agreement has not only run its 50-year tenure but is also heavily tilted against the state. It insists on a "fair and equitable" distribution of water without reference to the agreement.

Karnataka's argument is that though it contributes 52.5 per cent of the available water, its share of irrigation water has been pegged at only 24 per cent of the total availability of 740 tmc ft. While Tamil Nadu's contribution to availability was only 29.3 per cent it receives 66 per cent. Karnataka has been demanding an assessment of the yield on the basis of 50 per cent dependability of flow over an 80-year period. This is against Tamil Nadu's demand for 75 per cent dependability over 36 years. Tamil Nadu wants its present share protected in any fresh scheme. Tamil Nadu feels that Karnataka is pitching its demands at a level that would leave only surplus flows to it.

Reduced inflow. Tamil Nadu's contention has been that Karnataka has been going ahead with its Cauvery basin irrigation projects much to Tamil Nadu's detriment. The construction of a series of dams in Karnataka has doubled the storage capacity of the Cauvery water in the state, and rainfall in the catchment areas has declined. This has greatly reduced



Bommai: sharing headaches

inflows of water into the Mettur dam in Tamil Nadu which is critical to the irrigation of the Cauvery delta in Thanjavur district, the rice bowl of Tamil Nadu. During the past decade the Mettur reservoir could be opened for irrigation on the scheduled date only twice and today Tamil Nadu is totally dependent on Karnataka to make *ad hoc* releases from its reservoirs for its irrigation needs.

It was in 1970 that Tamil Nadu first approached the centre with a request to set up a tribunal under the Interstate Water Disputes Act of 1956. A year later it filed a suit in the Supreme Court seeking that the centre be directed to constitute a tribunal. Eventually the case was withdrawn on the centre's persuasion. Instead of a tribunal the centre constituted a committee to collect comprehensive data on utilisation and irrigation practices. But both the findings as well as the assessment of the savings that could be effected in the existing use of water were unacceptable to both states.

A couple of years ago Tamil Nadu again put forth a demand for the setting up of a tribunal to sort the matter out once and for all. Karnataka is against this as it feels that it will be a time-consuming process. There have been innumerable technical discussions and 20 official level meetings in the last 15 years.

Earlier this month the Supreme Court directed the two state governments to begin a dialogue to try and narrow the gaps. Predictably the talks went the way of all earlier talks. Now all eyes are on the Supreme Court to see what it will suggest next.

■ SUSHILA RAVINDRANATH

ALUMINIUM USER INDUSTRY

Hamstrung by raw material shortage

This year, private manufacturers of aluminium goods in the eastern region face a shortage of 50,000 tonnes of commercial grade aluminium ingots. Especially hard hit are the small-scale utensil manufacturers. The Eastern Aluminium Rollers and Fabricators Association (EARFA) has made a representation to the government highlighting this problem. It has warned that if the shortfall is not met, they will have to close down.

Imports stopped. Earlier, when the international price was low, aluminium used to be imported through the MMTC as a canalised item and supplied to domestic manufacturers at the local price. Later, after Nalco was commissioned, imports were stopped as it was felt that Nalco would be able to take care of domestic demand. However, demand has risen phenomenally since then and the gap between supply and demand has steadily widened.

Imports could be a solution. The government now permits import of aluminium under OGL. But the high cost of imported aluminium makes imports unviable. The international price is about Rs.42,000 per tonne whereas the price of indigenous aluminium is about Rs.31,000 per tonne.

EARFA suggested a solution — administered pool pricing. Under this, both domestic and imported aluminium will be sold at a common price that will allow the government to reimburse MMTC the difference between the prices of imported and indigenous aluminium. Besides price equalisation, manufacturers have suggested the waiver of all duties on aluminium scrap imports by actual users.

But why did the shortage arise at all? Judging by the country's installed capacity for aluminium, India should have a surplus of aluminium. But 50 per cent of production is reserved for the electrical conductor or EC grade sector as it is commonly known. And several manufacturers of aluminium require some for captive consumption. Thus, Hindalco, the largest producer, contributes only 60,000 tonnes of its annual production of 120,000 tonnes to private manufacturers of aluminium goods.

Power shortage. Severe power cuts are another problem. Indal, because of mas-

sive power cuts at its three units, has been able to produce only 30,000 tonnes whereas it has an installed capacity of 117,000 tonnes. Its smelters at Hirakud in Orissa and at Belgaum in Karnataka are operating at less than half their capacity. Says R. Das, corporate planning manager, Indal, "If these smelters had been operating at full capacity, there would have been a surplus instead of a shortage. It was on this premise that the central government stopped imports through MMTC." The teething problems faced by Nalco have also been an important reason for the shortage. There have been several delays; as a result, the company is still in its first phase, producing 65,000 metric tonnes annually against an ultimate installed capacity of 218,000 tonnes. Only 32,000 tonnes are available to private manufacturers.

The shortage of aluminium does not affect everyone equally. The large scale users — the automotive, extrusion and packaging industries — manage to obtain priority allocation. Private manufacturers of aluminium goods in India require 370,000 tonnes of aluminium every year; domestic aluminium companies can supply only 60,000 tonnes or 16 per cent of the demand. And when the larger consumers have taken their share, there's not much left for the small ones.

Over the years, in the eastern region, the number of small manufacturers has been decreasing. One reason is that as the price gap between steel and aluminium narrows, the demand for aluminium falls. But this does not mean a fall in overall demand for aluminium. As traditional aluminium-using industries fade out, newer ones come up. The most important one today is the packaging industry. Tetra packs, in which a variety of foods are now marketed, use aluminium foil. And as the middle-class grows and the consumer boom continues, no slackening of demand seems in sight.

The aluminium user industry is today growing at a rate of 7 per cent a year. What is more, it has tremendous potential. If this potential is not to be strangled, the government needs to ensure that the industry receives adequate supplies of raw material. The supply this year may improve after the good monsoon and the consequent improvement in the power situation. But this alone is not enough. More active steps by the government are required.

AVIATION

Meenambakkam to Heathrow

Last year, when Mike Kately, manager for India, Nepal and Sri Lanka of British Airways was in Madras for a visit he had declared that the airline would not give up its efforts to operate a direct flight from Madras to London. The efforts have now borne fruit. "We will be operating the first-ever direct flight from Madras to London on 4 November," he announced in Madras.

It was a welcome announcement for many regular travelllers to London from Madras. "This was really long overdue," says A.L. Mudaliar, chairman, India Cements Ltd, a frequent visitor to London. "This flight will not only help Madras but also attract passengers from the other southern metros like Bangalore, Hyderabad and Cochin," says one travel agent.

New connection. The flights will leave Madras airport every Friday and Sunday night (so that travellers from the other southern states can catch the flight comfortably) and land at London's Heathrow airport at 6 o'clock local time the next morning after a stop-over in Kuwait. From here the traveller can take any of the dozens of connecting British Airways flights leaving London throughout the day for every major city in Europe and the United States. The incoming flight will leave Heathrow on Thursdays and Saturdays to land in Madras on Fridays and Sundays. British Airways certainly has its eyes on south Indian immigrants to the US who account for about 40 per cent of the more than one million immigrants of Indian origin in that country.

The airline has been trying ha many years to get this route. And fo reason. The international air ticket from south Indian centres grew by cent in 1987 over 1986, twice the na average. This upward trend is conti through 1988, mainly in commerci vacation travel. The cargo revenue went up by 8 per cent from 1986 to Also, Madras today is the third-mos ferred destination in India.

K. Shivaraman, manager for Nadu, Air-India, refutes the argu that Air-India will be hit by this de ment and that it tried to stall it welcome this development. This is for the aviation industry. Nobody is to get affected when the cake is g bigger," he says. The airline's source point out that the British goverr has agreed to allow it increased freq on the London-Canada route, as a k quid pro quo arrangement. And April next year the airline will in all ability introduce the new 747 Comb operate the Madras-London route t

ESAB INDIA LIMITED

Regd. Office: Bank of Baroda Building,
Bombay Samachar Marg,
Bombay 400 023.

Public Issue of 30,04,993 Equity Shares of Rs. 10 each for cash at par.

ESAB INDIA – In Brief

- Promoted by ESAB Holdings Limited, U.K., a wholly owned subsidiary of ESAB AB, Sweden, the world's largest manufacturers of welding and cutting equipment, consumables and accessories.
- Equity participation by ESAB HOLDINGS Limited, U.K.,to the extent of 39.90%.
- No gestation period.
- Import substitution products for application in High Priority growth sectors, like Off-Shore Drilling, Aeronautics, Energy, Petrochemicals, Ship Building, etc.
- World leaders in welding technology, coming to India for the first time as manufacturers.
- Easy liquidity – listing on Bombay and Calcutta Stock Exchanges.
- 80L, 80M, Wealth Tax exemptions and other tax benefits.
- Eligible Issue under Section 80 CC.

ISSUE OPENS ON OCT. 3, '88

Soon, ESAB India can be yours.

Plan is 500 such vessels. This was announced in 1986. Yet, almost two years on, the incentives have not proved powerful enough to attract entrepreneurs.

Only two ventures have materialised so far. One, with an investment of about Rs.1 crore, is between the Japanese group Shimizu and the Madras-based KSK Fisheries. The other is between Hyderabad's Indus Foods Ltd, promoted by NRIs, and the reputed American company van Camp Seafoods. This venture involves a sophisticated vessel intended mainly for tuna fishing, which is worth about Rs.4.5 crores, with a helicopter and helipad thrown in. Three more applications are awaiting clearance — one for a collaboration with a Greek company, and two others with Australian companies.

Incentive schemes. Under the incentive scheme no duty needs to be paid on import of capital goods, raw materials and consumables. Second-hand vessels, not more than eight years old, can be brought in too. The *pari passu* condition (ie, the obligation to order one vessel from an Indian yard for every two vessels imported) is not applicable to the EOU scheme. To ease things further, the government promises faster clearance of licences for such units.

Why then are there so few takers? Financial aid from banks or institutions like the Risk Capital Foundation or the Technology Development Corporation is virtually non-existent. They regard deep-sea fishing as too risky. Banks, in particular, fight shy because of their bad experience with the seafood processing industry.

The government too offers no subsidies — mainly because deep-sea fishing is not classified as an industry. Were that to happen — and the Marine Products Export Development Agency (MPEDA) is pushing towards that — the incentives offered to an industrially backward area (eg, a 25 per cent investment subsidy) would follow.

Inputs are costly too. In India the cost of high-speed diesel is twice the international price — about Rs.3,900 per tonne, compared to Rs.2,000 in the foreign market. The government allows Indian companies a drawback of Rs.300 per tonne, but there are so many conditions attached to the scheme that it effectively bars several fishing companies. Even the subsidy on diesel announced recently applies only to generating sets of land-based processing factories.

Lack of infrastructure. Yet another problem is poor infrastructure. Most of the country's fishing harbours have not been developed to suit deep-sea vessels. Only Visakhapatnam has been developed fully — it currently sustains most of India's 148 deep-sea vessels.

On the west coast, the important centre of Cochin presents a pathetic picture. Its fishing harbour can still accommodate only the smaller vessels. This is despite promises by the government to dredge and equip the Cochin harbour for deep-sea vessels. An even more glaring disincentive is the rate that the Cochin Port Trust charges for wharfage. At 1.5 per cent of the total value of the catch, it amounts to a penalty for the more efficient fishing units. No other port pegs its rates to the value of catch. It is always related to vessel size and the number of days of berthing.

Seafood exports have traditionally concentrated on shrimp. Overfishing has seriously affected shrimp resources. An estimated 4.47 million tonnes of other varieties of seafood is exploitable every year in India's 200-mile Exclusive Economic Zone. About half of this is within the coastal area upto a depth of 50 metres. Yet only 1.5 million tonnes or 35 per cent of the total potential is currently being exploited. To reorient fishing activity to go for tuna, squid, cuttlefish and deep-sea lobsters more deep-sea vessels are needed.

■ K.G. KUMAR

MOLASSES EXPORTS

Short of storage space at ports

The government's decision last year to allow, in principle, the export of molasses has created problems which the sugar industry had not envisaged when it welcomed the move.

While the industry's export agency, the Indian Sugar Import and Export Corporation (ISIEC), has been given the mandate to export 400,000 tonnes of molasses, it lacks adequate storage capacity at the major ports. The bulk of storage capacity is controlled by Indian Molasses Company Private Ltd (IMCPL).

The IMCPL has reportedly lobbied actively with the government to either declare it as the sole exporter, or place molasses export under OGL, release some quantity to be exported by the IMCPL, leaving the remainder to the ISIEC and other parties. The industry is firmly against such an arrangement. "Unfortunately, IMCPL controls 93 per cent of the storage capacity for molasses at the country's 11 major ports," says a sugar industry spokesman. Therefore the ISIEC has been hard-pressed to make alternative storage arrangements at the ports to ensure lifting of the excess molasses from the mills in view of the ensuing crushing season in October.

Storage capacity. The ISIEC maintains that IMCPL has empty capacity which it refuses to make available. The IMCPL has 35,000 tonnes capacity at Madras, 15,000 tonnes at Kandla, 15,000 tonnes at Calcutta, and 5,000 tonnes at Mangalore. According to sugar industry sources, all this capacity was created exclusively for the storage of molasses, when the IMCPL was acting as an STC agent, and was given the necessary land by the respective port trusts. The result is that today the ISIEC has not been able to hire storage space at Bombay. Also molasses from Tamil Nadu will have to be routed through Mangalore since IMCPL reportedly has a monopoly of molasses storage space at Madras, thereby resulting in an additional transport cost of Rs.300 per tonne.

"While the ISIEC has made alternative arrangements at Goa, Mangalore, Haldia and Calcutta, a permanent solution has to be found to the storage problem," comments S.L. Jain, secretary-general, Indian Sugar Mills Association (ISMA).

The ISIEC is also making arrangements to build storage tanks at Kandla, Mangalore and Haldia with a total capacity of 50,000 tonnes, which will be ready in a few months. So the problem will be alleviated to some extent. However, the sugar industry's main worry seems to be that in the interim the IMCPL may move the authorities to either grant it sole exporter status or have molasses exports placed under OGL.

Sugar production touched a record 9.15 million tonnes in 1987-88 and is expected to reach 10 million tonnes next year. The surplus molasses, according to the government's estimates was 1.5 million tonnes, and is expected to remain at this level next year. Says Ram V. Tyagarajan, president, Indian Sugar Mills Association (ISMA), "A solution has to be found, since the export of molasses is likely to be an ongoing exercise with the continuing rise in production of sugar".

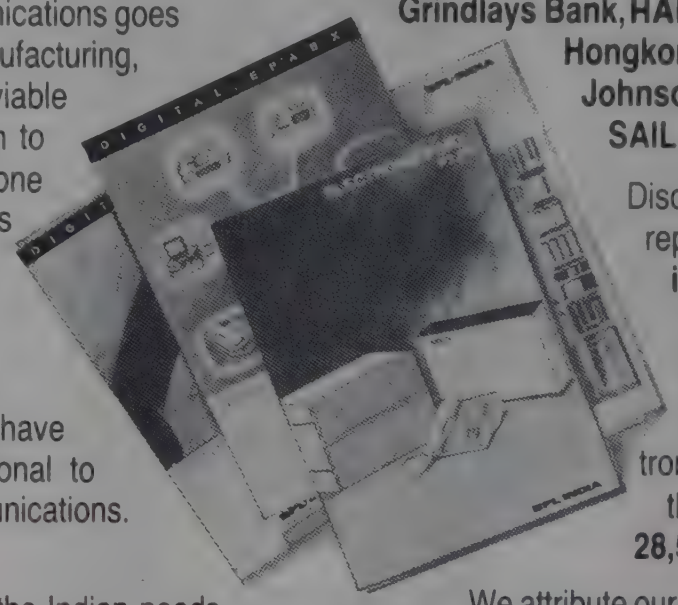
IF YOUR QUESTION IS A 4-LINE EPABX, OR A 4000-LINE EPABX, THE ANSWER IS...

CENTRAL MARKETING ORGANISATION: BPL Centre, 14, Church Street, Bangalore 560 001 Phone: 572321/2/6, Telex: 0845-2511, Cable: PHISILAB

SALES OFFICES: * BANGALORE [illegible] 98/574787, Telex 0845-2511, Cable PHISILAB * BHOPAL 282 [illegible] * BOMBAY [illegible] Cable PHISILAB * CALCUTTA 248 [illegible] Phone 4316[illegible] 445566 [illegible] Cable PHISILAB * COCHIN [illegible] * COIMBATORE [illegible]

Without an extensive product range, your needs are often only half-met. That's why, at BPL, we strongly believe that what you need in telecommunications and what you get should be one and the same. No compromise. So when you buy an EPABX, we make sure you get just the one you need. From a 4-line EPABX to a 4000-line EPABX. And everything in between. We make them all. And coming up soon are the Key Telephones. All customized to suit your needs and budget. We also offer you over a dozen EPABX models. Plus, special packages for hotels and banks. And networking solutions for private business communications over leased P&T channels.

We can. Because our experience in telecommunications goes back a long, long way. More than 16 rich years. Manufacturing, installing and maintaining. Shining with many an enviable precedent. From Power Line Carrier Communication to PAXs and EPAXs to EPABXs to Networking. Each one a telling proof of our ability to understand user needs and come through with cost-effective solutions.



Electronics: Our Only Business

We could. Because electronics is our business. Our only business. Since 1963. And in 25 years, we have covered quite a wide territory in it. From professional to consumer electronics. Computers to telecommunications. And equipped to excel in all.

Like a mature R&D to identify and respond to the Indian needs, especially in telecommunications. Coupled with integrated manufacturing facilities that make all the critical components in-house. So exceptional quality is ensured all the way. And a large, modern plant that guarantees excellence through an incomparable range of the best in hi-tech machinery.

Like a Multi-layer Professional Grade PCB plant with Through-hole Plating facilities. Plastic Injection Moulding. Genrad In-circuit Component Tester. Ageing Chambers. And many more.

The Best Prefer The Best

So at BPL, we manufacture the best communication equipment. From 4 to 4000-line EPABXs to Push Button Telephones. **The best in the Indian business have settled for our range. American Express, Bank of Tokyo, Berger Paints, BHPV, Blue Dart, Canara Bank, CMC, Colgate Palmolive, Deccan Herald, FICCI, FSL, Grindlays Bank, HAL, Hindustan Cocoa, Hindustan Lever, Hongkong Bank, Indian Bank, Ion Exchange, Johnson & Johnson, Lipton, Madura Coats, SAIL, The Hindu... just to name a few.**

Discerning clients satisfied enough to place repeat orders. In fact, **1 in every 3 orders is a repeat order.** All relying only on BPL when the market place is awash with innumerable brands.

Naturally, today we have more electronic exchange installations countrywide than any other. **Over 650. With over 28,500 lines.**

We attribute our growing goodwill in the EPABX market to our comprehensive approach. R&D, in-house manufacturing, extensive product range and countrywide maintenance. An approach time-tested and refined by our long years in telecommunications. So, to all your questions in telecommunications, there can be just one reliable answer: The BPL Answer.

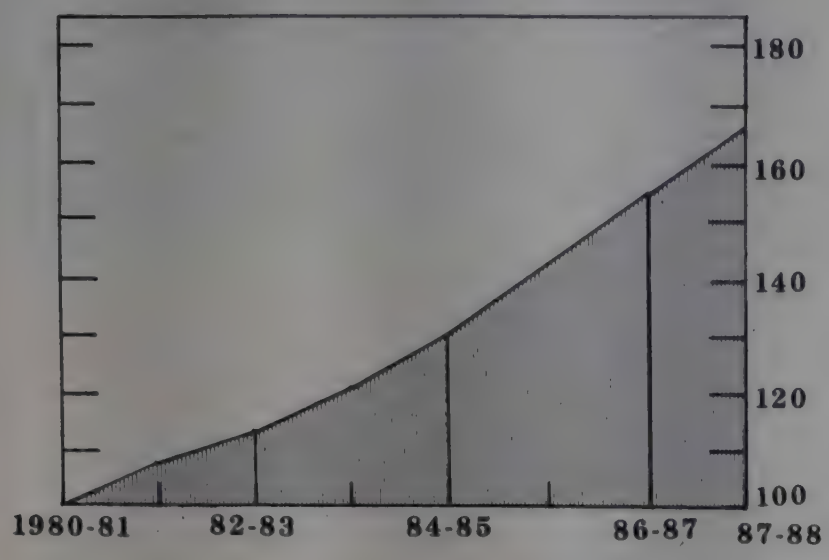
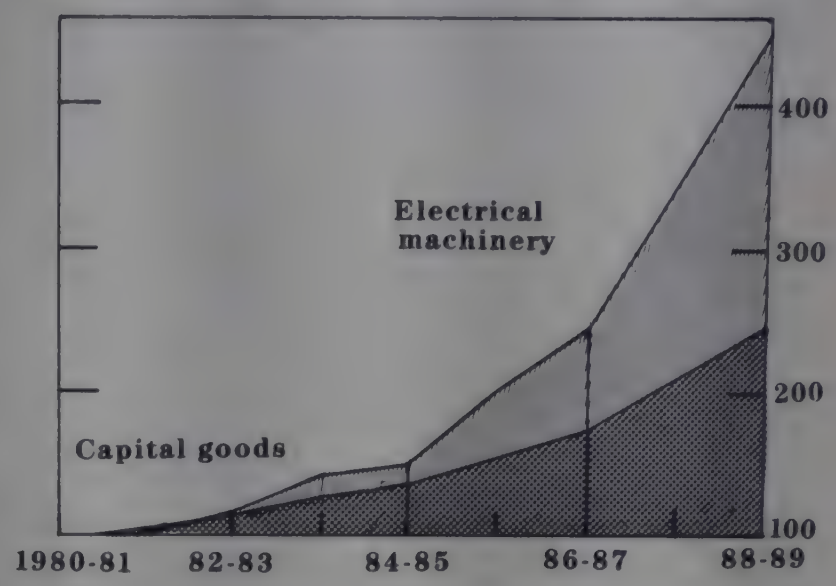
Index of industrial production



The index of industrial production — all industries — has risen from 109.3 in 1981-82 to 166.7 in 1987-88, which works out to a compound annual rate of growth of 7.6 per cent. The projected growth rate for 1988-89 is about 10 per cent. The laggard in industrial production is manufacturing, which grew at around 7 per cent per annum. Mining and quarrying registered the highest growth rate of 9.4 per cent.

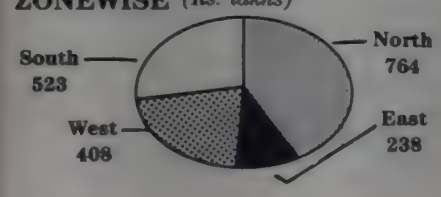
Index of capital goods (year ending March)



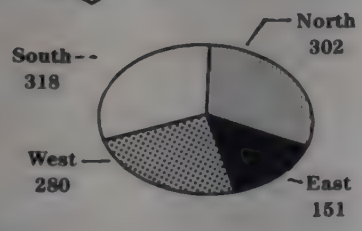
The capital goods index has grown by a factor of two between 1980-81 and 1987-88. It is expected that this sector will grow by 22 per cent in 1988-89. This high growth in the capital goods sector is due to the phenomenal growth in the electrical machinery sector, which has grown by 40 per cent in 1987-88 and is expected to grow by 35 per cent in 1988-89.

View of analgesic (pain killer) market

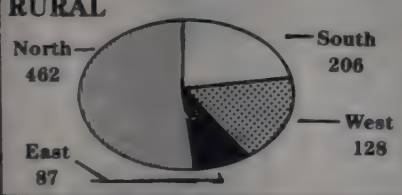
ZONEWISE *(Rs. lakhs)*



URBAN

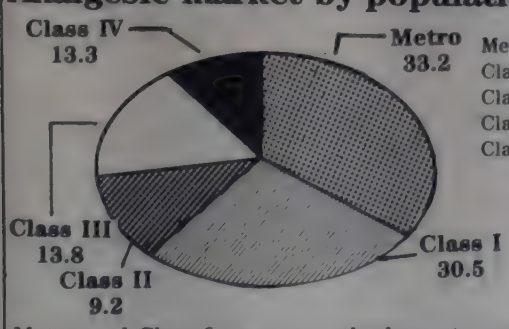


RURAL



The total market for analgesics (pain killers) has been estimated at 11,593 lakhs tablets valued at Rs.1,934 lakhs. The urban sector accounts for 54 per cent by value and 51 per cent by volume. Thus showing the significant contribution of the rural sector. North zone is the leader in the all India market.

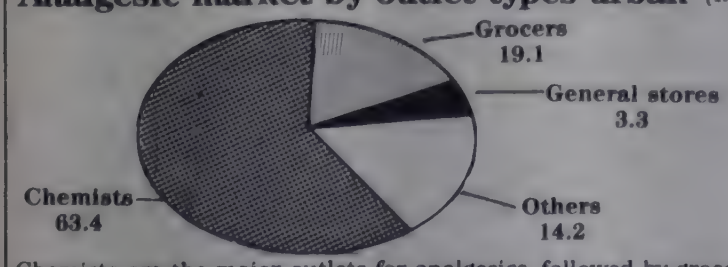
Analgesic market by population strata *(Rs. lakhs)*



Metro	Above 10 lakhs
Class-I	Between 1 lakh & 10 lakhs
Class-II	Between 50,000 & 1 lakh
Class-III	Between 20,000 & 50,000
Class-IV	Between 20,000

Metro and Class-I towns are the largest contributors to the analgesics market. They together account for 63.7 per cent of total sales by value.

Analgesic market by outlet types urban *(Rs lakhs)*



Chemists are the major outlets for analgesics, followed by grocers. Together they account for 82.5 per cent of total sales by value.

ZFWZ 08 EZ CNC

Latest technology Gear Hobbing Machine

The machine cuts cylindrical parts of up to 800 mm diameter by the hobbing method.

The all-CNC control — without indexing and differential change gears — also permits specific gear cutting technologies to be applied including the single indexing method.

Because of very short change-over times, the ZFWZ 08 is ideal for service in small and medium-batch productions.

The SFWZ range also includes machines for hobbing of spur gears of up to 10000 mm diameter.

ICICI study: sales and profits dip

There was a slowdown in growth of sales and value of production in 1986-87, virtually no increase in gross profits and a decline in profits both before and after tax as well as in retained profits. This was revealed in an analysis done by ICICI on its 417 assisted companies. However, capital formation, especially in plant and machinery, continued at an accelerated pace, despite the decline in profitability. Sales increased by 8.6 per cent against 15 per cent in the previous year. Growth in sales during 1986-87 was the slowest in the five year period 1982-83 to 1986-87.

The increase in expenditure at a rate faster than income put pressure on profit margins. The increase in total expenditure was mainly due to higher costs of raw materials and power and fuel. The gross profit margin (gross profits as a percentage of net sales), which rose steadily over the last three years to 10.5 per cent in 1985-86, fell to 9.7 per cent in 1986-87. In absolute terms profits before tax, profits after tax and retained profits declined significantly in 1986-87 over the previous year. There was a decline in operating profits because of higher interest burden. Profit after tax declined by as much as 19.3 per cent in 1986-87. This steep fall in margins had an impact on retained profits, which fell to Rs. 588 crore in 1986-87, a decline of 30.4 per cent during the year. Interestingly, retained profits had almost doubled from Rs. 464 crores in 1983-84 to Rs. 846 crores in 1985-86.

Due to the fall in profitability, the return on capital of the 417 companies, the report points out, fell to a year low of 13.6 per cent in 1986-87. The maximum number of companies (299) showed a return of between one and 20 per cent.

However, surprisingly dividends as a percentage of profit after tax increased marginally to 40.1 per cent from 38.9 per cent in 1985-86.

From the sample of 417 companies 113 companies skipped dividend as against 109 in 1985-86. But the number of companies that declared a dividend between 10 and 20 per cent increased by nine to 195. Therefore, in a year when profits declined, dividend was either maintained or hiked by many companies. This is a clear indication that with the increased reliance on capital markets, companies need to keep their investors happy even in bad years.

The tempo of capital formation was maintained in spite of the decline in profitability. The bulk of the increase was in gross fixed assets formation, which accounted for 83.5 per cent of the gross capital formation. Plant and machinery accounted for 80 per cent of the increase in gross fixed assets formation and 83.5 per cent of the gross capital formation. Plant and machinery accounted for 80 per cent of the increase in gross fixed assets. In contrast, the rising trend in the growth of inventories over the last three years was curtailed and inventories rose by only 8.5 per cent, as against 18.4 per cent in the previous year. With the decline in the growth of inventories, its proportion in current assets also declined and that of cash and bank balances increased.

The all-industry average of growth in net sales and gross profit in 1986-87 was 8.6 per cent and 0.6 per cent respectively. Going by this benchmark the industry groups power generation and distribution, rubber products, automobiles and cycles, glass and pottery and electrical equipment manufacturers performed rather well.

Capacity utilisation during 1986-87 was about the same as last year (about 75 per cent). However, rubber products and the sugar industry registered a significant increase during the year. The number of companies with less than 50 per cent capacity utilisation increased to 53, as against 44 in 1985-86.

Considering that the need to export is becoming an urgent necessity the 264 exporting companies did not perform very well. Exports increased by only 2 per cent to Rs. 1,242 crores in 1986-87.

If current trends in corporate performance are anything to go by 1987-88 should once again see a revival in sales and profitability.

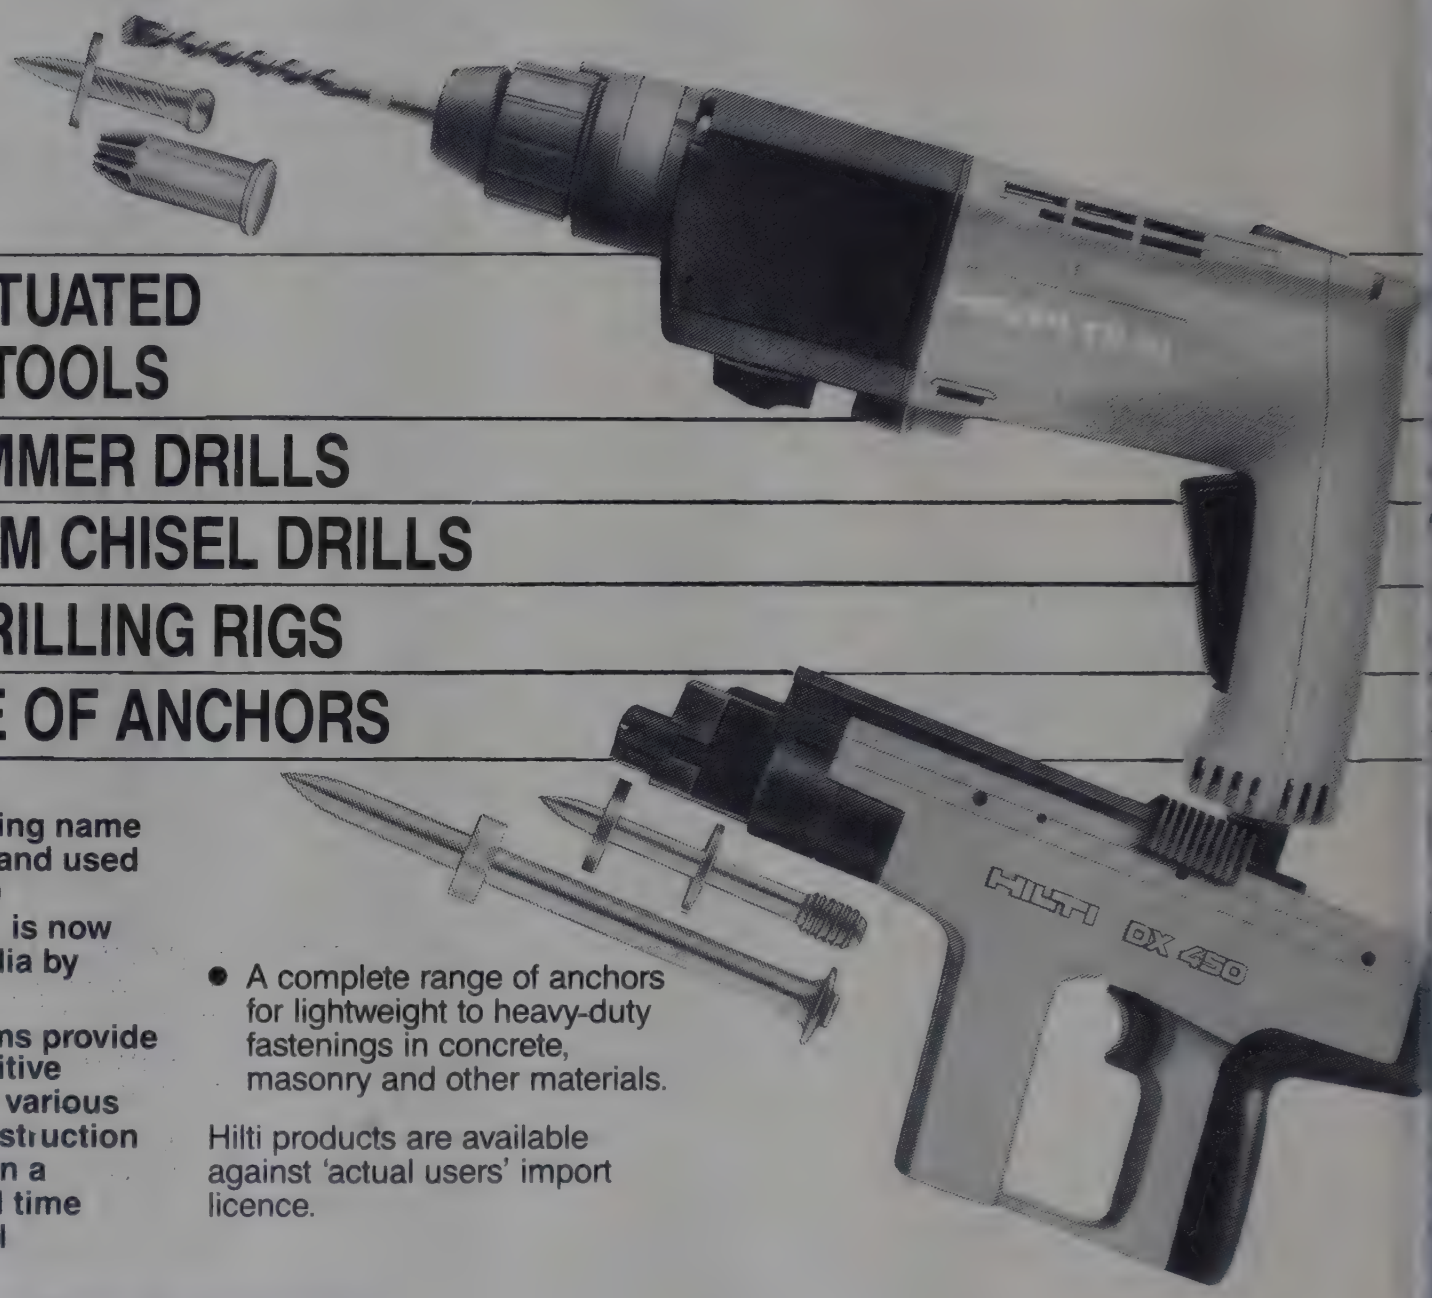
FROM THE WORLD'S MARKET LEADEI

HILTI



POWDER ACTUATED FASTENING TOOLS

ROTARY HAMMER DRILLS

HAMMER CUM CHISEL DRILLS

DIAMOND DRILLING RIGS

FULL-RANGE OF ANCHORS

Hilti, the world's leading name in fastening systems and used extensively in over 80 countries world-wide, is now being marketed in India by Greaves.

Hilti Fastening Systems provide extremely rapid repetitive fastening resulting in various operations in the construction industry being done in a fraction of the normal time taken by conventional methods.

Hilti Fastening Systems consist of:

- Powder actuated fastening tools where no external power is required and can be used for fastening on concrete and steel.
- Rotary hammer drills use a rotary and hammering action to drill holes, ideal for concrete and masonry work.
- Combi hammer drills can be used as a rotary hammer drill as well as a chisel for breaking work.
- Diamond drilling rigs for drilling precision holes in heavily reinforced concrete.
- A complete range of anchors for lightweight to heavy-duty fastenings in concrete, masonry and other materials.

Hilti products are available against 'actual users' import licence.

BROUGHT TO YOU BY GREAVES

Take it or leave it

Speaking a few months ago to the Confederation of Indian Engineering Industry the prime minister asked why direct foreign investment into our economy was minuscule compared to inflows into other developing countries. Foreign investment in ASEAN countries, he pointed out, was around Rs.15,000 crores per year. India, on the other hand, received only a paltry Rs.100 crores.

"The level of external borrowings," Rajiv Gandhi said, "has expanded over the past several years reflecting our growing needs and absorptive capability. But the flow of direct investment has remained very small. Yet direct investment has some advantages over loans. Loans have to be repaid whether investments are productive or not. But direct investment leads to outflows only after there is production and then too only when there is a profit." He did not add that repatriation of profits only takes place after a considerable contribution has been made to the exchequer by way of excise duty and taxes nor that direct foreign investment is generally the best form of technology transfer because the investor has a greater stake in making a go of the project than in cases where there is only a one-shot sale of technology.

There are, in fact, several reasons why the inflow of direct foreign investment into India, to use the prime minister's words, is minuscule and it must be readily admitted that not all of these have a bearing on goverment policy.

India over the years has consistently got an undeservedly bad press in the West. The reportage, with rare exceptions, has been confined to riots, natural disasters and epidemics that rock parts of India from time to time but which in themselves are of no great significance when the overall size and stability of the country is taken into account. Most potential investors are aware of the problems in Punjab and the north-eastern states, and of the drought conditions that have prevailed during the last few years, but few know of the millions who have died in not-so-distant famines in China. Secondly, our own raucous free press, essential for other reasons, does little to inspire investor confidence. China and most ASEAN countries, because of the absence of genuine democratic institutions tend to give an impression of greater stability, law and order, and prosperity than actually exists. With India the opposite is true. The Philippines and South Korea are prime examples of countries where foreign investors have in the past been lulled into a false sense of security by sympathetic overseas reporting and the absence of internal critical comment.

These reasons apart, there are deterrents on the policy plane. The most important is our own ambivalence on the whole question of foreign investment. The government in the past has never been certain whether it wants foreign investment or not and this is true even today. While in international forums we repeatedly invite foreign capital, on other occasions we are reminded that the East India Company originally came to India as traders. An irrational suspicion of foreign companies (whether genuine or motivated) still clouds our political thinking. Are we Allende's Chile? Is it conceivable that Hindustan Lever or ITC can influence the results of a municipal election, leave alone toppling the country's government?

Translated into policy this fear has restricted foreign equity to 40 per cent in projects other than hi-tech or export-oriented industries. There is no logic to this restriction. If the rationale is that it will restrict profit remittances, then the extent of commercial borrowings will correspondingly increase. If the aim is to dilute foreign control over the concerned company, experience shows that a 40 per cent holding almost always gives you full control. Most Indian companies have complete management control with holdings of 30 per cent or less. One may ask: if a 40 per cent equity stake gives management control, why does this limitation deter foreign investors from coming in? Unfortunately, it is not the facts of the matter that count, but the perception and in this case, the foreign investor's perception. Many companies, particularly US companies, feel comfortable only if they have a 51 per cent holding. Since in fact it makes little difference to us one way or the other, why not permit a 51 per cent foreign holding in all areas where we wish to have foreign investment? The governments of ASEAN countries and even China actively woo the foreign investor when they are convinced that such investment is needed; we, on the other hand, have always followed a lofty "take it or leave it" approach.

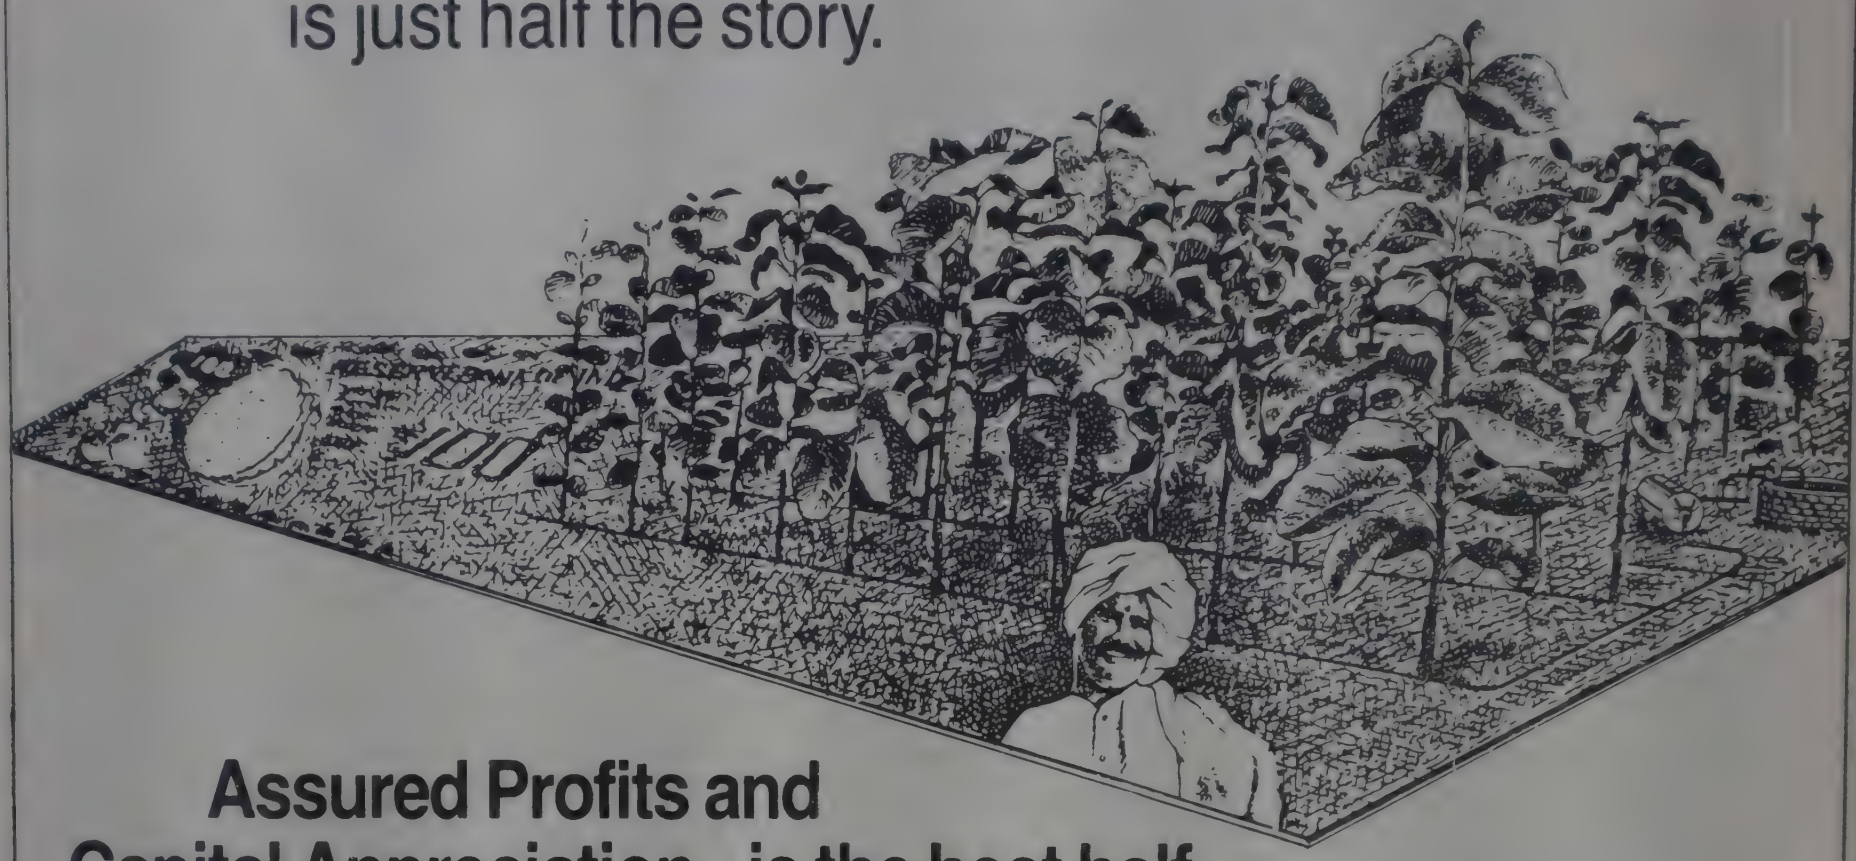
A further obstacle to foreign investment is that the areas of entry are too restricted. It is interesting to note that the Soviet Union under perestroika permits joint ventures in any sector of the national economy: in industry, trade or transport. Joint ventures have already been established to manufacture clothes and a variety of chemicals and to set up restaurants, which would normally not be permitted in India. We do not have to open the doors to any kind of foreign investment, but there is need to considerably widen the area where such investment is permitted from the current 31 sectors and look at individual propositions from two main points of view viz, technological upgradation and exports. Happily a move in this direction is already being made with the addition of food processing to the list. We need to take a second look at export commitments which have, in the past been wholly unrealistic. An export commitment of 25 per cent of turnover will in most cases lead to a reasonable balance of foreign exchange advantage.

Many foreign investors are deterred by the inadequacy of our patent laws, which in general provide a safeguard of 14 years for most industries (usually reduced effectively to ten years because it takes three or four years to get a patent registered) and seven years for the food and drugs industry (reduced to three years for the same reason). Again this is a case of mistaken perception because, in fact, there is hardly any infringement of intellectual property rights in India and in any case such infringement is difficult without the requisite inflow of technology. Though joining the Paris convention may not be the answer, we should consider adding to the life of the patent the time it takes to get the registration without altering the period of duration.

Finally, despite the procedural simplification that has taken place, there is a need to speed up the process of decision-making. The delay of two years in the clearance of the PepsiCo case is perhaps understandable because it got politicised. But even the relatively straightforward Adidas-Bata collaboration was finally approved in an acceptable form a full 26 months after the application.

■ A. RANGANATHAN

Adventing modern technology in agriculture to increase yields and conserve water... is just half the story.



Assured Profits and Capital Appreciation...is the best half.

A part of the dynamic Jain Group of Jalgaon – having deep roots in agriculture and a proven track record of over 25 years – Jain Irrigation is all set to revolutionise irrigation in India

Jain Irrigation has collaborated with Hardie Irrigation of Italy, the world leaders in irrigation systems The Jains are pioneers in promoting scientific and integrated approach and have established an extensive product range

The system facilitates slow but continuous availability of water, so that plants do not suffer from shock or stress and their even growth is guaranteed The result – increase in yields upto 230% and savings in water upto 80% have been recorded.

To date the Company has crossed Sales Turnover of Rs. 325 lacs with Pre-Tax Net Profit of Rs. 11.64 lacs.

Having achieved more than 40% indigenisation the Company expects to be independent of imports by the end of next year. Production has already commenced in rented premises.

The construction of the factory is in progress on the Company owned 10 acre plot at Bambhori Dist . Jalgaon and is expected to be complete in all respects by June,1989.

With a project outlay of Rs. 7 8 crores, the Company is confident of achieving a Sales Turnover of Rs 10 crores in the coming financial year This would only represent 0.01% of the total market potential.

The demand is expected to accelerate with the Central Government contributing 50% of any subsidy declared by a State Government for purchase of this system. Maharashtra, Karnataka, Tamil Nadu and Gujarat have taken the lead by declaring subsidy up to 50%. More States are expected to follow suit.

With an assured and untapped market Jain Irrigation is set to blaze a trail in the annals of agro-based industries. With this market potential – the future promises more than just rich yields

ISSUE HIGHLIGHTS

- ★ **PROMOTERS :** Jains of Jalgaon having deep roots in agriculture & proven track record of over 25 years.
- ★ **PRODUCTS :** A state-of-the-art irrigation system which guarantees increase in yield upto 230% and savings in water upto 80%.
- ★ **PROSPECTS :** Untapped Market – The estimated Turnover of Rs 10 crores in the coming financial year is only 0 01% of the market potential
- ★ **COLLABORATORS :** James Hardie Irrigation (Italy) SRL – World patent holders and the largest manufacturers of Micro Irrigation Systems.
- ★ **Assured Dividend in the very first year.**
- ★ **Eligible for 80CC and Wealth Tax benefits.**
- ★ **Listing on Bombay, Ahmedabad and Pune Stock Exchanges.**

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

Registered Office: Road No 3, Banjara Hills, Hyderabad - 500 034

Dr. A. Besant C. Raj, DBA (Harvard)
Chairman

Chairman's Speech - Fourth Annual General Meeting

It gives me great pleasure to welcome you to the Fourth Annual General Body Meeting of the Institute. During 1987-88, your Institute has made significant progress in terms of academic work, student enrolment and other activities.

The CFA Programme

The CFA Programme launched by the Institute in 1985, with the support of the Institute of Chartered Financial Analysts, USA, has been receiving excellent response. The cumulative enrolments have gone up from 5588 in 1987 to 7975 during this year. The profile of the CFA students indicates that the programme continues to attract professionals from different disciplines and executives employed in banking sector, industry and government.

You will be happy to know that the major All-India Financial Institutions like IDBI, ICICI, IFCI, UTI, and several private and public sector organisations are reimbursing fee (paid to the Institute) to their employees enrolled in the CFA Programme.

The Institute has so far conducted four examinations for Preliminary and Inter Levels, in the last two years. The pass percentage at Preliminary Level varied between 40-50% and at Inter Level it was around 25%.

Development of study material for Inter Level was completed during 1987-88. Study material for the Final Level was partly completed during 1987-88. The remaining material is expected to be completed during early part of this financial year.

The Institute has organised oral coaching classes for the benefit of our students at New Delhi, Bombay, Madras, Hyderabad, and Bangalore during the year.

The DBF Programme

I am happy to report that the Institute has developed The DBF Programme (Diploma in Basic Finance) for the benefit of Corporate Executives, Businessmen and Government Administrators.

This programme will be useful to those in Production, Marketing, Personnel, Materials Management areas to help them to develop a deeper understanding of the financial implications of these operations. The DBF Programme is essentially a short duration correspondence course with four compulsory modules and two optional modules. The Institute is receiving excellent response from all over India, for this programme announced in April 1988.

Seminars/Workshops

In April 1987, a one-day Workshop was organised on Zero Base Budgeting. This Workshop was attended by a large number of participants from Government Departments, Public Sector Undertakings and Private Sector Companies. The workshop was inaugurated by Shri K. Subramanyam, IAS, Principal Secretary, Food and Agriculture Department, Government of Andhra Pradesh.

The Institute invited Prof Marshall E Blume, Director, Rodney L White Center for Financial Research, The Wharton School, University of Pennsylvania, to deliver the Foundation Day Lecture on June 27, 1987. Prof Blume chose 'Recent Trends in US Capital Markets' as the topic for the lecture. CFA students, members of academic community, senior government officials, and managers from the corporate sector attended this lecture.

CFA Annual Number

The Institute has brought out the CFA Annual Number with articles on various topics in Financial Management, contributed by distinguished academicians and practitioners.

Second All India CFA Chapters' Meet

Second All India CFA Chapters' Meeting was organised on December 26, 1987 at Hyderabad. Representatives of students' chapters from various centres attended this meeting. On the same day a Seminar was organised in which technical papers on 'Leasing Industry in India - History, Problems and Prospects' and 'Zero Base Budgeting - The Indian Experience' were presented and discussed.

Global Affiliations

You will be happy to learn that ICFAI has been admitted as a member of the Asian Securities' Analysts Council (ASAC) representing India. ASAC was founded in 1979 to promote a more co-operative relationship among securities analysts, societies in Asia, to develop analytical techniques and promote the social status of securities analysts, and generally to contribute to the role of securities analysts. At the 9th ASAC Conference held during September 1987 at Taipei, I presented a technical paper on 'Venture Capital in India' on behalf of our Institute.

ICFAI has also been admitted as an institutional member of the International Council for Distance Education (ICDE), Norway. ICDE is an association of educators and educational organisation dedicated to furthering the aims and methods of distance education throughout the world. ICDE is affiliated with UNESCO as a Category B Non-Governmental Organisational.

ICFAI has also become a member of The International Coordinating Committee (ICC) consisting of Financial Analysts Federation, USA, European Federation of Financial Analysts and members of Asian Securities Analysts Council. Among other things, ICC is evolving a common curriculum for financial analysts on a world-wide basis.

Future Programmes and Plans

The first batch of CFAs is expected to come out in April/May 1989. As the number of qualified professionals in this new discipline grows, the Institute is contemplating to draw an ambitious plan for academic enrichment and professional advancement for the CFAs. This would include continuous upgradation of the study material and addition of some more subjects to be offered as electives. The Institute is also in the process of developing a Corporate Data Bank to help research in the main thrust areas of the CFA Programme and to provide needed information to Corporate Entities and the Investors.

Acknowledgements

I wish to take this opportunity to thank the members and ICFA, USA, for extending enthusiastic support for the development of our Institute. I would like to particularly thank Mr Alfred C Morley, President, ICFA, USA, for the interest he is taking in developing our Institute and a professional cadre of Financial Analysts in India. I would also like to thank my colleagues on the Board, the members of the Academic Council, the various academic experts who are developing the study material and members of the staff of ICFAI for their continued support and help.

Post Pepsi fizz

The excuse of the prime ministerial foray into Punjab helped push the Pepsi proposal through. The final clearances from the Cabinet Committee on Economic Affairs came through with a haste that more significant decisions often deserve but rarely receive. Yet, it would be wrong to call the Pepsi decision "hasty" since the project has been in the governmental wringer for several years now. Tough going for a mere Rs.22-crore investment backed by a pugnacious state government, a business house and an unstoppable multinational. But "hasty" it has been labelled already since the Pepsi decision seemed to scramble through with just a

day to spare before the prime minister arrived in Punjab.

The few reports that are available of what transpired in the final hearings before Pepsi received its seal of approval suggest that the decision was not exactly unanimously welcomed. At least one minister enquired almost innocently why a Pepsi project was not planned for every state if indeed Tytler's claim of Rs.22 crores generating 20,000 jobs was correct. The sarcasm was lost on the other ministers who lapsed into silence after Tytler's impassioned plea for the project that cynics always insisted was the purpose behind creating his new ministry.

Now that the decision has been taken and Tytler has had his moment of glory on Doordarshan, the government seems relieved that the decision seems to have been accepted rather tamely. But going by all indications, after the present lull is over there are likely to be reactions from elsewhere. Already, firebrand George Fernandes has thundered that "the next government will toss Pepsi out".

Under such circumstances and particularly since Voltas chairman Tobaccowala promises to be "free with information", the Pepsi proposal is expected to be in the public eye for a long time.

There are moves underway to cope with the adverse publicity that may arise because Rajiv's government proved accommodating to a multinational. One is to find an acceptable brand name for the cola that Pepsi may bring to the market before the next elections. The prime minister's office, which seems to have suddenly realised the importance of domestic brand names, is understood to have expressed concern on this front. So, if caution finds expression in action, though Pepsi may be in, the opprobrium of being called a Pepsi Cola government may still be averted.

When's the poll?

For the last few weeks there have been those in the capital who have been speculating about the date of the next general elections. Some believed that the Gandhi government would attempt to seek a new lease of life by marching to the hustings at the start of 1989. That, they claimed, would help limit the damage caused by the series of self-inflicted disasters that this giant majority has been irreparably damaged by.

Now however, the moment seems to have passed. Current thinking in Congress circles is that there is no reason to push elections forward substantially. With the Defamation Bill fiasco barely behind them, party strategists have once again begun the lengthy exercise of surveying the mood of the electorate. This new-found penchant for opinion surveys seems to be gradually taking root in the party organisation. While two recent surveys have shown a decline in the prime minister's personal popularity, the more serious surveys being planned now may address new issues.

Be that as it may, the message from New Delhi seems to be that the next elections may be held only a month or two before they are actually due. In the meantime, there seems to be some understandable hesitation about getting over some by-elections which are now due. Since even the party faithful agree that victory is likely in only one of the seven seats, nobody quite wants to take the risk. But, at least for the moment, solace is sought in the psephologists' thesis that by-elections are not necessarily good pointers to the mood of the nation when a general election is held.

Situations vacant

Should S.S. Nadkarni, chairman of the IDBI, be satisfied with a three-month extension of his term? Can Col Wahi, chairman of ONGC, be overjoyed that he has two months left of his extension? Can giant financial institutions and public sector corporations be run by individuals who are kept in constant insecurity? The answer to each of the above is, of course, a resounding no.

But, does anybody care? The answer, if one were to go by the behaviour of the central government, once again seems to be no. The complaints that a large number of public sector companies are starved of a stable top management seem to consistently fall on deaf ears. The most glaring case, which now shows hints of being resolved is, of course, the top posts at STC and MMTC. While there are rumours that a common chairman may now be named, in this case the reasons for such an appointment seem to be expediency rather than deliberate policy.

The debate over whether STC and MMTC ought to be merged gradually after the initial appointment of a common chairman is now sought to be short-circuited by the proposed appointment. From all available indications in the commerce ministry, the issue of merger or even common management for the two giant trading corporations is a subject that is yet to be resolved. And the current proposal, to appoint B. Ratnakar, formerly of Canara Bank, seems merely an expedient means of using available talent to fill as many gaps simultaneously as possible. While it is true that within the administrative ministry, commerce in this case, control is usually exercised on both organisations by one official, the vexatious problems of inter-organisational relations as well as relations with the ministry are unlikely to be eased unless these basic issues are addressed.

Even if such tricky matters are left unresolved, somebody somewhere will have to take quick action to fill the nearly 38 top management posts in the public sector. Today the public enterprises selection board seems to be both ignored in the advice it renders as well as stymied in its attempts to attract talent. All of which bodes ill not just for the public sector but also for the national budget — which last year had piously promised that public sector losses would cease to be a constant drain on national resources. With the increasing length of the "situations vacant" column, all such hopes may well remain just that.

■ DILIP CHERIAN

OFF THE SHELF

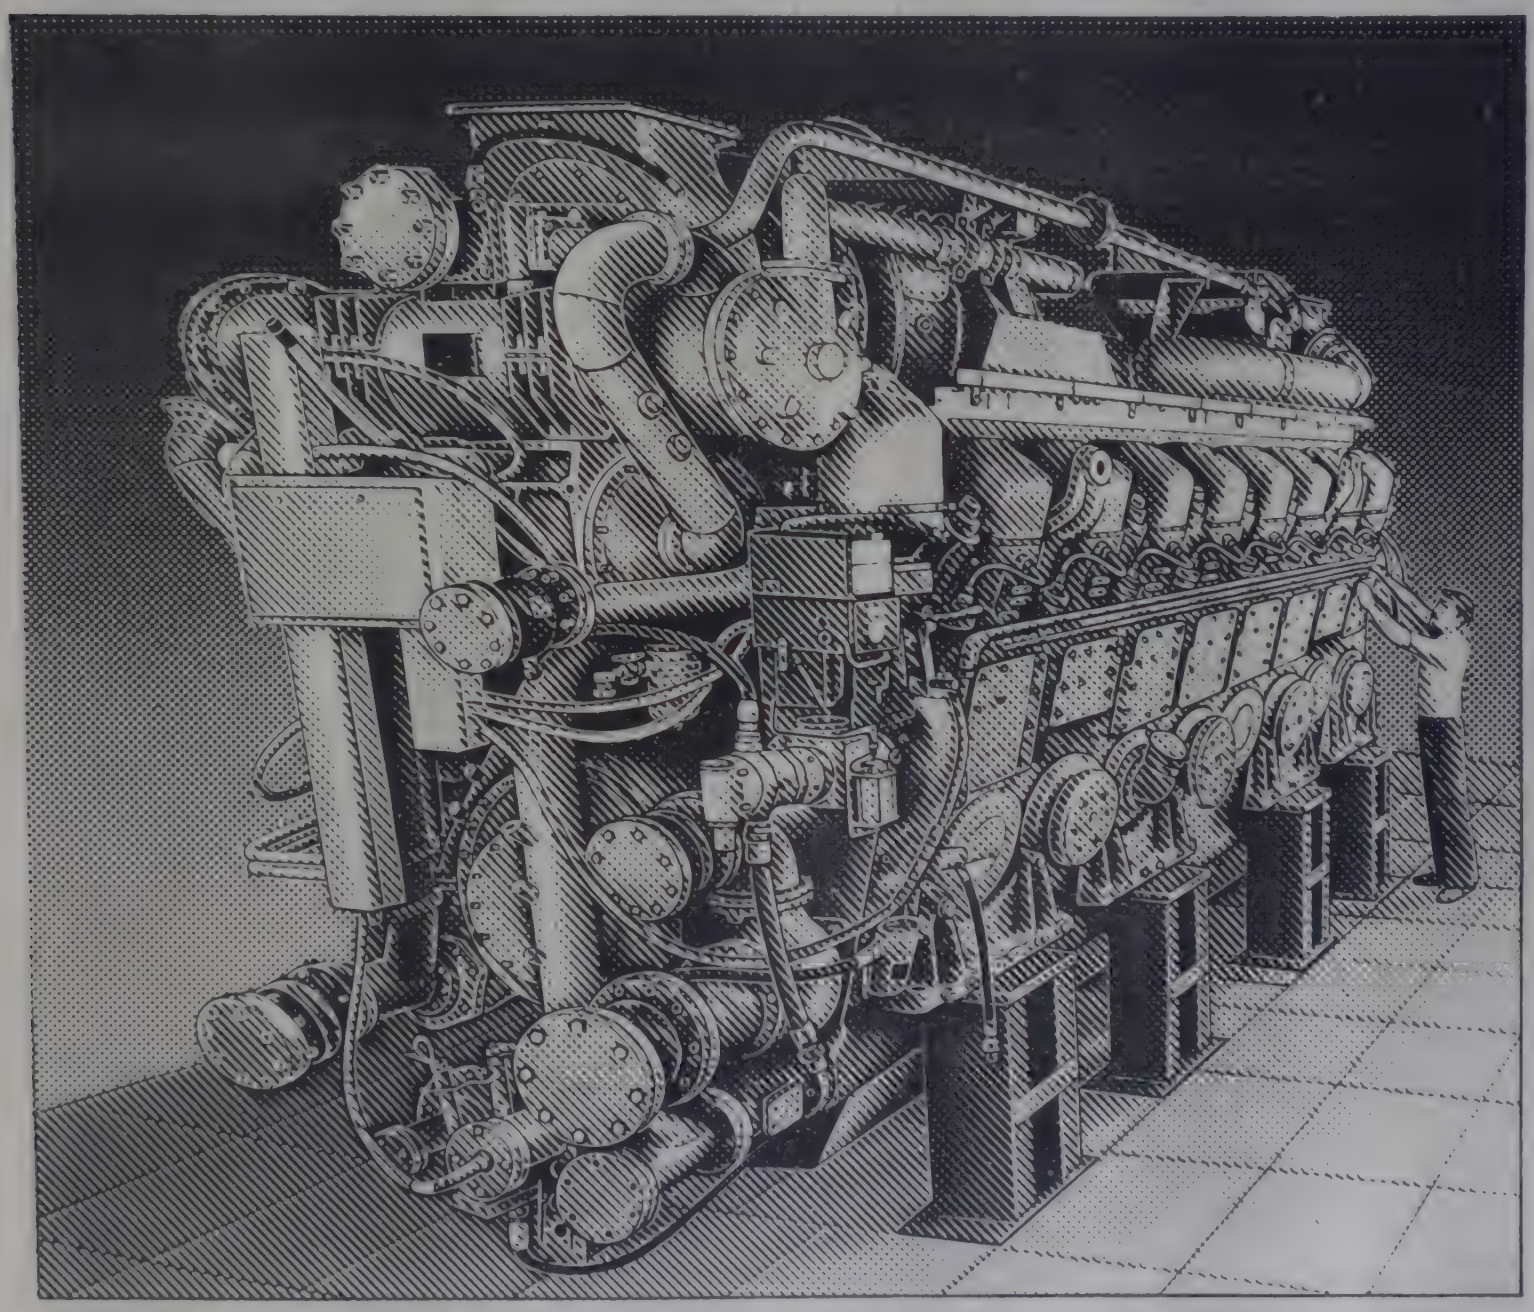
Perhaps a slight advertising overstatement. But truly, you can pick up the 2.2 to 4.5 MW Kirloskar Pielstick, one of the world's finest and most proven continuous duty diesel generating sets as easily as alphonsos in season. Naturally, without an import licence. Not even for spares. And in rupees too. And yes, there's one other continuous thing. Our after-sales service.

The Kirloskar Fielstick. A real warhorse. Ask the Indian Coast Guard. They've been flogging it in six off-shore patrol vessels day and night for years now. And the Indian navy is installing it on several Corvettes and other naval vessels. So have a great number of the most advanced navies in the world. Now tell us, what better proof can you get of continuous duty operations?

And on land? You know what the power situation in the country's like. And it's not likely to improve for a long time to come. So a whole lot of industries like Andhra Cement, Orissa Sponge Iron, BEML, Bihar Sponge Iron

are picking it up as their prime mover. And discovering that they'll never be short of power again. Ever.

Why don't you call Mr. S. Goswami at (0212) 55341/ 56454? Or better still, kill two birds with one stone, have a cup of tea with us at Kirkee, Pune 411 003, and see this magnificent genset? That's if one is still left on the shelf.



Kirloskar Pielstick... you'll never be short of power again.

NOTICE

It is hereby notified for the information of the public that Shaw Wallace & Company Limited proposes to make an application to the Central Government in the Department of Company Affairs, New Delhi, under sub-section (2) of Section 22 of the Monopolies and Restrictive Trade Practices Act, 1969, for approval to the establishment of a new undertaking/unit/division. Brief particulars of the proposal are as under:

1.	Name and Address of the Applicant.	**Shaw Wallace & Company Limited** **4 Bankshall Street** **Calcutta 700 001**
2.	Capital Structure of the Applicant Organisation.	**Authorised** **Preference** **Rs. 1,00,00,000** **Ordinary** **Rs. 39,00,00,000** **Subscribed** **Preference** **Rs. 75,00,000** **Ordinary** **Rs. 12,00,00,000**
3.	Management Structure of the Applicant Organisation indicating the names of the Directors, including the Managing, Wholetime Directors and Manager, if any.	**Mr M R Chhabria, Chairman** **Mr K R Chhabria, Managing Director** **Mr R M Moghe** **Mr A K Das** **Mr B S Mehta** **Dr R S Tarneja** **Mr R S Mama** **Mr M L Bhakta** **Mr B Sanghavi**
4.	Indicate whether the proposal relates to the establishment of a new undertaking or a new unit division.	**New Undertaking.**
5.	Location of the new undertaking unit division.	**Place/Town** **Bhankerpur** **Tehsil/Taluk** **Dera-Bassi** **District** **Patiala** **STATE: PUNJAB**
6.	Capital structure of the proposed undertaking.	**Same as in item 2.**
7.	Incase the proposal relates to the production, storage, supply, distribution, marketing or control of any goods/articles, indicate:	
	i) Names of goods/articles	**Potable alcohol from non-molasses based raw materials.**
	ii) Proposal licensed capacity	**50,00,000 Bulk Litres per annum.**
	iii) Estimated Annual Turnover	**Rs. 7,56,30,000**
8.	In case the proposal relates to the provision of any service, state the volume of activity in terms of usual measures such as value , income, turnover etc.	**NOT APPLICABLE**
9.	Cost of the Project	
10.	Scheme of finance, indicating the amounts to be raised from each source.	**Finance will be arranged partly from internal sources and balance by raising loans.**

Any person interested in the matter may make a representation in quadruplicate to the Secretary, Department of Company Affairs, Government of India, Shastri Bhavan, New Delhi, within 14 days from the date of publication of this Notice intimating his views on the proposal and indicating the nature of his interest therein.

(retd)

SHIPBUILDING

Making it cost-effective

Speaking at a recent seminar organised by the College of Insurance, Vasant J. Sheth, chairman of The Great Eastern Shipping Co. Ltd, said, "A shipyard is a drag on the Indian economy and at best should only serve the purpose of building ships required by the Indian Navy. It would certainly be undesirable either to expand or to continue commercial shipbuilding."

It has been observed that Indian shipowners take every opportunity to publicly decry indigenous shipbuilding efforts, forgetting that their own operational efficiency compared to foreign shipping is also wanting. They have had to repeatedly approach the government to bail them out. An entrenched lobby exists to ensure that ships are acquired from abroad because of the hidden financial advantages in such transactions.

Both the shipping and shipbuilding industries have been a drain on the Indian economy. The net worth of shipping companies as a whole is negative, despite the easy terms loans and fiscal concessions given to develop them. The losses of the shipping industry are much more than those of the shipbuilding industry, and yet the former continues to be given more favoured treatment.

The government of India has sunk over Rs.2,000 crores into mercantile marine shipping with little prospect of earning the necessary returns in the immediate future. The planning group on shipping has estimated that the industry will require Rs.8,000 crores between now and 2000 AD for replacement and expansion. Such outlays can only be accepted in the strategic interest of the country and cannot be justified on economic considerations.

The Industrial Policy Resolutions of 1948 and thereafter have categorised shipbuilding as a Schedule 'A' industry and thus in the priority sector. The founding fathers obviously understood the importance of the shipbuilding industry in the economic and industrial development of a nation. It is not only the direct benefit which accrues from this labour-intensive assembly industry which is important, but also the spinoffs through the development of downstream industries. Unfortunately shipbuilding has been given stepmotherly treatment and the development of shipbuilding ancillaries and supporting industries like power plants, instrumentation, and marine equipment has not been given any attention.

Shipbuilding on the basis of very limited capacity is not cost-effective or practical as it leads to the non-availability of indigenous industrial support. For example, the Cochin Shipyard was set up at a cost of Rs.122 crores for building only one large ship at a time. Further expansion has not been considered and thus the yard's flexibility in shipbuilding has suffered. Such limited capacity also leads to some specialised machines installed at high cost remaining idle for a major portion of the year. In addition, India has practically no design capability for merchant shipbuilding, although a national shipbuilding design centre has been on the anvil since 1972.

When South Korea set up its shipbuilding industry in the late sixties, it developed very big yards with the capacity to build about 4 million DWT annually and repair 20 ships concurrently in one yard. At the same time it set up related industries for the production of steel plates, main engines, diesel alternators, specialised pumps, marine valves, etc. to support the shipbuilding industry so that it got off the mark quickly and did not have to rely on imports except for a few specialised components. Singapore port, which has concentrated on ship repair rather than shipbuilding, has 13 floating dry docks with the capacity to repair 40 ocean-going ships. Thus its repair yards can support one other by catering to specialised facilities. In such a situation, spares, paints etc are available off the shelf and there is no necessity to import them as in India.

Indian shipyards have been losing money because of our unremunerative pricing formula. Ships have to be sold at the international price plus a subsidy of 30 per cent (20 per cent paid by the government and 10 per cent by the buyer). This does not compensate for the cost/price gap (the cost of inputs is more than the IPP), because the Korean and Japanese shipyards are selling ships at marginal cost, with a covert subsidy from the state. The 30 per cent subsidy cannot take care of the conversion cost in the high-cost Indian economy. When ships in India are sold at a loss, working capital has to be obtained at commercial rates leading to a further loss.

The complaint of shipowners is that they have to pay 10 per cent more than the IPP which itself is not the lowest international price of an efficient yard but is the average of the prices in various countries. In a situation where the value of the rupee is falling compared to international currencies, this may still mean that the price paid to an Indian shipyard is less than that to an efficient Far Eastern yard. For example, the value of the yen more than doubled between March 1985 and March 1988. Thus if a vessel had been ordered from a Japanese yard in 1986

The author is chairman and managing director of the Cochin Shipyard

Wadia Building, 17/19 Dalal Street, Fort, Bombay 400 0

against an SDFC loan at a cost of Rs.20 crores (2,880 million yen), the contract price of a similar vessel in India would have been about Rs.23 crores. The total cost to the shipowner by the time of delivery in 1988 would be about Rs.26.3 crores (2,880 million yen) for the Japanese vessel and a maximum of Rs.24.6 crores for the Indian vessel. Moreover the interest rate for Indian built vessels is lower.

The position becomes worse if the ship is obtained on deferred credit provided by a foreign bank. There is a case where a shipowner took delivery of a vessel from Japan in 1984, with loan repayment in yen still in progress; as a result the total cost in Indian rupees will be more than double that envisaged at the time of signing the contract in 1981. This is not an isolated case. Even earlier many shipping companies had faced similar problems and the government had instituted SAFAUNS, which indirectly subsidises foreign shipyards at our expense.

A grouse of Indian shipowners is that the period of construction in Indian shipyards is two to three times as long as that of Japanese and Korean shipyards. By the time an Indian shipyard delivers the ship there is a built-in obsolescence in the vessel. They have to pay higher interest on the stage payments made during the longer construction cycle, and some equipment has completed its guarantee period by the time the ship is delivered because of the long storage period in the shipyard. Most of these complaints are justified, but the complaint that the workmanship of Indian-built ships is not as good as that of ships obtained from abroad, can be dismissed; the quality is as good if not better. Complaints about quality standards of construction which are not entertained by foreign shipyards have to be taken note of and attended to in India. Disputes on quality control when the shipowner does not want a vessel due to a changed shipping scenario leads to the hold-up of construction and is one of the reasons for slower construction.

Then there is the question of working capital. In foreign yards the state provides funds through the shipyard for financing ship construction, so that a ship can be sold to any shipowner in the world on a deferred credit basis. In India the financial institution directly provides 90-95 per cent of the funds to our shipowners for either an Indian or a foreign-built ship. As the shipowner's personal stake is very limited, he can and does delay stage payments and thus slows down ship construction, particularly when he is in no hurry to take delivery and has placed an order merely to meet a *pari passu* obligation. To overcome these problems, it is essential that Indian deferred credit should only be for Indian-built ships and routed through the shipyard.

Basically Indian shipyards need to become time conscious. Even if all the equipment is available in the yard, we are not able to match the productivity of foreign countries. The work culture is poor, leading to low production. For this we have to blame equally the worker, the supervising officer, and the management. Complacency, job security, indiscipline, bureaucracy and lack of commitment are some of the reasons for the inefficiency of the public sector, of which the shipbuilding industry is a part.

The need of the hour is therefore to remove all bottlenecks which delay ship construction in India. First of all, productivity must improve through better management and greater dedication from the employees. To improve material availability, as a short-term measure, the import of the requisite equipment should be allowed without the DGTD/DOE clearance. However, long-term efficiency can only be achieved through developing ancillaries and supporting industries in the neighbourhood of the shipyards. If we build faster, we will get more orders and if we get more orders, ancilliary development can take place leading to better material availability. Because shipyards are located far from each other, they should have reasonable capacity to generate ancillaries. Thus a shipyard's infrastructure must be increased even if it needs diversion of capital from other sectors.

Prompted by the world recession in shipping and over-capacity in shipbuilding, the economist will naturally seek justification for the recommended increase in investment. The fact is that India now carries less than 25 per cent of its trade in its own bottoms. Ideally, every maritime nation should carry 50 per cent of its overseas trade and 100 per cent of its coastal traffic in its own ships. Even without taking replacement of our aged ships into account or the need to carry 50 per cent of our traffic, our shipping fleet needs to be expanded by 2 million GRT to meet Seventh Plan targets. It must be realised that what is ordered today will be available only in the Eighth Plan period by which time our shipping needs will increase further.

The question is whether such ships will be built in India or abroad? Most European countries have closed down their shipyards. The Japanese are increasingly turning to high technology industries and consequently they will gradually relinquish their interest in heavy industries like shipbuilding which are labour intensive. If India shows the correct determination and leadership, our shipbuilding industry can certainly become cost-effective. Today our shipping companies procure less than 10 per cent of their requirement from Indian shipyards. Thus the world recession in shipping should not affect the long term development of either Indian shipping or the Indian shipbuilding industry.

BUSINESS IN PUNJAB

Amazing resilience

In the midst of the political uncertainties, the uneasy peace, the frequent disruptions of daily life, the businessman in Punjab hangs on tenaciously. It may not be "business as usual", but trade and industry in the troubled state have managed to show an amazing resilience

"Industry in the Punjab is not buoyant, people are making very hard efforts to keep it alive."
S.S. Barnala, former chief minister of Punjab

"People don't want to lose their lives. They have also to live. So they carry on their normal business and avocation."
J.F. Ribeiro, adviser to the governor, Punjab

"People outside have exaggerated notions of the dangers over there. I see Punjab as an attractive scene of business activity as anywhere else."
L.M. Thapar, industrialist

Last week large areas of Punjab lay under flood waters. It is too early to assess the extent of the damage. Yet everyone believes that Punjab's agriculture, its mainstay, is strong enough to withstand this threat. In fact over the last five years in spite of troubled political conditions, agricultural output has continued to grow. Outside Punjab, many people fail to appreciate that industry too has proved to be remarkably resilient. This is true not only in the relatively trouble-free southern districts, but also in the trouble-prone border districts.

Today, the bazaars of all the towns and cities in Punjab are well stocked again. Shops do brisk business. On the surface life is normal. The larger-than-life presence of the police and para-military forces is, however, a constant reminder that things are far from normal with the state. "Local people have to exist. Therefore they buy their daily requirements. So if you go to any bazaar, you will find things normal," says S.P. Virmani, president of the Punjab Federation of Industry and Commerce.

For prominent businessmen and industrialists in the districts of Amritsar, Gurdaspur, Ferozepur, Kapurthala and Faridkot, however, threatening phone calls and extortion by terrorists have been a common experience. Confides Amritsar-based Ashok Sachdeva, president of the district Rice Millers Association, "Nearly 90 per cent of the rice millers have paid extortion money to the terrorists. The amounts have varied between Rs.2 lakhs and Rs.5 lakhs per mill. Often, truck-loads of paddy and rice have been hijacked. Both Hindus and Sikhs have been targets. Nobody has dared to complain to the police for fear of death. We have not even told our family members."

Sachdeva spends about Rs.2 lakhs a year on security. He has 20 security guards in his employ to protect family members and the mill workers. He himself moves about without a bodyguard so as not to attract attention. His only protection is a licensed pistol which, he agrees, has merely psychological value and would be of no use whatsoever against a terrorist attack. He escaped a murderous attack on new year's day.

The situation is, however, not so bad in the southern districts. In fact, Amarinder Singh, the Akali leader, refuses to believe that there has been any extortion at all. "There has not been any direct attack as such on business and industry," he says.

According to a spokesman for Colgate-Palmolive (India) Ltd the country's leading manufacturer of toothpaste it is business as usual in Punjab. The company has not encountered any problems in sending its sales force all over the state or in distribution. Moreover, in the regular meetings the company has with its sales force, selling in Punjab has never been perceived to be a problem. The company's Young India Project, a public service programme for dental care in rural areas has similarly not been affected. These views are echoed by Hindustan Lever, the giant soap and detergent manufacturer. Lever has a factory at Rajpura, Punjab and maintains a large distribution network in the state. Company spokesmen say that sales and distribution have never been affected.

Normal life, business, and industrial activity have been affected badly over the last few years in Amritsar and Batala, which have faced the brunt of extremist violence. Amritsar, known for its boisterous people who loved to keep late nights and eat out, bears a deserted look after 7 pm. But it is not unusual to see families eating out in dhabas late at night. They accept as a matter of fact the BSF patrols on the street.

According to Piara Lal Seth, president, Shastri Market Association, the biggest mart for shawls and blankets in northern India with an estimated turnover of more than Rs.200 crores a year, not only have the traders been badly affected by frequent bandhs and curfews but they have been the main target of terrorist bullets. Says Seth, "The recent bomb explosion at Katra Ahluwalia which was the biggest unofficial stock exchange in

JURAN.

The Mantra That Won Yokogawa Hewlett Packard Japan's Most Coveted Industrial Award – The Deming Prize

The Rags to Riches Story

When Yokogawa Electric Corporation and Hewlett Packard set up their joint venture in Japan, the fledging company languished during its first decade in both product quality and profitability.

Until 1975.

After which the upswing in the performance of Yokogawa Hewlett Packard was dramatic, almost magical. Just 7 years later, in 1982, the company won the Deming Prize.

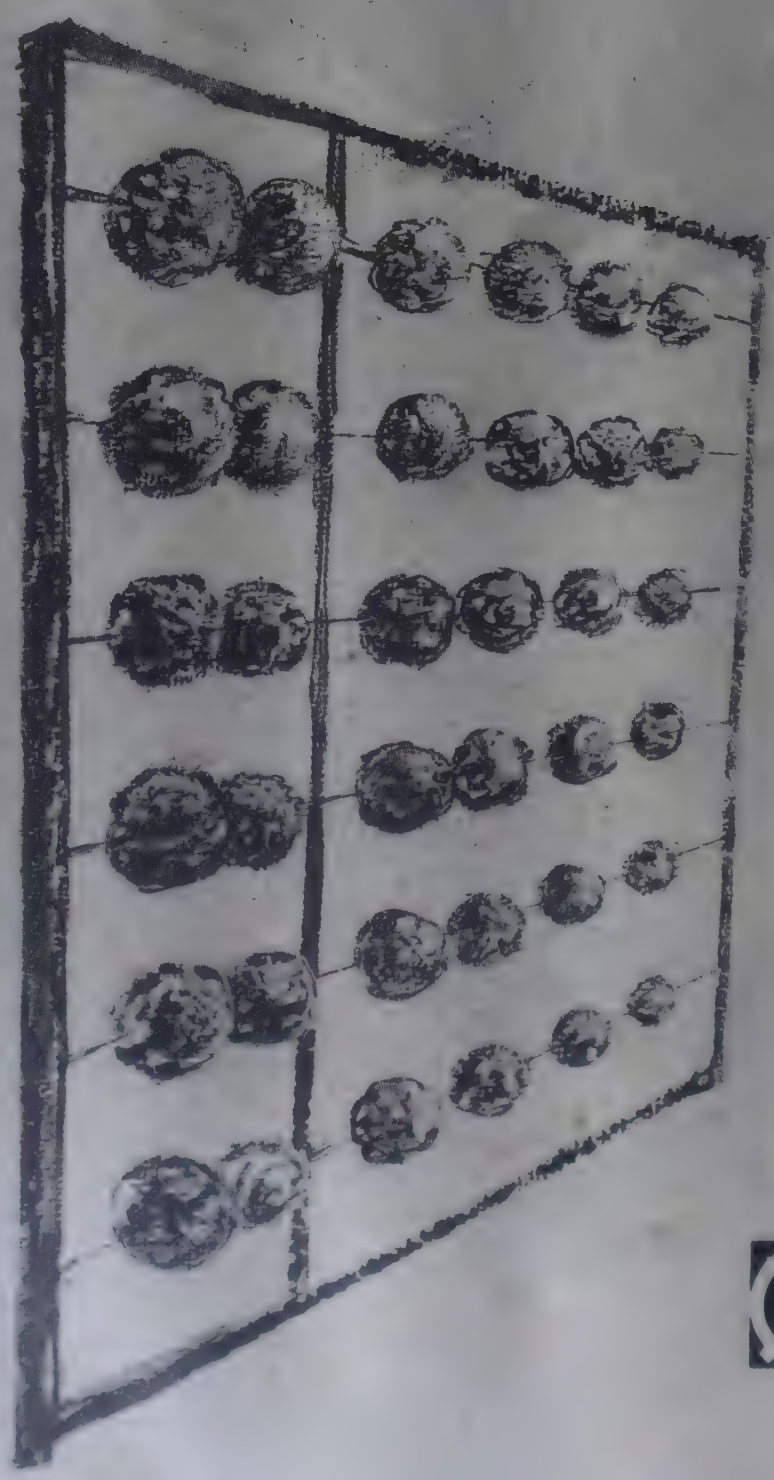
By 1985, profits had soared 244% and market share shot up 195%.

The mantra that brought about the turnaround was no esoteric chant from the Far East but an organized method – TQC (Total Quality Control), developed by Dr. J. M. Juran, the man who taught Japan how to manage for quality.

The Quality Guru

Dr. J. M. JURAN.
A preacher of the virtues of quality. Recepient of an extraordinary honour for a quality consultant:
The Order of the Sacred Treasure awarded by the Emperor of Japan for "...the development of Quality Control in Japan...".

His decades of experience now find expression in a range of management-oriented products and services, based on the principle of the JURAN TRILOGY®
* *Quality Planning*
* *Quality Control*
* *Quality Improvement*



Juran on Quality Improvement

This is a structured process that helps establish annual *improvement* in quality and annual *reduction* in quality-related costs.

Juran on Quality Improvement assures immediate and continuing results that impact favourably on the bottom-line. This programme has had a successful track record at Du Pont, AT&T, IBM, Tata Steel, Volvo, Hindustan Motors and Boeing, to name some.

Let Juran Work for You

Fourteen international affiliates form the global network of the Juran Institute. Qimpro Consultants Private Limited, Bombay, is part of this network which provides access to Dr. Juran's programmes, including Quality Improvement.

Amritsar really broke our backs. Nearly 50 brokers died in the explosion with their business secrets. Traders from outside, who till recently used to call themselves our brothers, now demand bank drafts, whereas earlier they were only too eager to give us all the credit we desired."

Mohan Mehra, the biggest trader of green leaf tea in Amritsar, says that more than 60 per cent of the business has been lost to Jammu and Kashmir. Green tea trade in Amritsar is worth around Rs.100 crores per annum. Said Mehra: "If you get a buyer, it is very difficult to get a good price and if you get a good price, it is very difficult to get payment in time."

Not only have traders and dealers from outside stopped coming to Punjab but business transactions with villages have been reduced to the absolute minimum. Wholesalers are afraid to go to the village to collect their dues from village traders and shopkeepers. Says Rajesh Bajaj, distributor of Racold Electrical Appliances and Televista TV sets, "Our sales are down by at least 50 per cent. Earlier, we used to give liberal credit to villagers. Now the question does not arise. However, we still give credit to our urban customers," he says.

An immediate effect of extremist violence in Amritsar and other industrial and business centres was that credit disappeared from a market where private finance had always played a critical role. As Seth points out, it was normal for the urban and rural rich to invest in Amritsar's trade, when money went abegging at 1 per cent per month. Today, credit is not available at even two-and-a-half per cent per month. "The normal market channels have got disrupted," concedes A.S. Chatha, industry secretary of the Punjab government. Earlier, outsiders used to sell raw materials to the Punjab industrialists on credit and buy goods in cash. Now raw material has got to be obtained against cash and goods sold on credit. The result is an acute scarcity of working capital.

Says Narinder Kumar Jain, managing partner, Jaykay Fabrics, Amritsar, "At any given time, we used to have Rs.1 crore of advance credit with us. It is now down to zero. Money was easily available at 18 per cent per annum. Today, even at 30 per cent, it is not forthcoming."

INSTITUTIONAL CREDIT

The banks have made some attempt to fill the credit void. The Reserve Bank announced a package of concessions, relating to increases in working capital limits by 50 per cent, reduction in margins and bank charges. However, the experience of some of the industrial units with the banks has been quite frustrating. Says Piara Singh, managing director of Auto Piston Manufacturing Company, Amritsar, "We had applied for a working capital term loan of Rs.25 lakhs in September 1987. Till date, not a single paisa has been forthcoming though the bank has agreed to pay in principle." Piara Singh's production is down by more than 50 per cent. Last year his company suffered a loss — for the first time since its inception in 1958. Says Jain, "It is the duty of the government to provide an environment in which I can exist and, if it fails to do so, it does not have any right to recover any taxes from me." According to him, not more than 20 per cent of the credit gap has been filled by the banks.

Yet, in spite of these unsettled conditions, the total advances of the banks in the state have increased by 14.33 per cent, from Rs.2,463 crores in the year ended December 1986 to Rs.2,817 crores in the year ended December 1987. Deposits have grown from Rs.5,407 crores to Rs.6,484 crores in the same period. Recovery was 55 per cent.

Funds from financial institutions have also come in substantial quantities. An uptrend is noticeable from 1985, an indicator of the creation of fixed assets. The Industrial Development Bank of India (IDBI) is treating the entire state as a backward area. Its funding shot up to Rs.155 crores during 1986-87 from about Rs.79 crores in the previous year. The Industrial Finance Corporation of India's (IFCI) lending also went up from Rs.15 crores in 1984-85 to nearly Rs.45 crores in 1986-87. Loan sanctions shot up from Rs.10.55 crores in 1984-85 to Rs.63.62 crores in 1987-88, disbursements from Rs.10.66 crores to Rs.37.56 crores. S.K. Tuteja, managing director, Punjab State Industrial Development Corporation (PSIDC), feels that "investment decisions here are not solely guided by law and order problems". He has a target of Rs.1,000 crores of investment in the state in the next three years.

Spearheading the state government's "lure investment drive", is the Punjab State Industrial Development Corporation, which offers an attractive package of services right from identifying a suitable project and procuring a letter of intent to extending a term loan upto Rs.90 lakhs and even participating in equity. It also extends seed capital up to Rs.15 lakhs on behalf of the IDBI and a term loan of upto Rs.100 lakhs for the expansion or diversification of existing ventures. (The last scheme has only recently been introduced under the label of IDBI equipment refinance plan.)

Then, there is the Punjab Financial Corporation which takes care of the needs of the small and medium units and the Punjab Small Industries and Export Corporation, which provides multi-faceted services — from developing and giving plots on a "no profit no loss" basis to budding entrepreneurs, undertaking procurement of raw materials, and finding marketing outlets at home and abroad.

These claims of the government agencies are borne out by S.L. Srivastava, former chairman of PSIDC, who points out that none of PSIDC's joint sector partners has pulled out. In the past five years the

corporation has implemented some of its largest projects worth Rs.120-125 crores each compared with Rs.5-6 crores earlier. Amongst the major projects are: a Rs.80-crore picture tube project with JCT; a Rs.120-crore polyester project, also with JCT; a Rs.120-crore acrylic fibre project with R.P. Garg of Steel Strips; the Rs.70-crore Oswal-Agro project in Sangrur district; and soda ash and caustic soda projects totalling Rs.100 crores in Nangal. "And yet, if we tell people there are no difficulties, they are just not willing to believe us," says Srivastava.

The state government's data on revenue accruals show a buoyant trend. The growth in revenue collection was 22 per cent in 1985-86, 18 per cent in 1986-87 and 15 per cent in 1987-88. The growth rate in sales tax which remained constant at 18 per cent for some years, touched 22 per cent in 1987-88. However, according to a prominent industrialist with operations in the border districts, sales tax is not a correct index and gives a distorted picture because of the ad valorem arrangement of prices. "The turnover has not increased, only the value has gone up because of the price rise."

Bank security, however, continues to be a serious problem. Says S.K. Uppal, zonal manager, Punjab National Bank, "Unless there is a proper environment of security, banks cannot function effectively. The mobility of our business staff is restricted."

The plight of hoteliers in the state has been pitiable. Investments in construction and buildings made before 1983 are now locked up with little hope of recovery in the immediate future. Mohan International, the only four-star hotel in Amritsar, started business on 13 April 1982, with 96 rooms, but, ended up by furnishing only 39 rooms. Says Sanjay Galhotra, executive, administration, "Our occupancy rate is barely touching 30 to 40 per cent. On days when the law and order situation is bad, the only people we have are some foreign journalists and a few chaps from leading Indian magazines." The hotel is now relying on food sales to keep it going.

Construction activity too has come to a halt. Says Anil Chawla, a leading architect in Amritsar, "I was working almost 18 hours a day before the trouble started. Today I am absolutely idle. Business is down to zero." Yet land prices in Chandigarh, Ludhiana and other parts of the state are their highest ever; though it is true that there are relatively few deals.

"Our industrialists are very hard working"

Interview with **Surjit Singh Barnala,** *former Akali chief minister of Punjab.*

What is the status of industry and business in Punjab today? How has terrorism affected economic activity?

People are making very hard efforts to keep it alive and well. Our industrialists — small, medium and large — are very hard working. They are also good technocrats and engineers.

This year, migrant labour from Bihar and Uttar Pradesh has been very shy of coming because of some incidents of killings. The reduced inflow of labour will affect both industry and agriculture as the wages will go up, thereby, pushing up the cost of production. Businessmen from outside are also reluctant to come here.

Did any cases of flight of capital from the state come to your notice during your chief ministership?

There has been some flight of capital in the sense that a few people have set up another unit elsewhere. Similarly, soon after 1984, there was a visible trend of Sikhs from outside coming back. Some of them left when things improved outside. During the Akali regime, we directly approached industrial houses to invest in the state. I personally requested the Thapars, Modis and Tatas to come to Punjab. They agreed despite the unstable conditions.

With the imposition of President's rule very little is being done in this regard. Punjab needs large industry, both in public and private sector. Compared to other states, the central government has been giving step-motherly treatment to Punjab in the matter of public sector investment which is essential for tackling the problem of unemployment.

What is your answer to terrorism?

Rural educated unemployment is one of the basic reasons for extremist activity. There are a large number of boys who have strayed but are willing to return to the mainstream.

Our people are still the best fighters. Their recruitment to the para military and armed forces has been reduced to a negligible level. So, naturally, they feel unwanted and frustrated. Take them away from here if you like, but recruit them. The only method being adopted is bullet for bullet, which has not succeeded.

the city of the Golden Temple, making on an average Rs.6,500 per month per vehicle, are giving up their once lucrative business. Before Operation Bluestar, 50 taxis used to ply from Amritsar airport. Now the number is down to 18. Truckers too now avoid the trouble spots. They tend to bypass towns like Amritsar and Batala. The availability of trucks has decreased and charges have shot up.

Says Chittaranjan Dass, secretary general, All India Motor Transport Congress: "As the situation worsened from 1981 onwards, it created a sort of panic among outsiders. Direct sales to Punjab consignees nosedived. This resulted in a drastic cut in transportation by road to Punjab by about 20 to 25 per cent." Another transporter from Delhi points out, "The greater the distance from Punjab, the greater is the panic. Business from Delhi has not been affected because people there know that the situation is not so bad. It is only in Ahmedabad and Bombay, where uncertainty is greater and people hesitate to do business with Punjab, that transportation has been adversely affected."

Speaking to a cross-section of people, it becomes evident that trade and industry are suffering not so much on account of actual events in Punjab as because of the fear and uncertainty in the minds of people outside the state. Indeed, the Punjab businessman is paying a very heavy price for the rampant misinformation and disinformation.

Points out V.N. Ojha, managing director, Punjab Small Industries and Export Corporation (PSIEC), "An established

Semiconductors complex Mohali: into the hi-tech age

London-based importer of cycle parts, failed to turn up at Chandigarh on the appointed day. On the telephone later, he told us that somebody in the Indian High Commission had advised him against proceeding to Chandigarh for reasons of personal safety. Our own people are spreading such stories." Ojha has had a tough time convincing businessmen in Bangladesh, where he had led an export delegation in June last, that they could safely do business with Punjab.

The hosiery and textile industry with regular and committed export channels, like the Soviet Union, has not suffered. Small units, which do not have the resources to go out and sell, are facing the brunt, says Shripal Oswal, chairman of Vardhman, Mahavir Mills and Mohta industries.

"Newspapers want to increase sales and exaggerate news to boost them," says one businessman. The distinction between crimes and terrorist crimes is not made. The state home department has issued strict instructions to police officers to carefully sift available evidence to determine whether a crime is terrorist-related or not.

Says Virendra Mohan, managing director of Semiconductor Complex Ltd, "There has been more growth in the last three years than in the 15 years before." He points out that lots of companies like Thapars, Swaraj Mazda, ESPL have come in. He adds that the government support is total. "The atmosphere is very good, once you get over the psychological barrier of entering a disturbed state," he adds with equanimity.

Even so, for outsiders, Punjab is best avoided. The logic is simple: why risk your life at all when business can be done safely and profitably elsewhere. The worst victim of this reasoning has been Batala, where the 2,000 odd industrial units — mostly foundry, engineering and machine tools — with a turnover in excess of Rs.200 crores have a tough time with sales. Batala along with Amritsar is the worst affected in the state. The Akali government of S.S. Barnala had to specially open a showroom in Delhi for Batala units. Says Ashwani Sekhri, president of the Foundrymen Association of Batala, "Prior to 1982, a customer used to come for booking an order, pay an advance of up to 25 per cent, then take delivery by making full payment on the spot. Now 95 per cent of the customers have stopped coming. We have to visit them to book orders. They now want it at their price and impose all sorts of unreasonable conditions." Sekhri, who is also the local MLA and chairman of the Punjab Steel Corporation, says he spent Rs.50,000 last year just on travelling for booking orders. His production, however, has actually increased from Rs.25 lakhs in 1982 to Rs.1.25 crores last year.

According to Sekhri, the inherent strength of Batala's foundry industry has enabled it to face stiff competition de spite great odds. Batala units operate with only one shift whereas earlier they were functioning 24 hours. Indeed, it goes

RADIAL CAR TYRE

"Go after them relentlessly"

Interview with **J.F. Ribeiro,** *advisor to the governor, Punjab.*

Has business and industrial activity in Punjab been significantly affected?
Life in general has not been affected because people have got used to it. They know it is going to be a very long fight. The law abiding citizens are shocked and alarmed by the peculiar phenomenon of innocent killings. They also have to live, so they carry on their normal daily business and avocation.

Will it help if the central government pumps in a lot of investment in the next two to three years to generate large-scale employment?
It will certainly help. Unemployment is one of the big sources of fuel for the separatist movement.

Can industry help contain terrorism in any manner?
Yes, it can. If there is big industry and people are organised in that form, fundamentalism will decrease considerably.

Can you spell out in brief, what shape government policy is going to take in the immediate future?
This is a case of classical terrorism. And, there is only a classical answer to it. The killers are not going to come around, no matter what you do. So you should go after them relentlessly.

As for the rest majority of the people, they will have to be dealt with on the economic and political plane. Eventually, every solution will have to be political.

What kind of political solution do you have in mind?
There is a great advantage in the restoration of the electoral process. To start with, we can have municipal elections. At one stage, we thought of doing it last year. We were prepared, the police was also prepared for it. But political parties felt it was not the opportune time for it. We would like to do it quickly. It is very important to have the political process going on.

to the credit of the Batala industrialist and his determination to carry on that not a single one has shifted or closed shop. As Sekhri puts it, "In Batala an entrepreneur doubles up as a chowkidar, a labourer and an overseer as and when the need arises." "Only one big unit, BEICO of the Mukand Iron and Steel Company, has downed shutters. Said Sekhri, "They were Bombay-based and outsiders and so did not have the grit to carry on."

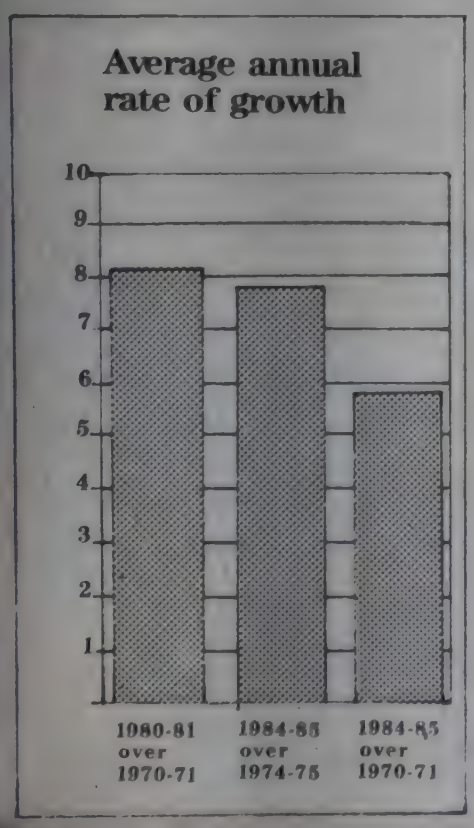
According to Sekhri, both migrant labourers as well as local skilled employees have co-operated very well in the hour of crisis. There has not been any noticeable flight of labour from Batala though some *bhaiyas* have left Amritsar.

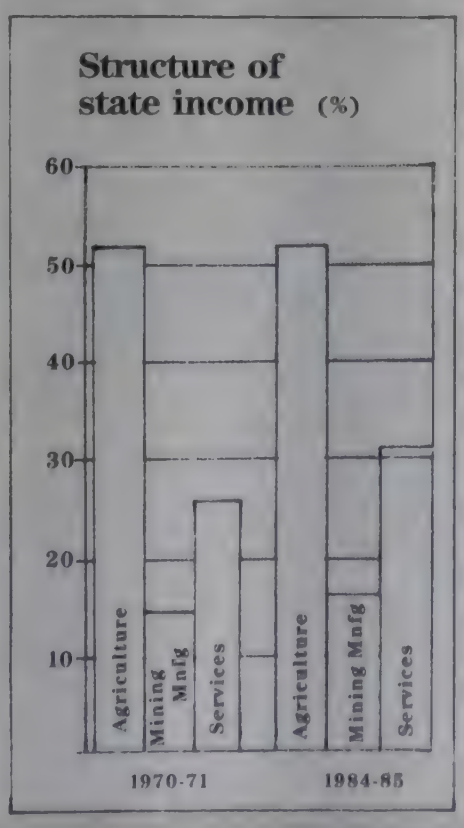
The migration of the *bhaiyas* of Bihar and Uttar Pradesh, set in motion by the killings at the Sutlej/Yamuna link canal, has become a serious problem for industrialists, agriculturists and government officials alike. Said Chatah: "We are really worried. Many areas are heavily dependent on migrant labour." Sachdeva, for instance, is facing an acute labour shortage in Amritsar. He had between 1,200 and 1,500 *bhaiyas* earlier; now he has to make do with only about 700. Says J.L. Srivastava, labour secretary of the Punjab government, "Migrant labour is playing a very important role. If they disappear, the worst affected would be the brick kiln and construction industries."

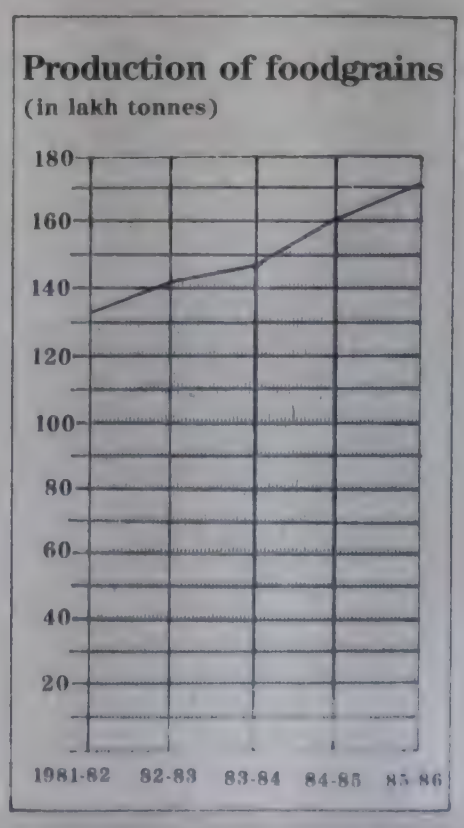
Growth in certain high-tech industries has also been stunted because of the acute scarcity of experts. Says Mohan, "Bright young people are reluctant to come to Punjab. They feel that bullets are flying all over the place. Induction of top executives is also very difficult."

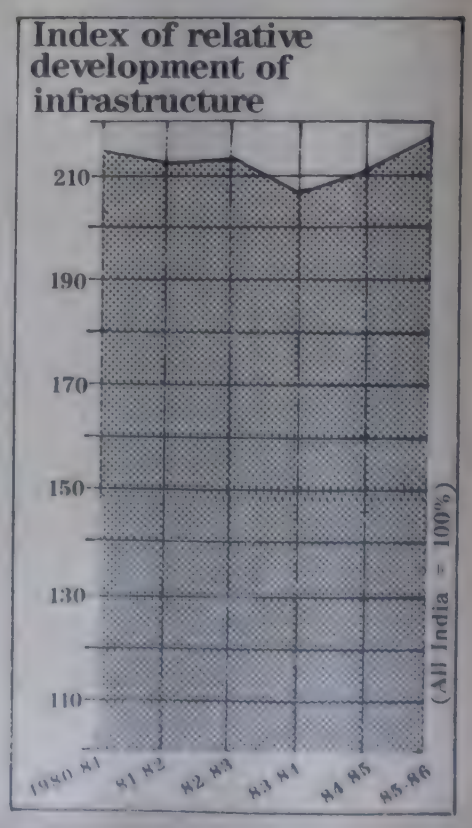
Laments Sripal Oswal: "We had to resort to overmanning by five to six per cent to maintain a standby arrangement because getting a replacement in Punjab is very difficult. This has pushed up our operating costs. People here are under pressure from their families to leave." He adds, however, "We are living in Punjab and acclimatised to the situation."

Amritsar's entrepreneurs too are a de-









termined lot, prepared to take risks, according to H.S. Makhini, secretary, Textile Manufacturers Association. "They have faced partition, two wars and have not only survived but prospered. But the government must come up with supportive measures," he says.

Contrary to normal belief and expectation, there has not been any noticeable flight of capital from the state. But then neither has there been much investment in the trouble-prone areas. It is a mixed scenario. In the border district of Gurdaspur, the rural areas of Amritsar, Ferozepur, Faridkot, and parts of Kapurthala, where extremist activity is at its height, hardly any fresh investment has taken place. However, in the districts of Ropar, Hoshiarpur, Patiala, Sangrur and Ludhiana, fresh investment and expansion of existing units is noticeable. The troubled districts offer a 25 per cent capital subsidy, 15 per cent by the state government and 10 per cent by the centre which has declared them 'C' category backward areas. As Chatha points out, "Power is available freely. There is a continuous, 24-hour supply. In addition Punjab has a distinct advantage because of a highly developed work culture. Even so, as J.S. Varshneya, chairman of Punjab National Bank, puts it. "People are following a cautious policy."

Says R.C. Oswal of the Oswal group of companies, "We have a high stake in Punjab. But I think we should go slow on investment. If there is new business outside, we may be prepared to take it up. All the eggs should not be put in one basket."

A similar view was expressed by Om Prakash, managing director of Ralson (India) Ltd, who felt it would be wise to spread out operations and diversify in other states. Yet often industrial houses want to set up in more than one state, not because of disturbances but because of other considerations.

DIFFERING PERCEPTIONS

L. M. Thapar, whose group has pumped in nearly Rs.150 crores in the past three years, says, "In the matter of investment, we don't favour Punjab nor do we disfavour it. Its problems are compensated by the fact that it has enough power, a highly skilled labour force, is a very prosperous part of the country and, therefore, forms a natural, rich market for a lot of products you might wish to make."

Piara Singh is unhappy at the state government's policy of attracting new investments. "The government is giving all sorts of incentives to the new units. What about the old ones?" Asks S.K. Bijlani, MD, Molins India Ltd, "Are we going to keep on increasing the number of units or industrial focal points, given the present inadequate infrastructure and the fact that barely 50 per cent of the potential of existing units has been utilised?"

Obviously, with these unsettled conditions it is not surprising that even within the same areas and within similar industries perceptions differ. Also many are reluctant to talk openly. Certainly a larger number of private sector businessmen are less sanguine. However, government and public sector officials uniformly express greater confidence.

At this critical juncture, when Punjab's industry and business are struggling to keep up the tempo of growth, the consensus is that a massive dose of investment, public and private, will provide the state's economy the much-needed impetus to generate jobs on a large scale.

Says Amarinder Singh, "The government must force big industrial houses to invest in Punjab. They must be told that if they want to expand anywhere else in the country, they must first set up a plant in Punjab." The unemployment rate increased from 4.4 per cent in 1982 to 6.7 per cent in 1984 and 12.4 per cent in 1985. Says Kapur, "Our basic target should be to check fresh recruitment to terrorist ranks which can be done by providing gainful employment to the youth. Unemployed youth are good material for terrorists to recruit." According to Amarinder Singh, Punjab adds about 170,000 youths every year to the ranks of the unemployed. The trouble in the state started in 1983. So in five years nearly one million educated youth are more or less idle. "Too much easy money is being thrown around in Punjab. The nexus of smugglers, Khalistanis, heroin and dope pushers has corrupted the youth," says Thapar.

In the midst of the political uncertainties, the uneasy peace, and the frequent disruptions of daily life, businessmen in Punjab hang on tenaciously. As one of them sums it up: "Asi to thatariya de kabutar ban gayan hein" (we are like pigeons who roost on the roofs of utensil makers) And have learnt to live with the din and the clutter.

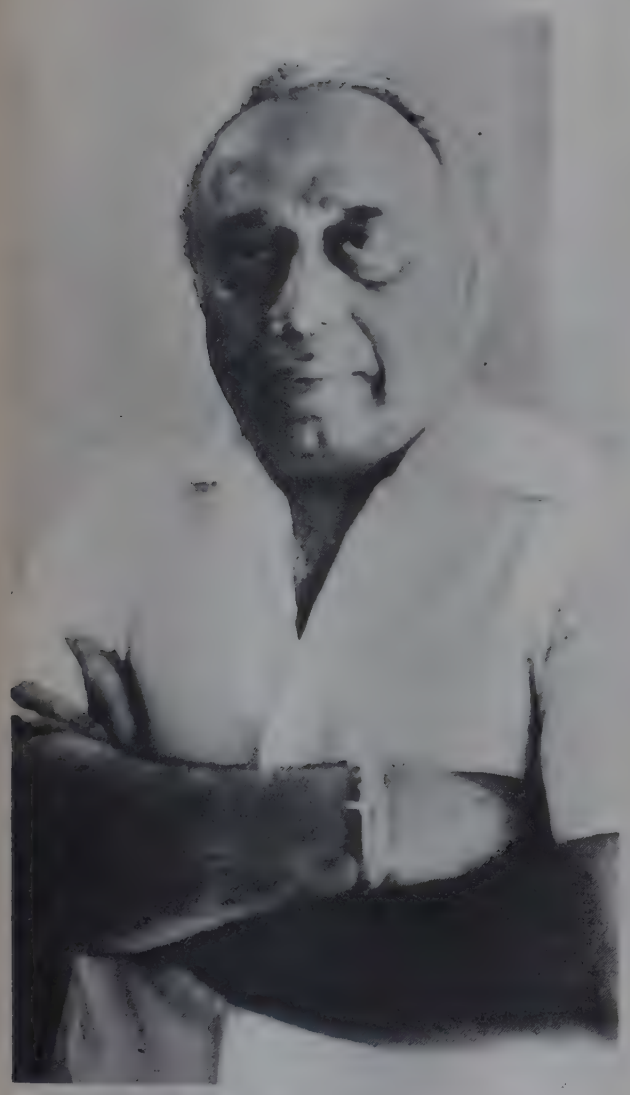
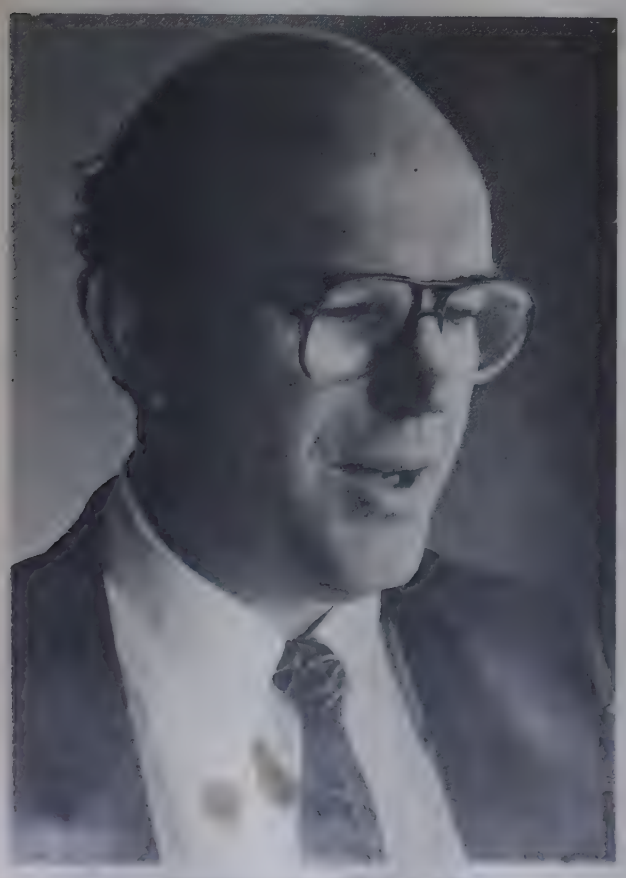
RPG ENTERPRISES

Back in the takeover game

With Dunlop India slipping out of the fold, the RPG Enterprises group appears to be back in the takeover race after a lapse of two years. Last month, in quick succession, the group formed "strategic alliances" with foreign equity holders in ICIM and Harrisons Malayalam. And corporate watchers expect more such "marriages" in the next few months



Goenka: back in the game



Soon after the Goenkas of Duncan Brothers parted ways in 1979, Rama Prasad Goenka (RPG), the eldest, emerged as a master of the takeover game. With the first scent of corporate prey — any company in which the foreign owners had lost interest or where there was a family dispute or bad management — he'd be there. But for the last two years, the formidable corporate hunter appeared to have settled down. He told *Business India* in 1986, "The days of takeover are over. Somehow, the present government dislikes takeovers." Possibly a reference to V.P. Singh's finance ministry.

But the takeover scene today is more exciting than ever before. And RPG is back in the game with a vengeance, despite his ill health. Last month, he pulled off two major coups: "strategic alliances" with International Computers Indian Manufacture Ltd (ICIM) and Harrisons Malayalam Ltd (HML). And he is believed to be hotly pursuing other potential takeover targets such as IEL Ltd (the chemicals conglomerate owned by ICI of UK) and Kothari General Foods (KGF — a joint venture between General Foods of USA and the D.C. Kothari group of Madras).

TIME FOR CONSOLIDATION

Around 1986, after having taken over five companies in as many years, the RPG group seemed to have decided to consolidate its gains and project a group identity. There was also the Haldia Petrochemicals project, that kept RPG's hands full. Thus, RPG was not in the running for the prestigious Chloride India and Ashok Leyland bids last year. More significantly, the group was shaken by the intensifying feud with the Chhabria brothers, Manu and Kishore, who helped RPG bag his biggest prize, Dunlop India, four years ago.

By all accounts, a deal was struck last July whereby the Goenkas agreed to sell their stake in Dunlop to the Chhabrias for a fancy price. (Knowledgeable sources believe this to be around pounds sterling 37 million, though there is no way this figure can be confirmed.)

The group's resurgence of interest in takeovers is not really surprising, then. First, with Dunlop slipping out of the fold, the just-born RPG Enterprises group shrinks in size roughly by half. So the Goenkas must be more than keen to compensate for this loss as quickly as they can. Second, the pile of money received as consideration for the Dunlop stake would mean that cash for acquisitions is hardly a problem. And third, Dunlop was acquired for younger son Sanjiv Goenka to give him a "metropolitan base" similar to that of elder son Harsh at Ceat in Bombay. RPG must now be keen to restore such a base to his younger son at the earliest. Already there is talk of shifting Sanjiv to Bangalore from where he could oversee the operations of not only HML but also older group companies like Asian Cables.

Whatever may be the compulsions that have propelled RPG back into the takeover game, the interesting feature in both the ICIM and HML deals is the concept of "strategic alliance". Unlike the earlier acquisitions, where the Goenkas had complete control over corporate operations despite minority shareholdings, under the new deal they are expected to complement and work in tandem with their overseas partners.

In the case of ICIM, with whom the alliance is currently being finalised, the parent company, International Computers Ltd (ICL) of UK, will continue to hold a 40 per cent stake. The Goenkas will be helped to acquire around 10 per cent of the Rs.4.14-crore equity of the company by way of a private placement of shares or a rights issue in which resident Indian friends and associates would renounce their rights in favour of the Goenkas. Market purchases could also be made to some extent either from the institutions (which hold 27 per cent of ICIM's equity) or from the public (33 per cent).

Under ICIM's articles of association, ICL has the power to appoint the chief executive and three directors on the board as

long as it owns a 40 per cent stake. And since ICL has no intention of reducing its stake, it would continue to enjoy this right. Thus, the Goenkas could be in a weak position in the alliance, unless this condition is altered.

As is well known, ICIM has gradually been losing its pre-eminent position in the computer market ever since the new computer policy of 1986 was announced: it lost its No.1 slot to HCL last year. The personal computers (PCs) business has been booming, but ICIM's product range is limited to minis and mainframes. It did venture out with a PC in 1986, but it was priced 30 per cent higher than the competition. In the mainframes and minis business too, ICIM has lost out to the public sector ECIL which enjoys a price preference from the major buyer of such systems, the government. This is despite the introduction of new products such as Series 39 mainframes.

In short, ICIM has failed miserably on two counts: production costs and management. Today, the company is rapidly losing market share and faces a severe working capital crunch. Between January and June this year, the company lost Rs.3 crores on modest sales of Rs.14 crores. It went off the dividend list in 1987.

With the induction of the Goenkas in local management, ICL expects to strengthen that area. Apart from equity, the Goenkas are expected to put in fresh funds in the form of inter-corporate advances (Rs.3 to 4 crores). Their connections in industry and government could also translate into more orders for ICIM. And the assured backing of a well known local business house is expected to dilute ICIM's FERA image and facilitate a greater flow of credit to meet working capital requirement.

QUICK ENTRY

For the Goenkas, it means a quick, overnight entry into the exciting field of computers and electronics. "We have identified electronics as a major thrust area," says Harsh Goenka, chairman, RPG Enterprises, "so working with ICL fits into our plans." The RPG group already has some presence in electronics, though not in computers, with Murphy India and Gramophone Co (audio products) and Norplex Oak (PCBs, electronic components). Murphy could place orders on ICIM for electro-mechanical components for which it has idle capacity, while Norplex Oak could supply it electronic components. A renewed entry into the fast growing PC market can also not be ruled out.

HML, unlike ICIM, has an excellent track record; it has raked in good profits since inception. It has never paid dividend at less than 25 per cent. Last year, it earned a gross profit of Rs.12.15 crores on sales of Rs.65.29 crores. The company continues to perform well even though no major investments have been made for many years. This is because natural rubber — its major product — is in short supply. And the strong presence in tea has helped stabilise income.

Anthony Guinness — from an established Irish business family, and settled in Australia with interests in agriculture and consultancy services — clinched a deal last month with Malayalam Plantations (Holdings) plc of UK to buy the latter's 36.9 per cent stake in HML (reportedly for pounds sterling 12 million in competition against the omnipresent Chhabrias and Hindujas). He then sounded out Standard Chartered Bank to find him a suitable local partner in India. "I am completely new to India," says Guinness, "so I was keen to form an association with an Indian family business house." Talking about his long term view of HML, he says, "These estates are excellent but they need to be modernised." As the output increases, the emphasis will be on converting it into higher value products like latex, packaged tea, and so on, he adds.

This is where the Goenkas fit in. Their group has a strong presence in tyres and rubber products (Ceat, and Dunlop too until now) and good experience in managing tea plantations and agro-based industries like jute, textiles and tobacco in the days of Duncan Brothers.

Conceivably, the Goenkas would now have a stable, reliable source of rubber for their tyre operations. There are frequent shortages of natural rubber in the country, its price is volatile and tyre manufacturers are often badly hit. Already, the group owns Phillips Carbon Black (set up in 1963) which supplies yet another key material for tyre manufacture.

Says Harsh Goenka, "We will start off as associates in HML and look after its day-to-day operations. As the association grows, we will acquire an equity stake." Guinness echoes this, "The equity sharing can be worked out in due course. It is more important to forge a relationship of trust and confidence first." In all likelihood, the Goenkas will acquire a minority stake, at least to begin with. Over 45 per

H. Goenka: "ICL fits our plans"

cent of HML's equity of Rs.9.10 crores is held by the public. The balance is with Guinness (36.9 per cent, held by his Ambledown Investments), institutions and banks (over 6 per cent), corporate bodies (around 8 per cent). So, market purchases may play an important role in the share acquisition by the Goenkas. Currently, the HML equity is quoting at around Rs.60 and a 10 per cent stake could cost upward of Rs.5.5 crores.

Many corporate observers wonder how these nice-sounding "strategic alliances"of the Goenkas will work out in practice. "Joint management" of Dunlop with the Chhabrias has just not worked. Sources close to the Goenkas also question younger son Sanjiv's "business maturity" and his ability to work with foreign companies in a formal and autonomous manner.

BACK WITH A VIGOUR

Be that as it may, the Goenkas are now back in the takeover game with renewed vigour. The financial grapevine is abuzz with talk of IEL and KGF being next on the hit list. Both P.E.G. Daubney of IEL and D.C. Kothari of KGF have denied plans to sell out, but corporate circles are not convinced. KGF is in the fast growing (and now high priority) area of processed foods and the Goenkas are interested in getting a foothold there. However, dried coffee is KGF's major product and with established brands like Nescafe and Brew in the market, the going is not going to be easy.

Undoubtedly, RPG today appears to be in a great hurry to ensure that there is no loss in the group's growth momentum, after the recent setbacks in Dunlop and Haldia Petrochemicals; and in the process, also giving each of his sons, Harsh and Sanjiv, enough room to spread wings.

SWASTIK SURFACTANTS

Staking its claim

After a three-year chase, two relatively unknown Bombay businessmen took over the ailing Swastik Surfactants Ltd in August this year, outbidding big-timers such as Manu Chhabria, the Mafatlals, Godrej Soaps and Nirma, among others. Armed with strong brands such as Swastik Shikakai, Det, Genteel and Max Factor, the duo hopes to recover lost consumer franchise

Swastik products: a image in the market

After three years of being virtually starved of working capital and management direction, the Sarabhai group's Swastik Surfactants Ltd (SSL) — formerly Sarabhai Surfactants Ltd — is now pitching for lost ground, under a new management. Nitin Jobanputra and Satish Bhangar, two young and relatively unknown Bombay-based businessmen, who have bought 97 per cent of SSL's equity capital from the Sarabhais for Rs.1 crore, hope to turn around the ailing company in a year's time.

"The market is craving for SSL's products," says Bhangar, referring to one-time brand leaders such as Swastik Shikakai hair care soap, Det detergent cake and powder, Genteel liquid detergent, and the Max factor range of cosmetics, among others. Barely two months after taking over the reins of the company, the new management has restarted production at two of the six plants, raking in a turnover of nearly Rs.2 crores. In comparison, the turnover in 1986-87 was Rs.4.19 crores while in 1987-88 it barely amounted to Rs.1.5 crores.

A VINDICATION

For the 35-year-old Bhangar, who has interests in electric motors, pumping sets and construction, SSL's good start is a vindication of his belief that the company's "gold mine of brands" can see it back to health.

Bhangar had relentlessly made a bid for the company since the Sarabhais made it known that they wanted to sell it off but his proposal was sidelined. Not surprising, considering that several big names in Indian industry were in the race — Manu Chhabria, the Mafatlals, Godrej Soaps, Nirma, Colgate-Palmolive, Tomco, Hindustan Lever, Procter & Gamble (then Richardson Hindustan), and the Nath group, among others. "We were last on their list of suitors," says Bhangar; M.N. Parikh, former chairman of SSL and currently director of Ambalal Sarabhai Enterprises Ltd (ASE), does not disagree.

Bhangar had nearly bagged the deal in January 1987, with the Nath group (of Nath Pulp & Papers) willing to provide the financial backing. But the Naths backed out at the last moment, even as a memorandum of understanding was ready to be signed. The winning chance came in July this year, when he found a willing financial supporter in Jobanputra, a 36-year-old former non-resident Indian, whose family has business interests in Rwanda, Uganda, Zaire, the UK, Belgium and Hong Kong.

The deal was overseen by former Bank of India chairman N.S. Parulekar, who has taken over as SSL's chairman, with Jobanputra as vice-chairman and managing director and Bhangar as joint managing director. They have also roped in 46-year-old Jaffar Imam as executive director; Imam was an industrial consultant who has worked with the Kamani group for several years.

Jobanputra dismisses industry gossip that the SSL deal was a steal. "I don't think we've hit a jackpot," he says. "The deal is not underpriced." Of the Rs.1 crore price tag for 97 per cent of SSL's equity capital of Rs.99 lakhs and the entire preference capital of Rs.8.25 lakhs, half has already been paid to the Sarabhais — the remaining Rs.50 lakhs is scheduled for payment in November 1988. Another Rs.30 crores will be paid in four equal instalments of Rs.7.5 crores each in the 13th, 14th, 15th and 16th years after the takeover, as purchase consideration, to ASE Ltd, of which SSL was a part. "One can say that the whole deal is worth Rs.3 crores or so," says Bhangar. "A sum of Rs.2 crores today adds up to Rs.30 crores after 15 years, at an interest rate of 18 per cent annually."

COMPLEX PROBLEMS

What put the others who bid for SSL off the race was not price, but the complex problems that SSL face. Besides an accumulated loss of about Rs.18.5 crores, the company had gone through a series of amalgamations and de-amalgamations in the Sarabhai group, all of which were designed primarily to steer the troubled ASE out of its own financial mess. "All the others wanted to go into the nitty-gritties of the deal," says Bhangar. "But we were prepared to take over the company lock, stock and barrel, without going into verifications of the details and checking out the plants." The new management says it has protected itself from any unpleasant problems that may arise later, after the books for 1987-88 are audited — a clause in the agreement ensures that any discrepancies in current liabilities that exceed 5 per cent will be made good by ASE. "Variations, if at all, will be in the region of 2 to 3 per cent," says Jobanputra.

Besides the aspect of verifying the books of accounts and stocks, the others in the race may also have been discouraged by the company's large workforce of nearly 2,300 people, according to industry watchers. The most significant among those who backed out is the Mafatlal (Sungrace) group, which, in late 1985, had even remitted to the Sarabhais, an advance payment of Rs.2.75 crores, representing 10 per cent of the total bill. After they backed out a couple of months later, several others conducted negotiations for takeover, besides offering to buy off specific brands or plants. Manu Chhabria,

whose company Shaw Wallace made a bid through Creditcapital Finance Corporation, apparently decided to withdraw in the wake of the rapid advances made by Nirma Chemical Works in detergents.

UNATTRACTIVE PROPOSITION

Says a top executive of one of the multinational companies that actively looked at SSL as a takeover candidate, "It's crazy to buy the company. There is the liability of a large workforce at the Ambernath plant which is unionised. Being close to Bombay, the wage levels are also high." He adds that it may have been an attractive proposition if soaps and detergents were not delicensed industries. "Today it makes no sense to buy companies that are in delicenced areas," he says. "I may have been willing to pay Rs.1 crore for the Swastik Shikakai brand, and may be another Rs.50 lakhs for the Det brand, nothing more."

Imam does not agree. "We are not overstaffed," he asserts. "At 65 per cent capacity utilisation, the present workforce may be just about enough for our plants." He, however, agrees that the company is "top heavy" and reveals that efforts are on to work out various schemes to reduce the burden. While the memories of a year-long strike led by Datta Samant in 1981 are still fresh in people's minds, Imam says that the militant trade union leader is no longer attached to SSL's union, and that the new management has been able to smooth out industrial relations. As soon as the new management took over at SSL, the company's workers — unpaid for eight months — received arrears for one-and-a-half months, and also their salaries for August this year. A proportionate amount has also been remitted to the provident fund authorities.

BAD INVESTMENTS

There are, however, other structural problems that make the new team's task ahead onerous. The company is saddled with investments made in several facilities over the years by the earlier management, many of which are considered by industry watchers as strategic mistakes. The most striking of all is a Rs.5-crore detergents and shampoo manufacturing plant at the Kandla Free Trade Zone, set up in the early eighties. Exports of about 12,000 tonnes of detergents to the Soviet Union in 1980, 1981 and 1982, and the [illegible] exports [illegible] the

Imam, Bhangar and Jobanputra: game plan ready

Kandla plant. But the Soviets unilaterally decided to discontinue imports in 1983, and the plant was rendered practically useless.

The company also set up its own facilities to manufacture pulp and paper, corrugated boxes, printing and packaging, for captive use, at Ankleshwar and Vapi in Gujarat. What's more, it also bought a blow moulding machine to manufacture bottles for its own use. For marketing its products, SSL had an assortment of eight to ten companies which dealt directly with the wholesale trade, unlike others in the soaps and detergents business who maintained contact right up to the retail level. The 400-odd staff of these marketing companies only succeeded in pushing the wage bills higher.

Currently, the company has facilities to manufacture up to 90,000 tonnes of detergents spread out across Ambernath, Kalol, Kandla, Vapi and Madras — the Madras and Vapi plants convert detergent powder into a solid form. The Ambernath unit also has facilities to manufacture 10,920 tpa of toilet soaps, 8,000 tpa of fatty acids, 400 tpa of glycerine, and the Max Factor range of cosmetics and toiletries. Besides these, the company also has facilities to manufacture a range of industrial products such as wetting and dispersing agents, industrial grade glycerine and detergents, pesticide and mineral oil emulsifiers and drilling detergents, with applications in the textile, leather, silk and oil drilling industries

SELECTIVE PROMOTION

Although the company is armed with such a diverse range of manufacturing facilities, SSL's game plan to get out of the red will be focused on pushing fast-moving products. "Swastik Shikakai and Genteel are our cash crops," says Imam. "Our accent is on those products that can sell by themselves, without requiring much promotional expenditure. Once we start the cycle, we can look at the other products." While production of Swastik Shikakai and Neem soaps, and Genteel detergent has already started at the Ambernath and Vapi plants (within a week of the new management taking over), the Kalol and Madras units are likely to resume operations in a month's time. The Ambernath plant will also roll out Max Factor cosmetics; the full-fledged launch of the whole range is being planned for 31 December this year, at a fashion show in Bombay.

All through, the effort is to devote the scarce working capital on hand — about Rs.50 lakhs has been brought in by Jobanputra and Co — to those areas that augment the cash flow. The management is also in the process of cocooning the Kandla plant to cut down overheads. The printing press has been sold off, and the packaging unit at Ankleshwar is proposed to be either leased out, or sold off. "There is a sizeable amount of over Rs.1 crore that is locked up in immovable inventories which cannot be used immediately," says Imam. "Efforts are on to liquidate this so as to reduce the inven-

EASY TO FILE EASIER TO FIND

Crucial papers misplaced or files lost. Irritating hold-ups, tension, anxiety. You just cannot afford it.

Godrej Instafile — the only solution.

Sturdy, high quality Filing Cabinets from Godrej help you enhance office productivity through systematic storage and retrieval of files.

The functionally designed Instafiles offer a set of unmatched benefits.

- Fully enclosed drawers prevent files and papers from falling out.
- A unique Godrej double extension telescopic slide facilitates smooth, effortless movement of fully loaded drawers and easy access upto the last file.
- The Godrej lock with a 'push and lock' action ensures confidentiality.
- Automated airless electrostatic painting process and special Alkyd-amino paint give the Instafiles longer life and a lasting, attractive finish.

Godrej also offers two choices for Filing Systems:

VISAFILE®—Interconnected file folders house individual files—recommended where files are referred to frequently.

EEZEEFILE®—Individual files suspended directly from the top of the drawer—an economic alternative.

To put an end to disorganised office routines and boost efficiency, buy Godrej Instafiles and Filing Systems today.

Kandla plant: white elephant

tory carrying cost."

Even as these efforts are in process, the company's bankers — Bank of Baroda and Central Bank of India — are refusing to advance working capital loans. While the bankers are said to be insisting on the repayment of outstandings of about Rs.9.75 crores (principal and interest) before they consider any fresh proposal, the company's management wants immediate working capital assistance of Rs.4.5 crores on the usual terms, and is willing to put down the required margin money. The past bank outstandings, they say, will be paid over six years, with a two-year moratorium.

REQUEST FOR RELIEFS

SSL, which is a "potentially sick unit" under the Sick Industrial Undertakings Act, 1987, has filed a proposal with the Board for Financial and Industrial Reconstruction for reliefs — a concessional interest rate of 10 per cent for the Rs.5.5 crores of overdue interest payable to its bankers, 13 per cent interest on the Rs.4.25 crores of the principal amount, working capital advances on regular terms, and a rehabilitation term loan of Rs.5 crores from the financial institutions/banks carrying interest at the rate of 15 per cent annually.

With these in hand, the new management hopes to achieve a gross turnover of Rs.39 crores in the first year, Rs.78 crores in 1989-90, and nearly Rs.90 crores in 1990-91. Gross profits are projected at Rs.32 lakhs in the first year, Rs 4.07 crores in 1989-90 and Rs.4.67 crores in 1990-91. After interest and depreciation charges, the company will incur a loss of Rs.2.6 crores in 1988-89, break even in the next year, and register profits from the third year onwards, according to a plan submitted to the banks.

The bankers, however, are not willing to step in as yet. "We are three unknown Bombayites who don't have big tags behind us, which is why the banks are playing tough," says Imam. Bhangar is irate at the banks' attitude. "If they start insisting that all the past dues must be cleared on the day we take over, what is the sense," he asks. "We would like to produce now, and then pay government dues. We want the government agencies to give us breathing time...we have told them that all future dues will be paid on time." He says that the reliefs must come on an "emergency basis" for the company's rehabilitation programme to work. "What is the sense if the reliefs come after the patient is dead?" he fumes.

COMPETITORS ON THE ALERT

Even as the banks and the BIFR take their time to respond, SSL's competitors are already bracing up for the competition ahead. Wipro Consumer Products, which had introduced its brand of shikakai in late 1986 to capture the vacuum in the market caused by Swastik's exit, is planning to slash the price of its 100 gm cake (Rs.5.80) by 40 paise — SSL has already cut Swastik Shikakai's price by 25 paise on a 100 gm cake to Rs.5.90. "By and large, we were aware that Swastik may come back," says K.B.R. Menon, Wipro's marketing manager for consumer products. "We cannot have a permanent holiday."

Menon, however, feels that Swastik may not be able to make a significant dent in the market unless it resorts to high-pressure advertising — something the new management may not be able to immediately afford. He also feels that Wipro has a distribution network that is stronger than that of SSL. "Over the years, there has been a lot of attrition in SSL's field force," he says, "whereas we have established our systems." Menon adds that it is not as if Wipro is suddenly facing competition from Swastik now — limited quantities of the soap were being produced at SSL's plants under a processing arrangement with Godrej Soaps, from mid-1987.

TOUGH BATTLE

Marketmen do not see encouraging prospects for SSL's Det, a premium detergent product that competes with Hindustan Lever's Surf and Rin and Tomco's Dubble. Much of the growth in the detergents business has taken place in the lower end of the market, with Nirma leading the pack. "But you cannot discount anyone who comes in," says Ernest Fernandes, Tomco's general manager (marketing). "What Swastik will do is a matter of considerable interest to all in the industry."

Fernandes' cautious attitude is not surprising, for when SSL was at its peak in 1984, it had impressive market shares of 17.2 per cent in the organised sector detergents market, and 8.9 per cent in the premium toilet soaps market. The best years for the company were in the early 1980s — in 1979-80, turnover was Rs.55 crores, with gross profits of Rs.9 crores and net profits of Rs.5 crores. The Datta Samant-led strike in 1981, and the mutton tallow scandal in 1982 (which led to a ban on raw material imports) played havoc with the company's fortunes, which were only worsened by acute working capital resource constraints, leading to the decision by the Sarabhais to sell off the company.

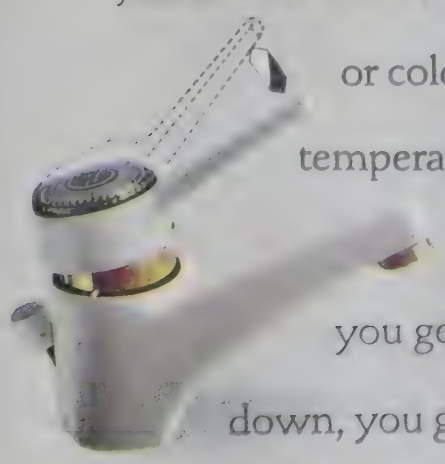
But all that has not substantially eroded the strengths of the company's brands. "SSL brands like Det, Swastik Shikakai, etc have a good image in the market," says a report by the SBI Capital Markets Ltd on the company in mid-1987. "It should be possible for SSL to capture the market again for its products..." And so, the burden of SSL's revival now rests squarely on its brands, and willing bankers.

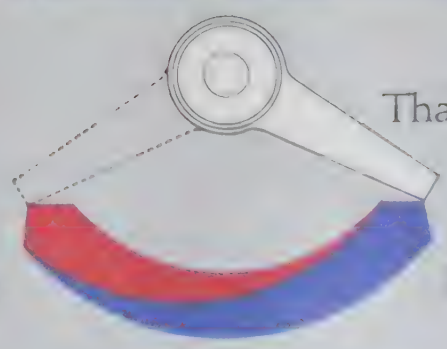
■ SHANKAR P.

RANUTROL HANSA AQUA MIXER. THE EASIEST WAY TO GET HOT, COLD OR AS-YOU-LIKE-IT WATER.

With the Ranutrol Hansa Aqua Mixer, a single lever does it all.

Just flick the lever and you get hot water or cold water. Or any temperature in between. Move the same lever up, you get more water. Move it down, you get less. Simple, isn't it.





That's the wonder of ceramic cartridge technology from Hansa Metallwerke AG, the world's largest seller of aqua mixers.

So, if you want to take it easy in your bathroom or kitchen, all you have to do is choose from a range of stunning designs.

LAKSHMI MACHINE WORKS

An unrivalled run

The performance of Lakshmi Machine Works is remarkable, given the dismal state of the textile machinery industry. This it has managed by sticking strictly to a policy of "fair dealing at affordable prices"

In its 25-year history, the Coimbatore-based manufacturer of textile spinning machinery, Lakshmi Machine Works Ltd (LMW), has had several achievements to its credit. And today it has emerged as one among five companies in the world to manufacture the entire range of textile spinning machinery. It is the undisputed leader in the domestic market; almost all textile mills have one Lakshmi machine or the other. And what is most remarkable, Lakshmi is perhaps the only large textile machinery company in the country that has remained unshaken by the downturn of textile mills.

The company continues to make impressive profits and works at full capacity. Last year, it notched up a turnover of Rs.96.4 crores (year ended December 1987) and earned a gross profit of Rs.9.7 crores. Encouraged by its success, it went in for a major diversification into machine tools, the first of its kind in the last ten years in this troubled industry.

Almost all the major textile machinery manufacturers (including Lakshmi) went in for large capacity expansion in the late seventies, anticipating a boom in demand. But the boom went bust in 1984. At the same time, machinery imports were liberalised. All this dealt a body blow to the industry. The total installed capacity (spinning; weaving and processing) is currently around Rs.600 crores of which only 45 per cent is utilised. The scene in spinning is worse; the utilisation is only 30 to 35 per cent.

Jayavarthanavelu: "We have a versatile base"

EMPHASIS ON QUALITY

How did Lakshmi overcome these adverse developments? Says D. Jayavarthanavelu, managing director, "Our overriding emphasis on producing quality machines at affordable prices is the key to our success." Also, he points out, the collaboration with Rieter Machine Works of Switzerland, a world leader, gave the company access to the latest technology. (Rieter has a 14 per cent equity stake in the company.)

When Lakshmi set up shop in 1962, manufacturers like National Machinery Manufacturers (now Mafatlal Engineering Ltd) and the Birla-owned Texmaco had already established themselves. These companies also had highly rated West German and British collaborations.

But within a year or two of going into production, Lakshmi left these giants behind. Comments Deepak Banker, vice chairman and managing director of the Madras-based Kunal Engineering Company Ltd, a competitor and a supplier to Lakshmi, "It is true that Lakshmi has one of the world's finest collaborators in Rieter. But anyone can get a good collaborator. What is critical is how you absorb technology. Thanks to an excellent training programme, the company could genuinely assimilate Swiss technology."

Even before the company's building came up, Swiss instructors came to train the workforce, to help in the selection of machinery, and so on. A Rieter executive is always stationed in Coimbatore. Over the years, Lakshmi has sent hundreds of its engineers and even workers to Switzerland for training. "We don't have to translate any of the German drawings. All our workers can read that much German," says Jayavarthanavelu with pride.

The company, as a matter of policy, played a scrupulously fair game with the textile mills during the boom years 1974 to 1984. At the time, the demand for Lakshmi machines was huge; the waiting period for some was as long as ten years. And yet, as Jayavarthanavelu says: "We never cut the queue or raised prices to take advantage of the situation. Even our group mills had to wait their turn."

LOWEST PRICED

Today, Lakshmi-Rieter spinning machines are the lowest priced among the major brands. Comments a textile industry insider, "In the days of the boom, the other big players grew complacent. They did not bother to keep up with technology as Lakshmi did. Nor did they care much about customers. So when the slump came, it was only Lakshmi that remained unaffected." Today, its major competitors, Mafatlal Engineering, Machinery Manufacturers Corporation, and Texmaco are nowhere in the picture.

Right from the outset, Lakshmi aimed at ultimately manufacturing the entire range of spinning machinery (blow room equipment, carding engine, drawframe, speed frame, comber, silver lap, ribbon lap, ring frame and open-end spinning machines). Today, that aim has been achieved; as a result Lakshmi has the strength to withstand the vicissitudes of the textile industry. The company has a record of introducing a new machine almost every year. And though it does face competition, it has a virtual monopoly of some crucial machinery like combers, and its latest product, the open-end machine.

Apart from its product range, Lakshmi also draws strength from exports. The company was able to successfully tap markets in developing countries during the textile slump. Its collaborators also buy some of its machinery. Currently, at least 15 ring frames are being exported to Rieter every month. This year it has already exported machines worth about Rs.16 crores. And by March 1989, the figure may well exceed Rs.25 crores.

Today, Lakshmi has enough capacity to meet over 50 per cent of the country's demand for complete spinning plants. "We regularly visit international textile exhibitions. Before we import any machine, we first find out whether it is saleable," says K.B. Krishnan, assistant general manager, engineering. "We have the infrastructure to make any machine but we must also be able to sell it."

The company has followed a policy of

Quartz Watches — Clocks & Alarms

A timely gift for all occasions

rapid indigenisation from the beginning. The import content is nil for almost 90 per cent of the machines manufactured. And it is also able to develop machinery on its own. For instance, the Speedframe LF 1400 is Lakshmi's own baby. Continuous product development ensures that machines developed abroad are suitable for Indian conditions. And each year, Rs.4 to 5 crores are spent on modernisation.

NO CREDITS

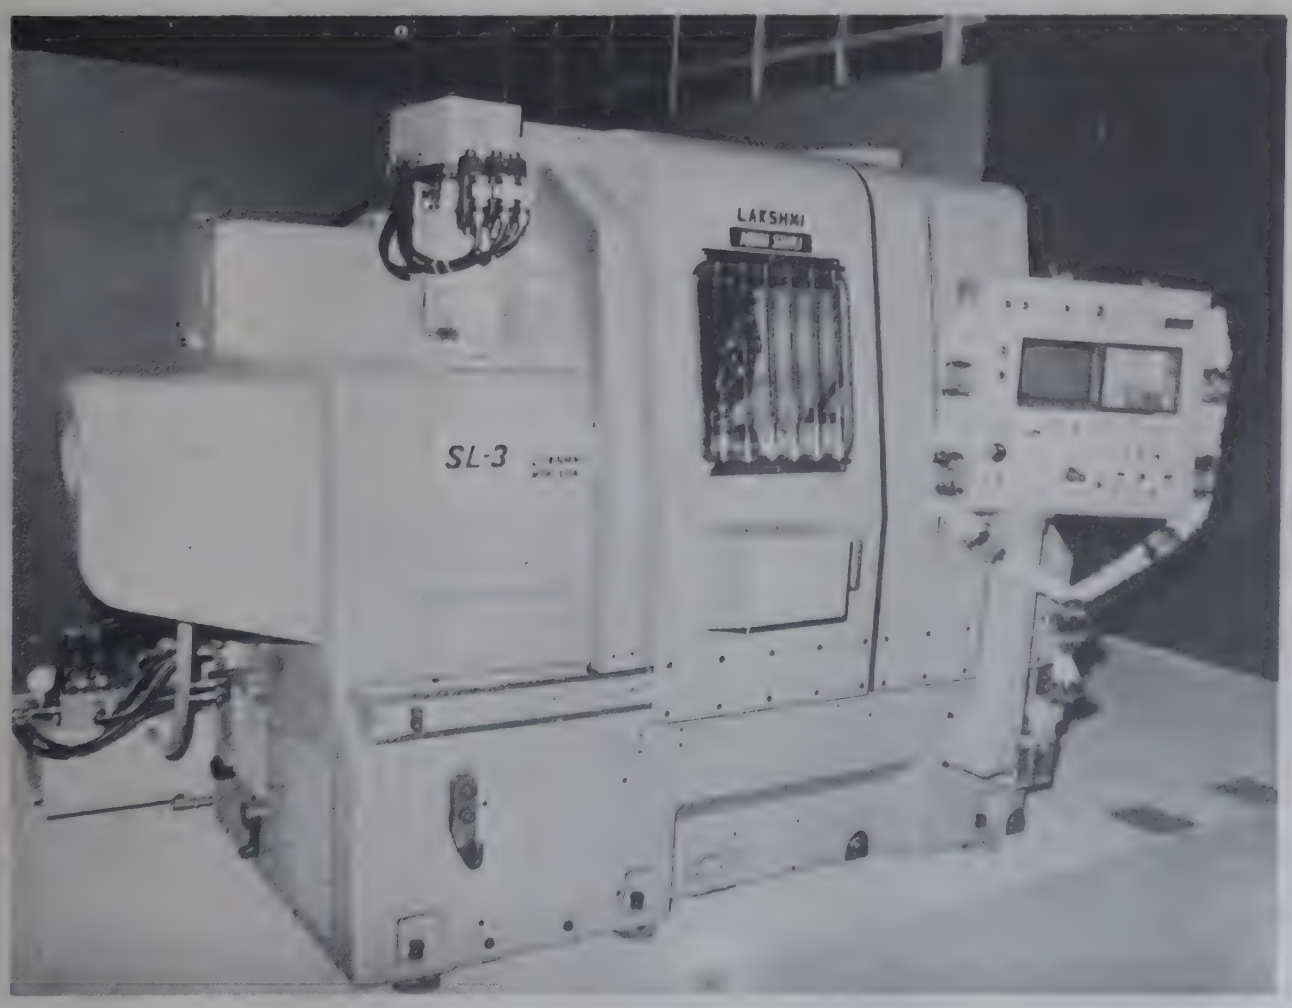
The company has followed a conservative financial policy, which has stood it in good stead. "We do not extend credit to anybody, not even to our group mills," says R. Rajendran, senior manager, accounts. Also, the company believes in funding its expansion and diversification as much as possible with internal funds. So the interest burden is low.

Lakshmi's latest and most prestigious diversification is the machine tool unit set up near Coimbatore to produce high quality CNC machines. This project is expected to cost around Rs.30 crores. Borrowings will mainly comprise foreign exchange loans from the World Bank and the IFC for equipment imports.

The project has raised many eyebrows. The eighties have hardly been happy years for machine tool manufacturers. All, including the public sector giant HMT, have been badly hit by import liberalisation and the sudden increase in the demand for CNC tools which was not foreseen. Jayavarthanavelu appears quite unperturbed about the prospects of the machine tool industry, though. "We have a versatile base for taking up complex manufacturing processes and a large bank of skilled and trained manpower," he says, "also, we have extensive experience in purchasing and using machine tools."

The project has been set up in technical collaboration with Mori Seiki Co of Japan, world leaders in the manufacture of CNC lathes and machining centres. The factory itself is being pressurised, at a cost of nearly Rs. 1 crore, to keep it dust-free. Says N. Srihari, assistant general manager, machine tools division, who has joined Lakshmi after a long stint at HMT, "This manufacturing facility is really the only one of its kind in India." Jayavarthanavelu is confident that in the next two to three years the machine tool project will have a turnover of Rs.40 crores.

Evidently Lakshmi Machine Works has begun its 26th year of operations in a mood of optimism. It expects to reach a turnover of Rs.150 crores by the end of the year. For the future, Jayavarthanavelu sums up, "We will work towards maintaining our leading position in every way. We will continue our policy of fair dealing in good machines at affordable prices."



A CNC lathe: bold diversification

SUSHILA RAVINDRANATH

The Lakshmi group

Established in 1910 in Coimbatore, the Lakshmi group today is a vertically integrated organisation in the textile industry. It has a combined turnover of over Rs.250 crores. The group companies consist of Lakshmi Mills Co Ltd, United Bleachers Ltd, Lakshmi Machine Works Ltd, Lakshmi Card Clothing Mfg Co Pvt Ltd, Lakshmi Textile Exporters Ltd, Vijayeswari Textile Ltd, Lakshmi Automatic Loom Works Ltd, Lakshmi Ring Travellers (Coimbatore) Ltd, Lakshmi Electrical Control Systems Ltd, and Lakshmi Precision Tools Ltd.

Informal split? The group is managed by the family of G. Kuppuswamy Naidu, founder. It is generally believed that the inevitable family split has also taken place in the Lakshmi group. G.K. Devarajulu, the eldest son of the founder who was also the chairman of the group until recently, has now resigned from all the other group companies, except Lakshmi Machine Works and Lakshmi Ring Travellers, both run by his son Jayavarthanavelu. He is no longer involved in the running of Lakshmi Mills Company Ltd — the first company promoted by the founder and one of the largest textile mills in the south today — which is managed by K. Sundaram, his brother.

Jayavarthanavelu looks after the spinning and allied industries. In fact Lakshmi Machine Works and its affiliate companies really form a group within the group. Jayavarthanavelu's cousin (son of Sundaram), S. Pathy, is in charge of Lakshmi Automatic Looms Works Ltd — which makes machinery for the weaving industry — and the other associated units. Jayavarthanavelu does not describe this clear-cut division of responsibilities as a split. "As we grow, people must have responsibility for their own units," he explains. "Unless proper channels of communciation are established, responsibility cannot be fixed." He adds that Lakshmi Machine Works is an MRTP company, and there is no need for the other group companies to get affected because of this. "But there is no real split," he asserts. "I still have a lot of shares in Lakshmi Mills."

GODREJ & BOYCE

In the excise net

Extensive excise raids last year on Godrej & Boyce Mfg Co resulted in two show cause notices for alleged duty evasions of over Rs.14 crores on sales of refrigerators and typewriters. In July last year, the company obtained a stay from the Bombay High Court, but a scrutiny of the documents seized by excise officials suggests that a long battle may well be in the offing

The mood is distinctly downbeat at the corporate offices of Godrej & Boyce Manufacturing Co Pvt Ltd, in downtown Bombay. Even though the decline in sales since 1985 was reversed last year (up by 23 per cent to Rs.260 crores), the company began the current year with the hangover of a large excise evasion charge.

Raids conducted by excise officials during June last year at the various premises of Godrej & Boyce and its dealers all over the country unearthed documentary evidence that seriously implicates the company in charges of duty evasion of Rs.11.95 crores on sales of refrigerators, and Rs.2.15 crores on typewriters.

The excise authorities allege that the company recovered a part of its advertising and distribution costs from trade discounts offered to dealers. These discounts were earlier deductible from the basic price of refrigerators (15 to 19 per cent) and typewriters (15 to 28 per cent) for excise purposes when the duty was levied on an *ad valorem* basis. So the company is alleged to have fixed these at very high levels to reduce the excise duty payable. Later, a part of the discount was recovered from the dealers under various heads such as "warehousing costs", "after sales service charge" and so on, as claimed by excise officials in their show cause notices. (Later, with a view to counter such practices, resorted to by many firms, the excise authorities made these specific: on refrigerators from March 1987 and on typewriters from March 1986. So there was no longer any incentive to maintain the discounts at such high levels. And sure enough, these climbed down as revealed by some Godrej dealers).

N.P. Godrej: "the commission...has to have some element of advertisement"

"NORMAL [illegible] COUNTS"

The company claims that their's were "normal trade discounts" [illegible] formly allowed" and not refundable on [illegible] by account whatsoever. But the [illegible] dated [illegible]

was seized from Godrej & Boyce during the raids which categorically states, "So far we have been giving a TD (trade discount) of 19 per cent and 18 per cent to U/C (up-country) WDs (wholesale dealers) and SDs (sub-dealers), respectively, and recovering 2 per cent W/H (warehousing) charges from dealers under regional distribution. The net effective trade discount was 17 per cent to wholesale dealers and 16 per cent to sub-dealers."

The letter also reveals that a part of the trade discount was to be spent by the dealers on advertising Godrej products, "We had increased the trade discount some time in April 1982 by 5 per cent so that the upcountry dealers could use 4 per cent for giving special prices and other promotional expenditure. One per cent was to be considered as our prepaid contribution to their advertisement expenses which was to be budgeted at 2 per cent of the basic price."

The excise authorities say that this letter of August 1983 clearly indicates that higher trade discounts were primarily given to wholesale dealers to give attractive discounts to customers and also to "vigorously advertise" in the local media. Yet another letter, seized by the excise authorities, dated 2 September 1982, states, "Out of your margin of Rs.200 to Rs.250 for the coming month, you should be prepared to spend Rs.60 per refrigerator on advertisement and publicity...this time we shall be advertising in the newspapers on your behalf and recover the cost from you through your blank cheques." Many Godrej & Boyce dealers follow the practice of depositing blank cheques with the company to take care of their offtake of products for distribution.

The company had earmarked an advertisement budget of Rs.60 per refrigerator, and expected dealers to fund half this amount from their trade discounts. A letter written to dealers in April 1982 states, "Out of your higher trade discount you should consider that Rs.30 per refrigerator has been prepaid by us to you towards advertisement. To this you should put in Rs.30 per refrigerator as before and vigorously advertise with a budget of Rs.60 per refrigerator."

Another document seized by the excise officials gives the break-up of the trade discounts that dealers received. The document, dated June 1982, shows that out of the total discount of 19 per cent (Rs.570) for each refrigerator, dealers were expected to appropriate 2 per cent for warehousing costs, 3 per cent as their contribution to advertising and 2 per cent for a special discount to be passed on to customers. This left only Rs.360 in the hands of the dealer.

NO COMMENT

In a statement made to the excise authorities in June last year, Godrej & Boyce managing director N.P. Godrej admitted that "the commission...to the wholesale dealers has to have some element of advertisement (costs)". The company's officials, however, refused to talk to *Business India* on the charges made in the two show cause notices, saying that the matter was sub-judice. Although the excise authorities had asked the company to reply to their notices within 30 days of them being served, it has not done so as yet. Said P.D. Lam, vice-president (corporate services), Godrej & Boyce, "we cannot talk to you on the subject until we reply to the excise authorities."

Besides advertising and warehousing

"Sure, it's polyester/wool. It's Gwalior's unique all-season suiting."

The secret is in the blend. It has not only polyester and wool, but silk, flax, viscose and other fibres as well. Which makes it especially suited for tropical climates. You feel comfortable and well dressed in any weather. You won't get a more suitable polyester/wool worsted blend.

costs, the company also expected dealers to spend a part of their trade discounts to meet after-sales service expenses, at least in areas where the company did not have its own offices or service infrastructure. The excise authorities conclude from their investigations that out of the 15 to 19 per cent that was passed on as trade discount on every refrigerator, about half was treated as consideration for providing after-sales service over a five-year period (including four years of optional service). In fact, one letter dated 18 April 1985, seized from the Calcutta branch of the company, reveals that even in cases where the wholesale dealer has to render service only for one year instead of five years, "...it would be fair if a part of the trade discount is recovered in some form representing the four years' service which the dealer would not be rendering".

The letter then goes on to details how the amount should be recovered: "We feel that it would be appropriate if, while refunding the amount of the service contract deposit, we raise a debit note on the dealer for the value of five per cent of basic price which can either be adjusted against this deposit refund or recovered separately. This will also act as an incentive for the dealers to persuade the customer to enter into the service contract."

> Yet another letter, seized by the excise authorities, dated 2 September 1982, states, "Out of your margin of Rs.200 to Rs.250 for the coming month, you should be prepared to spend Rs.60 per refrigerator on advertisement and publicity...this time we shall be advertising in the newspapers on your behalf and recover the cost from you through your blank cheques."

Armed with all these revelations, the excise authorities say that according to the provisions of the Central Excise & Salt Act, 1944, the "value" of any excisable goods does not include trade discount, provided it is not refundable on any account whatsoever. "It appears that the deductions claimed by M/s. Godrej as 'trade discounts' in the price lists filed by them do not meet this proviso," they say. "Instead, a part of the trade discount amounting to 2 per cent has been recovered or refunded in the guise of warehousing charges."

The company maintains that it has stopped recovering warehousing charges from dealers about three to four years ago. But at the same time some dealers found that their trade discounts were also lowered. S. Krishnamurthy, proprietor of Fashion House, Vellore, a Godrej & Boyce dealer, in his statement to the excise authorities, says that his agency was given a lower trade discount of 17 per cent as against 19 per cent earlier for refrigerators, as soon as the company stopped recovering warehousing charges. The excise authorities found a similar pattern in the case of typewriters too.

The excise case is far from sealed

SMALL REPRIEVE

For the time being, Godrej & Boyce appears to have got a reprieve, with the Bombay High Court issuing a stay order last year. The company's counsel, H. Hidayatullah, has argued that the excise authorities had approved the assessable values determined in the price lists submitted by the company on a provisional basis. The petitioners felt that once provisional approval was given to the price lists, it also applied to the assessments of duty. The petition filed by the company states, "Therefore...it is not open to allege that there has been any non-levy or short levy of duty as the question of the extent of the duty itself is under inquiry and quasi-judicial determination." Thus the company's petition "raises pure questions of law" (as Justice K. Kurdukar of the Bombay High Court put it) and not any substantive issues raised by the excise authorities.

Surjit Singh, collector of central excise, Bombay, declined to comment on the matter, or indicate if the excise collectorate will challenge the stay obtained by Godrej & Boyce. But clearly, the evidence cited by the excise authorities in their show cause notices is far from flimsy and they are not likely to give up in a hurry. So yet another long-drawn-battle over excise seems to be in the offing.

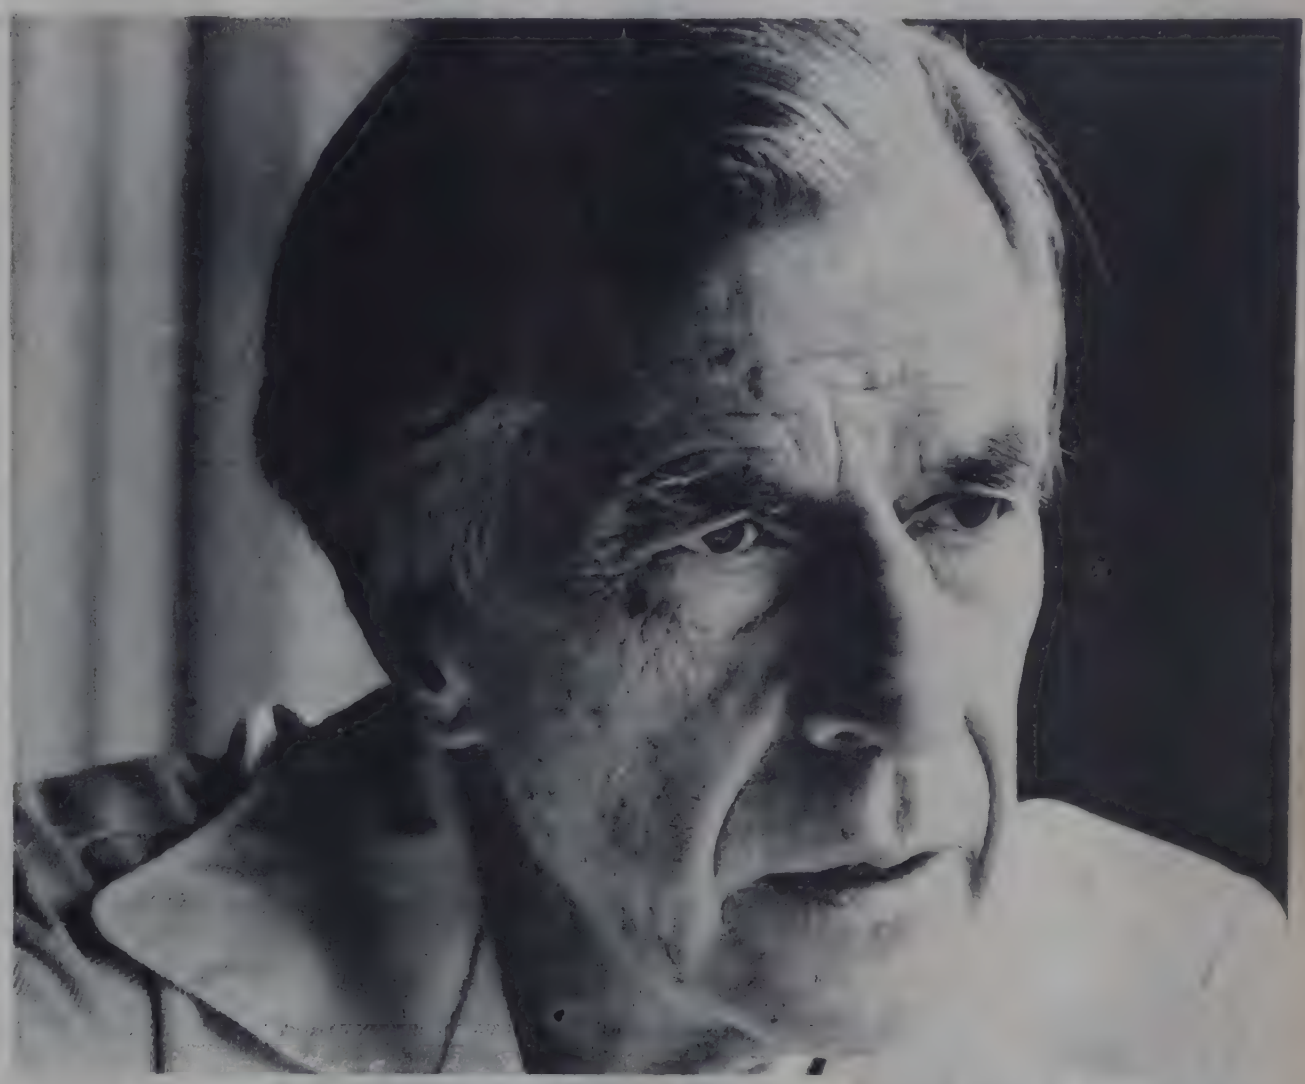
"Urging a liberal economy on India"

John Kenneth Galbraith, *noted economist, adviser to several US presidents, author, diplomat and ardent India watcher was in New Delhi last fortnight on a lecture tour. He spoke to* Business India's *Dilip Cherian and to M.V. Doshi, a former student of his.*



The issue of liberalisation, which is very big in India at the moment, is one that both developing and developed countries are grappling with. Where do you think this process is heading?
I think it is a very important issue and it depends entirely on the stage of development. In the early stages of economic development, where administrative skills are a scarce resource, the country should have a generally liberal economic policy. Then you get to matured capitalism as in the United States, Western Europe, Japan. You have an enormous number of problems that need to be considered and also a stronger administrative capacity. The result is, inevitably and rightly, you have more state control. This was a conclusion that I reached many years ago when, while flying back to India from the United States, I always, somewhere over Beirut, change from being a social welfare economist to the United States and find myself urging a liberal economy on India.

Do you think there will be a price to be paid in the short term for such a process?
Well, one sacrifices some measure of social equity in order that you have a greater rate of economic growth. There is no question about that. The whole question is not of right or wrong but something that is related to the much larger historical process.

In a country like India would the question of social inequity be an acceptable price?
This is a question on which we have practical experience. The liberalised economies of Korea, Taiwan and Singapore have had a beneficial effect on all the participants and indeed, are drawing participants from all the other countries. Similarly Thailand. But, at a later stage I would like to see India, as in the US, in Western Europe, concern itself with the greater questions of social equity.

Will liberalisation end up by benefiting India with rapid economic growth and a move towards a developed economy or will it send it into a Latin American kind of debt trap?
The South American debt trap was a result of one of our recurrent episodes of insanity where the big international banks had very large deposits of oil money and made speeches to their mirrors every morning about their success in recycling it. That was an episode that need not and will not recur.

That takes us to the issue of global debt which must at some stage begin to affect the way countries trade with each other. What do you see as the most expedient way out of the current crisis?
This is something which people who are short of conversation talk about. There is only one real problem of debt at the present time and this is of South American countries and that will not be repaid, it will be written off. There is a long history of written off debts in the last century for the developing countries. The US borrowed heavily in 1830 and again in the 1870s and a lot of that debt went into default and during the World War I the British and French borrowed heavily from the US and that went into default. The Canadian railway system was built on debt that was never repaid.

There is a lot of talk in India about moving towards high technology and I recall you have some very different views on technology. What do you feel is the correct technology for India?
Appropriate technology. There is no doubt about that. People involved in such matters find it profitable to produce themselves and this is not a matter for overall judgement it is a matter to be left with the market absolutely. Absolutely. Any public official or private businessman who talks about concentrating India's attention on any particular level of technology should be treated with loud snores.

I don't think there is any particular level of technology that India cannot achieve. I would in a liberalised economy encourage also hi-tech countries from abroad. I don't consider IBM an uncontrollable menace.

What about Pepsi?
Or Pepsi. I've been associated for the last twenty years very closely with the head of Pepsi Cola. Not for consumption of his products but because we've been co-chairmen on the American committee for US-Soviet relations. I'd make a point of that. I'd say if the Russians can survive Pepsi Cola, so can the Indians. In moderate amounts.

Photocopy on ordinary paper.

One of them can seriou

The photocopy on the left is on ordinary paper. What it can do to your copier, however, is far from ordinary. In its passage through your copier, it can leave a trail of virtual mayhem.

The 'fluff deposits' on it can scratch the most critical and expensive part of your copier, the drum. Apart from reducing the life of your copier, this can do all kinds of things to the photocopy. Shear, bend, stretch, smudge, fade... the symptoms of a damaged drum are all-too-visible.

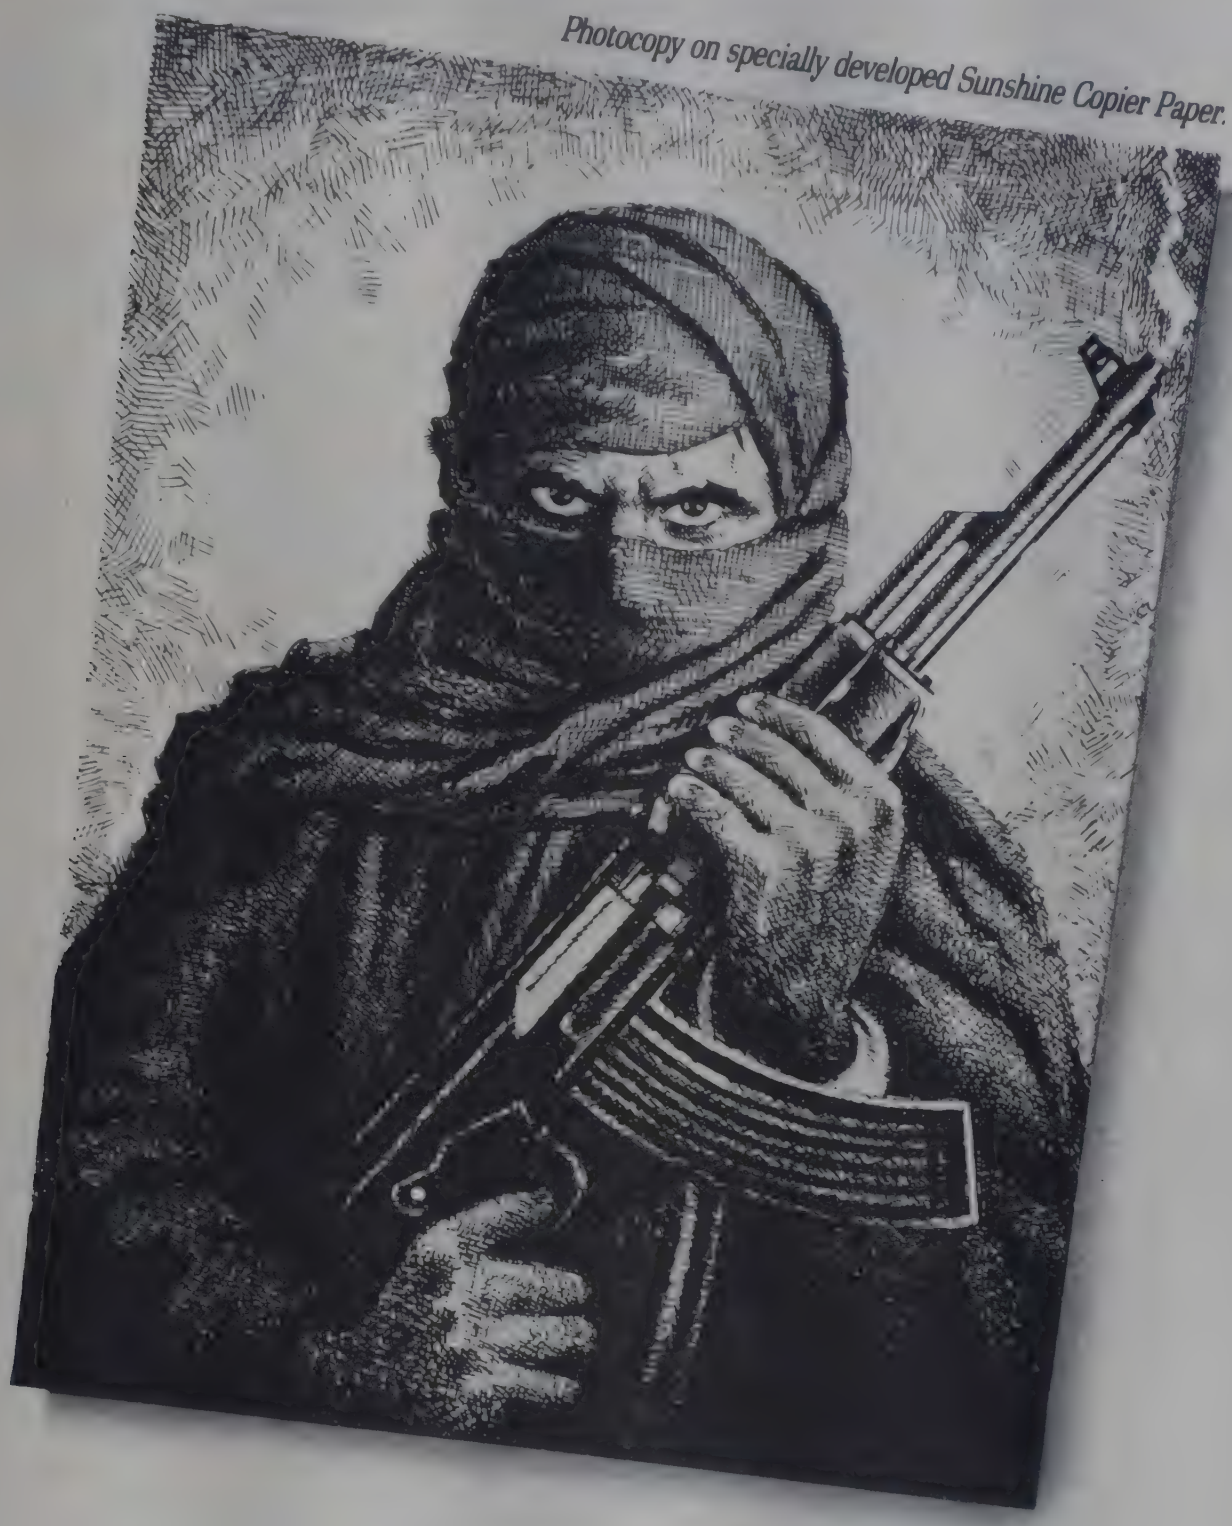
And since ordinary paper is neither stiff enough nor accurately cut to size, it tends to jam in the copier, further increasing the damage.

Fortunately, there's a photocopy on the right too. On specially developed copier paper – Sunshine, from Ballarpur. This, you should have guessed by now, is all that ordinary paper isn't.

- The surface is specially treated to eliminate the 'fluff' and has a very high smoothness index. It actually glides over the drum effortlessly.

Photocopy on specially developed Sunshine Copier Paper.

The Thapar Group



sly damage your copier.

- Sunshine Copier Paper is also of the right stiffness and is precision cut to size (on imported electronic guillotining machines). So there's no question of paper jams.
- Also, the copies come out much sharper on Sunshine Copier Paper. Why? Controlled surface conductivity and an extra white Sunshine brightness ensure that copies come out original looking, and stay so for a long, long time.

Not much of choice between the two, is there?

Sunshine COPIER PAPER

For better copier care.

Our edge is not just the technology... but knowing best what to do with it

WEBCOM brings the latest Analog/Digital technology in Telecom
- EPBT from SIEMENS AG, West Germany &
EPABX from JEUMONT SCHNEIDER, France.

There is a veritable explosion of technology in the field of telecommunication—the world over. And India could not lag behind. Accordingly, the Government of India has ushered in a new policy bringing in radical changes in the whole outlook on communication systems. That brings to the Indian business and industry the benefit of latest proven technology from world leaders in telecommunication.

To give the best of the new breed of technologies, WEBCOM has joined hands with SIEMENS AG, West Germany for EPBT and with JEUMONT SCHNEIDER, France for EPABX systems—remarkably efficient and easy to operate. These are duly approved by the P & T.

Our Company's project is unique in setting up an integrated facility for the manufacture of EPBTs and EPABXs in tandem to optimise resource utilisation and cost effectiveness.

It would be the promoters' endeavour to make WEBCOM a synonym for 'Service'.

Always a beat ahead in Technology

What do you think will be the likely US scenario after the November elections and how is that going to affect the US attitude to India?
I pay no attention to the US attitude to India or the Indian attitude to the US. That's something that affects about half a dozen of bureaucrats on both sides. The real relationship between India and the US is an enormous and continuing fascination of the US for Indian culture, politics, literature; something that has captured millions of us. On the Indian side there is a similar fascination with the US and I have said many times that Indians anciently concern themselves with the transmigration of the soul. Now that problem is solved and when they die they want to go to New York.

In economics there is a tremendous amount of value being attached to new resources, and it's quite obvious that India has a large pool of this. Yet how is it not attracting global economic powers?
Oh, I think this is inevitably the process. We have seen industry moving from Britain to the Continent in the last century on to West Germany, on to the US, on to Japan, on to Korea. Now we have a rapidly developing Thailand and I have no doubt that India will be next in line.

The important thing which can't be emphasised too strongly is the importance of cultural investments. The most important step in this process is to have good primary and secondary education besides good university education. Modern industry requires a literate working force. This has been the great advantage that the Japanese have, that the Koreans have, that the Thais have taken seriously. One of the mistakes of my generation is that we didn't see the importance of strong disciplined public education. One of the simple truths of modern world economy is that there is no literate population anywhere in the world that is poor and there is no illiterate population where there is anything but poverty.

Some studies for the 1990 picture the global economy as one where there will be low growth, low inflation, a more conscious customer, and far greater competition thanks to open markets. Do you see this as a possible scenario?
It's possible. But these are all matters of not judgement but guess. I would see the 1990s as a time when the industrial countries will continue to give up their mass production and will be increasingly dependent on hi-tech or service industries. And there will be much greater emphasis in the older countries on industries involving the arts, entertainment and design. This is not a purely theoretical matter. One of the great post-war successes has been Italy, and Italian products have been based overwhelmingly on superior design which in turn reflects the superior artistic vision of Italy.

We already see New York and Paris surviving not because they are places of inexpensive manufacture but because they are incomparable when it comes to the arts.

What do you see as India's role in this?
Well, I've no doubts that India has a long future in the arts. But India's immediate future is in the liberalisation of its labour force.

How do you see the communist giants of China and the USSR putting the markets into Marx as it were? Do you see this as something that the communist ideology can accept?
Certainly. Inevitably. As you get more complex consumer goods, more styles, more designs, more supporting services, the whole problem of command social planning becomes very difficult, very awkward, very immobile. And you have both China and Russia moving towards the market as the only means of translating consumer demands to a producer and getting the producer to respond. Combined with the fact that we now recognise, as the Chinese have and the Russians are recognising, that agriculture works only when you have responsibility resting on the individual cultivator. Agriculture works only under the system of exploitation, where the individual exploits himself and his family.

In India, on the one hand, the government is liberalising industry and the economy. On the other side, they talk of achieving the commanding heights of the public sector. How do you see the future trend in India with regard to this kind of conflict?
That talk about the government occupying the commanding heights. It is something in which I participated 50 years ago and which I have long since abandoned.

A lot of people are talking about Africa and how there is a constant and consistent deterioration there. What is your view of Africa in a world economic content?
I have never been a first hand student of Africa. But there is no question that this is the tragic case in economic development. And the circumstances that have led to this breakdown are I think four. There's first of all a kind of pseudo socialism in Ethiopia and Mozambique, and Tanzania. One of the things that Marx was most insistent about was that you can only have socialism after you have capitalism. He would have been appalled at the idea of a socialist Ethiopia. That is one thing wrong. Putting a burdensome administrative load on a primitive governing body.

Second problem, there has been an emphasis on industrial development with a prior claim to agricultural development. This has led to efforts to keep food prices low in order to benefit the urban working community and has discouraged long term development of agriculture, and has been a factor in the famine.

Third has been the failure in economic development to emphasise what we have already talked about here in India — cultural education. In the last century in the US and Europe, when you were talking about economic progress the first thing you were talking about was education, public education, that lesson got lost in Africa.

Finally of course there's the problem of who does the developing. One of the things that is certainly necessary for economic development is a stable government apparatus.

To come back to India, do you see India's diversity as an accelerator or deterrent to its economic prosperity?
It's a hypothetical question, because one accepts what one has. The clear implication of your question is that somehow India should be converted exclusively to Punjab? It shouldn't be very difficult!

No, seriously, you once called India a functioning anarchy. You still subscribe to that view?
I've noticed that India like the US has a gift for accepting pat phrases. Many years ago I invented the phrase 'conventional wisdom', which has become part of the language and I come to India and still discover that two of my comments of the distant past, post-office socialism and functioning anarchy are still around. I am prepared to see them abandoned. They lack novelty.

BOMBAY SEWERAGE PROJECT

Down the drain

Initiated in 1970-71 with a feasibility study the World Bank-sponsored Bombay II project, intended to revamp the city's sewerage system, is still far from complete. If anything, the project appears to be in murkier waters now than a decade ago when the consultancy for the project — a WB pre-requisite for the loan — was awarded to Engineering Science Inc (ES), a US company known more for its expertise in water supply than sewage disposal.

The way the consultancy contract was awarded to ES on 9 June 1979 generated a great deal of controversy. And the way it was handled spelled disaster right from the word go. The ES consortium comprising two local companies — Public Health Engineers Consultancy Pvt Ltd (PHE) and Associated Industrial Consultancy Pvt Ltd (AIC) — took three years to complete the designs alone out of the five years stipulated for the completion of the entire project. The consortium was appointed for detailed engineering consultancy and site supervision of certain components of the work which included laying submarine outfalls, setting up aerated lagoons, constructing tunnels, diverting sewage from various parts of the city to the pumping stations and outfalls through the tunnels and testing the sewage to ensure that it conforms to the standards set by the Maharashtra Prevention of Pollution Board.

Eight years later and three years behind schedule, the only achievement the consortium could boast of was the partial commissioning of the Colaba waste water treatment plant, the smallest of the seven systems with a capacity to dispose of approximately 25 million gallons of sewage a day. Less than two months after commissioning, the chief engineer of the Colaba plant listed 106 defects in the waste water treatment facilities.

The number of contracts handed out *in toto* for smaller jobs exceeds 85. Ramesh Joshi, a Janata Party councillor believes that most of these contracts have been awarded fraudulently and that "the entire project has become a money-making bonanza for everyone involved with the project — from the smaller contractors to the consultants themselves". The prized contract — that of installing the outfalls (3.5 metres diameter RCC pipes that would diffuse/dissolve the treated sewage and finally release it 3 km out in the Arabian sea at Bandra and Worli) — was however, awarded to Spie-Capag, a French firm with Italian collaboration which, later on also bagged the HBJ pipeline contract.

Subsequent events proved both the choices — that of the consultants (ES) and that of the contractors (Spie-Capag) — to be a mistake. While Spie-Capag suspended all work on the outfall project on account of "incorrect seabed data prepared by the consultants", the latter seemed even less interested in getting the project completed. Delays kept mounting, equipment lay idle and therefore costs kept escalating. The cost of the project initially estimated at Rs.334 crores has soared to Rs.651 crores. Joshi, however, estimates the total outlay of the project to be not less than Rs.800 crores. "I wouldn't be surprised at all if the final figures exceed Rs.1,000 crores," he says. The two Indian companies of the ES consortium, however, could not explain the reasons for such delays. While PHE directed *Business India* to AIC for the information, the latter passed the buck on to the former."

According to Spie-Capag, the survey conducted by the ES consortium showed the seabed at Bandra and Worli to be rocky whereas their own investigations revealed that the bed was sandy and hence unsuitable for laying the heavy 65-80 tonne RCC pipes. The BMC, however, differs. Says R.G. Deshpande, deputy municipal commissioner, "What Spie-Capag is claiming now is not true. When the contract was awarded, they were aware of the seabed conditions at Bandra and Worli. Their only grudge then was that the rock level was higher than desired. Suddenly they made a volte face and claimed that the seabed soil conditions were at variance with what they had been led to believe."

Bombay II sewerage project: in limbo

WHO CARES IF YOU BUY THE BIGGEST NAMES IN PCs, IF THE MAINTENANCE SERVICE YOU GET IS THE SMALLEST !

Pity the maintenance service in the computer industry is so poor! Especially if you're not a top priority customer.

You hardly get to see a service engineer even while the warranty period for your PC is on.

What happens to you when your machine breaks down after the warranty period is over, is anybody's guess.

In such a situation, the words "preventive maintenance" might as well cease to exist.

Though we all know what a difference it can make to the meantime between failures.

Fortunately, there's big help at hand.

From a computer company at that.
A company that believes as much in preventive maintenance as in corrective maintenance.
Believes not only in speed of response, but backs it up with the best repair time in the industry.

Call Eiko. Book the finest computer maintenance engineers.

Call Eiko. No matter what your brand of PC. Get yourself a maintenance service reputed to be the best in the country.

Eiko PC Care

Backed by a full-fledged computer manufacturing company.

By a network of skilled service engineers.

By the facility to offer the best spares whenever you want it. Everything to take on where the others left off.

Find out more Ask any Eiko PC Care customer

Ask Procter & Gamble, Nuware India, Kirloskar, C.D.O.T., Indian Organic Chemicals Ltd., Dabur India, Vedanta Printers, Chandan Auto Agencies, Mohini Wines...

Some names you know, others you don't know. But all satisfied Eiko clients. Because their PCs are the best maintained PCs in the country.

TO SAVE YOUR LIFE, YOU MIGHT NEED YOUR LIFE'S SAVINGS.

Major illnesses can be pretty expensive indeed. Reason why, United India has tailor-made Mediclaim slabs to help you when you need help most.

With its total hospitalisation and domiciliary hospitalisation scheme, UI Mediclaim helps you cope with the heavy expenses of major illnesses—a probability in everyone's life.

For a premium that amounts to less than 60p. a day, Mediclaim reimburses your hospitalisation and domiciliary hospitalisation expenses upto Rs. 13,600/- per year (minimum slab) and you can avail of the best in medicare.

Inexpensive and tax-deductable

The most attractive feature of UI Mediclaim is that premiums upto Rs. 3000/- enjoy a deduction on your taxable income.

Family Discount

UI Mediclaim also offers a special family discount of 10% if you cover besides yourself, spouse, two children and dependent parents.

Take the UI Mediclaim Cover.

Premium per day	Premium per annum	Hospitali-sation	Domiciliary Hospitali-sation

Interpub-UI 388

According to B Le Marquis, project director of Spie-Capag, it was the responsibility of the consultants (ES consortium) to obtain adequate data to enable them to design the outfalls at Bandra and Worli. Cementation India Limited (CIL), a local firm, was appointed by the BMC to do the initial drilling along the offshore alignment at both the outfalls. Cementation India Limited made several borings and on the basis of these, an ES engineer, B. Onodera, proceeded to establish the nature of the soil at various levels on the ocean floor. This data in turn was supposed to be included in the tender documents provided to the contractors.

It was during the "core-bore" trenching done by Spie-Capag in 1986-87 that the seabed survey results were found to be totally inconsistent with that provided in the tender. Only one bore log prepared by CIL tallied with the information provided at the time of awarding the contract.

The remaining borelogs, it has been alleged, had apparently been invented and extrapolated by the BMC in order to give support to the soil conditions made in the tender documents. This was done with a view to further strengthen the illusion that there was rock at an average distance of less than 3 to 4.35 metres below the seabed. According to Spie-Capag, the seabed data furnished in the tender were designed to deceive the bidding contractors into quoting a lower rate for the works than they would otherwise have done.

Consequently, Spie-Capag stopped work in a sudden move in October last. The BMC, however, assigns different motives to Spie-Capag's stoppage of the work. They claim that Spie-Capag's work progressed very slowly — it cast nine pumps a per month as against the normal 2.3 per day. Generally a foreign company teams up with some local firm to facilitate the execution of the work. Spie-Capag tried to woo Bombay-based Larsen and Toubro failing which it tried to team up with Essar Construction Limited. The second attempt also failed ostensibly because "the central government did not give the sanction". However, insiders claim that the terms at which Spie-Capag wanted Essar to join in were not only unfeasible, they were also against all the norms that the union government has laid down for such alliances.

Sources in the BMC also allege that Spie-Capag was deliberately blocking the execution of the project in order to take

Bandra outfalls: a white elephant

over the consultancy contract from ES Consortium. Spie-Capag had not only recommended the termination of the ES consultancy contract, it had also promised to continue work and withdraw its demand for an additional Rs.11 crores if the consultants were removed. However, Spie-Capag could not shed any light on the allegations. They refused to speak to *Business India* as "the matter was *subjudice*".

Finally, on 22 July 1987, the Standing Committee of the BMC in consultation with the World Bank terminated the contract of the Bombay II project consultants — ES consortium. "Despite the contract being drawn on a 'fixed fee basis', ES consortium walked away with Rs.23.19 crores as fees — Rs.7.43 crores more than the fees mentioned in the contract," bemoans Ramesh Joshi.

However, in December 1987, Spie-Capag, at the behest of the World Bank, arrived at a Memorandum of Understanding (MOU) with the BMC. The MOU recognised that the design of the works and specifications as described in the contract documents were based upon non-existent physical conditions of the seabed. According to the MOU, Spie-Capag would submit a fresh proposal to the BMC for design and construction of its remaining works on or before 10 January 1988; the proposal would be evaluated by the BMC using the services of a third party expert consultant and a fresh agreement would be entered into on or before 15 March 1988. Despite the fact that this proposal was considered after due analysis by the BMC's new consultants, Binnie and Partners (B&P), to be technically sound and reasonably estimated, the BMC elected not to implement it.

Having failed to enter into any agreement until March this year, Spie-Capag finally withdrew its services on its own. In a writ petition filed on 1 September 1988 in the Bombay High Court, the firm asked the Court to legalise its termination of the contract for the Bandra and Worli outfalls. It alleged that the BMC had perpetrated a fraud in collusion with ES consortium by providing incorrect data on the sub-soil survey of the seabed.

Spie-Capag has further asked for an injunction restraining the Corporation from removing its tools, plants, equipment etc. It has also demanded more than Rs.112 crores as damages for being forced to keep their men, machinery and materials idle. As the Corporation had awarded the contract to Spie-Capag against bonds guaranteed by Banque Indo Suez worth Rs.8.6 crores (US $ 40.5 million) the contractor company has also prayed for an injunction preventing the Corporation from encashing these bonds and securities. The Court, however, has asked the BMC for a show cause reply before granting any injunction. Incidentally, the BMC has yet to appoint a counsel for their defence.

The pace of work at the Corporation is indeed slow. Fresh tenders for resurvey of the seabed are still in the preparatory stages, seven months after the decision was taken to invite bids. "We have started the process," explains Deshpande, deputy municipal commissioner. "By March 1989, the resurvey work should be complete. The work on the two outfalls will commence by early 1991." The period of the contract of the corporation's consultants, B&P, however, expires in 1992.

Whether the entire Bombay II Sewerage project will be completed by then or not remains to be seen. What is more than obvious is that the project — for which the World Bank has already paid its commitment of US $ 196 million — has become a white elephant for the BMC as well as for the residents of the city who will ultimately have to shell out the extra cost in increased taxes. Dubbed as the largest sewerage project in Southeast Asia, the Bombay II Sewerage Project does indeed seem to be a "multicrore fraud" as the erstwhile chairman of the BMC Standing Committee, Pushpakant Mhatre said in a letter to the Commissioner. "The stench emanating from the sewerage project deal stinks worse than Bofors," Ramesh Joshi concludes.

■ SHEKHAR GHOSH

Top of the pack rating

Know what? Two Indian lending institutions have been assigned prime-1 (P-1) rating by the New York-based Moody's Investor Services. After several months of preparation which culminated in presentations made by a team each from the State Bank of India (SBI) and the Industrial Credit & Investment Corporation of India (ICICI) to Moody's, both secured a top of the pack rating.

While the ICICI rating applies to its existing $ 150 million Eurocommercial paper (ECP) programme (issued in October 1987), SBI's rating applies to its commercial paper issue in the US market. The ratings indicate that the issuers (SBI and ICICI) have a "superior ability" for repayment of short-term debt obligations.

SBI has won another feather in its cap by getting an A2 rating from the other world renowned rating agency — Standard and Poor's (S&P), also based in the US. This applies to a long-term debt obligation for a US $ 200 million issue in the US commercial paper market.

Ratings, rating agencies, and rating concepts are an established feature of US capital markets. Over the years they have also become popular in international finance markets. In 1987, with the creation of the Credit Rating and Information Services of India Ltd (CRISIL), a joint venture between the banks and ICICI, a beginning was made for independent rating of debentures and fixed deposits of Indian companies. It is expected that equity issues will soon be rated by CRISIL.

Eurocommercial paper along with Euronotes are short-term unsecured promissory notes that are issued in discount or interest-bearing form. Approximately $ 20 billion of these short-term debt instruments are outstanding in the market. However, the US commercial paper market is very much larger with outstandings of US $ 300 billion. It is a prerequisite for any issuer of US commercial paper to get a credit rating before the issue. Which is why SBI first got a rating for its $ 200 million US commercial paper issue which opened on 20 September. The same does not apply to the Eurocommercial paper markets.

What purpose does a credit rating serve? "The credibility of the borrower (issuer) gets established," says Lalitha Gupte, assistant general manager, ICICI

Gupte: "borrowing from the capital markets works out cheaper"

"A rating enables you to bring down costs. A few months from now I will be able to say how much," she adds.

Obtaining an international credit rating is part of the long-term borrowing strategy of ICICI and the government of India. "We are going to borrow not only from multilateral agencies but also from the capital markets which works out cheaper," says Gupte.

In the international market, many investors usually go in for rated paper. The reason is simple. An investor in Japan, for instance, is not in a position to do a detailed analysis of a sovereign risk. The investor may not have the information and the wherewithal to do an analysis of, say India. "So investors look for a credit rating by Moody's or S&P's which is a measure of the credit-worthiness of issuers whether they are companies, banks, financial institutions or government-owned agencies," comments Gupte.

Increasingly, investors are relying on formal credit ratings as major bankruptcies and debt reschedulings reduce the credibility of less formal credit judgements. Credit ratings help investors by providing an easily recognisable, simple tool to estimate the credit quality of unknown issuers — municipal issuers, sovereign governments such as the UK and Finland, and companies such as National of Japan and International Computers, UK. Many issuers sell bonds with varying security pledges, such as first mortgage bonds and sinking fund debentures, and also issue bonds that are on call and are convertible.

A handbook published by S&P says, "Ratings are of value only as long as they are credible. Credibility arises primarily from the objectivity which results from the rater being independent of the issuer's business. The investor is willing to accept the rater's judgement only where such credibility exists. When enough investors are willing to accept the judgement of a particular rater, that rater gains recognition as a rating agency." Both S&P and Moody's have no government backing or mandate. But over the years both have evolved and today their ratings are considered the top two credit ratings of the world.

Says S.Gupta, chief general manager, international division of SBI, "The commercial paper market has several definite advantages over the loan syndication market." According to him while the former is long-term in nature (2-3 years) the CP market maturity ranges between seven days and 270 days. "By its very nature the loan syndication market is very small as the source of funds is limited to the banks. In contrast, commercial paper issued in the capital market have a much wider source of funds. It includes mutual companies, insurance companies, corporate money managers and trusts," says Gupta. SBI entered the CP market because of the several advantages it offered: cheaper and bigger markets and wider publicity among investors. "Currently SBI is known to a hundred banks. After the CP issue and once there is active trading in the exchanges SBI's access would widen to 10,000 banks," predicts Gupta. Once investors become familiar with India and Indian institutions, the country can improve its rating even further from the current A-2 rating to possibly a A-1 rating for long-term debt. 'This will not happen overnight. But it is worth it," says Gupte.

How much do ratings cost? In the Moody's investor services, the fee for short-term bank obligation ratings is a $ 10,000 basic annual appraisal charge plus a supplementary quarterly charge. The maximum supplementary charge is $ 6,000. The basic annual appraisal charge for long-term ratings is $ 15,000. Which is a small price for greater access and deeper penetration at competitive costs in the international finance markets.

There's Rs. 12 Crore Worth of Back-Up Service Behind This.

To understand the reason why Tata Telecom has invested so much, you'll need to know the business Tata Telecom is in.

And if you're in the market for a Digital EPABX System – the facts will be of even greater interest to you.

Technology from Oki of Japan.

Tata Telecom is working with technical assistance from OKI Electric of Japan.

OKI is a world leader in the field of telecommunication.

OKI's technology is state-of-the-art, which makes it relevant to today's needs – and to those of the future.

Rs. 12 crore Worth Of Back-Up For Quality And Service.

Besides the hardware, Tata Telecom has built a comprehensive infrastructure for quality service to customers.

The company has invested Rs. 12 crore in this project, in sophisticated computerised test equipment – so that every component can be checked for 100% performance. And that diagnosis is immediate and rectification rapid.

The Tata Commitment.

Tata Telecom is here to stay – with an automated assembly and testing facility at Gandhinagar, Gujarat.

Key personnel have been intensively trained in Japan.

Tata Telecom has done all this to meet the challenge of the future. To bring you EPABX Systems that will change your life. For the better.

NRI INVESTMENT

Housing could be the answer

Given that fresh NRI money is the need of the hour, innovative options are worth considering on how it can be accessed. The basic objective of any new initiative ought to be to get money that has not previously contemplated entry and money that will actually stay. Considering the fact that, currently, investments in financial assets (bank deposits, bonds, equities) are primarily in repatriable categories, it is unlikely that there will be much investment in such financial assets on a non-repatriable basis. One area the inflow of NRI funds can be increased considerably is investment in real estate or housing. With the return-to-roots theme being discussed so often these days, this proposal could have major significance.

Many NRIs are likely to view such an investment, as one made in a retirement home for their old age. Thus the issue of repatriation will not arise. And many NRIs will not mind investing on a non-repatriable basis because one's bond towards one's home are clearly different and distinct from connections with investments in some company's equity or as bank deposits. It is a known fact that the world over, private wealth is mainly invested in real estate, primarily housing stock.

However, it should be understood that logically NRIs are not going to invest in houses for rental purposes. They will either house family members or keep the premises vacant till they come back to India. This follows simply because the laws in India, relating to access, possession, right to occupy, eviction, etc, are clearly in favour of the tenant. In fact, the general feeling is that once a house has been rented out, the tenant cannot be evicted or removed.

But investments in houses which have to be kept vacant are not attractive, and rightly so, from two viewpoints. First, the NRI investor in housing stock would be keen to ensure that, apart from the initial outlay, he does not have ongoing cash outflows. In other words, some income on the investment — necessarily rent — must cover payments like municipal taxes and society and maintenance charges. It will be difficult, to the point of impossibility, to persuade persons to invest a large sum in a house and then keep remitting more and more funds for maintenance and overheads each year.

Second, the principal purpose of encouraging investment in housing is to make more housing stock available to more people and thereby bring down rents. Keeping houses and flats vacant will not serve this purpose at all. In fact, by keeping vacant housing, one would contribute to the creation of isolated pockets, leading to price escalations and social tensions.

Leverage would of course be desirable from the investors' point of view. They would like to borrow as much as possible in rupees to finance their housing investment. This, however, does not meet the nation's objectives. We would like them to borrow as few rupees as possible and remit in as much foreign exchange as possible.

Keeping all these points in mind, a workable proposal could be along the following lines.

- Investments should be allowed only for the acquisition on construction of new houses. The state and local governments should be asked to demarcate areas outside specified cities where the legal tenets of ownership and eviction are not present or applicable. Builders and land developers must only be allowed to sell houses in such marked areas to NRIs against payments made to them through authorised foreign exchange dealers.
- Builders to be permitted to import special fixtures and should be encouraged to set up and organise housing maintenance companies. These companies to maintain, manage and rent out houses or flats on behalf of NRIs.
- Rental income less maintenance charges, property taxes, fees paid on partial rupee finance to be liable to Indian income tax at a flat rate.
- Net amount to be credited to NRI accounts and to be available for the use of NRIs upon visits to India, but not to be repatriable.
- Transfer of property from one NRI to another with consideration paid outside India to be allowed by simple registration process without incidence of income/capital gains tax. Stamp duties to be minimal. Even transfers to a resident to be permitted freely and gains to be exempt from tax, but no permission to repatriate proceeds which have to be credited to an NRI account.
- Gifts of these properties to other NRIs or to residents to be exempt from gift tax.

However, there may be some problems. First, the need to involve a variety of state governments in ensuring appropriate protection from rent control and tenancy rights legislation will present a problem of logistics. Second, granting of what may appear to be special privileges to NRIs may give rise to a demand for similar facilities for residents.

This, however, may represent a boost for the housing industry in general. As long as the thrust remains on new construction that adds to housing stock in the country, such an approach merits serious consideration. With the NRIs, there is the added plus point of non-repatriable investment flows that augment foreign exchange reserves.

Incentives needed for pvt sector debenture issues

By a Staff Reporter

NEW DELHI, Jan. 23.

The Federation of Indian Chambers of Commerce and Industry (FICCI) has urged that debenture issues of private sector companies should be given the same incentives as are available to public sector bonds.

Speaking on 'Economic situation and budget' at the meeting of the Rotary Club of Delhi Mid-town here today, FICCI president, Mr K. S. G. Haja Shareeff stated that the capital market had been dichotomised because of the special concessions given to public sector bonds. As public sector bonds were made to [illegible] concessions both equal terms and conditions.

Mr. Haja Shareeff said that the revival of the capital market was of utmost importance to enable the private sector industry to raise necessary funds from this source. Equally necessary is to exempt capital gains from tax if these are reinvested in shares within the specified period. This will divert resources from non-productive or less productive uses to the capital market which can direct them to industrial development.

With a view to stimulating demand it was necessary to liberalise credit and monetary policies [illegible] institute a system by banks. Such [illegible] of consumer [illegible] accelerate expansion of industrial production and provide larger revenue to the government by way of higher excise and sales tax collection. Moreover, fiscal measures need to be taken to reduce the cost of production. These could include reduction in customs duty on capital goods which cannot be produced within the country and abolition of excise duty on capital goods.

Mr. Haja Shareeff also stated that it was imperative to raise the tax exemption limit on personal income from Rs 18,000 [illegible] 25,000 and reduce the rate of [illegible]

Excellent industrial sites at Kerala (Dist. Ahmedabad) give you a competitive edge.

Just 45 kms away from Ahmedabad, industrial land is selling for one-third the price prevailing in the neighbouring city!

As an entrepreneur you know what that means to your business. Lower infrastructural costs. Better margins. And a chance to make headlines with your successful project.

On the Bavla-Bagodra road, Kerala has every conceivable infrastructural facility needed for your project, including readymade sheds.

Besides adequate water and power supplies, transportation and communication facilities too are well developed.

An ideal location for engineering industries, labour, both skilled and unskilled, is easily available thanks to the proximity to Ahmedabad.

And naturally, this proximity also means that the social infrastructure your managerial personnel will need is not far away.

To top it all, new units in Kerala are eligible for attractive incentives under Category IV...

Subsidy : 20% of the fixed capital investment for small scale units and 15% of the fixed capital investment for medium/large scale units: or Rs. 25 lacs. whichever is less.

Sales tax exemption : 50% of the fixed capital investment for small scale units and 40% of the fixed capital investment or Rs. 60 lacs, whichever is less, for medium/large scale units. For a period of five years from the date of starting production.

Sales tax deferment : 45% of the fixed capital investment for small scale units and 30% of the fixed capital investment or Rs. 40 lacs, whichever is less, for medium/large scale units. For a period of five years from the date of starting production.

This gem of a location is just one of the many that Gujarat has to offer. All complete with necessary infrastructure. And situated close to urban conglomerates.

Kerala is a site worth seeing. Check it out right away!

Fresh energies for electronics

The governor's package of incentives seems to have had an energising effect on the electronics industry in Tamil Nadu. The state has been lagging behind neighbouring Andhra Pradesh and Karnataka, and it has been relegated to the seventh position in the country. "For the last two years, preceding President's rule, no major products in electronics received clearance," observes an industry spokesman. Industrialists have still not forgotten the manner in which the Texas Instruments project was lost to neighbouring Karnataka.

Under the package, sales tax concessions granted have rendered products manufactured in the state cost competitive. The electronics industry in the state is making efforts to get on an even keel while the climate is encouraging.

Leading the pack in this attempt is the state-owned Electronics Corporation of Tamil Nadu Ltd (ELCOT). "Hard decisions have been taken; the corporation has disinvested in projects which have not been worthwhile and has simultaneously taken on new projects with private sector promoters in order to reach a turnover of Rs.43 crores by 1989-90, from the current turnover of Rs.15 crores", says Elcot chairperson, S. Sathyabama.

Elcot has, since 1980-81, accumulated losses of Rs.3 crores. During 1987-88, its net loss was reduced to Rs. 6.7 lakhs, and as per its projections, it should reach a no loss position this year. "Our accumulated losses will be wiped out by the end of the Seventh Plan," says Sathyabama. "Most of our units are either expanding capacity or are on the verge of declaring a dividend," she adds.

This will include Sears Electronics Ltd, the joint sector TV manufacturing company; Elcot Power Controls Ltd and Kody Elcot Ltd; Telematics Systems Ltd, which manufactures push button telephones instruments; and Infotech Ltd, which undertakes turnkey computer projects.

Available resources will have to be invested wisely in order to maximise returns. (The budgetary allocation for the Seventh Plan was Rs.10 crores, though this is likely to increase to Rs.13 crores by the end of the plan period.) As a first step, two companies have been privatised. Elcot disinvested its holding in Advent Computer Services Ltd, a small venture engaged in software exports, in which it had originally sunk Rs.2.5 lakhs. "We realised that even if this company paid a dividend of 200 per cent, the return on investment would not render our involvement worthwhile," says Sathyabama. Its public sector aluminium electrolytic capacitor project has also been converted into a joint sector venture with a private promoter from Madurai.

New investments henceforth will be made only in joint sector companies. "This is necessary since none of our companies have stabilised sufficiently to merit additional borrowing from the market," explains Sathyabama. Elcot has plans to move out of consumer electronics. Besides catering to the needs of the defence sector, it will be involved with telecommunications and professional electronics. It will continue to make TVs, but has decided to opt out of watch making. Its attempt at manufacturing digital watches based on the Hitachi module supplied through Semi Conductors Ltd cost it a loss of Rs.8 lakhs. Competition from smuggled watches, company sources say, resulted in a capacity utilisation of a mere 15 per cent.

Available resources will have to be invested wisely in order to maximise returns. (The budgetary allocation for the Seventh Plan was Rs.10 crores, though this is likely to increase to Rs.13 crores by the end of the plan period.) As a first step, two companies have been privatised. Elcot disinvested its holding in Advent Computer Services Ltd, a venture engaged in software exports...

Observers of the electronics industry feel that the corporation is now learning to make the right choices for projects. Also, according to a company source, "With the encouragement given to electronics in the state, larger groups like Amalgamations, Peico and Indchem Electronics are now willing to team up with Elcot in new ventures." The first, ie, Amalgamations, is to set up a 100 per cent export unit for printed circuit boards at the Madras Export Processing Zone with Elcot. Peico is involved in a venture to manufacture rural electronic exchanges with technical knowhow from TRT of France. Indchem Electronics and Elcot will together manfuacture micro-communication equipment for the railways and the ONGC. A project to manufacture soft filters for TV with Anand Electronics is on the cards. With Electroscan Ltd, there are plans to manufacture high voltage line output transmitters to be used in colour TVs.

"The climate has certainly changed since 1987, when I took over. We were then trying to push through a few select projects. Now we are flooded with enquiries and project proposals," says Sathyabama. So, on the drawing boards are projects to manufacture cable harness systems, industrial safety control systems indigenously developed metering systems and instruments and hybrid circuits — in collaboration with Sietex, a local SSI success. Elcot hopes dividends within five years of starting commerical production in these projects.

"It is now time for the centre to step up public sector investment in electronics in Tamil Nadu, so that the state can gain ground in the field," says M.M. Rajendran, chief secretary, Tamil Nadu. Hindustan Teleprinters Limited and BEL's supporting centre, to cater to the Avadi tank factory, are about the only instances of such investment in the state. "The state can not even boast of a research laboratory in electronics," says one industry source.

In the absence of major public sector investment, "the spread effect with smaller units coming up has just not happened", observes Sathyabama. However, Elcot is making an attempt in this direction. "Hosur is now being promoted as a centre suitable for locating electronic units," she says. Coimbatore and Madurai also present several possibilities. While the former is noted for its light engineering units, the latter is geared towards auto ancillaries. "The attempt is to use that reservoir of expertise to encourage units related to these field," says Sathyabama.

The other drawback which Elcot had, particularly in the earlier days, was the absence of a technocrat to head its operations. "For the first time, we have a person like G.V. Ramakrishna, who understands electronics," comments an industrialist.

Elcot's efforts are being watched keenly, as they signify fresh hopes for the electronics industry in the state.

SKL 1150 KVA Diesel Generating Set
specially designed for the Indian climatic conditions

1150 KVA • 1050 KVA • 1450 KVA

Backed by four decades of experience and continuous technological research and development, SKL Diesel Generating Sets are sturdy, reliable and provide long lasting economy.

Special Features :

- Low consumption of fuel
- Round the clock operation
- Easy maintenance and long service life
- Possibility of operating on heavy fuel
- Multiple sets can run in parallel
- Original spare parts stocked in India

Kanubhai Engineers have sold and commissioned over 800 SKL Diesel Generating Sets in India. We have trained personnel in all our offices and can help you plan and erect a complete power station from designing to complete erection on turnkey basis.

SGS/KE/1/88

Government-industry dialogue at last?

Both the LDF government in Kerala and the state's industrialists seem to be realising that constant battles will get them nowhere. On 15 August, the two sides got together at a round table conference to discuss the problems faced by industry and the ways in which entrepreneurship would be encouraged. The theme of the conference: "Creating a climate for industrial growth and employment." On the one hand, were representatives of chambers of commerce and industry, organisations of planters, employers and industrial consumers and on the other, the chief minister with the ministers of industry, finance and power, top officials of the industries and electricity departments and the board of revenue, and the vice-chairman of the state planning board.

The industry's point of view had been laid down in a background paper on the problems and prospects of Kerala's industrial scene. One major hurdle is the negative image of the state that most entrepreneurs harbour: brittle industrial relations; high wages without correspondingly high productivity; a government which shuns modernisation in industry. Add to this the current power crunch, and you have some very powerful reasons not to invest in Kerala.

Industry in Kerala wants the state government to "demonstrate by words and deeds" its commitment to industrial development, including automation and mechanisation. And this should be supported by discouraging "unlawful" trade union activities. As one committee had observed, no policy statement on industrial relations by a coalition government will carry conviction if it is not supported by a joint declaration by the constituent political parties.

In improving productivity standards, industry wants the state government to propagate collective agreements that include productivity schemes too, besides the usual wage and bonus components.

For power, since the gestation period for new projects is 7-10 years, industry proposes a short-term contingency plan. This stresses better maintenance, reduction of transmission and distribution losses and rapid completion of ongoing projects.

According to industry, the state's development planning has been lopsided. The social services sector has got top priority at the expense of agriculture and industry. Moreover, say industry representatives, the state's educational programme is not employment-oriented. Rather, it generates individualism, a preference for salaried jobs and no "entrepreneurial elan".

This calls for recording priorities in development expenditure, say Kerala's industrialists. Industry gets merely 7-8 per cent of budgetary allocation, while education and health services grab over 70 per cent of revenue expenditure. The resulting pressure on the budget necessitates frequent changes in tax rates. Moreover, Kerala's sales tax legislation is far too complex and a major impediment to growth. This has pushed some trading activity to neighbouring states.

Industry also feels that investment clearance is too cumbersome and time-consuming in Kerala, notwithstanding the government's announcement of an escort service. A prospective entrepreneur has to cope with nearly 14 agencies before he can set up shop. Industry's suggestion for a solution is the single window, single counter approach.

One point on which the government and industrialists agree is the need for greater central investment in the state. During 1985-86, the share of central investment in non-departmental undertakings was Rs.920 crores out of a total investment of Rs.56,695 crores — a meagre 1.6 per cent.

Cochin port, an all-weather seaport, and still the linchpin of Kerala's commerce and trade, needs to be modernised, especially in container operations.

The Kerala government's responses at the round table were not unpredictable. Chief minister E.K. Nayanar said his government would not tolerate violence and gheraos. But the police would not be used to suppress peaceful agitations. He also said industry should not blame labour for every problem.

According to the industries minister, K.R. Gouri, the government recognised the need to link income to output through incentive schemes, provided these did not go against worker interests. She also declared the rubber-based industry a thrust area with special concessions for purchase and sales tax, plus capital subsidy.

Defending the recent hike in the electricity tariff, T. Sivadasa Menon, electricity minister, stressed the need to conserve energy. By the turn of the century the demand-supply gap would be 20,000 MU. Finance minister Viswanatha Menon brought no cheerful news about the state's tight ways and means position. He asked for concrete suggestions on how to boost the state's revenue without hurting commerce and industry. Menon also said he was ready to talk again with the tea trade to prevent the auctions being shifted from Cochin to Coimbatore.

Perhaps the only tangible outcome of the conference was the call to set up a compact senior-level core committee to meet twice a year to interact between government and industry. Despite the plethora of committees, this is decidedly a sound idea — if the outcome is not confined to mere verbiage.

Clearly, industry and government in Kerala are a long way from finding comfortably common ground. Industry's opinions on development expenditure are unlikely to go down well with Kerala's government and its people. After all, as internationally acknowledged, the state's physical quality of life is superior precisely because of such expenditure.

What is clear, however, is the need for a receptive and candid dialogue. And that now seems to be possible in Kerala.

■ KG KUMAR

Kerala's industrial production

(Base 1970-71 = 100)

Year	General index of industrial production
1980-81	187.10
1981-82	180.51
1982-83	158.59
1983-84	139.06

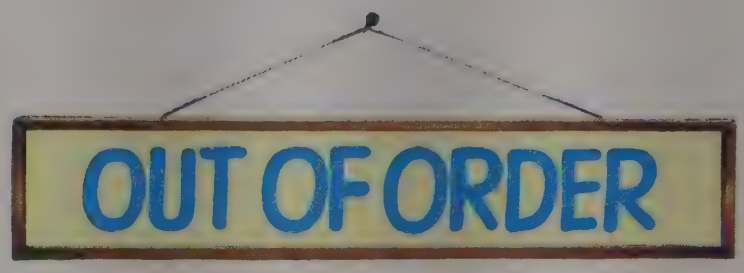
NOW THAT YOU'VE EXPER
TELEX, MAIL AND COURIEF
THE IDEAL MESSAGING SY



Getting the word across has never been easy. Surprisingly, even in this age of information, it remains fraught with problems. The mail can slow down to a crawl, or vanish entirely. Telex lines always seem to be down when a crisis comes up. Or a perfectly sensible message emerges as a hopeless scramble. So you pick

up the telephone. And by the time you've finished screaming across 1000 miles of noise, you've run up a hefty STD bill. Which might still be acceptable compared to what a courier charges.

THE IDEAL SOLUTION.

And now for the TEXTEL. The TEXTEL is really the optimal solution for messaging within any organisation having dispersed operations. It provides a quick, efficient, and inexpensive link between, say, branches or offices in different cities. And it does this by using the existing telephone line. The TEXTEL sends and receives messages at speeds up to 1200 bauds, nearly 20 times that of telex. While the money savings from this are obvious, they represent the mere tip of the iceberg.

IT REMEMBERS—TO SAVE YOU MONEY.

The automatic transmission functions of the TEXTEL make it possible to take full advantage of night-rates. A stack of messages could be stored in the memory and sent at the required time. Likewise, all incoming messages are stored in the memory for future recall and reference. In addition, all messages, whether incoming or outbound, are automatically printed out, complete with relevant details. A unique feature

is the battery-protected memory, immune to power failure.

While the speed of sending make the TEXTEL a perfect alternative to long and wasteful STD conversatio the importance of voice transmissio is not lost. The TEXTEL retains full voice capabilities, and it is easy to switch back and forth between data and voice.

NO AC. NO RESTS.

Unlike other messaging systems, the TEXTEL can function without ai conditioning or expensive protectio You can take it to ridiculous extremes—down to freezing point c up to a blistering 45°C. It will take such conditions smoothly in its stric In fact, the TEXTEL is rugged enou to run non-stop for 365 days a year.

NO ERRORS.

Another unique feature of the TEXTEL is its ability to detect errors and correct them automatically. The TEXTEL even goes beyond this. It compensates for any line fault or disturbance by slowing down transmission to the maximum rate that will result in no errors being generated. And it does all this

NCED THE TELEPHONE, YOU'RE READY FOR TEM.

utomatically, with no need for human ntervention. Which also makes it a erfect long-haul terminal.

WHAT ARE THE OPTIONS?

All of which really stacks up to what ve said in the beginning. That the TEXTEL is the ideal messaging system. But in all fairness, you should know what options you can find in he market today.

There are, of course, the telephone, elex, mail, and courier, which we've already gone over. There is the magic machine—FAX. Even discounting its astronomical cost, there remains the fact that only a miniscule portion of messaging needs to be pictorial.

And there are other messaging systems. At least, they are called as much. Even though they weren't designed for messaging in the first place. Expensive and over-equipped, they offer a great many features that you are highly unlikely to use, while

ЯORS ERRO 3 ERRORS E

compromising on what is really your primary requirement—messaging. Rather than build up a case against these options, we'll just return you to the case we have stated above—for the TEXTEL.

DEDICATED TO THE JOB.

The TEXTEL's main advantage is the fact that from the very beginning it has been intended for one specific purpose—messaging. This single-minded application can be summed up in one word—dedication. TEXTEL is the ideal messaging solution because it is the only dedicated messaging system.

ITL—A DALMIA VENTURE.

This dedicated solution comes from India Tele-Comp Limited (ITL), a dynamic new company whose mission is the creation of effective telecom solutions. Born from the pioneering spirit of the Dalmia group, ITL is today poised to unveil several new products, of which the TEXTEL is the first.

BRITISH TELECOM.

The technology for the TEXTEL comes from a world leader in tele-communications—British Telecom. And the Dalmia experience in India is the best promise of support and after-sales attention the TEXTEL can have.

In sum, if your organisation needs messaging, just call us, or mail the coupon, and we'll get there as fast as your message allows us to.

|T|E|X|T|E|L|

The dedicated messaging system.

Sundaram Finance Limited

Registered Office – 21, Patullos Road, Madras – 600 002.

Speech Delivered by Shri T S Santhanam, Chairman, at the Thirtyfifth Annual General Meeting of the Company held on 16th September 1988, at Madras.

Ladies and Gentlemen,

I have great pleasure in welcoming you all to the Thirtyfifth Annual General Meeting of your Company.

The Directors' Report and Audited Accounts for the year ended 31st March, 1988, have been with you for sometime and with your permission I shall take them as read.

WORKING RESULTS

You would have observed from the Annual Report that your Company had another successful year of operation in 1987-88, scaling new heights in various areas of performance. The total disbursements made by the Company during the year crossed the Rs. 100.00 crore mark. The total receivables under Hire Purchase and Leasing exceeded Rs. 228.00 crores at the year end. Your Directors have recommended a higher dividend of 20% for the year.

LENDING NORMS FOR HIRE PURCHASE AND LEASING COMPANIES

I welcome the revised guidelines announced by the Reserve Bank of India for lending by commercial banks to Hire Purchase and Leasing Companies. These norms are based on the recommendations of the Dahotre Committee. As far as Leasing Companies are concerned, the Reserve Bank of India have accepted the recommendations of the Dahotre Committee in full with regard to lending by commercial banks to the extent of 3 times the net-owned funds within the overall ceiling on borrowings of 10 times the net-owned funds.

In the case of Hire Purchase Companies, however, the same guidelines applicable to Leasing Companies have been adopted instead of the limit of 4 times the net-owned funds for bank lending in addition to 10 times the net-owned funds for public deposits recommended by the Committee. This may cause hardship to some Hire Purchase Companies in availing bank credit. The new parameters laid down by the Reserve Bank of India do not affect your Company in view of the substantial additions to reserves made year after year, in the past several years.

It will be pertinent to observe that the Reserve Bank have also directed the banks to take note of the depreciation or amortisation policy adopted by the companies in respect of their leased assets in arriving at credit limits. In this context, it may be noted that the Written Down Value method of Depreciation followed by your Company more than meets the guidelines and is widely appreciated by financial institutions, investors and depositors.

ACCOUNTING POLICIES

Consequent to the coming into force of the Companies (Amendment) Act, 1988, your Company has extended "accrual" basis for income-recognition and adopted the rates of depreciation under Written Down Value method as prescribed in Schedule XIV. The Institute of Chartered Accountants of India, it is understood, are finalising the Guidance Note on Accounting for Leases, to be applied prospectively, which may require amortisation of leased assets during the primary period. On the basis suggested in their draft guidelines, **even if applied retrospectively to your Company, the cumulative depreciation provided upto 31.3.88 is well above the amortisation charge by over Rs. 10.00 crores.** This has been made possible by the conservative policy of depreciation adopted by your Company, and the composition of the leasing portfolio under which long term leases for 8 years and above, constitute over 50%.

It will be relevant to note here that out of about 400 leasing companies promoted during the 80's, over 300 companies are either dormant or have diversified into other fields. Of the remaining companies, hardly a score of them amortise leased assets during the primary lease period itself.

MOTOR VEHICLES BILL 1988

The Motor Vehicles Bill 1988 has been passed by the Parliament and is awaiting the President's assent. This Legislation has many new provisions which safeguard the interests of hire purchase concerns.

SUBSIDIARY COMPANY

India Equipment Leasing Limited completed its first full year of operations in March '88. It made a Profit after tax of Rs. 40.75 lakhs, which has, with the consent of its shareholders, been ploughed back.

PROSPECTS

The total disbursements in the first five months of the current financial year aggregated to Rs. 43.48 crores as against Rs. 41.19 crores for the corresponding period in the previous year. The Stock-on-Hire and Lease Receivables as at 1st September, 1988, were Rs. 159.54 crores and Rs. 79.21 crores respectively.

Hire Purchase

The production of commercial vehicles has started showing improvement and the targets for Seventh Plan may be achieved. After four successive years of drought in many parts of India, we had good monsoon during 1988. There are indications of increase in agricultural production and consequent all-round growth in economic activities. Demand for vehicles, which has been stagnant for the past few years, will pick up and there is scope for increase in hire purchase business of transport vehicles, both in terms of units and quantum of finance.

However, there is intense competition in hire purchase business with many companies entering the field. Your Company is expanding its operations in Maharashtra and extending its activities to Gujarat. Your Company has substantially increased its hire purchase portfolio of passenger cars, jeeps and light commercial vehicles. Therefore, your Company expects a satisfactory growth in hire purchase business for the year 1988-89.

Leasing

In Leasing, there is keen competition from term lending institutions and subsidiaries of commercial banks. With the liberalisation in industrial licencing announced by the Government of India, and the improvement in the power generation in many States, there is bound to be a greater level of economic activity and industrial growth. However, in view of stiff competition, your Company hopes to register a marginal growth in leasing business in the current year.

Other Financial Services

Your Company has extended its activities by way of Factoring and other financial services.

DEPOSITS

I would like to express my grateful thanks to all the depositors for their continued support, Right from inception, your Company has been accepting Deposits only directly from the investors without any intermediaries. It has not offered any incentives to attract deposits, but grown purely on the strength of its reputation for financial strength, good administration, and dedicated and personalised service. Depositors' safety and security has been the watchword of your Company, which is the best incentive we can offer in the long term interests of the Depositors. Your Company will continuously endeavour to maintain and improve its services to its growing family of over 1,16,000 depositors.

ACKNOWLEDGEMENT

On behalf of the Board of Directors and on my own behalf, I take this opportunity to convey our sincere thanks to the customers, depositors, bankers and shareholders for their active support and co-operation. I also wish to place on record my sincere appreciation of the good work done by all the employees of the Company.

This does not purport to be a record of the proceedings of the Annual General Meeting.

41st SUMMER SCHOOL

India plays host

For the first time, India has hosted the International Banking Summer School (IBSS), held every year since 1948. What is equally significant, this is also the first time that a developing country has played host to the IBSS. "It signifies international recognition of the maturing of Indian banking," said R.N. Malhotra, governor of the Reserve Bank of India while inaugurating the school in New Delhi last fortnight.

The congregation of 200 bankers from 47 countries (including 27 from India) is the culmination of six or seven years of efforts by the Indian Institute of Bankers, official hosts to the IBSS in India.

The IBSS was first organised by the Chartered Institute of Bankers, London, in 1948. Since then the annual school has been held in a number of European countries, the US and Australia, returning to England every few years with the Chartered Institute of Bankers, London, playing an advisory role. It was only in 1982 that a decision was taken to investigate the possibility of developing countries or recently developed countries playing host to the school. And so it happened that India hosted the school this year.

The basic objective of the school which brings together bankers from all over the world for a two-week course is to promote the study of major developments in banking around the world. The principal features are the presentation of papers by eminent persons on a basic theme (which changes from year to year), group discussions and case studies.

The theme chosen for this year: "Banking and Economic Development." Veterans of Indian banking like C. Rangarajan, deputy governor of the RBI; D.N. Ghosh, chairman, SBI; I.G. Patel, a former governor of the RBI and now director of the London School of Economics; and M. Narasimham, vice-president of ADB and once governor, of the RBI, presented theme papers. The foreign luminaries included John G. Quinton, chairman, Barclays Bank; Shijuro Ogata, deputy governor, Japan Development Bank; Robert White, director, Westpac Banking Corporation; and W. Rasaputra, governor, Central Bank of Sri Lanka.

The rules of the IBSS lay down that except in a country with a socialised banking system no bank can nominate more than one participant. Each country is allotted a quota; the Bankers Institute of each country then allots quotas to the various banks which in turn nominate members to the school.

Chavan: a jamboree-like atmosphere

However, it wasn't quite clear what eligibility criterion had been used for nomination. Participants too seemed to have different reasons for attending the seminar. S. Samejima, assistant general manager of the Dai-Ichi Kangyo Bank, who is based in Hong Kong, said that since India was under his jurisdiction the interaction with Indian bankers during the school would probably be helpful. "Basically hard work is recognised at the time of nomination," said William S. Bos of the Central Bank of Netherlands, echoing the sentiments of quite a few of the participants.

Malhotra: "It signifies international recognition"

For participants who had not been to India before, the 1988 IBSS was of special interest. Since the venue is known well in advance and the quotas allotted, there is scope for the participants to work towards a nomination. Participants from Ireland, for example, who made it to the school in India, were particularly thrilled. A nomination to the 1989 school would have meant staying home since Ireland will host next year's school. An individual can be nominated for only one IBSS in his career.

Considerable repetition marked the two inaugural speeches by Malhotra and the union finance minister, S.B. Chavan. While Malhotra outlined the Indian experience in the context of social banking, and the new trends in a scenario of internationalisation of operations, Chavan went into the intricate details about the service area approach to be adopted by Indian banks, a topic which probably meant nothing to a majority of the participants.

At mealtime, the topics of discussion ranged from reserve ratios and the role of central banks to sight-seeing plans in the city and the country. Acting apparently on the belief that all work will make bankers dull, the IBSS scheduled visits to Agra and to Kashmir. A tightly packed schedule lay ahead, but on the first day the atmosphere was that of a jamboree.

KEYA SARKAR

SENSATIONAL

ool & Quiet Profile

led cavities, EPDM gaskets and an effective glazing unit keep noise, heat and dust infiltration at its minimum. Ideal for airconditioned areas.

Hi-Fashion Profile

Profile is modern and elegant. Contemporary designs blended with traditional care.

Water-Resistant Profile

[illegible] and built in drainage system [illegible] so that water come through. Profile is unaffected by [illegible] salts, acids, alkalis, [illegible] and all other [illegible] pollutants.

Tough Profile

Its high impact base material, zinc galvanised steel insert and highly effective multi point locking mechanism offer maximum durability and security. It is fire-resistant too.

Bombay: STARENTERPRISES, 807, Bus Udyog Bhavan, Tarwala Jurag Road Scheme, Dr. Off. 41 5530, Res. 548897, 544146, Hyder

PROFILES

Care-Free Profile

Maintenance free, in effort and cost. Once installed, Profile is totally immune to rotting, swelling, warping, peeling, moths, termites and rust.

Perfect Profile

Doors & Windows that look elegant and perform wonders. Fabricated on highly sophisticated machinery with German technology. Installed by trained company personnel. A perfect need for every perfect setting.

10 years guarantee

PROFILE

"Magnifique"

That's how any Frenchman, with his Gallic eye for beauty, would describe Profile Doors & Windows. He'd be right, of course, but there's much more than just beauty- Profile Doors & Windows are a marvel of attention to technical details.

Profile Door & Window systems-created by expert German designers—are processed to high standards and skillfully assembled. Perfectly glazed with a fool-proof locking mechanism and flawless hardware. Strict quality assurance procedures ensure its incredible strength and long term operational reliability.

Profile Doors & Windows are even installed by trained company personnel.

Profile's faultless technology is a must for every Hospital, Hotel, Computer Centre, Food Processing Unit, sensitive Electronic and Chemical Industry, Laboratory, Commercial and Public Building and any dust free environment and, of course... your home.

The wide range of Profile offers you Picture windows, Open-out windows, Main doors, and Sliding doors.

Custom built doors and windows are fabricated within 7 days.

Profile has a 10 years guarantee that says these doors & windows have come to stay.

Maruti's Largest Joint Venture with 31% Equity participation

JAY BHARAT MARUTI

Public Issue of 19,50,000 Equity Shares of Rs. 10/- each for cash at par

Maruti's popularity has been increasing rapidly and within a short span of time, it has already become one of the most envied vehicles on the Indian road.

Jay Bharat Maruti is yet another success story of Maruti's indigenisation. This Rs. 14.09 crore project coming up within the Maruti Joint Venture Complex at Gurgaon near New Delhi, is manufacturing critical sheet metal components and assemblies which are presently being imported – thereby saving valuable foreign exchange.

Jay Bharat Maruti is assured of a ready market as it would meet the entire demand of sheet metal components for the present and future models of Maruti. In addition, Jay Bharat will also cater to the requirements of other automobile manufacturers after meeting Maruti's demand.

With the solid support of Maruti and all the ingredients of success, Jay Bharat Maruti promises to be an outstanding venture... a success you can participate in.

HIGHLIGHTS

- ★ **Largest ever Equity participation by MARUTI UDYOG LIMITED.**
- ★ **Assured Market – Primary source of supply for Sheet Metal Components to MARUTI for existing and future models.**
- ★ **Technical assistance and full back-up support from MARUTI.**
- ★ **Most modern and sophisticated Press and Weld Shop.**
- ★ **Located within MARUTI premises – Assured of infrastructural facilities.**
- ★ **No gestation – Plant already in commercial production.**
- ★ **80 CC and Wealth tax benefits.**
- ★ **Listing on Delhi, Bombay, Calcutta and Ahmedabad Stock Exchanges.**

Concept

Moving to green fields

Shifting industry away from the big cities is seen by many to offer the prospect of better industrial relations. Our cities have earned a terrible reputation. Calcutta is said to offer a labour force which is both garrulous and unproductive. Bombay workers lack the ideological antagonism of Callcutta, but have a sharp pecuniary instinct. Madras and Bangalore are tolerable in comparison, but they too have had their convulsions. Most of the smaller cities have well entrenched labour movements and demanding workers.

The common view is that there is something in the social and political atmosphere of the city which makes people volatile. The countryside is seen to offer an escape from this chaos. Labour costs are expected to be low because rural labour would not be so demanding. Having been spared the winds of conflict which sweep the cities, it is also believed to be docile. So, why not give industrial relations a breath of clean, fresh country air?

These idyllic expectations are rarely borne out by experience. Employers who move out seem headed for an entire array of problems, some new and others painfully familiar. The very first problem they run into is employment for sons of the soil. People whose lands have been acquired for the project have an especially forceful claim. They lack the skills industry wants, but on the other hand it is impracticable to pack the side with outsiders. That might lead to problems even more difficult to manage. There have been cases of locals asserting that it is not their fault if they have no skills, and that it is the job of industry to train them.

Problems do not end with the employment of unskilled local people. Their attendance, performance and conduct are often unsatisfactory. In much the same way as preferentially recruited children of retiring employees, they feel that they have the right to be employed, that industry has done them no favour. Public sector enterprises going to remote areas face yet another difficulty. The only schools and medical facilities in these places have been set up by industry. The universal problem of project managers is whether the general public can be denied access to these facilities.

No one expects the hinterland to be bristling with trade unions, but it would be naive to think that country folk lack political instinct. They have all been sucked into the political process long ago, and it should be no surprise if one finds them politically astute. With such political acumen, it is a matter of time before these workers learn the ropes of trade unionism. The most common demand, and one that comes up pretty soon, is for wage parity with the city-based plant of the same firm. This, for example, is the experience of Madras industrialists who have gone to Hosur, and Bombay industrialists who have gone to a place like Aurangabad. Workers in the countryside demand within two or three years the kind of benefits which employees in the mother plant struggled for a quarter century to get.

The employers do not take kindly to these demands, because it was in search of cheap labour that they moved to the hinterland in the first place. They point to the industry-cum-region argument to discourage comparison with the distant city, but employees argue that they should be paid the same because they are doing the same work. A factory which exacerbates these problems is the tendency of workers to federate unions in far-flung units into an apex body. With such a structure, news of benefits travels fast and the demand for parity gains further ground.

When it comes to launching a struggle, the country cousins may be second to none. Surprisingly long and bitter struggles have been witnessed even before the new units could cut their teeth. These strikes, sometimes in support of absurdly unrealistic demands, come as a surprise to many observers. But, one must not forget that these workers have obvious advantages when it comes to sustaining a struggle. In the hinterland they have something to fall back on, either in the form of an income from land or relatives who can be turned to for help. The fact that these workers belong to a younger age group also means that there may be other wage earners in the family. On occasion, the hinterland has also witnessed the kind of violence we normally associate with the city. Cuddappah, in Andhra Pradesh, which attracted Coromandel, CCI and Texmaco with its limestone and supposedly cheap labour is a striking example. Quite a number of managers have been assaulted.

One enterprise took care to cope with some of these problems. The workforce was subjected to a thorough scrutiny before recruitment. Workers with a metropolitan background were kept out in favour of people from small towns. The company did not favour workers with high educational or skill qualifications, preferring instead to train them in-house. The economic background of workers was screened to ensure that they and their families needed the wage for sustenance. Systematic efforts were also made to promote the direct involvement of workers with the firm. Finally, the company arranged to set up a union so as to leave nothing to chance. After nearly a decade of relative peace, graffiti condemning both the management and union has begun to appear. Workers want parity with the mother unit several hundred miles away.

A personnel manager remarked that the main problem with first generation rural workers was that they had exaggerated and unrealistic expectations. They had no idea what kind of demands could be made and sustained. The provision of simple welfare benefits could lead to further demands in the belief that management would give more under pressure. They may be so foolish as to go on strike, demanding wages for an earlier strike. They lacked the leadership that could guide them along proper lines. In short, they did not understand the industrial way of life.

What is this industrial way of life? What are its ingredients? Twenty-five years ago, a group of American professors attempted to define it. They said that it consisted in accepting the division of labour, the monotony of routine, abnormal working hours, the need to learn new skills and shed old ones, the legitimacy of authority, a hierarchy with its lines of control and so on. They also added that the development of trade unionism and the demand for a better life were essential attributes of the industrial way of life. Rural labour is problematic because it does not fit this definition, and urban labour because it does!

Lotus Fibre Cement Sheets... long lasting... the ultimate roof

The foreign hand

It is the latest status symbol in adland — the international connection. The last five years have seen at least a dozen Indian advertising agencies striking up alliances with leading international names in the business. They are in search of a global orientation to their businesses and access to advanced, creative, account planning and research models.

The consumer goods market in the country is burgeoning, aided by the entry of multinationals such as Procter & Gamble and General Foods, among others. And advertising budgets are bound to make big jumps.

Today, almost all the world's top advertising agencies are represented in India, be it Young & Rubicam of the USA or Saatchi & Saatchi of the UK or Dentsu of Japan. Of all the recent tie-ups, the deal that has grabbed the most attention is that between the Bombay-based Trikaya Advertising Ltd and the US-based Grey Advertising Inc. Grey has obtained an equity stake of around 11 per cent in the Indian agency. Equity sharing with the foreign collaborator ensures a relationship that is closer than that achieved with a mere affiliation.

Before Trikaya, only three agencies — Contract Advertising, Ogilvy Benson and Mather (OBM), and Lintas India — had collaborators who hold a part of the Indian company's equity. Until a few years ago, HTA also had a part of its equity held by its foreign affiliate, J. Walter Thompson (JWT), but the latter sold off its share to Indian parties. Subsequently, JWT acquired 40 per cent of the shares of HTA's subsidiary, Contract, from the US-based Kenyon & Eckhardt, in an overseas deal (Kenyon & Eckhardt had 40 per cent of the equity of Grant, Kenyon & Eckhardt (GKE); Contract was set up by GKE employees as an HTA subsidiary when GKE closed down in 1985).

Most of the other international agencies that have representations in India have sought stakes in the share capital of their Indian partners. The Reserve Bank of India has, however, consistently refused permission, presumably to conserve foreign exchange. Advertising industry watchers say that the foreign equity stakes in OBM, HTA and Lintas were allowed long before the RBI got tough on foreign exchange releases, while in the case of Contract, it was merely a transfer of an existing equity stake.

In this context, the Grey deal has attracted much attention. Ravi Gupta, managing director of Trikaya Advertising, maintains that Grey's proposal to invest in Trikaya's equity was treated within the existing policy framework of the government. In fact, he suggests, others have probably not tried hard enough. "If you want anything badly enough, you get it," he says. "We tried for six whole months." Gupta is reluctant to go into the details of how exactly Grey managed the equity stake.

Legal experts who spoke to *Business India* feel that it may be possible for a non-resident Indian to acquire a stake in an Indian advertising agency and hold it abroad on behalf of a foreign affiliate (though strictly speaking this is not legal). Under Indian laws, NRIs can secure equity stakes of upto 100 per cent on a non-repatriable basis, in any Indian company, except those engaged in agriculture, plantations and real estate. Unfortunately, Gupta's refusal to divulge details has only set off a great deal of speculation about the real nature of Grey's stake.

A number of Indian agencies with foreign tie-ups will knock on the RBI's doors again. "One could expect all of us to do it," says Sajid Peerbhoy, president of Speer Communications, which has the US-based Foote, Cone & Belding as its partner. The US-based DDB Needham Worldwide, which signed up with Mudra Communications two months ago, is believed to have been keen on an equity stake, but did not get the RBI's approval.

Gupta: "access to Grey's databank"

Patel: "campaigns are transnational"

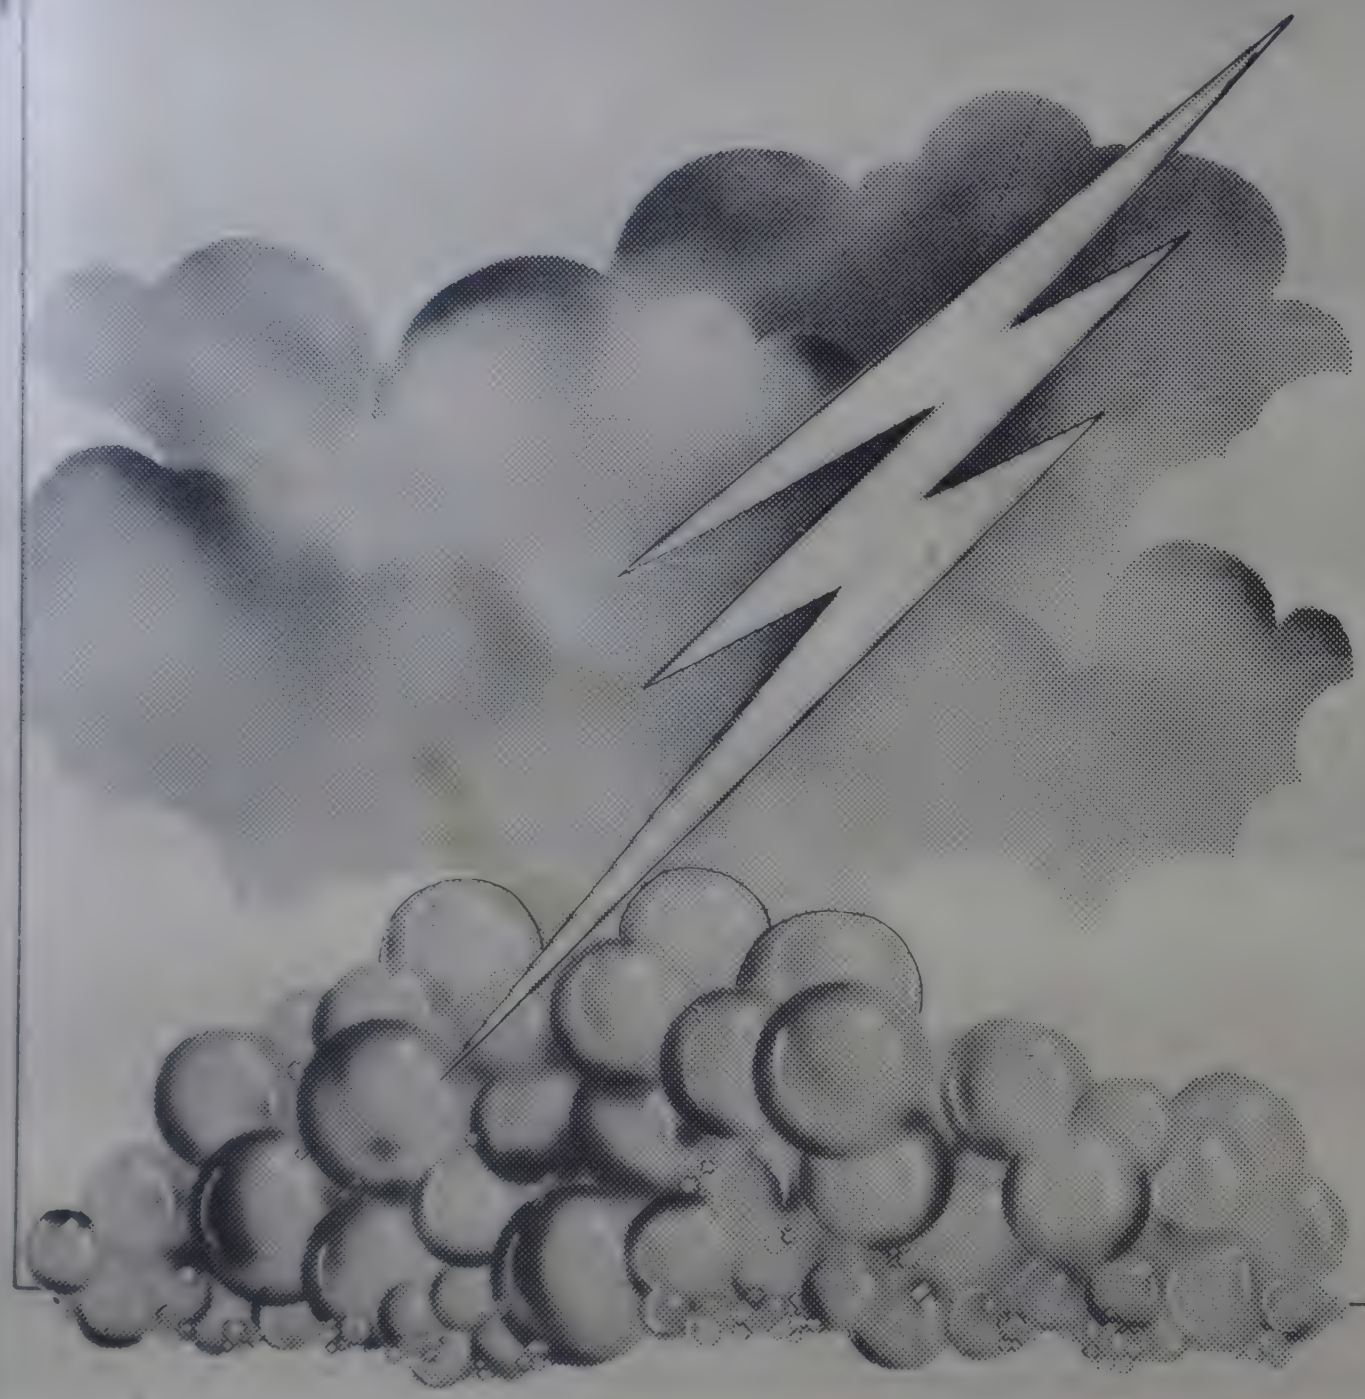
"The equity stake is important because international agencies have to be able to tell their clients that they can assure certain minimum standards in advertising," says M.K. Khanna, president and managing director of HTA. "Also, several multinational corporations which have operations in India prefer to deal with one agency internationally."

"Campaigns and advertising ideas are transnational," says Bharat Patel, executive vice-president of Procter & Gamble India (formerly Richardson Hindustan). "Brand character, consumer benefits and ideas don't change over boundaries." He cites the "khich khich" concept used for Vicks cough drops. "It was basically a Japanese idea," he says. "It was an idea that is used internationally to convey throat irritation. In the US, they call it the Ahem Bug."

In fact, clients themselves try and ensure that their advertising agencies have a global orientation. In 1985, when the Procter & Gamble Company (P&G) merged with Richardson-Vicks abroad, Patel realised that it could result in a shuffling of agencies in India that would not be desirable. "We went one step to protect our interests," he says. He saw to it that his company's existing agencies, Chaitra and Clarion, tied up with P&G's agencies worldwide — Leo Burnett, and D'Arcy, Masuis, Benton & Bowles (DMBB).

While the globalisation of advertising agencies helps advertisers integrate their marketing efforts, the benefits to the agencies are manifold. Gupta of Trikaya

Towards a cleaner world



Superlab

Extra power to detergents.

Here's what makes Superlab the country's best Linear Alkyl Benzene –

* Superlab's low molecular weight endows detergents with greater foaming capacity.

* Superlab's high level of purity produces quality slurry.

* In house quality control and raw material availability enables Superlab to meet international standards of product quality.

* Very high biodegradability makes Superlab absolutely harmless to the environment.

For your requirements of Superlab get in touch with our marketing agent, nearest to your industry.

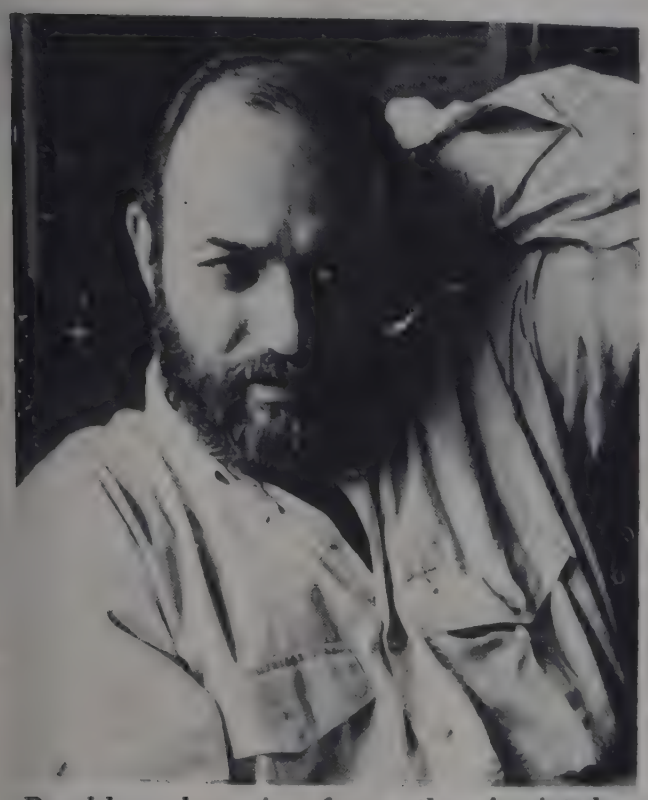
TPL helps you make quality detergents



Peerbhoy: learning from others' mistakes

says that greater access to Grey's data banks and account planning models was the motivating factor for "concretising" the three-year-old relationship with equity sharing. With the Grey connection, Gupta also hopes to provide better services to two of his clients who are looking at export markets — Universal Luggage and a computer manufacturer.

For Everest Advertising, which has an affiliation with the London-based Saatchi & Saatchi, there have been similar benefits. "If you have access to a large data bank, you are not rediscovering the wheel," says Munnawar Syed, president and managing director of Everest.

Ram Sehgal, president and general manager of Contract, cites the example of a campaign planned by his agency's client, the Apparel Export Promotion Council, for the export of garments to some 22 countries.

For others, such as the Mudra-DDB Needham combine, the accent is on training and advice on models for media planning and research. The two agencies also plan to set up an offshore company in Singapore or Dubai to pitch for advertisers in Nepal, Taiwan and the Middle East, where international agencies are not well-represented, according to A.G. Krishnamurthy, chairman and managing director of Mudra.

Peerbhoy of Speer also lays great emphasis on training and exposure to international advertising. "Why should I make the mistakes that American agencies made donkey's years ago?" he asks. Peerbhoy, who spent five years with Ted Bates in London, came back to India and started Speer.

Prem Mehta, director of Lintas India, which is part of the Interpub group of advertising agencies, says that besides benefiting from periodical training programmes abroad and workshops conducted by visiting executives from the foreign agency, his company has become a resource centre for the Lintas chain worldwide. "We are a resource centre for the group's public service advertising," he says. "Our managers are being picked up for international assignments."

Khanna: "an equity stake is important"

While the benefits of training and advanced management models are visible, tangible business gains are not far behind. Rediffusion Advertising bagged the prized Rs.10-crore Colgate-Palmolive account when it tied up with Ted Bates a few years ago. But when the account subsequently shifted abroad to Young & Rubicam, Rediffusion managed to retain it, by switching loyalties from Ted Bates to Young & Rubicam. Speculation is also rife now that Trikaya may get a part of the coveted P&G account in India. Grey is one of the four agencies abroad which handle P&G's brands in the world's major markets.

Even as the rush for tie-ups is continuing, some in the industry scoff at them. Creative counselling and advanced management systems are areas where Indian agencies don't need help from abroad, according to the head of one leading advertising agency. "On anything creative, local talent can either do a great job or it cannot," he says. "And in a service profession such as advertising, systems take a back seat."

Mehta of Lintas says that most of the tie-ups are notional. "Indian agencies want to put on an international image," adds Mehta. "But it is yet to be seen whether Indian agencies with such tie-ups will be able to develop the level of technology and skills required by multinational clients."

Toothpaste tactics

Selling toothpaste is tough business, all the manufacturers agree. The last five years saw the rise and fall of at least seven new brands. An Ace that crashed and a Flash in the pan. Yet there is a lot of optimism. Detergent giant Nirma is readying to enter the fray while the veteran Balsara Products has launched a new product, Babool.

Last year, toothpaste sales spurted by 10 per cent to 24,628 tonnes. And by the turn of the century, the industry expects it to more than treble to 85,000 tonnes. The per capita consumption of toothpaste in the country is pitifully low at 29 gms a year compared to 538 in the UK. Today, only 12 per cent of Indians use toothpaste. So the growth potential is large even though the competition is intense.

Most manufacturers jostle each other in the urban market which accounts for 83.5 per cent of the offtake. They lure the consumer with variations in colour or flavour, a dash of "what grandma gave you when you were a baby", a new combination of known ingredients, or a price that is higher or lower than the rest.

The newest toothpaste in the market, Babool, is Balsara's fourth brand after the successful Promise; Ace, which hit the market in 1982, was later withdrawn, and Prize, a fluoride toothpaste, drowned in Colgate's flood of Fluoriguard.

Babool is aimed at the lower end of the market with a price tag of Rs.10 for a 200 gm tube — nearly a third cheaper than most leading brands of toothpastes and even considerably cheaper than some toothpowders. The idea is to attract price-conscious people who use cheap toothpowders (some of which are more like scouring powders) or dentifrices like neem and babul twigs. This also explains the choice of the brand name, Babool.

"It's for the first generation city dweller who has never used toothpaste," says S.A. Swamy, marketing controller, Balsara Hygiene Products. "Indians are tradition-minded and have close family ties. Ayurveda is part of our tradition. So we prepared a toothpaste for the traditional Indian family."

Babool isn't the first toothpaste with ayurvedic ingredients. Nor is it the first to be aimed at the first-time toothpaste user. Vicco Vajradanti, an ayurvedic toothpaste, was launched on an experimental basis as far back as 1959 at a time when ayurveda was not considered "fashionable". It was produced on a commercial scale in 1967 but it was only in 1974 that the manufacturer, Vicco Laboratories, launched a massive radio and television ad campaign. The product gained steadily in the market till it attained a 4 per cent share by the end of the decade. Vicco's marketing campaign like that of Balsara's Promise was the stuff that marketing case studies are made of.

However, G.K. Pendharkar, managing director, Vicco Laboratories, is at pains to differentiate between his product, which is categorised by the Food and Drugs Administration (FDA) as an ayurvedic medicine, and the others that are listed as cosmetics. "We don't consider other toothpastes our competitors. Ours is a medicine, nearly 20 per cent of which consists of ayurvedic extracts," says Pendharkar. "That's why our product can't be as white or foamy as cosmetic pastes, nor can we afford to price it as low as some of them." He is sure that sales will increase as people become more aware of the benefits of ayurveda. Babool's ads which promote such contents may unintentionally help Vicco's sales.

Colgate thought of the first-time user before Babool was launched, packed its dental cream in a sachet and followed it up with a massive television ad campaign targeted at school kids with a hint to the traveller. "The idea was to motivate the first-time or peripheral user with a small pack," says Bishwajit Mukherjee, communications manager, Colgate-Palmolive (India) Ltd.

The company found that the 53 per cent share of Colgate Dental Cream could not be pushed up through sachets. The traveller was unwilling to mess around with packs that could squirt toothpaste into his or her suitcase. Moreover, retailers in urban and semi-urban areas found it hard to come by first-time users

Prices of major brands of toothpastes

Toothpaste	Price (Rs.)*
CLOSE UP	20.50
COLGATE FLUORIGUARD	17.25
PRUDENT	16.40
COLGATE DENTAL CREAM	16.00

who would prefer the sachet to the tube. When the novelty wore off, the kids too stopped asking for it. Pricing could, however, play a big role in making Babool a success. Never before has a toothpaste been available so cheap. And the first-time user may well switch over from toothpowder for reasons of economy and convenience.

Promise wasn't the first toothpaste with clove either. Colgate too claimed to use clove as did a few other manufacturers. But Promise was the first to make the ingredient its USP (unique sales proposition). Launched in the medium price segment, the sales of Promise grew steadily, despite the overpowering presence of Colgate; it ate into the sales of other multinationals till it cornered about 14 per cent of the market in 1980, next only to Colgate. But that was as far as Balsara could get. If it wanted a larger slice of the market, it would have to enter another segment.

That was what the company tried when it launched Ace in a higher price segment in 1982. But Ace had very soon to be withdrawn. According to Swamy, the launch was an experimental one restricted to Maharashtra only. Industry sources, however, say that Ace failed because of poor quality.

In 1986, the company launched Prize, a fluoride toothpaste, again in the higher price segment. A couple of months later Colgate launched Fluoriguard in the same segment with a massive ad campaign. Prize received a severe blow and its share tumbled from 7 per cent to less than 1 per cent.

All this only went to show that a company with a reputed marketing and distribution machinery, even in toothpaste, need not automatically succeed in marketing a new brand of toothpaste. Ponds is another example.

Around the time that Prize was launched, Ponds too launched a toothpaste and Parle, despite its earlier failures with Flash and Foamy, launched Prudent. Flash and Foamy, according to market analysts, lacked in quality. Ponds, on the other hand, suffered because of its bad positioning.

"Ponds' packaging with a pink floral design, gave it too much of a cosmetic appearance for it to be taken seriously. Even the television commercial placed too much stress on the fun factor. It was too funny," says a marketing executive.

Parle's Prudent is better than the earlier toothpastes launched by the company. The paste has better consistency and a longer shelf life. Yet, it has managed to get a mere 0.6 per cent of the market share. This is probably because fluoride is one of its ingredients. After the recent controversy over the use of fluoride, all toothpastes containing this ingredient have dropped in sales, the most significant being Colgate's Fluoriguard which dropped from 8 per cent to 5.8 per cent over the last year.

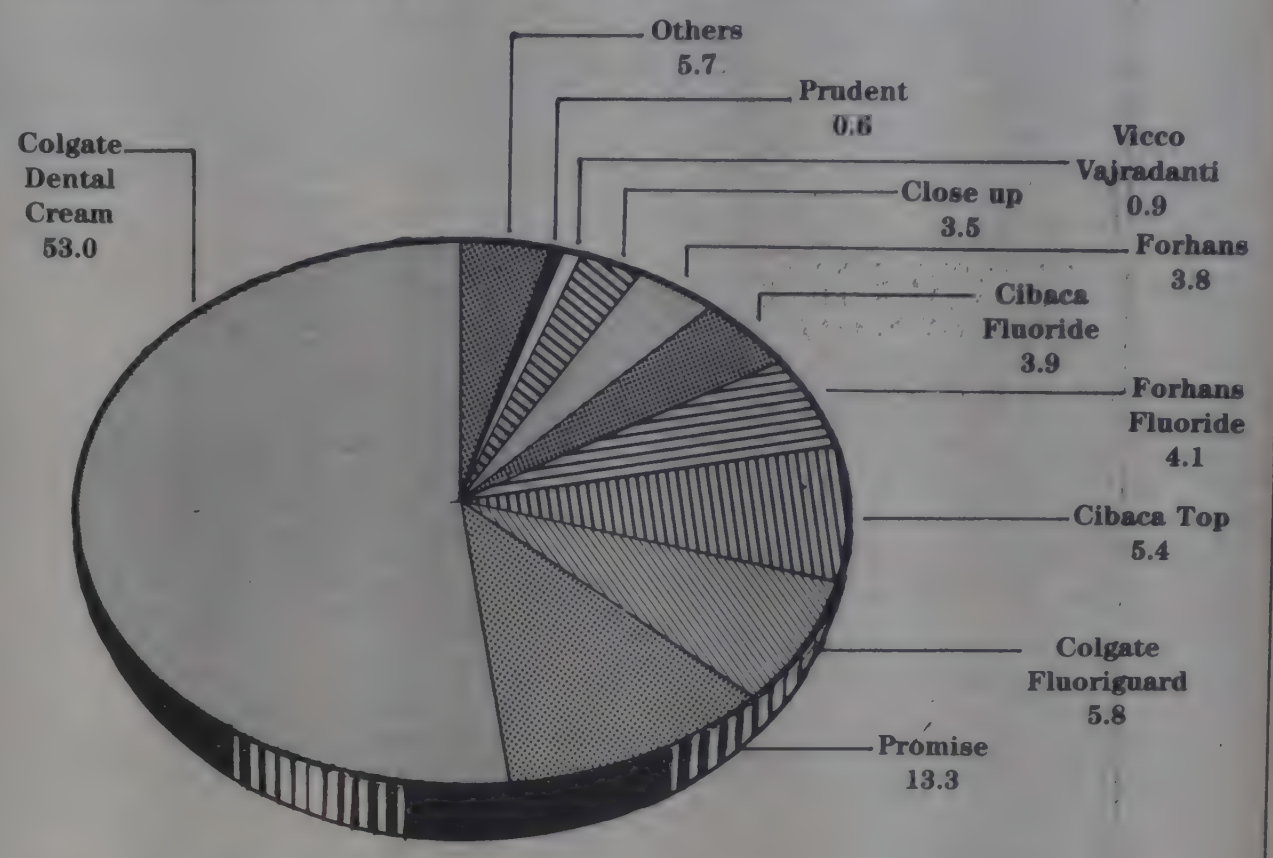
Despite these failures, no manufacturer has really explored the lower segment of the toothpaste market, especially in the rural areas. "How can we afford rural marketing when even Colgate cannot?" asks Swamy of Balsara.

"Our sales have to be mainly in the urban areas. Where is the infrastructure in the rural areas?" asks Mukherjee of Colgate.

What is required is the development of the rural market through a massive awareness campaign. But even the large business houses expect the government to do this for them. "India is a signatory to the United Nations' programme which envisages health for all by 2000 AD. This will involve a massive dental health awareness campaign and increase the toothpaste consumption by the end of the century," says the marketing manager of a reputed toothpaste manufacturing company.

Meanwhile, it seems that there's going to be a tug-of-war at the bottom end of the urban market.

Market shares of major brands of toothpastes



"We have been hearing about Nirma's toothpaste for such a long time. Where is it?" asks a Balsara executive happy to have got a head start in the low market segment.

Word about Nirma's launch of a toothpaste has been going around for a year. The company plans to launch its toothpaste on the same principle that helped it succeed against Lever's Surf: "Acceptable quality at the lowest possible price." The toothpaste was expected to hit the market around October last year at a price that was 10 per cent lower than other toothpastes. Now Balsara has upstaged it by pricing its new product almost a third cheaper than leading brands thanks to what Swamy would like to call "a technological breakthrough".

Industry sources feel that Nirma may now wait and watch Babool's performance before hitting the market. Moreover, these sources say, the recently launched Nirma toilet soap is not doing as well as the company expected it to do. So Nirma is going to be cautious about its next move. When contacted, company sources declined to comment.

Nevertheless, the company may choose to launch the toothpaste during the coming festival season when people are on a shopping spree and inclined to try out anything new. But whether they stick to it after the initial trial, one will have to wait and see.

■ ALOYSIUS FERNANDEZ

ADMINISTRATIVE STAFF COLLEGE OF INDIA

announces the following programmes

MAINTENANCE MANAGEMENT
(December 5 to 17, 1988)

Eligibility: Executives directly responsible for maintenance and other executives in production, materials and industrial engineering areas concerned with maintenance and also Executives from manufacturing, service, jobbing and process industries as the course will be informative and educative to them.

Course Director
A K Banerji

Last Date for nomination
November 5, 1988

HOSPITAL MANAGEMENT
(December 5 to 17, 1988)

Eligibility: Top officials entrusted with the responsibility of running hospitals - Directors, Superintendents, Chief Medical Officers or their deputies from both Government hospitals, those run by public and private enterprises and also railways and defence establishments.

Course Director
Dr. L H David

Last date for nomination
November 5, 1988

MATERIALS MANAGEMENT
(December 19 to 31, 1988)

Eligibility: Senior executives involved in Materials Management function - Commercial Executives; Materials Managers; Controllers of Purchase and Stores; Industrial Engineers; Superintending Engineers; EDP Managers; Production Controllers; Materials Accountants; Warehousing Officers; Controllers of Stores; Bank Managers; etc.

Course Director
Prof. P Gopalakrishnan

Last date for nomination
November 19, 1988

SALES MANAGEMENT
(January 2 to 7, 1989)

Eligibility: Executives engaged in Sales function - Middle level managers of large companies or senior level managers of small and medium organisations.

Programme Director
Prof. G G Ewari

Last date for nomination
December 2, 1988

MANAGEMENT OF COSTS FOR PUBLIC ENTERPRISES
(January 9 to 14, 1989)

Eligibility: Top and Senior Managers in the Public Enterprises (including Cooperative and Joint Sectors) responsible for formulating financial and accounting policies in order to achieve financial results - holding such designations as Director, Financial Adviser, Cost Controller, General Manager, Chief Accountant, Management Accountant, Manager — MIS and Planning.

Programme Director
Prof. K K Swaminath

Last date for nomination
December 9, 1988

Organisational sponsorship is essential

ASCI: The College for Practising Managers

UNIFORM ACCOUNTING YEAR

Birth pangs

In 1986 the government of India had circulated a discussion paper on direct taxes. One of the important proposals made in the paper was the adoption of a uniform accounting year for all tax payers, with the year ending in March. Ostensibly, such a change will ease the cross-verification of transactions, though given the various complexities involved, it is doubtful whether the object can be achieved.

In any case, it was apparent that the government did not intend to have any discussions on the matter and had made up its mind to go ahead with the proposal. In due course, the proposal passed into law and for the assessment year 1989-90, every tax-payer will have his year ending on 31 March 1989. It is obvious that for an assessee whose year did not end in March, the current financial year, for income tax purposes, will be longer than 12 months. For example, if earlier the accounting year ended in June 1987, the current assessment year will last 21 months until 31 March 1989.

In theory, it is possible to have different year endings for income-tax and for company law purposes. However, in actual practice, it would be extremely cumbersome and very few companies are thinking in terms of having a different year for their account closing purposes under company law. As such, companies would be required to close their books on 31 March 1989, and thereafter on 31 March of each year. Section 166 of the Companies Act requires that the company must have an annual general meeting (AGM) each year and that there should not be a gap of more than 15 months between two AGMs. Further, according to Section 210 of the same Act a financial year cannot exceed 15 months without the permission of the Registrar of Companies (RoC), and in no case can it exceed 18 months. In other words, so far as the Companies Act accounts are concerned, the position would be as under:

- A company whose accounting year ends in December, 1987, for example, can close the next accounts directly on 31 March 1989, without the RoC's permission.
- A company whose year ends between 30 September and 31 December 1987 can close the accounts with the RoC's permission on 31 March 1989, or it can close the accounts twice. However, for income-tax purposes, the two accounts will be merged by the income-tax department.
- If the accounting year of the company ends between 31 March and 1 October 1987, the accounts have to be closed twice; once as per the normal accounting year and then again on 31 March 1989. Here again, for income tax purposes, the accounts will be merged.
- The provisions of Section 166 of the Companies Act would have to be simultaneously complied with in all cases, whereby the 15-month gap between two AGMs can be extended by the RoC upto a maximum of three months. However, there is a further requirement that the AGM should be held in each calendar year, which would have to be kept in mind.

DEPRECIATION OVERHAUL

Depreciation has to be provided for Companies Act purposes as per the newly inserted Schedule XIV which prescribes various rates of depreciation for different assets. The rate for normal plant and machinery is 15 per cent, whereas the income-tax rate is 33.33 per cent. However, the Income Tax Law provides that, if the transitional year ending 31 March 1989, exceeds 12 months, depreciation will be proportionately increased. For example, if the financial year ends after an 18-month period on 31 March 1989, the rate of depreciation will be 50 per cent instead of 33.33 per cent for the general category of plant and machinery. It is important to note that companies will be entitled to a substantial write-off as depreciation, even if the asset is purchased at the end of the (18-month) year. In addition, under the Investment Deposit Scheme, the cost of the machinery can also be allowed as a deduction, subject to a maximum 20 per cent of book profit (this is independent of, and in addition to, depreciation).

Far-ranging changes have been made in the provisions relating to advance tax. Coupled with the problem of the transitional year, companies are facing considerable difficulties in relation to these provisions. For one thing, the provision for waiver of interest has been deleted. Advance tax is required to be paid now in September, December and March to the extent of 20 per cent, 30 per cent and 50 per cent, respectively of the aggregate advance tax. If the advance tax paid falls short of 90 per cent of the ultimate tax, there is a 24 per cent penal interest. Further, shortfalls in the respective instalments also attract a 1.5 per cent per month penal interest. Many companies have had year endings in June or September so as to be better able to estimate advance taxes. This will now not be possible and in the transitional period, the entire income of the year ending in March will have to be estimated. Of the estimated tax, 20 per cent would become payable on or before 15 September 1988. The problem of estimation is compounded by the fact that capital gains too are now subject to advance tax.

With effect from the year ending 31 March 1989, a provision for penal tax has been introduced whereby 30 per cent of the tax due on the difference between the assessed and the returned income will be charged as penal tax. This applies even when the difference may have arisen from a genuine legal dispute with the income-tax department and though the tax payer may have the support of various judgements in his favour, which the department still desires to contest. There is no right of appeal against this additional tax itself though there is a provision that the tax will be cancelled or reduced if the issue in question is decided in favour of the tax payer by the appellant authorities. (The Administrative Commissioners of Income Tax may be approached for waiver of the penal tax, but past experience of their attitude towards waiver of interest or penalty negates the value of this "remedy".) Amazingly, this additional tax also applies to a situation where loss is reduced; therefore it is now possible that an assessee will have to pay the additional tax without having to pay the basic tax.

With so many changes being introduced in corporate and taxation laws and with further changes anticipated — what with the amendment bill pending for the monsoon session of Parliament (to smoothen out the wrinkles in the earlier legislation) and the possibility of a direct tax code being introduced next year — the corporate tax-payer is undoubtedly in for considerable change and uncertainty

DISHERGARH POWER

(A member of the Andrew

Speech of Shri K.S.B. Sanyal, Chairman, at the Annual General Meeting on 15th Sept.1988

Friends,

I welcome you to the Annual General Meeting of your Company. I am happy to report that this year too has witnessed an excellent rate of growth in all our business activities. The results reflect the improvements achieved in operational efficiency and cost control, thanks to which your Company has successfully earned profit of Rs. 321.78 lakhs without revising basic tariff during the year.

Kindling a Vision

In 76 years of existence, we have been an integral part and parcel of the economic surge witnessed in the country's eastern coalbelt in the course of this century. A pioneer supplier of power to the Asansol-Raniganj region, it partook in moments of history such as the formation of the Damodar Valley Corporation (DVC) and the nationalisation of the coalmines. Throughout the unfolding course of all these decades, your Company has been able to re-position its strategic objectives with farsightedness and consistency, always in tune with national priorities. Looking back, I can discern a common visionary thread running through these leaves of your Company's history and binding them together, thereby in turn paving the way for future contributions in the field of power generation and distribution.

Let me share with you some insights as to how this sterling vision has translated itself into reality. One of your Company's primary achievements has been its ability to establish and maintain both its credentials and credibility as a viable energy source at a time when large power generation units are the trend of the day. With exemplary self confidence, your Company has adopted itself to the role of bulk power distributor and continued to play a pivotal role in the growth of industry and other branches of commerce in the licensed area. At the same time, your Company has continued to operate its age-old generating units, albeit with addition to the steam generating capacity and with diligent maintenance and upkeep. Your Company's plant load factor (PLF) of 65% compares very favourably with the national PLF reported at 56% and is well above the average PLF of 43% recorded in the state of West Bengal. I am sure you will join me in congratulating the employees for keeping up their high performance standards.

Apart from the fact that these old plants run as profit centres by themselves, they have the quintessential role of being consumer service centres too. For instance, they provide the gassy and floodprone coalmines of Eastern Coalfields Ltd. (ECL) a much needed sense of security and confidence. Your Company has developed over the years a reliable distribution network in the area with facility to feed most of the load centres from more than one source of supply. To top it all, the maintenance staff has created an enviable customer service track record, reacting swiftly to any fault or breakdown in power supply and restoring it within the shortest possible time. With such strengths built into the system, we can look a the future with confidence for serving the consumers in the licensed area.

Your Company stands testimony that in the field of power, while big might be majestic, small remains beautiful. It is by now established that in case of outage of large units the shortfall in power becomes unmanageable and the distributing agencies have to resort to loadshedding. A possible long term solution to this consumer irritant could be to so ordain that the bulk power supply from large generating units distributed through national o state grids be supplemented by smaller, more reliable and responsive generating units located at load centres with appropriate arrangements tied-in enabling a switch over from one supply source to another at short notice, if need be.

In keeping with our social awareness, we have kept our commitments to the overall cause o the environment. Last year, we had laid a garden at Yuba Bharati Krirangan-Salt Lake Stadium at a total cost of Rs. 2.50 lakhs as our contribution to Calcutta's beautification programme.

SUPPLY COMPANY LTD.

Yule Group of Companies)

Pioneering Tie-up

s reported last year, a new era of censee-consumer tie-ups has been ioneered by your Company, which as entered into an agreement with CL, by far its largest consumer, for etting up and subsequently perating a 2 x 10 MW captive hermal power plant for their Chinakuri group of coalmines. I am leased to inform you that this roject is progressing satisfactorily nd is likely to be commissioned in 990-91. Your Company has also aken up a feasibility study, for aking over the operation and naintenance of two gas turbine GT) generating sets belonging to ECL. There is a further possibility of similar arrangements to run and naintain two more of ECL's large capacity GT sets.

These schemes, when implemented, will provide more than 100 MW of survival power generation capacity o your Company's system. The consequent beneficial fallout would be two-fold. Firstly, it would go a long way to facilitate the optimum utilisation of capital investment in the nationalised coal sector. Secondly, it would also ensure greater flexibility in load management, which will serve the interests of all sections of consumers in the area.

Private Sector Role

Based on the report of a Working Group for private sector participation in the country's power supply, the Central Electricity Authority has invited proposals for increasing the generating capacity of your Company. The projections in financial terms for augmenting the generation capacity have been already submitted to the State Government. The proposal of the Central Government to increase the reasonable return on investment to 15% per annum, the announcement made in Parliament by the Union Finance Minister that Section 115J of the Income Tax Act, 1961 would not be applicable to electricity companies, and the proposed re-introduction of the Investment Allowance Scheme are all steps in the right direction. I have no doubt that responsible private sector participation in the power sector can only help in bridging the extent gap between demand and supply to a great extent and would be therefore in the ultimate national interest.

The Human Factor

Of the many factors which impinge on the managerial task and influence its accomplishments, the human factor is perhaps the most significant. With this strong belief, your Company's constant endeavour has been to create a sense of confidence, wellbeing and involvement amongst its employees. Each employee is motivated to contribute his full potential towards achieving the goals and objectives of your Company. This spirit has been nurtured over the years by professional management and an organisational culture which your Company shares by way of a common heritage as a member of the Andrew Yule Group.

Future Plans

With the ongoing modernisation and mechanisation of coalmines, the expansion of industry, trade and commerce as well as the introduction of modern technologies in the agricultural sector within the licensed area, the load demand is expected to increase two-fold by the year 2000. To meet this envisaged load burden growth, a long term plan for augmenting generation capacity by setting up at least two more 10 MW generating units, creating power supply receiving points from DVC at two new load centres and a large scale extension and modernisation of distribution facilities has been adopted by your Company. This will require an investment of upward of Rs.50 crores over the next few years. However, a prerequisite to the launch of this ambitious venture would be governmental assurance towards extension of your Company's licence beyond 1992. I am sure, the matter will be considered favourably by the concerned authorities.

Acknowledgements

We are most grateful for the continued support given to your Company by the Government of West Bengal, particularly its Department of Power, the West Bengal State Electricity Board, the Damodar Valley Corporation, Coal India Ltd. and Eastern Coalfields Ltd On behalf of the Board, I assure them that we shall always keep our vision intact and strive to fully play our role in maintaining and meeting the growing power supply requirements in our licensed area, not hesitating in the process to take up more responsibility in the cause of serving our valued consumers.

Chairman

Note:
This does not purport to be a record of the proceedings of the Annual General Meeting

A tradition of 76 'light' years.

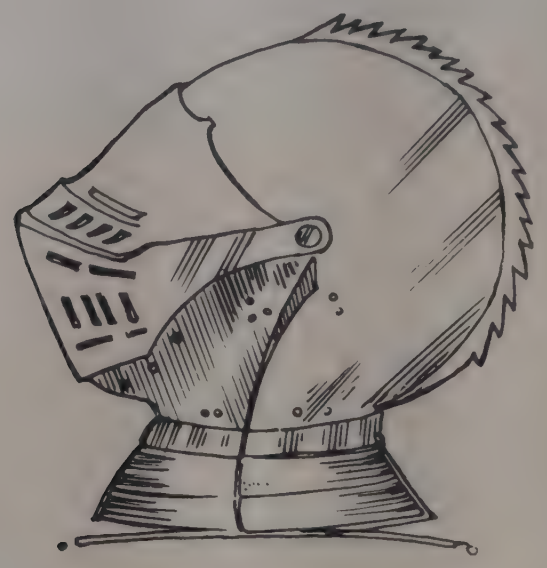
Absolute Protection



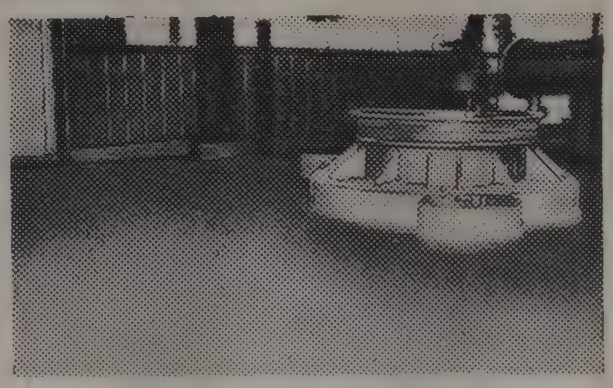
Now floor and wall coatings from Coromandel Prodorite that protect against fungi, dust, abrasion, skidding and of course corrosion.

Your walls and floorings need protection against corrosion. But an anti-corrosive agent, that's also proof against fungus, dust, abrasion and skidding is added value for your money. And safety.

Now Coromandel Prodorite's new wall and floor coatings have been formulated to offer all round protection. Manufactured in technical collaboration with Prodorite - UK and Concrete Chemie of West Germany, two world renowned names in anti-corrosion engineering, the new range have

universal applications. And are particularly ideal for the food and beverage industry.

For hospitals, explosives, factories, gas [illegible] and nuclear power stations a special non-conducting grade coating is available.



Choose a coating thats right for you from this range:

Corocretin	BB	—	Food industry, textile mills
and Corocretin	UBL	—	Nuclear Power Stations, chemical plants, warehouses, concrete surfaces
Corocretin and Corocretin	UBS UA	— —	Highly corrosive areas, where acids, alkalies, hydrocarbons etc are active.
Corocretin	BB-AS	—	Conduction resistance between 10^4 to 10^6 Mho makes it ideal for factory floors, explosive environments.
Coroguard	WC	—	Wall coat for beverage, brewery, pharmaceutical industries.
Coroguard	FC	—	Floor coat for chemical, electrical, electronic, beverage and brewery industries.
Corofilm	E	—	Coating for food handling tanks. Useful in dairys, breweries, handling of potable and Sewerage water.
Corofilm	P74	—	Withstands temperatures upto 100%c. Recommended for environments handling radio active material.

THE MENONS OF KOLHAPUR

From strength to strength

To most people, Kolhapur, a cool, pastoral and picturesque township in southwest Maharashtra, was known for two things: sugar and Kolhapuri chappals. Today, it is lot more — it hums with industrial activity and is catching up fast with the more industrially advanced centres in the state. Two industrial groups have put Kolhapur on the industrial map of the country — the Menon brothers and Ghatge-Patil Industries, both being involved in the engineering industry.

Of the two, the Menon brothers — Chandran (63) and Ram (59) — starting virtually from scratch three decades ago, have today grown to a Rs.25-crore business house. The two main companies in the group — Menon & Menon Pvt Ltd (managed by Chandran) and Menon Pistons Pvt Ltd (managed by Ram) — are today considered to be one of the leading companies in their fields, namely, automobile castings and pistons and piston rings, respectively. The group today employs nearly 2,000 workers, has seven plants and manufactures oil engines and automobile ancillaries, apart from castings and pistons. It has also entered the export market in a big way through its piston unit. This year the unit is expected to export almost half of its output to the USSR and West European countries.

But success has not come easily to the Menons. In 1955, Chandran, then an engineering graduate aged 30, started with a hired lathe machine in a hired shed in Kolhapur. He undertook job work for the larger companies manufacturing various machines. Chandran's parents, a wealthy agricultural family from the Trichur district of Kerala, was against this venture and therefore did not support him. "To begin with, I had no capital but only a strong desire to start something of my own," recalls Chandran. Of course, his seven years, working experience as a toolroom engineer in the defence factory at Khadki (near Pune) was a key factor in his success. Besides, Chandran says that he gained confidence by working with a private firm for a short time at Kolhapur which was doing well in similar business with very little capital. Ram, the younger brother, joined him two years later.

Around 1960 (by then the Menons had added a few more lathe machines to their stable by ploughing back profits), Menon & Co set up a new unit for the manufacture of diesel engines (agricultural pumpsets) for which demand was growing. "Within two years, the production of engines went up to 6,000 a year and the total sales to around Rs. 60 lakhs," says Ram. But the real growth of the company started in 1965 when a foundry unit was set up at Vikramnagar in Kolhapur for the castings required for the diesel engines. That year, Menon & Co was also split into two separate companies — Menon Ancillaries (for the ancilliary job work) and Menon & Menon (for the foundry and diesel engines).

Chandran Menon gearing up for faster growth

The Menon Pistons plant, Kolhapur

Chandran, however, soon found that the prospects for Menon & Menon as an independent casting unit were far better than expected. "We found that there were not many competent units manufacturing sophisticated grey iron castings for automobiles," says Chandran, "and we decided to enter into this area in a big way." Besides, the growth in diesel engines was also blocked when the government reserved this item for the small scale sector. The growth in the foundry division was substantial and around 1984 the company decided to set up another foundry at Amboli in the Sindhudurg district of Maharashtra (50 km from Kolhapur), with a licensed capacity of 32,000 tonnes per annum (tpa). In the first phase at Amboli, a capacity of 7,200 tpa was set up, thus taking the company's combined installed capacity to 15,000 tpa.

Today, Menon & Menon is producing heavy duty automobile castings like cylinder blocks and heads and gear box castings which it is supplying to a number of truck, tractor and industrial engine manufacturers as original equipment (OE). The client list of the company includes Escorts, Kirloskar Oil Engines, Ingersoll-Rand, Mahindra and Mahindra, HMT and Telco, among others. "Today we can compete with the best foundries in the country in terms of both quality and price," claims Chandran. The turnover of the company, which was about Rs.2 crores around 1980, has now gone up to Rs.11 crores. Of this, castings account for Rs.10 crores and diesel engines only Rs.1 crore (the same as 10 years ago). The company's turnover would have been still higher but for a 16-month long closure of its Kolhapur unit due to inter-union rivalry.

Meanwhile, Menon Ancillaries, the other company in the group headed by Ram Menon, had started reconditioning automobile engines along with its usual activity of manufacturing components. With the experience gained from this unit, Ram noticed that there is good scope for manufacturing aluminium alloy pistons for automobiles and industrial engines. Thus in 1969, he set up a new unit for manufacturing pistons and piston rings at Kolhapur. The new unit was named Menon Pistons while the old ancillary manufacturing activity was renamed Menon Automobiles.

In 1972, Menon Pistons went on stream and within a couple of years it became the OE supplier to a large number of automobile and engine manufacturers. Currently, it manufactures 190 types of pistons, next only to Escorts in terms of range, with price tags ranging between Rs.50 and Rs.1,200 per piece. This year (1988-89) production of the unit is expected to reach the 2 million mark, against around 360,000 pieces about 10 years ago. With such rapid growth (about 30 per cent per annum), the piston unit soon emerged as the largest in the group, with an annual turnover of around Rs.15 crores this year. "The beginning was not

Ram Menon: "the beginning was not easy"

easy," says Ram, looking back at the past. "We started without any foreign collaboration while all the other manufacturers had one and that is why our pistons faced difficulty in acceptance in the beginning."

Menon Pistons got its first major breakthrough when it developed a special piston for the Kirloskar Cummins diesel generator sets in 1974 to substitute imports. "We are grateful to them for their technical assistance in developing this critical piston," says Ram. Today, Kirloskar Cummins buys its entire requirement from the Menons and it is also the single largest buyer for them. This year, in fact, they are expected to buy pistons worth Rs.3.65 crores which will account for nearly half of Menon Pistons' total domestic sales. As Ram says, "Once our technical competence was proved there was no looking back." Today, Menon Pistons' client list includes leading automobile manufacturers like Telco and Maruti and diesel engine manufacturers like Kirloskar Pneumatic and Ruston & Hornby, apart from Kirloskar Cummins.

Menon Pistons had another major break when it made some small exports to Russia about three years ago. This year it will export pistons worth Rs.7.5 crores or half of is total output. Of this, exports to Russia alone will be worth Rs. 7 crores and the rest to some West European countries. "We are supplying one million pistons, valued at Rs.5.2 crores to the Lada Car manufacturing company in the USSR alone," says Ram. The technological competence of the company can also be gauged from the fact that the manufacturers of the Rolls Royce car in the UK and Peugeot in France have commissioned the Menons to develop pistons for their engines, according to their specifications and design. Also, a Nigerian company is trying to tie up with them for technical assistance in setting up a piston manufacturing unit in Nigeria.

The Menons are now gearing up for faster growth in the coming years. Menon Pistons has already set up an export division which will expand the exports of the group. "With our experience and contacts we can surely export many more items apart from pistons," says Ram. The company, in fact, has already identified several engineering products which have good potential in the export markets. It is also modernising its piston plants at Kolhapur and Sangli at a cost of Rs.7 crores to augment its output by a third of its present capacity. Similarly, Menon & Menon is doubling its installed capacity from 7,200 tonnes at its Amboli foundry in the next two years. It is also planning to diversify into foundry related chemicals, for which it has already made a beginning.

When translated into money terms, all these ambitious plans, according to Ram, will mean a near doubling of group sales to nearly Rs.50 crores within the next three years. As business is growing, the second generation of the Menons is also moving in. Vijay, Chandran's eldest son, has already joined the group after graduating in engineering. Two sons of Ram and the younger son of Chandran are currently studying and are expected to join the group later.

GILLETTE

Reprieve from Coniston

Gillette has agreed to a truce with the Wall Street firm, Coniston Partners, which had waged a proxy war against the Gillette management for the past two years. Coniston which owns 6 per cent of Gillette shares was trying to get the support of the other shareholders for a resolution to force the Gillette management to reorganise the company and sell off its assets. Under the terms of agreement, Gillette will buy back Coniston's shareholding and Coniston will not seek control of Gillette for at least three years.

CHRISTIN DIOR

Stake in Moet Hennessey Louis Vuitton

Shortly after the merger of the champagne and cognac company, Moet Hennessey, with Louis Vuitton, manufacturer of luxury leather goods sharp differences emerged between the erstwhile chairmen of the two units. To resolve their differences, Louis Vuitton and Moet Hennessey inducted Bernard Arnault, the French financier who controls the luxury goods company, Christin Dior. Arnault is now taking a substantial stake in Moet Hennessey Louis Vuitton through Christin Dior, in association with the UK drinks group, Guinness.

SMITH KLINE

Top management ulcers

Between 1976 and 1983, Smith Kline was the only US company selling the anti-ulcer drug, Tagamet. The enormous sales of Tagamet raised the company's total turnover to $4.3 billion per annum. However, in the past year, Glaxo and Roche have made deep inroads into the American market for anti-ulcer drugs with the Glaxo product Zantac. As a result, Tagamet sales have dropped by 30 per cent, [illegible] ulcers to Smith Kline's top man [illegible] and the company's institutional [illegible]

A zoom in income

TWA

Massive damages won

TWA has reported a sharp rise in income consequent on winning its $50 million lawsuit instituted in 1962 against the company's former owner, the late multi-millionaire Howard Hughes. The basis of the case was that the airline was mismanaged by Hughes during his ownership. The damages have been awarded against Summa Corporation, which is the main holding company controlling the Hughes estate.

GRAND METROPOLITAN

Sale of Intercontinental Hotels

Grand Metropolitan, the UK-based beer, food and hotels group has announced that it intends to sell its subsidiary, the Intercontinental Hotels group, at a minimum asking price of £1.5 billion. Intercontinental has 100 hotels in 47 countries and was purchased by Grand Metropolitan in 1981 for $500 million.

Possible buyers for Intercontinental include Trust House Forte, Holiday Inn, Sheraton, and Hyatt.

BICC

Purchase of Ceat Cavi

The British Insulated Callendars Cables (BICC) has agreed to purchase the cable business of Ceat, one of Italy's top tyre and cable manufacturing companies. This represents BICC's first major foray into the European market. "This acquisition is an important step in our preparation to take full advantage of the integration of European markets," says Robin Biggam, BICC's chief executive.

BRITISH AMERICAN TOBACCO

US takeover battle

The cigarette, paper and insurance giant, British American Tobacco (BAT), is engaged in a prolonged battle to take over the Los Angeles-based insurance company, Farmers Group. BAT is bidding $4.2 billion for the insurance company, but the takeover attempt has been stalled by Farmers, which has filed lawsuits against BAT in a number of states in the US, where it operates. BAT recently moved a step forward towards its objective, following the decision of the California superior court in its favour. Ohio has also ruled in favour of BAT, but suits are still to be settled in a number of other US states.

STANDARD CHARTERED

Dispute over insider trading funds

Standard Chartered Bank is caught between lawsuits over a $12 million deposit by Fred Lee, a Chinese businessman, who is charged with insider trading frauds in the US. Lee made a deposit with Standard Chartered in Hong Kong, but the US Securities and Exchange Commission has secured an order from a New York court requiring Standard Chartered to hand over the money to the court.

The bank plans to appeal on grounds that the New York court does not have jurisdiction over funds deposited in Hong Kong.

"HELLO ENGINEERS"

CMI Jelly Filled Telephone Cables are here.

CMI blazes a new trail with a range of Petroleum Jelly Filled Cables. CMI has been a trend setter in the Small Scale Sector and is proud of its role in the Telecommunication revolution sweeping the country.

These cables will find their way in telecommunications for the Railways, Control Rooms, Telephone Exchanges and Defence applications.

What's special about CMI Jelly Filled Cables is its exclusive Insulation Compound which gives the cable a longer life. The Jelly in the cable not only resists water seepage, but also acts as a moisture barrier. The cables are also provided with special screening which results in zero electrical interference from outside.

CMI is already a name to reckon with for a large variety of cables including Signal & Instrumentation Cables for data transmission. Today, CMI Cables are at work in the heart of Industry — Telephone Exchanges, Control Rooms, Railways, Power Stations, Heavy Vehicles, Defence, Satellite Launchings — you name it.

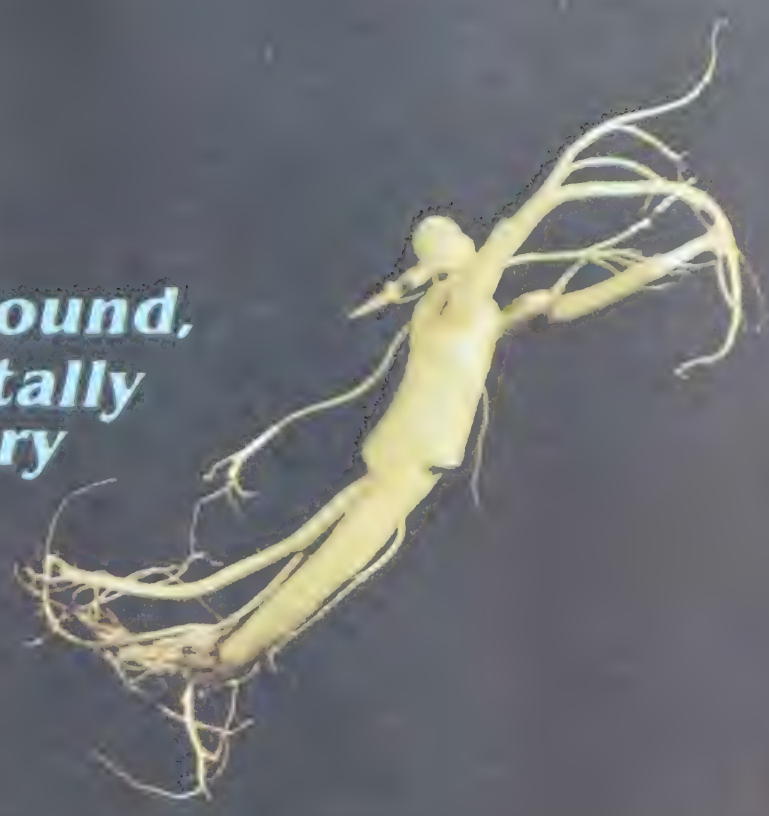
CMI CABLES — Making the right connections.

appeal

There's no stimulation on earth that can make walkers run, and runners fly...

but underground, it's a totally different story



A story that takes you back five thousand years. To the hidden depths of the Orient. To the fertile soils of Korea. To an enigmatic, man-shaped miracle root. To a legend that modern day scientists have already put to the test, proved and accepted with awe. A story that takes you to... GINSENG.

Ginseng. Over the years it's come to mean vigour, vibrance, vitality, plain good health or even energy plus. International pop legends have sung its praise. Celluloid giants have become fans. Celebrity authors write about it. Oriental athletes improve their track records with it. And Russian Cosmonauts use it in space to combat fatigue.

Ginseng. Across the counter, in Russia, China, Japan, Korea, West Germany, UK and USA, it's gained total consumer acceptance. And in every form, inspired hard-core medical confidence too.

Ginseng. To many it's the elixir of life. To others it's the key to sexual virility. While the Orientals have believed in it for years, the rest of the world is still waking up to its prowess. And discovering that Ginseng is much more than the aphrodisiac it's reputed to be. ★ It's good for body tone. ★ Great for the heart. ★ Lowers blood pressure. ★ Reduces stress ★ Stimulates the nerves. ★ It has known anti-diabetic properties. In short, it's an ideal weapon to fight the rigours of today's demanding lifestyles.

Now, the original, most potent Korean Red Ginseng. In capsule form. Under the brand name JENSHENG, comes to you from Biological E Limited.

JENSHENG. Use it to make flights of imagination, exciting journeys of reality. Use it to open up the frontiers of your mind. Use it too, to surpass your own concept of the ultimate. But use it. Most of all, for your better health.

If you want to know more about JENSHENG do write to us for a complete illustrated booklet.

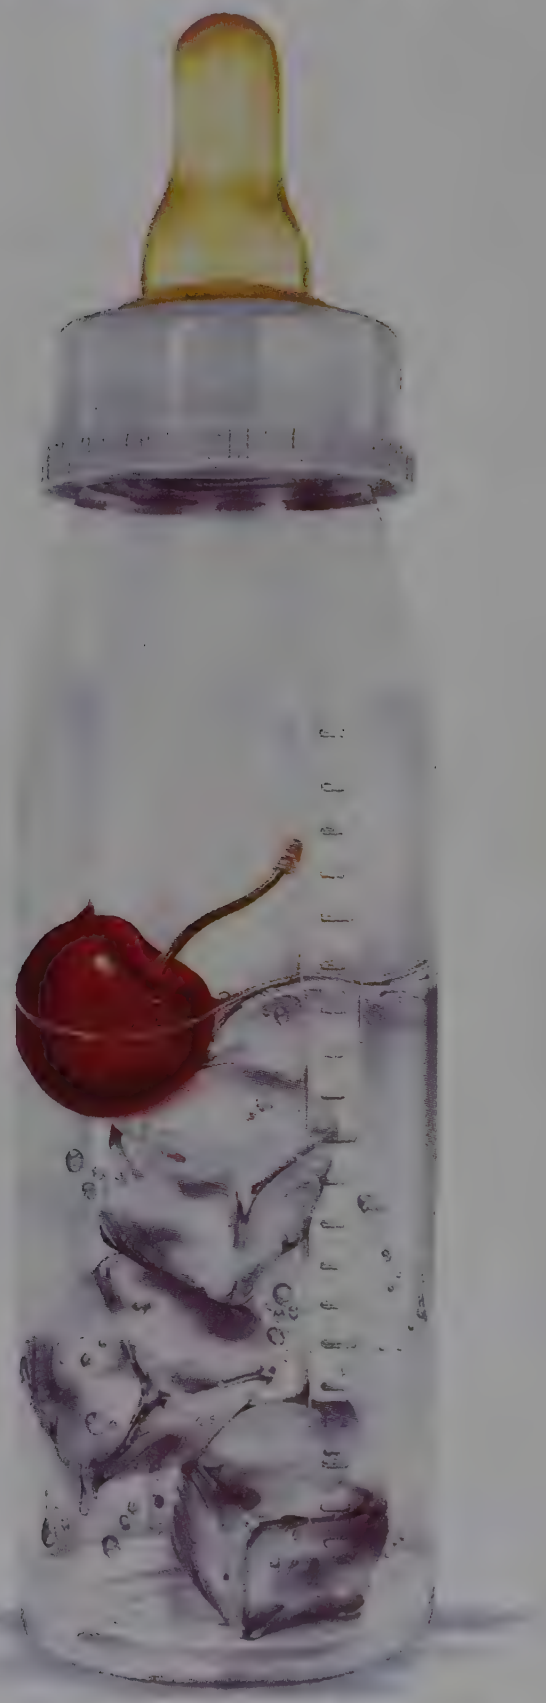
SAY CHEERS TO A NEW ARRIVAL.



CRUICKSHANK

You'll raise a lot of toasts to this new arrival. Because you'll know that this one's got a great future ahead. At Parties. Among Peers. Among Friends. Everywhere. In fact, you'll find that its smooth, mature and distinctly elegant personality is going to be the toast of every party soon.

And reason enough to keep celebrating forever!

C&C.
CRUICKSHANK & COMPANY LTD.
A NEW SPIRIT IS BORN

Birla Jute

Net loss; higher provision for interest, tax and depreciation; diversification plans suspended

Birla Jute has shown a loss for the year ended March 1988. Although sales have increased by 17 per cent to Rs.347.76 crores (previous year Rs.297.23 crores), the profits at operating levels have fallen by 8 per cent to Rs.28.70 crores (Rs.31.12 crores). After providing Rs.11.43 crores (Rs.9.28 crores) for interest and financial charges, Rs.16.88 crores (Rs.13.03 crores) for depreciation and Rs.0.71 crores (nil) for taxation, there is a net loss of Rs.32 lakhs as against a profit of Rs.8.81 crores in the previous year. Taking into consideration the excess provision for depreciation written back — Rs.4.06 crores (Rs.7.95 crores) — and the previous year's balance brought forward, the amount available for appropriation amounts to Rs.7.12 crores (Rs.16.77 crores).

The directors have recommended a lower dividend of 14 per cent (16 per cent).

The loss this year is mainly due to the continued squeeze on the cement division. This was due to the continuous power shortage, the poor quality of coal and the shortage of wagons.

The jute division has performed well. Exports of jute goods increased from 18,408 tonnes valued at Rs.16.80 crores to 19,996 tonnes valued at Rs.20.07 crores. Exports constituted 27.7 per cent of sales in terms of tonnage and 30.3 per cent in terms of value. (For the industry as a whole, exports as a percentage of production were 18.9 per cent.) The company has been sanctioned a loan of Rs.6.48 crores under the Jute Modernisation Fund Scheme for modernising three mills.

The synthetic unit has been able to make reasonable profits due to an increase in the sales of synthetic, viscose and cotton yarn.

The carbide and gases division suffered a substantial cash loss, despite the carbide division achieving a near optimum production of 13,977 tonnes (14,297 tonnes). The loss was due to the sharp rise in the cost of power and charcoal and a corresponding sharp decline in the realisation factor. This unit, which was the first of its kind in India, has become a "high cost" one compared with the modern plants coming up at Orissa and Bhutan. The management may therefore close it down. The Bhutan unit will have the lowest power cost and will be exempt in the beginning from duties and taxes. It is close to the Calcutta-Durgapur-Asansol industrial belt, which happens to be the major market.

Due to various constraints and adverse market conditions the company has suspended the various diversification plans it had considered earlier.

Tomco

Higher profits due to sale of overseas holdings; mediocre performance; dividend trimmed

The company has reduced dividend from 15 per cent paid last year to 10 per cent paid on enlarged capital for the year ended March 1988. The company recorded an increase under the "other income" head because of profit on the sale of all its holdings in United Plantations, Berhad, Malaysia at the prevailing market price which fetched the company Rs.7.70 crores.

Had it not been for this income, the company would have incurred a net loss of more than Rs.6 crores. The operating profit was up by 19 per cent to Rs.13.32 crores (previous year: Rs.11.24 crores) The interest and financial charges of the company amounted to Rs.8.82 crores; this will be reduced next year because of conversion of interest bearing debentures. After depreciation of Rs.2.13 crores (Rs.2.18 crores) and tax provision of Rs.0.80 crores (Rs.0.75 crores) the net profit was Rs.1.57 crores (Rs.1.29 crores). The cash profit rose to Rs.3.70 crores.

1988: HIGH	87.00	
LOW	55.00	

The major factor contributing to the company's set back during the year was the increased cost of raw materials, which was not matched by a commensurate increase in the price realisations. The price of rice bran oil (raw material for soaps and detergents) increased by 50 per cent over the preious year's average price. The sales of the company's main product, soap, which accounts for 70 per cent of total turnover went up to 94,613 tonnes (91,980 tonnes), the average selling price being Rs.20,130 per tonne (Rs.16,335 per tonne). The plant worked at 180 per cent capacity.

The problems were aggravated because the general demand for soaps and detergents received a setback particularly in the rural areas because of the drought. The company produced 93,010 tonnes of cattle and poultry feeds compared to 86,541 tonnes last year; an increase of 8 per cent; sales too have registered an 8 per cent increase.

The company has promoted Tata Vashisti Detergents Ltd in the joint sector with the State Industrial and Investment Corporation of Maharashtra Ltd (SICOM), and Maharashtra Petrochemicals Corporation Ltd. Tomco will contribute 25 per cent and SICOM and MPCL will together contribute 26 per cent of the company's equity. The company will man-

ufacture alpha olefin sulphonates (a substitute for LAB), shampoos, toilet soaps and synthetic detergents in a backward area of Maharashtra.

The company has a letter of intent to manufacture an additional 15,000 tonnes of toilet soaps under the Minimum Economic Scale of Operations Scheme for its plants at Calicut, Ghaziabad (UP), and Sewree in Bombay. The company is also in the process of renovating its fatty acids plant at Tatapuram (Kerala) and enhancing its capacity.

Indian Rayon

High depreciation charge results in net loss; major units affected by strikes

The company has maintained dividend at 28 per cent on enlarged capital for the current year ended June 1988. In September 1987, the company issued 9.3 million equity shares; this was after the conversion of the 11th series debentures. The prorata dividend for these shares now is 21 per cent. The sales have improved by 7 per cent to Rs.214.42 crores (previous year: Rs.199.75 crores). The company paid 13 per cent excise duty amounting to Rs.27.92 crores, thus bringing down the net sales figure to Rs.186.50 crores. The "other income" of the company increased mainly because of higher interest received from non-government securities.

The operating profit increased by 30 per cent to Rs.33.04 crores. After interest charges of Rs.15.31 crores, the gross profits rose by 34 per cent at Rs.17.73 crores. With a high depreciation provision of Rs.25.65 crores and tax liability of Rs.1 crore, the company incurred a net loss of Rs.8.92 crores as against a net profit of Rs.4.52 crores last year. But the cash profits rose by 34 per cent from Rs.12.45 crores to Rs.16.73 crores.

The company's production reached an all-time high, its rayon plant producing 8,135 tonnes (7,963 tonnes) utilising 90 per cent of the installed capacity of 9,000 tonnes; capacity was increased this year from 8,200 tonnes by installing balancing equipment.

The company sold viscose filament yarn (VFY) at an average price of Rs.69,165 per tonne (Rs.44,900 per tonne). The price of its main raw material — wood pulp — has increased from Rs. 8,860 to Rs.9,730 per tonne.

At the company's Portland cement unit there was an 82-day strike, which reduced production to 458,700 tonnes (598,700 tonnes); only 85 per cent of capacity was used (111 per cent). Although a power cut of 70 to 80 per cent prevailed throughout the year in Karnataka, the company's captive diesel power helped it achieve high capacity utilisation.

The company completed a Rs.40 crore carbon black plant in UP with an annual capacity of 20,000 tonnes in a record period of 14 months. The company is to market its product under the brandname "Hitech carbon".

The company is on the verge of implementing several diversification and expansion schemes. It has started implementation of the industrial licence for producing lightning arrestors and condenser bushings in technical collaboration with Brown Boveri Ag, Switzerland. The project is likely to be commissioned by the end of this year. The company is also expanding the capacity of its cement plant by 540,000 tpa. The expansion is likely to be completed by the first quarter of 1990.

The company also has a letter of intent for setting up a plant to manufacture 15,000 tpa of polyester filament yarn. Indian Rayon is also one of the promoters of Indo-Gulf Fertilisers & Chemical Corporation Ltd whose plant for producing 1,350 tonnes of ammonia and 2,200 tonnes of urea in UP is soon to be commissioned.

The company in collaboration with Hindustan Petroleum Corporation Ltd has also formed a new company — Mangalore Refinery & Petrochemicals Ltd (MRPL). Both Indian Rayon and HPC own 26 per cent of MRPL's equity. The refinery will be designed to initially process 3 million tonnes of crude oil annually.

The increase in the retention price of cement by Rs.47 per tonne will benefit the company and partly compensate for the higher costs. And with demand surging again, the capacity expansion will stand the company in good stead. The new carbon black plant too will add to the profits this year.

Standard Mills

Spurt in exports; sale of NOCIL shares relieves interest burden

The company has paid a dividend of 20 per cent for the 15 months ended March 1988; on an annualised basis, the dividend works out to 16 per cent. The year's balance sheet cannot be compared with the previous year's because the current year's accounts are for a period of 15 months.

The turnover was Rs.197.95 crores (previous year: Rs.166.50 crores). The "other income" is higher at Rs.20.77

Sintex - The only reliable and time-tested READYMADE WATER TANKS

SINTEX has proved its performance against all the tough and rough Indian conditions for more than a decade now. Dotting the Indian scene with lakhs and lakhs of installations — from Kashmir to Kanyakumari and Kutch to Kohima — Sintex Tanks are proving popular for all water storage and carriage applications.

Made by a unique moulding process on computer aided machines, Sintex Water Tanks offer a set of advantages unbeatable by others.

* Lightweight * Easy to install * Strong and Durable
* Maintenance - free * 100% Leakproof and Rustproof
* Most Hygienic * Available in wide range from 100 lits. to 20,000 lits. capacity and in different shapes.
* Backed by excellent installation and after sales service through a wide network of dealers.

ICFAI ANNOUNCES

A Unique Correspondence Course

DIPLOMA IN BASIC FINANCE

(The DBF Programme)

ADMISSION NOTICE

Encouraged by the phenomenal success of the CFA Programme (Chartered Financial Analyst) meant for Financial Executives, The Institute of Chartered Financial Analysts of India (ICFAI) now launches a new and unique programme in Basic Finance, entitled the DBF Programme (Diploma in Basic Finance) through correspondence.

DBF Programme Design & Structure

The DBF Programme is designed to help the candidates get a good insight into Finance through structured self-study at home. The Programme covers the essentials of finance through a mix of four compulsory and two elective modules. Two-day Weekend Workshop Sessions will be conducted at major cities periodically to facilitate direct interaction between faculty and the participants.

Eligibility

Corporate executives, self-employed persons, entrepreneurs, bank and insurance executives, Government officers, defence personnel, teachers and others without a formal professional/academic qualification in finance. The Institute welcomes sponsorship of candidates from employers.

Prospectus

For Prospectus and Application Form, please write to the Administrative Officer (DBF) giving your address and enclosing a demand draft for Rs. 40 drawn in favour of 'The DBF Programme A/c ICFAI' payable at Hyderabad.

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA
Road No. 3, Banjara Hills Hyderabad-500 034.

crores (Rs.8.96 crores) on account of sale of 205,000 equity shares of NOCIL at Rs.447 per share and the withdrawal of Rs.4.02 crores from revaluation reserve. The operating profit of the company was Rs.32.59 crores (Rs.19.99 crores). This works out to Rs.26.07 crores on an annualised basis. The company issued non-convertible bonds worth Rs.3 crores to UTI; interest charges have therefore increased. But at the same time the company saved substantial interest on intercorporate deposits which were repaid by utilising the money that came from the sale of NOCIL shares. The amount under the depreciation account is very high at Rs.13.05 crores (Rs.4.03 crores). The company has provided Rs.26 lakhs (Rs.10 lakhs) for taxation. The net profit works out to Rs.5.36 crores (Rs.4.85 crores). If the profit is annualised, it is lower by 12 per cent.

The production of cloth was higher by 19 per cent at 62.34 million kg (52.4 million kg). The prices of its main raw material, cotton, are 90 to 100 per cent higher than the prices prevalent in 1986. The favourable monsoon is good news for the company because cotton prices may come down.

The production of caustic soda was 211,407 tonnes (152,797 tonnes), an increase of 38 per cent. The increase in the cost of electricity from 106 paise per unit to 117 paise per unit will adversely affect the caustic soda industry. The company's efforts to reduce power consumption by installing metallic anodes are at the finishing stage. This will partly compensate for the hike in power tariff.

The company sold caustic soda and related chemicals at Rs.3,868 per tonne. This is one hundred rupees higher than last year. The cost of producing the same was Rs.3,603 (Rs.4,225). The capacity utilisation was higher at 110 per cent (80 per cent).

The company's other product, Chlorosol, has been widely accepted; production is expected to increase gradually. A letter of intent for the manufacture of 150 million disposable syringes and 300 million hypodermic needles has been granted. The company is getting set to implement this project.

The company's exports spurted to Rs.17.28 crores in the year ended March 1988, from to Rs.7.06 crores in 1986. The government's new policy of making profits from exports free of income tax will add to the company's profitability.

The company's joint venture in Indonesia — P.T. Standard Mills Industries — has shown better results for the year ended June 1987. The working is expected to improve further as its products are finding acceptance in Indonesia and other countries.

TRENDS

Dharamsi Morarjee

The sales for the first half year ended June 1988 are higher by 19 per cent at Rs.49.13 crores. But the operating margins have improved only marginally to 12.58 per cent (11.09 per cent in the corresponding six months of the previous year). "Other income" has risen from Rs.69 lakhs to Rs.1.15 crores.

The raw material cost was 66 per cent of sales, the same as last year, expenditure incurred on that account being Rs.29.15 crores (Rs.24.64 crores). The wage bill was Rs.4.47 crores (Rs.4.04 crores). The company made a profit of Rs.5.55 crores (Rs.4.11 crores) at the operating levels. After interest charges of Rs.3.03 crores (Rs.2.56 crores); depreciation charges of Rs.1.43 crores (Rs.1.45 crores); and tax liability of Rs.17 lakhs (Rs.2 lakhs), net profit rose to Rs.92 lakhs (Rs.8 lakhs).

The company's main product — fertilisers — has not done well due to drought. The company has been largely dependent on fertilisers for its profits. Now, the company plans to begin commercial manufacture of some new products developed by the R&D division. The ratio of fertilisers to chemicals, which is 62:38 at present, is expected to become 40:60 by the end of 1989.

Polyolefins Industries Ltd.

PIL has turned out an excellent performance in the first half of the current year. There has been a spurt in profits though the sales are only marginally higher.

The sales went up to Rs.81.57 crores (Rs.77.16 crores). But operating profits are significantly higher at Rs.18.14 crores (Rs.12.04 crores). Thus, profits rose by 51 per cent while sales went up only by 6 per cent.

The company has a higher interest burden of Rs.2.39 crores (Rs.1.72 crores). The company has made a higher provision for depreciation and tax. The provision for depreciation went up to Rs.2.38 crores (Rs.1.99 crores) and the provision for tax to Rs.4.66 crores (Rs.3.60 crores). In spite of all this, the company's bottom line is better than ever. The net profit is Rs.8.71 crores this year, compared to Rs.4.72 crores in the corresponding period last year. This is attributed to the tremendous demand for and scarcity of HDPE which has reduced the selling and administrative expenditure.

Besides, the raw material cost too has not increased significantly, as the company has arrangements with its sister concern NOCIL. In fact, the raw material cost as a percentage of sales declined to

graphisads 275

44.73 per cent (46.15 per cent). The overall effect has been the improvement of margins to 22.24 per cent (15.60 per cent).

The company is implementing projects to introduce many new products. These are at various stages of implementation; when completed they are expected to add Rs.45 crores to the company's turnover.

Besides, IPCL's Nagothane complex in Raigad, Maharashtra, which is expected to commence production in early 1990 is likely to bring in additional supplies of ethylene to the company and further enhance its profitability.

KSB Pumps

Though the company's turnover at Rs.21.34 crores is higher by 31 per cent, its operating profits have fallen to Rs.5.52 crores (Rs.5.75 crores). The interest burden is higher at Rs.24 lakhs (Rs.15 lakhs). The provision for depreciation is Rs.58 lakhs (Rs.57 lakhs) and for tax provision is Rs.1.97 crores (Rs.2.01 crores).

All this has led to a significant decline in the net profits of the company to Rs.2.73 crores (Rs.3.02 crores). The operating margins have been reduced to 25.87 per cent (35.23 per cent).

This decline in profits and profitability is mainly due to the tremendous increase in input costs and other indirect expenses. The raw material cost as a percentage of sales has risen to a hefty 46.63 per cent (35.66 per cent).

During this period, the company's water pump division at the Coimbatore plant commenced production. The new 4 inch submersible pump sets have undergone field tests. For the valve division, the company has entered into a technical collaboration with Velan Inc of Canada.

In the coming months, one can expect the Coimbatore plant to commence commercial production and thus add to the company's profitability. At full capacity, expected to be achieved by 1990-91, this plant is expected to add Rs.20 crores to the turnover.

RESULTS ANNOUNCED

Herdillia Chemicals

Herdillia Chemicals Ltd has recommended a dividend of 25 per cent for the year ended 30 June 1988. This includes a special dividend of 4 per cent to commemorate the silver jubilee of the company. Turnover increased by 13 per cent to Rs.79.37 crores (previous year: Rs.70.08 crores). Profits before tax improved to Rs.9.75 crores (Rs.7.44 crores); profits after tax were Rs.5.61 crores. The company has received three letters of intent for the manufacture of certain speciality chemicals.

Bakelite Hylam

Bakelite Hylam has reported improved results for the year ended 30 June 1988. The dividend has been stepped up to 18 per cent as compared to last year's 16 per cent. Sales increased by 14 per cent to Rs.66.89 crores (Rs. 58.84 crores). Profits after tax were Rs.1.24 crores (Rs.76.42 lakhs).

A plant for producing thermal insulation foam is expected to be commissioned by October 1988. The company has signed a memorandum of understanding with a Japanese company for the manufacture of wall covering material. The project is estimated to cost Rs.4 crores. The company is also planning a project for manufacturing acrylic fibre in West Bengal.

Glindia

The company has recommended a dividend of 20 per cent for the year ended 30 June 1988. Improvements in the performance of the foods and fine chemicals division contributed to the better results this year. Sales increased to Rs.230.13 crores from Rs.194.67 crores. Profits after tax and adjustments increased to Rs. 10.16 crores (Rs.7.39 crores).

IN BRIEF

During the six months ended 30 June 1988, **Thirumalai Chemicals Ltd**, registered a net sales of Rs.14.17 crores (Rs.10.98 crores in the corresponding period of the previous year). Similarly, the gross profit for the period went up to Rs.3.82 crores (Rs.1.91 crores) and net profit to Rs.2.07 crores (Rs.0.71) crores. Out of the 9,937 tonnes of phthalic anhydride sold during the six months, 5,212 tonnes were exported earning foreign exchange equivalent to Rs.4.54 crores on f.o.b. basis.

Despite the adverse conditions prevailing in the pulp and paper industry in the country, **Shree Vindhya Paper Mills Ltd**, has more or less maintained its performance during the year ended 30 April 1988. During the year the production of the company went up to 18,086 tonnes against 17,854 tonnes in the previous year. Sales during the year marginally went up to Rs.24.40 crores (Rs.24 crores in the previous year). The gross profit during the year was, however, lower at Rs.2.50 crores (Rs.2.62 crores). The board of directors has maintained a dividend at 18 per cent for the year.

Khaitan Tibrewala Electricals Ltd, the Hyderabad-based Khaitan group company has done well during the first six months ended 30 June 1988. The gross turnover of the company increased significantly by 32 per cent to Rs.9.55 crores (Rs.7.26 crores in the same period previous year). The gross profit of the company also increased to Rs.89.73 lakhs (Rs.70.32 lakhs). The company expects further improvements in its working and hopes to cross Rs.22 crores in turnover and Rs.2.5 crores in profits by the end of the current accounting year extended to 31 March 1989.

Ashok Leasing and Hire Purchase Ltd, a company promoted by Ashok Leyland Ltd, has registered a gross income of Rs.4.21 crores for the year ended 30 June 1988 (previous year: Rs.2.63 crores). Similarly, the profit before tax was higher at Rs.140.85 lakhs (Rs.78.18 lakhs) and the profit after tax was Rs.118.35 lakhs (Rs.66.18 lakhs). The company has declared a higher dividend at 20 per cent

Suppliers to the Hotel & Restaurant Industry

How to meet 75,000 buyers with just a stroke of your pen.

What an opportunity! To reach 75,000 potential buyers. To be able to talk to them at the best possible time! To be able to stay in touch all through the coming year!
By advertising in the Official Buyers' Guide '89.
Please ensure that I don't miss this.

☐ Rush me complete advertising details, the advertising rate-card and the booking form.
☐ Send your Ad Executive immediately.

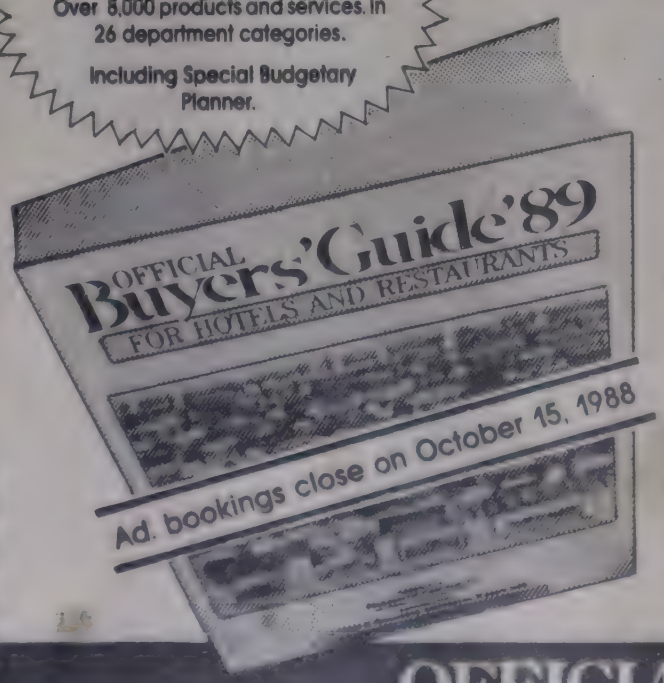
Over 800 pages.
Over 13,000 of the best suppliers in the country.
Over 8,000 products and services. In 26 department categories.
Including Special Budgetary Planner.



Yes, now here's a unique opportunity for suppliers to the hotel and restaurant industry.

An opportunity to advertise in the Official Buyers' Guide '89.

The first reference guide of its kind for the hotel and restaurant industry.

Published in association with HRA (WI) by Professional FoodService – the acknowledged trade journal of the hospitality industry.

A guide that will be so comprehensive, authentic and useful, that an estimated 75,000 buyers in 15,000 hotels, restaurants, industrial canteens and other related institutions will refer to it next year.

Every time they need something.

As a supplier, you can well imagine what that means.

It means getting your sales message across to more buyers in more places than ever before.

Being able to talk to these buyers at the best possible time – when they're ready to buy.

And staying in touch all through 1989 – by being close at hand for all 365 days of the year.

Ensure you don't miss this opportunity to reap greater returns in 1989.

Make an investment today. By simply filling in and posting the coupon above – now!

STOCKMARKET REVIEW

Upward bound

(For the period 12 September to 24 September.)

The relentless rise in stockmarkets continued with the strongest upward movement of the year so far. The September rise has so far added over 13 per cent to the *Economic Times* index, the strongest increase for any month this year; the current fortnight's rise was 7 per cent and took the ET index to a record high of 301.3.

The BSE index, however, rose by a more staid 4 per cent to 644.68. This was because cash scrips were in greater demand than earlier and tended to outshine the forward scrips. The spectacular gainers of the previous fortnight such as Century, Century Enka and Nocil (all in the forward list) slowed down their rate of gain, while others, such as Jindal Strips, Samtel and National Peroxide (all in the cash list) took the lead. It is normal for forward scrips to react earlier to good (or bad) economic news than cash scrips.

The starting spark for the current rise has been institutional purchases; its sustenance will surely be corporate profits, which have recorded average rises of more than 50 per cent over the past three months, with announcements over the previous fortnight recording an even more impressive average rise of 183 per cent. With such increases, it is hard to see a brake on a rising stockmarket for a while, unless dividend yields get out of hand. In the cash list, Jindal Strips rose from Rs.65 to Rs.97.50 upon announcement of a 375 per cent jump in annual profit after tax to Rs.4.85 crores, up from Rs.1.02 crores in the previous year. Samtel followed up its impressive gains of the previous fortnight with a further jump of 33 per cent from Rs.56 to Rs.75. National Peroxide also gained a strong 20 per cent up from Rs.1,200 to Rs.1,450, while Cipla touched Rs.2,000, up from Rs.1,350. Gokak Patel announced a 52 per cent jump in profits after tax; its stock price rose 20 per cent to Rs.82, up from Rs.68 a fortnight earlier. Other major gainers in the cash list included Finolex, Kinetic Engineering, Ficom Organics, Crompton Greaves, FAG Precision, Madura Coates and J.K.Industries.

In the forward list, Bajaj Auto followed up its results-induced rise of the earlier fortnight with a further gain of Rs.35 to Rs.307.50. Baroda Rayon announced excellent annual results, reversing a prior year loss of Rs.5.7 crores into a profit of Rs.4.3 crores. The scrip rose by Rs.55 to Rs.305. Premier Automobiles also announced good year-end results with profit after tax rising 30 per cent to Rs.11.2 crores. The scrip was in strong demand, closing at Rs.36.75, up from Rs.29.50. Great Eastern Shipping was actively traded, closing at Rs.31.25, up from Rs.29, after announcing year-end after-tax profit of Rs.15 crores, up from Rs.6.8 crores for the previous year.

Does a strategy of buying high-flying shares make sense at this point when many stocks have already risen strongly? Or is it better to buy those that have not risen as much, hoping they will catch up? Or is it better, perhaps, to wait and watch, hoping for a fall based perhaps on election rumours and then buying?

A strategy of buying the big winners of the week ended 17 September would have included shares like Bajaj Auto, Baroda Rayon and Premier Auto which continued to gain strongly in the next week. However, it would also have included shares like Hindustan Cocoa and Excel Industries,which fell off. For shares on the Bombay forward list, a strategy of buying in equal value shares which rose at least five per cent for the week ended 17 September would have resulted in the purchase of nine shares for an average gain of 4.06 per cent over the next week ended 24 September (while the BSE index rose 2.9 per cent).

On the other hand, a strategy of buying not the nine high-fliers but the nine medium gainers that followed the high-fliers in gains for the week ending 17 September would have provided some evidence of the "catch-up" effect; this group rose 4.89 per cent for the next week. But catch-up is not the whole story, because the third strategy, that of buying only those shares that had fallen over that week (such as Century and Sesa Goa) would have yielded a return of 3.72 per cent the next week, the poorest of the three (but still more than the rise of the BSE index).

As a result of the sharp rises, dividend yields for some stocks are beginning to look very small. This is not in itself a source for alarm because yield is calculated on past dividend whereas future dividends will be the determining factor. For example, Asian Paints has a yield of 1.69 per cent but this is based on dividends announced for the year ended December 1987. So also Food Specialities with a yield of 1.58 per cent . However, even some companies with recently declared yearly or half-yearly results currently quote at unusually low yields, such as Century Enka (2.03 per cent), Colgate (1.85 per cent) and Finolex (1.34 per cent).

The point of concern is that corporate finance managers tend to raise (or reduce) annual dividends more slowly than the annual rise (or fall) in corporate profits in order to protect the image of their firm against the possibility of rapid adverse changes in corporate performance from year to year. But many investors who measure the permanence of corporate performance by the level of dividends (which is perhaps why dividend yields have historically hovered around 3 per cent through good and bad years) will be expecting large increases in dividends next year. (For example, Finolex will have to more than double dividends to reach a yield of 3 per cent given its current stock price). Otherwise they may sell their shares. If corporate finance managers behave in the usual way, this could lead to some unexpected falls in stock prices.

INTERNATIONAL FINANCE CORPORATION

A new look at India investment

The International Finance Corporation (IFC), an affiliate of the World Bank, and by far the largest source of direct project financing for private investment in the developing world, has resolved to distinguish its role as an investor more clearly from its traditional role as a lender to companies. Indications to this effect are seen in the 1988 annual report of the corporation where of the, record 95 new investments totalling Rs.1,859 crores for the year ended June 1988, equity and quasi-equity investments approved by the IFC's board amounted to Rs.369 crores, 20 per cent of aggregate new approvals for the year. IFC has stated that as an equity investor it would be ready to be a "more active shareholder and to accept membership on company boards when appropriate".

Equity participation. The report said the IFC has made "a special effort" to widen its equity investments in India during the past year. One of the aims is to help take significant equity positions in promising new enterprises. Thus during the fiscal year 1988, IFC's focus on equity in India resulted in the approvals of three equity investments in start-up projects, all of which entail the transfer of technology, says Mohan R. Wikramanayake, new chief of regional office, south Asia, stationed in New Delhi.

Wikramanayake says the first project involves a Rs.37-lakh investment in an export-oriented software company, WBI Advanced Technology Limited. The second involves a Rs.38-lakh investment in a project to manufacture modern push-button telephones for Keltron Telephone Instruments Limited. The third involves a Rs.1.52-crore equity investment in a project to manufacture constant-velocity joints for motor vehicles with front-wheel drive for Invel Transmission Limited, a company jointly promoted by a West German firm with Indian public participation; this is a unique case in which there is no Indian company with share-holding status.

Renewed interest. The report states that the business climate in many developing countries is improving; it observes that there is renewed interest among business executives in having foreign companies as continuing partners rather than just sellers of technology. The report points out that the response of private enterprises to structural reforms depends crucially on whether business executives think that the government has the political strength to carry out its programme and on whether the programme itself seems to have a good chance of succeeding. In this context, the report observed that few disruptions are more damaging to private businesses than frequent changes in the "rules of the game".

On investment climate in the developing world, the report said that most of the Third World is turning from state industries to private enterprises as a source of growth; the corporation describes this as "a historic change" in the global investment scenario. The report also notes that the IFC undertook a new major role in corporate restructuring last year. It carried out 12 of these operations during the last fiscal year to help crippled companies become profitable once again.

NEW ISSUES

Cochin Refineries

Phillips Petroleum Company USA, which has a 18.49 per cent equity stake in the public sector Cochin Refineries Ltd is divesting its holding. Under an offer for sale which its constituted attorneys, Standard Chartered Bank is making, Phillips Petroleum is selling 185,007 equity shares (face value Rs.100) at a premium of Rs.100, aggregating Rs.3.7 crores. Out of this, 56,000 shares are being offered to the financial institutions on firm sale basis and to employees of CRL. The remaining 129,507 shares go to the general public. The CRL share, which is listed currently only at the Cochin stock exchange, was quoting around Rs.230 last fortnight.

Phillips Petroleum is the second multinational oil company to voluntarily pull out of India. A few years ago Amoco, which had a similar stake in Madras Refineries, divested its holding to the government. Several reasons have been advanced for the Phillips divestiture. In 1984 and 1985 the $ 10.46 billion company faced two hostile takeover bids. The company could only stave off the takeover bid by picking up available shares in the market. But Phillips apparently lacked the requisite financial resources needed for this buy-out exercise. So a massive corporate restructuring exercise was conducted — loss making divisions were hived off, real estate sold to raise money for the war chest. The sharp fall in oil prices was also hurting. Phillips operates three refineries in the US, has oil and natural gas installations world-wide and also operates several downstream units. So in order to raise additional resources the company is believed to have taken a close look at its overseas investments. And disinvestment in CRL was seen as one of the sources of raising funds.

CRL officials emphasise that the Phillips divestiture was due to the American company's "internal compulsions" and is in no way a reflection on CRL's financial health. Recently Phillips also withdrew its equity stake in another Indian company, the R.P. Goenka owned Phillips Carbon Black. CRL's pattern of shareholding after the Phillips divestiture will be divided between the government of India (62 per cent), Kerala government (5 per cent) financial institutions (15 per cent) and general public (18 per cent). CRL's equity base, which was only Rs.7 crores, was increased to Rs.10 crores in February 1988 through a rights issue at par to existing shareholders. However, Phillips, which originally held a 24 per cent stake in CRL, renounced its portion which reduced its holding to 18 per cent.

Though it has a fixed assets base of Rs.172 crores and reported sales of Rs.1,023 crores in 1987, CRL is smaller in size compared with the big three of the Indian petroleum industry — Indian Oil, Hindustan Petroleum and Bharat Petroleum. The company's single refinery in Cochin has as installed capacity to process 4.5 million tonnes of crude oil each year. Capacity utilisation in the last three years has been 61 per cent (1986), 93 per cent (1987) and 91 per cent (1988). CRL expects to fully utilise its capacity during the current year. Based on certain capacity utilisation norms all petroleum companies are assured a 24 per cent pre-tax return on their net worth.

CRL's performance was adversely affected in 1984-85 when one of its plants was damaged in a fire. In 1985 sales slumped to Rs.167.68 crores and net profit to Rs.2.58 crores. Though sales improved in the following year the company's net profit was a meagre Rs.25 lakhs.

According to J. Jayaraman, chairman and managing director, CRL in its corporate plan has indicated that it would substantially increase its share capital by offering another rights issue. "He adds that given the small equity base currently the new shareholders are assured of a reasonable dividend each year. But the performance of the share in the secondary market will be watched with interest. CRL is currently quoting at Rs.230 in Cochin and the new shares will also be listed on the Bombay and Calcutta stock exchanges. With negligible floating stock initially and marginal trading activity can shareholders look for capital appreciation?

CRL has several expansion plans with a total outlay of Rs.300 crores. In the first phase a Rs.77-crore aromatics complex will be commissioned next year (the benzene plant in February and toluene in August). A 20 MW captive power plant at a cost of Rs.57 crores is expected to be ready by 1991. And refinery capacity will be enhanced to 6 million tonnes at a cost of Rs.100 crores. New storage tanks for crude oil and LPG will account for the rest.

IF ONLY ELECTRICAL SHORT CIRCUITS WERE FIREPROOF!

The minor short circuit in a panel travels fast in the form of a burning arc – carrying tremendous heat energy – burning all materials/ equipments which come in its way.

"VERSATRIP'S VF Fuses" safeguard your electrical equipments against the deadliest of short circuits.

Here is the proof:

- Our **VF fuses** are designed and tested to withstand as high short circuit currents as 84 & 104 KA. The faults are cleared and isolated within milli seconds by VF fuses blowing off.
- **VF fuses** incorporate silver elements which have precise cut-off characteristic as well as they minimise the "let through energy" of a faulty current.
- All **VF fuses** have been exhaustively tested for **Type Tests** and each and every fuse is tested for "milli ohms drop" test. Therefore their performance during severest of short circuits is guaranteed.

Yet Versatrip VF Fuses do not cost the earth!

For more details please ask for our catalogue : VF-63005.

NOW!

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per shares for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share Yield: dividend as a percentage of market price.

1824: The ABN Bank's predecessor established to finance international trade.

1988: The ABN Bank, more than ever with you for worldwide service.

One of the finest Dutch traditions is financial entrepreneurship that made Amsterdam the world's financial capital 400 years ago. It was Amsterdam which had the world's first stock exchange.

ABN's predecessor – NTS Bank – added banking activity to its trading and plantation interests, which began in the Far East in 1824. For decades ABN Bank has been providing personalised service to its international clients.

Every branch of ABN Bank is today staffed with highly qualified internationally oriented personnel who are supported by the expertise of a sophisticated banking organisation with a long-standing tradition. ABN Bank is engaged in all banking activities and specialises in financing trade and industry tailored to individual client's needs in each country. Very few banks are comparable for on-the-spot service in so many financial centres around the world.

Today, with over 700 branches in the Netherlands and 250 branches worldwide, the tradition of leadership in international banking flourishes. ABN Bank, business oriented with proven record of reliable service, provides a full range of wholesale and retail banking support.

Call us to find out how ABN Bank can help you:-

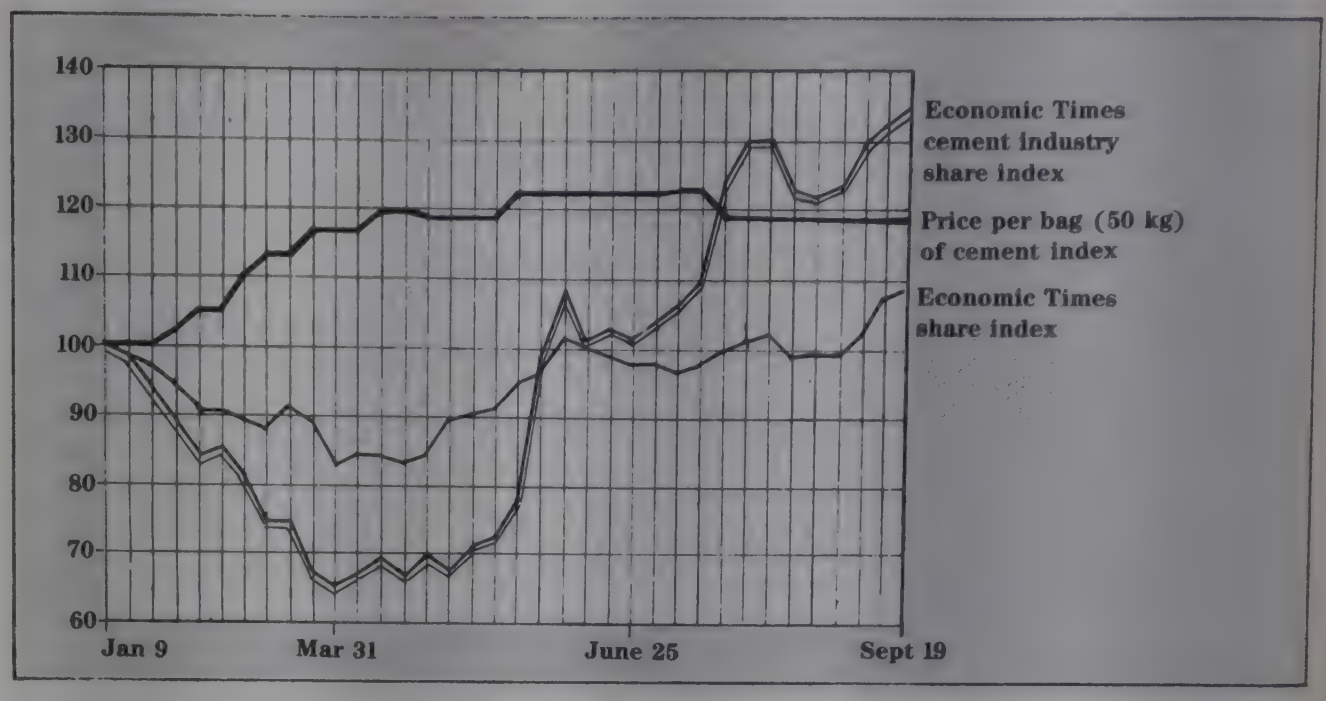
The Dutch Banker – worldwide with you

Cement scrips in the limelight



Markets are booming and most scrips have risen in value. The *Economic Times* share index has risen from 265 (9 January 1988) to 286.5 (17 September), a rise of 8.3 per cent in nine months. However, cement company shares which were languishing for quite some time have risen well over the market average. In fact, the *Economic Times* cement industry index has risen by 34.3 per cent in the last nine months. As a result of favourable conditions the price to earnings ratios (PEs) are at an all-time high — ACC 310, Birla Jute 427.3, Mysore Cement 22.3, and Gujarat Ambuja 9.88. This is despite the fact that the dividends declared have been dismal (very few cement companies declared a dividend over 15 per cent last year).

The popularity of cement company shares in recent months has a lot to do with government policy and changed economic circumstances. This is because the fortunes of the cement industry are linked to the vicissitudes of government policy.

As is well known the cement industry is a controlled one. The levy price and quota set by the government can make or break the industry.

After partial decontrol in 1982 installed capacity has risen significantly from 29.08 million tonnes in 1982-83 to 43.5 million tonnes in 1988-89. The average rate of capacity addition prior to 1982 was around 5 per cent per annum. The post-1982 growth rate is around 18 per cent. The phenomenal growth has led to a mismatch in supply and demand. Also, demand for cement has been suppressed because of two bad monsoons in 1985 and 1986 and the severe drought in 1987. The resulting adverse economic climate hampered growth in the housing sector as resources had to be transferred to fire-fighting economic operations.

It was only in March 1988 that the government decided to reduce the levy obligation of cement plants. The levy quota for units set up before 1982 was reduced from 50 per cent to 30 per cent and for sick units from 30 per cent to 15 per cent. In the case of units which began commercial production after 1 January 1982 the levy quota was reduced from 30 per cent to 20 per cent. There was no increase in the levy price in spite of persistent lobbying by the cement industry.

Because the concessions made by the government fell far below expectations, the cement index declined in March 1988 to touch a low of 66.3 (26 March). ACC was then quoted at Rs.137, Gujarat Ambuja at Rs.12, Mysore Cement at Rs.23 and Orissa Cement at Rs.29.5. So low was the sentiment in cement companies amongst investors that even though the price of non-levy cement had risen by about 16 per cent since January 1988 to about Rs.71 per bag of 50 kg there were few takers for cement scrips.

However, the good progress of the monsoons and the expectations of a general improvement in the economic climate led to the revival of the market as a whole.

In early June, just after the onset of the monsoons, cement company shares were back in demand and the cement share index has risen steadily since then *(see chart)*. To some extent the rise can be attributed to the increase in the price of non-levy cement. However, a major sop to the cement industry came in early September when the cement retention price was raised by Rs.47 in order to offset the rising input costs. Nevertheless the increase was less than what the industry was clamouring for.

As a result of the concessions given to the industry and the favourable economic climate, industry observers feel, the outlook for cement companies over the next two years is bright.

The signals emanating from the companies are already encouraging. Mangalam Cement, for instance, during the year ended June 1988 has increased profits after tax by 157 per cent to Rs.1.21 crores. Gujarat Ambuja Cement also increased its margin substantially (year ended June 1988) and declared a maiden dividend of 11 per cent. Profits after tax jumped from Rs.1.74 crores to Rs.4.22 crores. With an earning per share of Rs.2.10 and a yield of 5.30, market analysts feel that the scrip has good potential.

Recognising the possibility of a spurt in demand over the next few years, financial institutions are once again financing new projects. At least six new projects, it is reported, have been given the green signal to go ahead.

WORLD BANK-IMF MEETING

Tussle between the haves and have-nots

When bankers meet, the world is usually bored. But this time round at West Berlin everybody was watching. The reason: there was hope that bankers were on the threshold of a breakthrough. Of course, most observers knew better. The fact is that when bankers meet, they bargain for percentage points — never for the poor. They hedge their bets, they rarely trim their sails. And so it was at Berlin. The pin-striped gentlemen from the city and the gnomes of Zurich gathered — in what no doubt must have been a most pleasant paid-for-by-the-bank jamboree. Conviviality was in plenty and generosity in short supply.

For most corporate bankers, Berlin was just another opportunity to meet and exchange visiting cards and renew contacts. The real players, of course, were the lobbyists who seemed to flit on the edges but in reality held all the cards. The global game of bloc geo-politics has no real winners — only constant players. That in effect was the signal coming from West Berlin.

Yet, as we go to press, the much-talked-about meeting of the International Monetary Fund (IMF) and the International Bank for Reconstruction and Development, popularly known as the World Bank, is more than just a conversation topic for listless bankers' cocktails. The meeting in Berlin is being seen by both the media and international finance experts as a tussle between the developing and the developed countries. It has raised a rarely seen quantum of heat and dust over a lot of the basic issues involved. In the days to come, it may become clear which lobby at [illegible] has gained the upper hand. But at the moment, [illegible]

It is no secret that the developing countries need money. Huge sums of money. Very clear too that the World Bank will not be able to cope with the demand. Even by the Bank's own estimates, there will be a shortfall of about $ 8 billion in the capital needed by such countries to rejuvenate development.

Speaking at the Commonwealth Finance Ministers' Conference, S.B. Chavan, India's finance minister, noted that the Commonwealth Secretariat has estimated a financing gap of $ 18 billion per annum for the next five years. The Bank's own target, showing an annual growth rate of 10 per cent in its disbursements to these countries, remains only a target. So, the developing countries hanker for more loans from the Bank and logically, for more money to be provided by the developed countries to the Bank.

The West German finance minister, Gerhard Stollenberg broke ranks, however, and in an unprecedented show of support for the developing nations suggested that the "donor countries should agree next year to increase contributions by at least 35 per cent and probably by 50 per cent". The US (which controls over 6.3 per cent of votes) has not supported an increase in contributions. Ronald Reagan did not assent to general capital increase (GU) in World Bank capital by $74.8 billion.

One of the reasons for their fierce opposition is clear — the failure of certain poor, underdeveloped nations to repay loans. The debts of the Third World have today reached a figure of $ 1.2 billion; a major percentage of this is now considered "bad debts". The lobby of once-stung [illegible] bankers, states that it is not contributing for charity. Michel Camdessus, managing director of the IMF, firmly believes that the developing countries should not rely on debt reliefs as a way to resolve their economic crises. Other IMF officials feel that there is no justification in writing off the loans of some countries while others are paying.

And this is exactly what the G-24 group of developing nations is demanding. In fact last Friday, proponents of a "debt moratorium" held a two-day conference which was attended by many groups from Africa, Latin America and Asia; among those who attended were representatives of trade unions, clergymen and supporters of socialism. This group is a thorn in the side of both the G-7 and G-24 countries since its attempts are aimed at doing away with the ideological gap between the rich and the poor.

However, there are some more grievances that the developing countries have. For example, a reduction in interest rates.

The happy news in all this is that the West German government, perhaps acting the role of generous hosts, is contemplating giving contribution for lending at the same rates based on soft loans (around 0.75 per cent) like not having floating exchange rates for a simple fluctuation hits them on the face. Not surprising therefore that Warnasen A. Rasaputra, governor, Central Bank of Sri Lanka, claims that the so-called floating rates have only added further instability to BOP situations.

In many senses the trap is of the developed countries' making. Most bankers agree that the current nervousness and reluctance is understandable. The Latin debt trap, as J.K. Galbraith himself pointed out recently "is just another demonstration of temporary insanity that we as a people have". If, as Galbraith says, the Latin debt trap is just a passing lunacy, then surely the demands made by the developing countries deserve examination. And perhaps as the West Berlin meetings come to a close, this ought to be the message: forget the lunacy of the past, examine the debilitating reality of today for the developing countries and let us work towards a new future that involves genuine give-and-take, not just the old syndrome of grab-and-run, lend-and-lose.

Dusk descends on Kundam in Madhya Pradesh. As Sushilabai looks out at the setting sun, she eagerly awaits her husband's return from the fields. Balram, their elder son, is herding the cows home, while she plays with little Rajni. The infant's joy reminds Sushilabai of the time when, as a newly-married couple, they planned their family with care and understanding to bring security and happiness for the future. That was eight years ago when ITC came to their help...

Sushilabai of Kundam. The thought of marriage held out little joy for her. She feared that her life would be like her mother's: burdened with too many children.

Then, ITC showed her husband the simplest way to plan a small, happy family.

Growing awareness: a small family is a happier one

ITC has been a participant in the Government's Family Health and Welfare Programme since 1968. The Company's widespread distribution network and marketing experience are being utilised to promote Nirodh contraceptives in Madhya Pradesh, Karnataka, Kerala, Andhra Pradesh, Tamil Nadu... and now in Delhi and Uttar Pradesh, too.

As India's single largest distributor of Nirodh contraceptives, ITC is making special efforts to increase awareness among country folk on the benefits of a small family. By 1989-90, it will be spending more than Rs 1 crore on this project—in manpower training programmes, on distribution and on promotion.

Working closely with the Department of Family Planning, ITC is helping dispel traditional taboos over an area where more than half the country's population lives.

Where else is ITC working for India and its people ?

Agro-industry: ITC's technological expertise, gained from decades of R&D in seed development, is now being transferred to produce oilseeds. The manufacture and marketing of edible and non-edible oils will help reduce imports and aid thousands of farmers.

Indian Classical Music: At the Sangeet Research Academy in Calcutta, tradition married to technology keeps alive the *guru-sishya parampara.* Through Sangeet Sammelans around the country, ITC is rekindling interest in classical music.

Cottage-sector Craftsmanship: ITC set up Triveni Handlooms to preserve the traditional craft of Shahjahanpur's weavers. Looms, raw materials, technical knowhow are provided; today 2500 weavers are gainfully employed, their carpets exported by ITC.

I.T.C. Limited

New horizons, new hopes.

HTA 7204

Bullish markets... but no winner in sight

Last fortnight the stockmarkets were in a buoyant mood. Several leading share counters at the Bombay stock exchange registered a sharp increase in prices. According to market watchers, small investors who stayed out for 24 months had once again returned in large numbers. That's the good news. The bad news is that we have no winners for the investor contest.

How to enter

On the entry form given below are listed six popular scrips. All you have to do is to use your skills to predict the prices of each of these share as on 28 October 1988, and send in your entry by 18 October 1988. The winner in accordance with the rules printed below, will get a prize of Rs.5,000. In the event there is no winner, the prize will not be carried over.

Every issue of **Business India** will contain a new contest. The entry which has all six correct answers will receive a prize of Rs.5,000. If no such entry is received, the entry which has 5 out of 6 correct answers will receive the prize. In the event of there being more than one winner, the prize will be shared equally. We repeat, if there are no winners, the prize money will not be carried forward.

Rules:

1 There is no entry fee.

2 The list has been selected on the basis of what we consider are actively traded and interesting scrips on Indian stockmarkets.

3 The price mentioned last in the official quotation list of the stock exchange (if there is a series of such prices against the name of the share) will be taken as the correct answer. The official list of the particular stock exchange, which will be referred to, is given against the name of each scrip. If for some reason the stockmarket is either closed on 28 October 1988, or there are no transactions for the six scrips chosen below, then the quotations for the nearest working day prior to 28 October 1988, will be used.

4 Variation from the correct answers are permitted within a range that is specified against the scrip.

5 Entries must be on the printed form given below. Any other entries will be disqualified.

6 Only one entry will be permitted per form.

7 Envelopes sent in should be marked Investor Contest. All entries must be received at **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, Tuesday, 18 October 1988.

8 **Business India** is not responsible for non-receipt of entries.

9 **Business India's** decision on the winning entries will be final and binding, and no correspondence in this regard will be entertained.

10 The contest is open to residents of India only. No employee (or any direct relation of any employee) of the **Business India** group of publications is entitled to enter the contest.

Name of scrip	Stockmarket official list to be used for comparing results	Prices as on Friday, 23 Sept 1988 (Rs)	Variations permitted from correct prices upto (Rs)	Prices as on Friday, 28 October 1988 (Please fill) (Rs)

NOTICE

It is hereby notified for the information of the public that Shaw Wallace & Company Limited proposes to make an application to the Central Government in the Department of Company Affairs, New Delhi, under sub-section (2) of Section 22 of the Monopolies and Restrictive Trade Practices Act, 1969, for approval to the establishment of a new undertaking/unit/division. Brief particulars of the proposal are as under:

1.	Name and Address of the Applicant.	**Shaw Wallace & Company Limited** **4 Bankshall Street** **Calcutta 700 001**
2.	Capital Structure of the Applicant Organisation.	**Authorised** **Preference** **Rs. 1,00,00,000** **Ordinary** **Rs. 39,00,00,000** **Subscribed** **Preference** **Rs. 75,00,000** **Ordinary** **Rs. 12,00,00,000**
3.	Management Structure of the Applicant Organisation indicating the names of the Directors, including the Managing, Wholetime Directors and Manager, if any.	**Mr M R Chhabria, Chairman** **Mr K R Chhabria, Managing Director** **Mr R M Moghe** **Mr A K Das** **Mr B S Mehta** **Dr R S Tarneja** **Mr R S Mama** **Mr M L Bhakta** **Mr B Sanghavi**
4.	Indicate whether the proposal relates to the establishment of a new undertaking or a new unit division.	**New Undertaking.**
5.	Location of the new undertaking unit division.	**JAMMU (JAMMU & KASHMIR)**
6.	Capital structure of the proposed undertaking.	**Same as in item 2.**
7.	Incase the proposal relates to the production, storage, supply, distribution, marketing or control of any goods/articles, indicate:	
	i) Names of goods/articles	**Potable alcohol from non-molasses based raw materials.**
	ii) Proposal licensed capacity	**50,00,000 Bulk Litres per annum.**
	iii) Estimated Annual Turnover	**Rs. 7,50,00,000**
8.	In case the proposal relates to the provision of any service, state the volume of activity in terms of usual measures such as value , income, turnover etc.	**NOT APPLICABLE**
9.	Cost of the Project	
10.	Scheme of finance, indicating the amounts to be raised from each source.	**Finance will be arranged partly from internal sources and balance by raising loans.**

Any person interested in the matter may make a representation in quadruplicate to the Secretary, Department of Company Affairs, Government of India, Shastri Bhavan, New Delhi, within 14 days from the date of publication of this Notice intimating his views on the proposal and indicating the nature of his interest therein.

S.C. MAJUMDER
SECRETARY &
PRINCIPAL OFFICER

Dated this 6th September, 1988

Khote ki duniya

Tina Khote *is a producer of documentaries and advertising shorts*

Krystyna (Tina) Khote is an unusual film producer. Earlier, as a partner of Durga Khote Productions, and now as a full-fledged owner of the company, she has produced innumerable documentaries and advertising shorts for about 33 years. But overnight, Khote has been catapulted into media fame with the success of her TV serial, *Wagle ki Duniya*.

Mirth-go-round. For years, R.K. Laxman's harassed cartoon strip hero, the Common Man has been a mute witness to bureaucratic bunglings, political shenanigans and other blows of fate. With hilarious results. Khote is the inspiration for another widely acclaimed Laxman creation — the harassed hero, Wagle. When Laxman, an old friend, was seeking a new vehicle for his variety of humour, Khote with her penchant for the film medium, suggested a series based on the assorted situations in his cartoons. The whole thing took off into a mirth-go-round and Khote is one happy producer today.

Born in Poland, Tina fled in the mid-forties with her family to England, and eventually settled in Canada where she completed her secondary education. She did a summer course on French civilisation at the Sorbonne, a brief stint for the International Air Transport Association and met her future husband, Bakul Khote, then an Air-India executive. She came to India in 1953, travelled a great deal and got married. She joined Durga Khote's Fact Films in 1955; the company was later reconstituted into Durga Khote Productions.

Despite the consciously adopted low profile, her company is a well-known name in the documentary and advertising film business. Profitability in documentary films is low and public acclaim is rare, though occasionally, they win an award, more often in foreign film festivals. Khote derives tremendous satisfaction in making documentaries, though the company's advertising shorts bring in the money "to pay the bills". The company produces an average of 10-15 advertising films and 6-8 documentaries a year. The cost of a documentary can range anywhere between Rs.3 and Rs.7 lakhs; an advertising film, Rs.3.5 lakhs.

Khote is a great admirer of her mother-in-law's efficient management of the unit's finances. "I have learnt a great deal from her," she says. When Coke and Fanta were around, the unit made a series of ad films which were very popular and won awards too. The company has made several films for National Insurance, New India Assurance, IDBI, Nirodh etc.

Challenging assignment. Some of her more memorable documentaries are *Kashmir and Ladakh* ("one of our best"), *Indian Carpets* (on behalf of the Handloom Board) and *Bonded Labour* (which won the President's award). The Tata Institute of Fundamental Research commissioned a documentary on cancer and the evils of smoking/chewing tobacco. This was a very challenging assignment as it was aimed at disparate regions — rural Maharashtra, Gujarat, Kerala and Andhra Pradesh. It was differently conceived and made on a folk level, in which the *'Sutradar'* sings, and cancer is depicted as a crab.

Khote emphasises that she is only a producer and has never been involved in direction. She enjoys putting the project together, assuming overall responsibility, including the choice of music. In the pipeline is a series of films depicting the life of children in India, drawn mainly from middle-class families of many regions. These are to be shown in schools abroad: India seen through the eyes of 12-15 year olds. Films on children, women and the environment are subjects that interest her. (As a policy, girls and women are not portrayed as non-participants or as mere spectators in her films.)

The expansion of the Doordarshan network has opened up a whole new vista to create subjects. Earlier, the problems for a documentary maker were enormous. Even if the subjects considered were interesting would they be accepted by the Films Division or Doordarshan? Controversial subjects or themes were out. But the success of 'Wagle' has strengthened the company's position. Small companies often cannot afford even the cost of a pilot, which may or may not be accepted. Often, these projects have a long gestation period from idea to execution, to acceptance for airing. "'Wagle' is our first success, a moderate success and has boosted our standing," she says.

Khote has made a public service documentary for the Clean City Society, Bombay. More and more corporate sponsors are now interested in sponsoring documentaries in the public interest (as distinct from corporate image building public relation films) which highlight a company's concern for community/national problems and other issues.

Khote feels that the country has a fund of talent, especially the aspirants from the Film and Television Institute who are keen on making documentaries on public issues and associated themes. This in turn would mean an increase in the volume of business and employment opportunities for professionals.

Besides film making, Khote's abiding passion is painting. She also loves Indian and western classical music and jazz

—Rest assured, they are the latest and the best.

There are ways and ways of being constantly in the public eye. V.G. Paneerdas of the VGP group of companies was a past master at this art. Although he is now no more, his brother **V.G. Santhosham** is proving that he is a chip of the old block. He has come up with a novel scheme wherein the oldest man or woman born before 1900 in Tamil Nadu will be awarded a cash prize of Rs.10,000 and given a gold medal by the group. The next oldest man or woman will be eligible for the second prize of Rs.5,000. The eligible octogenarians, nonagenarians and perhaps centenarians will have to furnish proof of their birth dates. Those who help identify

the seniormost citizens will also be given an award of Rs.500.

All awards appropriately enough will be presented by the former prime minister, Morarji Desai.

"I am doing this so that the present generation will learn to respect the older generation," declares Santhosham. That's not all. Everybody over the age of 65 can apply for identity cards and Santhosham will allow them to spend time on the fabulous VGP Golden Beach free of cost.

Time was when Datta Samant's brand of militant trade unionism froze company managements in the country. Today, it is **D. Thankappan,** the working president of the Kamani Employees Union (KEU), who is sending shivers down management spines, although militancy is not his way of solving

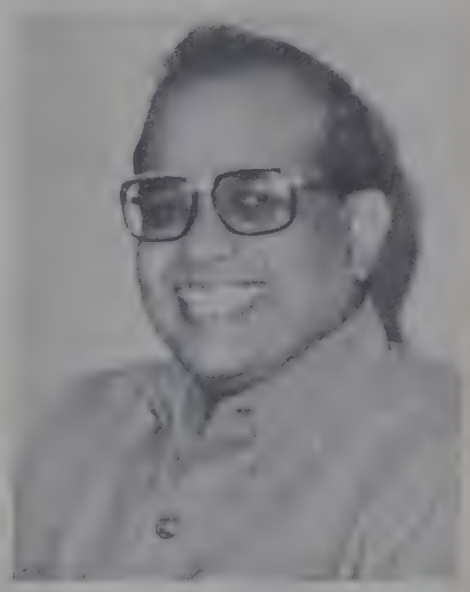
workers' issues. The irrepressible Thankappan is out to prove that workers too can run companies. In a relentless three-year campaign he master-minded, he pushed hard for a workers' takeover of the sick Kamani Tubes Ltd (KTL), and finally won the day last fortnight, when the Supreme Court approved the KEU's scheme for reviving the company.

Thankappan and his band of 600-odd workers, who plan to restart production at KTL in December, will buy the Kamani family's 92.6 per cent stake in KTL's equity through a workers' co-operative society. Today, Thankappan is flooded with calls for his services from trade unions all over the country; several doctoral students too want to record his sagacious battle for control of KTL.

It is probably because there is no statue of a Gandhi family member in Calcutta that the central government is often indifferent towards West Bengal. This is one of the jokes that is making the rounds in Calcutta these days now that ITC chairman **J.N. Sapru's** plan of putting up a statue of Jawaharlal Nehru at Chowringhee is finally materialising. Sapru is the president of the Indian Chamber of Commerce and Industry (ICCI), which is now collecting donations from the public for the Rs.12-crore effort. "We thought of putting up this statue in anticipation of the Nehru centenary on 14 November next year," he says, "especially in view of the fact that the city has no statue of the former prime minister." The statue which will be 12 feet high will, if all goes well, be installed before Sapru's tenure at the ICCI ends next year. The state government has provided the land and the ICCI will meet the shortfall in donations, if any. And then we will have to see if the central government's attitude towards the Marxist government really changes for the better.

For more than three years, **Ramesh Chauhan,** the soft drink magnate and maker of Thums Up, fought tooth and nail to block PepsiCo's entry into the country. The MIT graduate used his huge network of contacts in Delhi to build up a powerful lobby against the US multinational and almost succeeded in his efforts. But now that Punjab Agro-Voltas-PepsiCo is a reality, what are the bruised Chauhan's feelings? "It is a sad thing for the country," he says, "and I am sure that the government will regret the decision. It has all along been misled by the tall talk on food processing." Chauhan says PepsiCo will never be able to meet its export obligation and quotes the example of Cadbury's which failed to do so with apple juice concentrates. Does he plan a change in his corporate strategy

now that Pepsi will enter the Indian soft drink market? "I don't think that is necessary," he claims, "International brand names like Max Factor, Chesterfields and Rothman have not been too successful in India and I don't think Pepsi is going to be either." We'll have to wait and see about that. But to cap it all Chauhan was not even interviewed by Doordarshan which did a feature in its Focus programme on the controversy last fortnight. "Their request for the interview came too late," he says, "and anyway I don't regret not being on television. It was anyway a government propaganda programme trying to justify the Pepsi entry."



Imitation may be the simplest form of flattery, but it can be problematic. **S.Viswanathan,** chairman and managing director of Enfield, in between flogging his two-wheelers, has been for some years organising a dance festival in Madras around September. His Kalamandir Trust is well known for supporting promising young dancers. However, people know a good thing when they see one. Several groups are now entering into Viswanathan's pet preserve, and plan to have dance festivals more or less around the same time. The proposed dance festivals may just about exhaust available talent and the patience of audiences. Viswanathan is, however, not one bit fazed. He sees this development as an opportunity to take the Kalamandir name elsewhere, plans to drop the Madras festival and set it up in important mofussil headquarters like Madurai, Tuticorin, and Trichy. Says he, "Where there is a vacuum, I will fill it. I keep looking out for greener pastures."

■ N. RADHAKRISHNAN

INDIAN TELEPHONE INDUSTRIES LIMITED

(A Government of India Undertaking)

Registered & Corporate Office: No 49 Museum Road, Bangalore 560 001

Indian Telephone Industries Limited, India's first Public Sector Undertaking, is a pioneer in telecommunications and manufactures the entire range of telecommunication equipment from simple telephones to modern fibre optic systems and satellite communication systems.

EXCELLENT OPPORTUNITY FOR INDIAN ELECTRONIC COMPONENT MANUFACTURERS

- ITI currently buys over Rs. 300 crores worth of components and materials every year from sources in India and abroad.
- With increased requirement of Telecom Systems and Equipment in India, this figure is likely to go up at least by 20% to 30% every year.
- A major portion of this requirement is for components and a substantial share is at present met by imports. Therefore, there are excellent opportunities for Indian manufacturers to show their capabilities in meeting this challenging demand.
- Please note that what ITI requires are professional grade electronic components of high quality/reliability and **NOT** entertainment grade components.
- ITI will fully support any genuine competitive attempt to manufacture such components in India and back it up with technical advice and help in rigorous component evaluation formalities.
- A rough idea of the technology, no. of types and quantity of current annual requirements is given below.

	PRODUCT (COMPONENTS)	NO. OF TYPES (APPROX)	APPROX QTY (NOS IN LAKHS)
1.	INTEGRATED CIRCUITS	400	240
2.	OPTO DEVICES	25	40

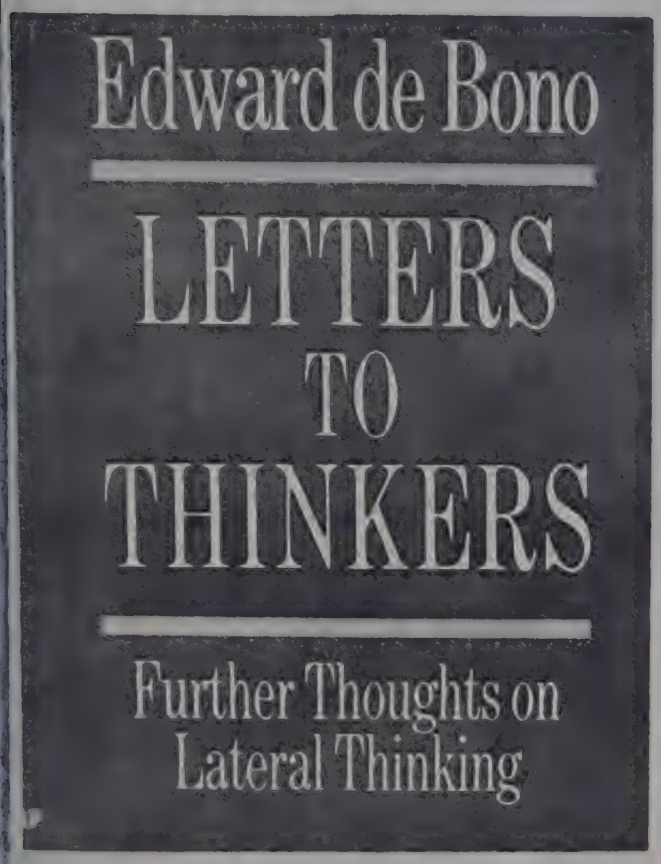
How to think creatively



Letters to thinkers: further thoughts on lateral thinking
By Edward de Bono

Harrap, Stockists: UBS Publishers Distributors Ltd, Bombay

Between 1982 and 1984, Edward de Bono issued, through private subscription, a series of letters to businessmen on the practical aspects of thinking — creative thinking in particular. Some of these have now been published for the first time in book form.

Mediocre minds, de Bono tells us, have a horror of the simple. It may be that the mediocre mind feels threatened by the inability to distinguish between something that is simple because there is nothing behind it, and something that is simple because there is a great deal behind it. Mediocre minds are reactive rather than proactive. They prefer to react to what is put before them. They are describers and there must be something to describe. "The richer the picture placed before them," writes de Bono, "the richer their reaction and the greater the sense of achievement. Such minds are most comforted by complex and turgid prose full of multiple references to pundits both obvious and obscure. There must be qualifications sitting upon qualifications and nuances shading into further nuances."

De Bono's letter on 'Thinking and Information' is worth much reflection. He points out the fallacy in the "obvious" precept that the more information we can get the better.

De Bono reminds us that there are many different levels of reading — quite apart from the physical speed of our reading. There is "defensive" reading in which we skim through just to check that everything is as we assume it to be, and with the hope that we shall find nothing in what we read that might change our views. We just have to read through the material in case there is something of significance in it. Then there is what we might call "gist" reading. We appreciate that this may have to be expressed in detail, but we are only interested in the broad picture or the final conclusion.

Then there is "atmosphere" reading in which we read through a piece to get the general feel or mood of the piece, even though we are neither interested in the details nor even in the broad gist of what is said. For example, we may read the comments of a financial journalist in order to get the mood of the market.

Finally there is "information" reading in which what we read has been designed to bring to us information that we want. Here it may be a matter of sorting out the linking material and the tone-setting material from the actual information.

After teaching lateral thinking to thousands of people the world over, De Bono admits that persuading anyone to take an interest in thinking as a skill is a hard task. In the matter of thinking, he feels, the simplest things done consciously and done well can make a quite astonishing difference. Most of us tend to believe that there is a "general problem-solving" technique which should be used on every thinking occasion.

Again, there is a huge difference between a problem and an opportunity. A problem presents itself. We do not have to go out and search for it. Like an ache or a pain it makes itself felt. There is another type of problem which takes the form of an obstacle or a gap which occurs on the road we are taking to achieve something. For instance, an engineer needs to find a metal that will stand up to the great heat in an engine he is designing. But an opportunity does not arise until after it has been seen. By putting a tight specification on the purpose of our creative thinking we can only tackle defined problems. We would be unlikely to come up with opportunities. This requires us to apply our creativity and our lateral thinking tools to what De Bono calls a "general area focus". It involves a broad description of a general area such as hotels, retail banking, airlines, hospital care, traffic in cities, etc.

It is possible to narrow it down a little further. For example, we may want to focus upon hotel restaurants rather than hotels in general. But it would still be a general area focus item. The most important point, says De Bono, is that a specification of purpose must never be used. We must not specify that the purpose of our creative endeavour is, say, "to increase the profitability of hotel restaurants". If that is what we want to do, then we should use a "specific concern area" which is designed for specific concerns. The general area focus is meant to be general. The reason, De Bono feels, is that we want to give ourselves a chance of turning up ideas we had never thought of before. We also want to turn up opportunities.

Every one of de Bono's "letters" helps to loosen the girders of our mind and reveal vistas and vantage points we did not know existed. Whether De Bono is talking to us about being negative, the future of thinking, impediments to creativity, improving our thinking ability, idea flavour in creative sessions, unemployment, why banks are obsolete, or introducing creativity in an organisation, he is always farm fresh, stimulating and unobtrusive, in a Socratic sort of way.

Senior management, De Bono bemoans, is often not interested in lateral thinking. There are senior executives who believe that efficiency and problem-solving are all that an organisation requires. Creative thinking to them seems a luxury and something less than solid. Such an old-fashioned "maintenance" view of management can work when there is market domination or when the particular business segment is still growing. But organisations that are already in trouble tend to blame their trouble on outside forces such as a change in the market, subsidies to the competition, exchange rates, government interference, labour trouble, etc. To deflect the focus on problems in an organisation, De Bono advises the corporate executive to write down some opportunity areas — areas that might benefit from new thinking or better ideas.

DRILLING RIGS

for oil and gas well drilling to 2500 m depths

- stepped-up hydraulic and total power
- enhanced performance and specifications
- prolonged service periods
- reliable and durable components
- curtailed time of rigging-up, dismantling and moving from site to site

The Rigs are transportable in large blocks, without disassembly into individual units.

SICO's MAPSICON

MICROPROCESSOR BASED AUTOMATIC pH CONTROL SYSTEM

for better quality sugar

FEATURES

1. On-line pH control of preliming, shock liming and SO_2 control system with three independent microprocessor controlled PID controller.
2. Stepper motor driven valve for lime feed and integrated motor driven non-corrosive SO_2 control valve.
3. Linear bar graph display for valve positions with built-in pH recorder
4. Control of pH possible within range of ± 0.15 pH of set valve.
5. Suitable for JPMA, NSI and other types of sulphiters

BENEFITS

1. CaO content in clear juice is reduced.
2. Saving of sulphur consumption.
3. Reduction of final molasses % in cane .
4. Rise in purity- 0.5 to 0.75
5. Higher setting rate leading to increased capacity utilisation.
6. Reduced scale formation in evaporators reducing the frequency of cleaning operations and the cost of cleaning.

Who is a good employer?

With the job market becoming a "buyers" market, employers are increasingly finding that employees have very decided views on the kind of employer they would like to work for. And making an offer is no guarantee that a recruitment is complete. "I want to work only for a 'professionally' managed company" is an often heard refrain among job seekers.

The term 'professional' of course means different things to different people. So who are good employers, from the view point of the job seekers?

The best paying companies are not necessarily considered good employers. However, it is true that companies considered good employers are generally amongst the better paymasters. This is implicit in the fact that a good employer is a "caring" employer and therefore would pay reasonably competitive salaries across levels. Multinational companies do fall into this category, though several Indian companies, despite being excellent paymasters, fail to make the grade.

The most important factor for managers at middle and senior management levels is the culture of the organisation and the way it handles its managers. The culture of the organisation, in terms of its personnel policies and the "style" of management, are the two major issues that concern prospective employees (and of course current employees too).

Employees are wary of companies that have an *ad hoc* approach to personnel issues, such as compensation and perquisite practices. What is sought is a culture of openness in these matters which, in turn, gives employees the surety that all employees are treated equitably and fairly. In this context, it is very important for employees to feel that decisions on these aspects are based on rational and professional reasons rather than the personal whims of senior management.

Needless to say, basic principles such as that of keeping one's promises and commitments on payments, perquisites, promotions, designations, and job responsibilities have to be met. Too often, anxious employers tend to go overboard with some of these promises at the time of recruitment to get employees on board. Thereafter they keep postponing the date of making good the commitment, resulting with the employees feeling cheated and frustrated.

Being the best paymaster is not the main consideration; what is important is for employees to have the feeling that the organisation can be counted upon in the event of a personal calamity such as serious illness or accident. This means that the organisation is responsive enough in such a situation in terms of using its resources in doing the best possible as well as helping the individual monetarily. Several of the younger organisations do find this difficult, but the fact remains that for most employees the sense of belonging to the organisation comes from its responsiveness to such situations and its capacity for such gestures which indicates "concern" for its people.

The other important aspect of personnel policy for the employee is the scope there is for him to grow in the organisation. It is quite commonplace in several organisations especially family manged ones, for an employee to remain in virtually the same job during his entire service. The individual's need to develop and take on more responsibility is rarely taken cognizance of, resulting in a feeling of stagnation and frustration.

The paternalistic and welfare-oriented culture of some of our best known business houses (such as the Tatas or Godrejs) have earned them good reputations as employers. Of course, fast track managers might not find the culture of relatively slow growth to their liking. But there is no doubting the fact that, along with some of the multinationals, they are considered the "gentleman" employers. Unfortunately some of these companies do not appear to be result oriented, making them less attractive for the ambitious manager. But, on the balance, most employees would rather be with a gentleman employee than a 'racehorse' whose basic values cannot be taken for granted.

In this context, it is important for professional managers to have the confidence that the corporate culture, philosophy and ethics of the organisation are in line with their own values. The personal integrity and ethics of the senior management of the company are therefore very important indicators of the 'values' of the organisation.

Equally important at senior levels is the need for a company to treat senior managers with due respect and consid eration. This is reflected in small things such as the manner in which discussions involving senior managers are conducted, the manner in which communications are handled in the company, and even the way bills and vouchers of managers are handled. It is surprising how many large, successful companies fall short on these issues, resulting in senior managers feeling slighted or ignored and even insulted. Very often, these practices are taken as an indication of the trust placed on senior managers by the top management of the company. And it is here that owner managers often tend to fail in giving their senior managers the confidence that they are part of the "inner" circle.

It is interesting to note that many family managed companies do not have a strong personnel function. In fact several large, family managed companies have only industrial relations officers and the personnel function is dissipated between several senior managers. The chief executive or managing director often takes decisions personally on every small aspect of the implementation of personnel policy. This only weakens the position of the senior managers of the company.

Employees often find that certain companies are "one man" shows, with all powers concentrated in or one at best, two or three persons. The senior managers are so only in name and have no real authority to take any decisions independently. The culture of the organisation is such that, despite trappings of professionalism, there is no scope for mangers to be anything but implementers.

The key virtues sought in a 'good' employer are, therefore, 'concern' for and 'trust' in his employees. These serve to inspire the latter's confidence and, in their perception, become a part of the company's 'values'. Also, the values of the senior management of the company serve to reinforce the company's image as a 'good' employer.

The good employer is, therefore, one who is able to make his employee feel that he is a part of the organisation, by actively involving him both in decision-making (of course, with due consideration to his level in the organisation) and implementation and makes him feel as much a part of the "family". And above all, an employer whose personnel policies are not only rational and fair but are perceived by employees as being so

NOTICE

It is hereby notified for the information of the public that Shaw Wallace & Company Limited proposes to make an application to the Central Government in the Department of Company Affairs, New Delhi, under sub-section (2) of Section 22 of the Monopolies and Restrictive Trade Practices Act, 1969, for approval to the establishment of a new undertaking/unit/division. Brief particulars of the proposal are as under:

1.	Name and Address of the Applicant	**Shaw Wallace & Company Limited** **4 Bankshall Street** **Calcutta 700 001**
2.	Capital Structure of the Applicant Organisation.	**Authorised** **Preference** **Rs. 1,00,00,000** **Ordinary** **Rs. 39,00,00,000** **Subscribed** **Preference** **Rs. 75,00,000** **Ordinary** **Rs. 12,00,00,000**
3.	Management Structure of the Applicant Organisation indicating the names of the Directors, including the Managing, Wholetime Directors and Manager, if any.	**Mr M R Chhabria, Chairman** **Mr K R Chhabria, Managing Director** **Mr R M Moghe** **Mr A K Das** **Mr B S Mehta** **Dr R S Tarneja** **Mr R S Mama** **Mr M L Bhakta** **Mr B Sanghavi**
4.	Indicate whether the proposal relates to the establishment of a new undertaking or a new unit division.	**New Undertaking.**
5.	Location of the new undertaking unit division.	**Tehsil/Taluk:** **BEHRUR** **District:** **ALWAR STATE: RAJASTHAN**
6.	Capital structure of the proposed undertaking.	**Same as in item 2.**
7.	Incase the proposal relates to the production, storage, supply, distribution, marketing or control of any goods/articles, indicate:	
	i) Names of goods/articles	**Potable alcohol from non-molasses based raw materials.**
	ii) Proposal licensed capacity	**50,00,000 Bulk Litres per annum.**
	iii) Estimated Annual Turnover	**Rs. 7,51,30,000**
8.	In case the proposal relates to the provision of any service, state the volume of activity in terms of usual measures such as value , income, turnover etc.	**NOT APPLICABLE**
9.	Cost of the Project	
10.	Scheme of finance, indicating the amounts to be raised from each source.	**Finance will be arranged partly from internal sources and balance by raising loans.**

Any person interested in the matter may make a representation in quadruplicate to the Secretary, Department of Company Affairs, Government of India, Shastri Bhavan, New Delhi, within 14 days from the date of publication of this Notice intimating his views on the proposal and indicating the nature of his interest therein.

S.C. MAJUMDER

Mgmt) and at Dy. Gm/GM level with proven track record in a large company where the volume of purchase is the key function.

Group believes that Managers are the most valuable asset of an organisation and it must employ the best available professionals. For the right kind of candidates, salary and perks will not be a limitation.

Please apply in absolute confidence with passport size photograph superscribing the post applied for on the envelope to Box No. AA/276/LI/1, **Business India,** Krishna Villa, 100 Park Street, Calcutta 700 017

VICE PRESIDENT
(FINANCE)

Exceptional terms

We are group of business companies with a turnover of around 100 crores and exclusively engaged in the export of leather, garments, electronics, projects etc. and are on the look out for an outstanding professional to head our finance functions and to report directly to the Managing Director.

The responsibilities include —

- **Complete control of all financial, accounting and Tax matters.**
- **Corporate and tax and policy planning and management amongst various divisions of the Company.**
- **Being conversant with financial management, cash management, budgetary control, Misc. & Computer application.**
- **Accounting and management reporting.**
- **Effective interaction with banks and financial institutions.**
- **Ensure efficient management of working capital.**
- **Fully conversance with the formalities and procedures for issue of capital.**

We expect the candidate to be in his forties, with a wealth of experience at the senior most level. We are looking for a steady and mature professional who can financially control a rapidly expanding multi-activity business.

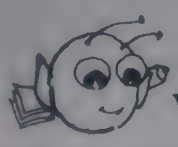
Please apply in confidence with in 10 days to :

Box No. AA/244/BT/3, **Business India,** 59, Regal Building, Connaught Circus, New Delhi-110001.

WE ARE LOOKING FOR A COUPLE OF MARTIANS

Or some one that rare, to be more exact. Honest, we are looking for a couple of truly exceptional computer professionals. The type any company would give its left hand for. And we are willing to do a little more than that. In terms of working environment. Pay and perks. Space for growth. If you are really the hot-shot talent we are looking for, we know you will ask for the stars But chances are we will give you the moon.

Whom are we looking for?



Vice President (R&D)

You are most likely in the age bracket of and 28-35 years and a Post-Graduate in Electronics/Computer Technology. With exposure to new RISC-based processors, Fault tolerant systems, Parallel processing, and UNIX® internals.

That's for starters.

What we are really looking for in you is a drive to create products, the understanding of how to productise a design. The ability to lead a team of hardware and software engineers. The flair for team building. Tall order? Well, the moon doesn't come easy.

Now, what we will do for you, you may ask.

Give you a free hand once a project is accepted. As also a virtually free purse to implement projects. And what would you say to Rs. 2 lakhs plus per annum?

Vice President (Manufacturing)

You are around 35 years and an Electrical/Electronics Engineer with about 10 years' experience. You have had the exposure to assembly techniques using SMT,are familiar with system integration, material planning for productivity and SQC methods. You will be able to expand the facilities, beginning from selection of plant and machinery to designing plant and work-place layouts.

A nuts and bolts man, you love to deliver results. You can lead people, including skilled workers, and manage teams.

For you, we have an opportunity to deal with frontier technologies. Tough targets and hard challenges, matched by recognitition and remuneration. You could expect anything above Rs.1 lakh per annum, to start with.

So, come out of your hiding and be recognised.

Send us your resume within fifteen days and we will get in touch with you.

STANGEN PHARMACEUTICALS

Division Of Dr. Reddy's Laboratories Ltd

National Sales Manager

(Pharmaceuticals)

Hyderabad **Attractive Salary Plus Perks**

The Company

STANGEN PHARMACEUTICALS is the division of Dr. Reddy's Laboratories Limited, pioneers and trend-setters in the manufacture of basic drugs and formulations. Dr.Reddy's group of companies are acknowledged as leaders in various high technology frontline basic drugs like Methyldopa, Ibuprofen, Norfloxacin, Cephalexin, Naproxen, Ranitidine, Minoxidil, with more on the anvil. The current group turnover of Rs.40 crores is expected to reach the Rs.100 crores mark by 1991.

STANGEN, the formulations division, in a little over 2 years has established itself to be an all India set up with field staff over 200. Innovation in technology, product mix and marketing, supported by highly professional environment has contributed to the success of STANGEN. The current turnover of Rs.4.5 crores is expected to go beyond the Rs.10 crore mark in 1989. To spearhead this ambitious and trail-blazing growth, we are on the look out for a dynamic leader.

The Job

The National Sales Manager will be expected to contribute actively to policy formulation and shall be fully responsible for its implementation down the line. Leadership and coordination has to be provided to the 200 plus good and experienced field staff. Meeting the forecasted sales objective, effective distribution, control of accounts receivables and continuous on the job development of field force will be his prime responsibilities.

The Person

The right candidate should be highly result oriented with proven skills in man management areas. He should be a graduate in science or pharmacy, preferably with a degree in Business Management. He should have atleast 5 years of Sales Management experience with a proven track record as a zonal head in a company of repute. Those having exposure at the all India level will be given preference. We are essentially looking for a very high calibre professional around 35 years.

The position carries attractive salary and perks. Remuneration will not be a limiting factor.

Interested candidates may please apply within ten days providing full bio-data alongwith the present and expected salary to:

SHOES

PHOENIX started Shoe Upper Production in 1987 at NOIDA with BRITISH TECHNICAL expertise, modern production techniques and new machines. Today Phoenix has four production facilities with three more to start within 6 months. We emphasie quality, meeting targets, efficient use of raw-materials and growth. We are unique in this industry to introduce the concept of PROFIT-SHARING.

GENERAL MANAGER — **200K + CAR + PROFIT SHARING**

The General Manager will have complete control over this division and will be responsible for all aspects of production, quality control, plant maintenance and plant administration etc. He will be the top man of the division and would work as HEAD OF THE **PROFIT CENTER**. Experience of setting up new organization will be an added advantage. An awareness of the footwear industry is necessary but more important is the ability to use the resources provided and direct them into a **PROFITABLE ORGANIZATION**. Our British consultant would be available for advice and support as necessary.

FACTORY MANAGER — **(4 POSTS)** — **150K + CAR + PROFIT SHARING**

Responsible for each unit as a separate PROFIT CENTRE. Must be experienced in Shoe production planning, motivating operatives and staff for production and achieving targets.

ASSISTANT MANAGER (PRODUCTION) — **(9 POSTS)** — **100K + PROFIT SHARING**

Organize production to meet targets. Must have shop floor experience.

ASSISTANT MANAGER (PLANNING) — **(7 POSTS)** — **60K + PROFIT SHARING**

Must have experience of modern production planning from stores to work in progress to the packing department. Knowledge of using PC will be desirable.

ASSISTANT MANAGER (PROCUREMENT) — **(2 POSTS)** — **60K + PROFIT SHARING**

Knowledge of shoe-making material sourcing is vital.

ASSISTANT MANAGER (ADMINISTRATION) — **(4 POSTS)** — **60K + PROFIT SHARING**

Factory laws and personnel management experience is critical. House keeping will be part of the responsibility.

ASSISTANT MANAGER (DESIGNING AND PATTERN CUTTER) — **60K + PROFIT SHARING**

Must be able to understand pattern, gradation and production techniques.

ASSISTANT MANAGER (MACHINES) — **60K + PROFIT SHARING**

Qualified mechanical engineer with experience of stitching machines in particular and hydralic and pneumatic machines in general.

PRODUCTION MANAGEMENT EXECUTIVE — **(10 POSTS)** — **RS. 2500 PER MONTH GROSS**

All the other posts advertised here are basically for those with experience. However, this post, is for those very dynamic, self-motivated, result-oriented people who want to make a switch from existing production based jobs to shoe manufacturing. The future in shoe export is brighter than garments etc. If you have the zeal we shall train you, and in less than 12 months you should be earning twice the starting pay.

Those who can join WITHIN A MONTH will be given preference. Phoenix would welcome your response giving your background, experience achievements and salary history.

DEPUTY GENERAL MANAGER (P & A)

A large multi-divisional industrial organisation with diverse interests and a current annual sales turnover of Rs. 65-70 crores wishes to recruit the following management personnel for its forgings unit located in Central India. There are similar requirements for other units in the group in South India and elsewhere.

WORKS MANAGER

(MS/4835)

The Works Manager will be overall in charge of all technical functions at the manufacturing unit and would be expected to spearhead the company's drive towards maximising capacity utilisation while adhering to customers' quality specifications.

Applicants should be mechanical/metallurgical engineers with around 8-10 years experience in the forgings/steel wire rope industry. Familiarity with modern developments in forging/heat treatment techniques is necessary. Persons who have worked in a unit producing automotive forgings would be preferred.

MAINTENANCE MANAGER

(MS/4836)

Reporting to the Works Manager, the incumbent would be responsible for efficient operations and maintenance of all machinery and utilities, maintenance staff productivity, preventive maintenance and the development of sound maintenance management systems.

Candidates should be graduate mechanical engineers with around 7 years relevant experience. Some exposure as head/deputy head of the maintenance function in an engineering industry is essential.

MARKETING MANAGER

(MS/4837)

The incumbent who will be a key member of the top management team would be responsible for ensuring growth in sales of the unit's products which cater largely to the automotive sector. Key areas of the job would be new product/market development, senior level customer contact, finished goods inventory and receivables management.

The person selected would be a graduate engineer preferably with a post graduate qualification in management/marketing. Industrial selling experience of around 7-10 years is essential. Exposure to marketing to the automotive/steel wire rope sector would be desirable.

QUALITY ASSURANCE MANAGER

(MS/4838)

The selected candidate will be overall in charge of the unit's quality control function. Responsibilities will include laying down quality standards for incoming/process material, dies, jigs and fixtures and finished goods and for formulating and implementing inspection procedures to ensure adherence to such standards. Additionally he would be involved in investigating customer complaints regarding quality.

Persons applying for this position should be metallurgists/engineers with a specialisation in metallurgy. Experience of 7-10 years with some involvement as head/deputy head of quality control in an engineering industry is required. Exposure to the forgings industry would be an advantage.

FINANCE MANAGER

(MS/4839)

The Finance Manager as a member of the units top management team would have a major role in the formulation of decisions affecting its future growth and profitability. Responsibilities will cover control over the finance, accounting and management information functions, budgeting and cost control and close liaision with banks & financial institutions.

Applicants should be finance professionals — preferably Chartered Accountants — already functioning as head/deputy head of the finance and accounting department in their organisation. Exposure to computerised management systems would be desirable.

Compensation for the above positions is negotiable and is unlikely to be a constraining factor

Please apply within 10 days giving details of age, qualification, experience etc. to

A F Ferguson Associates
Hansalaya, Barakhamba Road
New Delhi 110 001

Applications and envelopes must be marked with the appropriate MS reference numbers

Rasna

s memorable advantages include
n-the-spot-expandable memory and other capabilities.

Most electronic typewriters have limited memory. Each time you exhaust the specified memory, you have to send your typewriter back to the company for upgradation. You are left in the lurch for days. Sometimes even weeks.

But FACIT has more brains and talents in its 10 kg body than you'll find in most others.

It has unique memory modules expandable to 16K, 24K or 30K – **instantly.** You can just slip-in an extra memory pack without any fuss.

Yes. FACIT can do almost everything that others can – and lots of things others can't.

Look what unique features FACIT offers:

- Unique memory modules expandable to 16K, 24K or 30K right on the spot. You can slip-in an extra memory pack without any fuss or loss of time.
- Very user-friendly. Even the most sophisticated functions achieved through plain language.
- Unique 2-line LCD display adjustable for better viewing.
- 4 regular typing modes plus two exclusive modes.
- Easy line editing and text editing.
- File copying and retrieval ability.
- Instant text printing in any format, pitch or line spacing, through auto-scanning.
- Automatic bold printing.
- Computer inter-facing capability.
- Exclusive PS printing with Right Hand justification in inter-face mode.
- The quietest electronic typewriter available.
- Most ergonomic design, with choice of models.
- Unique 106-character print wheel plus high-yielding ribbon cassette for lowest running cost.
- Reliable after-sales service.

Sleekest looks – sophisticated features – good economy – ergonomic designs! FACIT has it all!

Engineering and Management Consultants

READY TO TAKE OFF

OFTWARE FROM INDIA

Consider these statistics.

India has the third largest pool of chnically trained manpower.

The global Software market is estimated at S $ 80 billion in 1988.

India's share? Estimated at US $ 80 million, a ere 0.1%. Clearly, the potential for us Indians is vesome. Can we realise this potential? India's dgling efforts in exporting software indicate yes.

How will it happen? Governmental efforts will course have to play a significant role. But, in e final analysis, it is the software companies, d the individuals working in them, who will engthen India's toe-hold in international ftware.

Now consider one such company, a relatively w entity but one with loads of experience and nbition.

K TECHNOSOFT

JK Technosoft is a software house of growing repute.

K Technosoft is setting up an advanced software evelopment facility at the Noida Export rocessing Zone (NEPZ), on the outskirts of elhi. An IBM main frame is to be installed ortly.

JK Technosoft has accumulated extensive perience in the overseas market—in Australia, pan & US. In the domestic market K Technosoft has proven its skills in various i-tech application areas.

This wide ranging expertise is the heart of K Technosoft.

Now JK Technosoft is expanding its ternational operations. That's where you could t in, in software or marketing.

YOU

You are a dynamic **software professional** with at least 2 years of experience in the areas of software design/development. You are fully conversant with any of UNIX/IBM/VAX/BURROUGHS environments.

You can grasp problems quickly and think objectively. You are willing to learn new software tools and techniques and can adapt yourself to different project environments at short notice. Good inter-personnel skills would be essential.

(Professionals with engineering/finance background would be preferred.)

You are an ambitious, result oriented **marketing professional** with over 7 years of experience in computer related areas with at least 3 years in systems consultancy. You have an enviable track record in marketing and are good in price estimation, proposal preparation and making presentations. You possess a sound technical base and clear knowledge of business applications. In short, you are a winner !

You are expected to formulate and implement sales strategies on a world wide scale, develop new markets and organise promotional campaigns.

(MBA's with an engineering background would be preferred.)

High levels of initiative and enterprise are demanded. In return, we offer an environment that is professionally, and monetarily exciting.

REQUIRES

Deputy General Manager (Research & Development)

The Company is a leading manufacturer of refractories with a turnover of about Rs. 50 crores, having its main plant at Belpahar, another plant for calcining magnesite at Salem, Head Office at Jamshedpur and Marketing Division at Calcutta, apart from its mines at Talbasta.

The Company is poised for large scale modernisation. Most of the operations on the shopfloor and in the offices are computerised. Paramount importance is attached to Research and Development and the R&D Division is manned by highly talented and trained personnel and equipped with sophisticated instruments, many of which are computer controlled. The Company has recorded a substantial growth in recent years and is looking for result oriented professionals. TRL will pay remuneration at levels comparable with the best. The package will also include Company Housing and a Company Car.

Qualifications : M. Tech in Ceramic Engineering/Technology or M.Sc. in Chemistry with specialisation in Refractories. A Doctorate in the above discipline would be preferred.

Experience : At least 15 years' experience, in a senior responsible position, in applied research work on refractories in a ceramic research institute of repute or in a well-equipped R&D Laboratory attached to a multicomponent modern refractory manufacturing plant/steel plant is essential. The incumbent must have proven track record in development of sophisticated new generation refractories. In addition, he must be well conversant with the latest trends in application of refractories in iron and steel, cement, glass and various other industries.

The applicant should have thorough knowledge in usage and application of latest tools in refractory research e.g. XRF, XRD, SEM, DTA/TGA, Creep, Hot MOR, etc. He should be able to lead a group of qualified scientists and ceramists engaged in the development of sophisticated refractories.

The incumbent will report to the General Manager (Technical) and shall be responsible for all R&D activities of the Company, with Head Quarters at Belpahar.

Apply with complete bio-data, giving details of experience, positions held, break-up of present emoluments, photocopies of certificates and a recent passport size photograph within 10 days from the date of publication of this Advertisement to:

Chief General Manager,
TATA REFRACTORIES LIMITED
P.O. BELPAHAR, DISTRICT: SAMBALPUR, ORISSA 768 218

nss TRL 8848 A

A German collaborated high precision engineering company having an All India marketing network to handle substantial growth in turnover requires

SENIOR MANAGER – MARKETING

MAJOR CITY IN WESTERN INDIA (NOT BOMBAY)

Rs. 90,000/- p.a. + HOUSE & CAR

A Mechanical Engineer preferably with an MBA degree having 12 years relevant experience in marketing of engineering items would suit this senior position based at corporate headquarters and report to Head of Marketing. Age around 38 years.

Responsibilities include formulation and implementation of strategy for achieving continued sales growth through creation of major enquiries, providing pre-sales technical support, commercial negotiations and action on post-sales customer feedback in respect of major institutional customers. The job involves extensive travel.

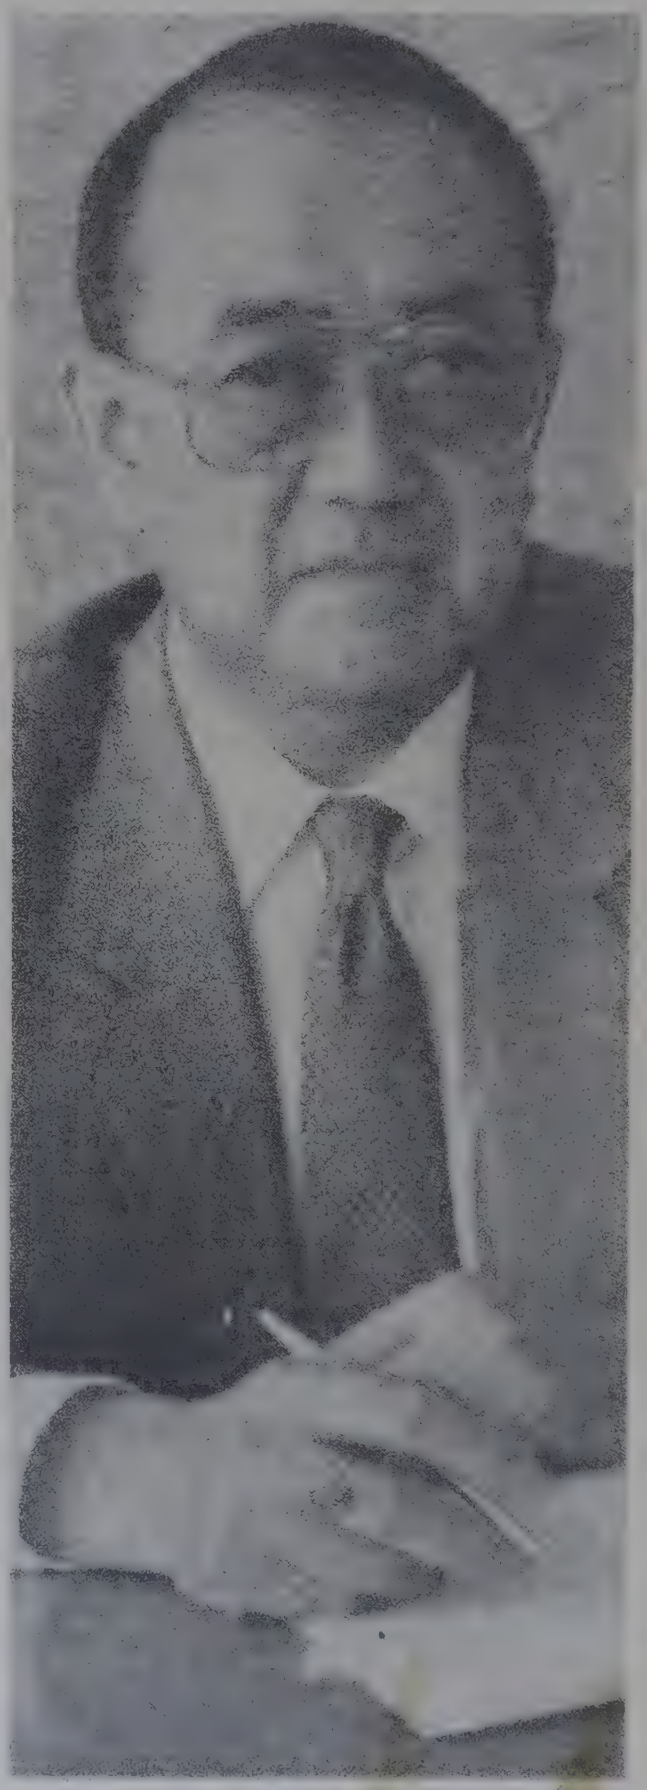
Stature coupled with technical and commercial abilities to interact at senior level, strategic orientation and self-motivation are pre-requisites.

Experience of managing agency division for sale of foreign engineering products/familiarity with purchase and QC procedures of Railways would be a distinct advantage.

Please apply in strict confidence within 10 days to **A. F. Ferguson Associates, Post Box 1786, Bombay 400 001,** attaching **a recent photograph**. All applications and envelopes should be marked "Ref. MS/4950"

"We are placing more stress on practical programmes"

The World Health Organisation's (WHO) new director-general, **Dr. Hiroshi Nakajima,** *promises "more practical" programmes at both the country and the regional levels. Nakajima, 60, is the first Asian to head this UN body. On his visit to India to commemorate the 40th anniversary of the organisation, Nakajima spoke to Siddharth Dube of* Business India *exactly two months after his term began. Nakajima is a specialist in psycho-pharmacology and previously served for nine years as the director of WHO's Manila-based Western Pacific office.*



What will be the major areas that WHO is likely to concentrate on during your tenure?
The goal of "Health for all by 2000 AD" is already in everybody's mind. This is the achievement of the past decade. I feel countries are now waiting for solutions and that WHO must develop technical and human resources for this. We are now placing stress on more practical programmes at the country and regional level.

It has been a full decade since the "Health for all" aim was enunciated. But does not the poor performance of programmes such as the ambitious universal immunisation programme signal a need for revaluation?
This programme has fared well although large countries like India have faced certain logistic problems. Coverage also varies from vaccine to vaccine. In India, coverage is 30 per cent for some vaccines while for others it is nearly 50 per cent. But we think that by 2000 AD India should be able to achieve the 100 per cent goal.

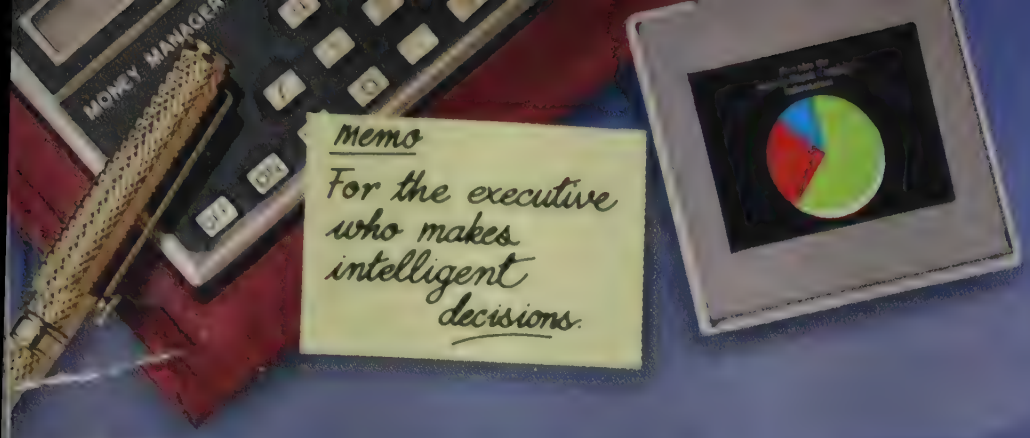
Infant mortality which is one of the two indicators of progress in immunisation has been steadily decreasing in every country and is likely to fall below 50 per thousand births which is our target. Unfortunately, maternal mortality has not decreased; in developed countries there are virtually no deaths during childbirth

WHO has been criticised for concentrating too much of its energies on AIDS (Acquired Immune Deficiency Syndrome) to the neglect of the more pressing concerns of third world countries.
First, funds for AIDS research do not come out of WHO's general budget; they come from countries willing to pay additional funds for special programmes. Secondly, AIDS is a major disease and the only infectious disease prevalent in the West. The battle against AIDS is also an opportunity to develop health systems in the third world — in health education and blood bank systems.

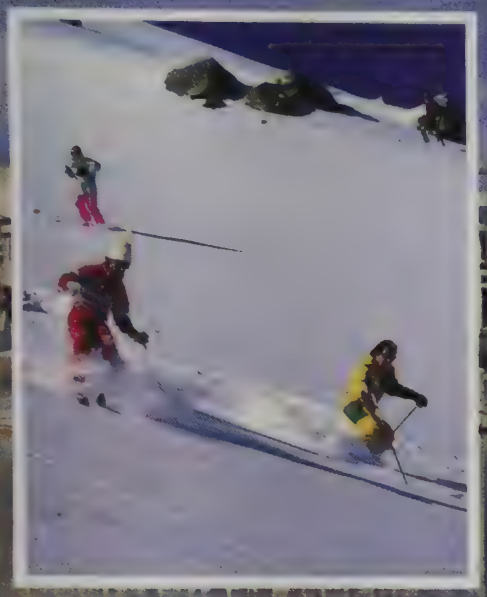
What would be a rational and effective public health policy for countries that still have a low incidence of AIDS? Is testing of foreign tourists or mandatory testing of citizens called for?
The only way of protecting people against the spread of AIDS is public awareness. We must announce that "AIDS has no cure and therefore, one must take no risks". Testing of foreigners is not only practically impossible but also of no help at all. The situation is the same as in cholera epidemics when the movement of foodstuffs is banned, which is a useless step. However, testing policies are a matter of national sovereignty and WHO can only advise the member countries.

What is WHO's position on checking population growth and family planning strategies?
Well, I must agree with your prime minister, Rajiv Gandhi, that family planning programmes must be integrated with broader social services and should not remain isolated. At the very least, they must be integrated with the mother-child health programme.

A recent press report charged that only a small portion of WHO's budget goes into actual health programmes while 75 per cent is spent for administrative purposes.
This really depends on how you interpret the administrative costs. If you include salaries paid to technicians and experts in such costs, well yes, these costs are high. A more accurate breakup is that within countries, 70 per cent of WHO's budget goes for health programmes. Of WHO's global budget, 60 per cent goes for the regional offices and the rest is used for inter-regional programmes. My estimate is that only one-fourth of the budget is used for the staff at the headquarters in Geneva.



"Great things are done when men and nature meet."



Meet in Kashmir where business is always a pleasure

Kashmir...
the playground of the world is also the meeting place for world-class conventions. World celebrities and jet setters flock to Kashmir for fun and frolic. And the same happy valley, with its Sher-i-Kashmir International Conference Centre, is the spectacular setting for high-powered conventions. At the Sher-i-Kashmir International Convention Centre you will be enchanted by the friendliness that immediately surrounds you ...from our usherette to our efficient secretary promising you a smooth, well orchestrated business meeting.
The SKICC is built to the best international standards of a world convention centre with the latest audio-visual equipment, relaxing accommodation and unrivalled executive service.
The next time you plan a convention, meet with pleasure at the country's premier meeting place — Sher-i-Kashmir International Conference Centre.

THE FINE ART OF FLYING

by Kolar.

«Je suis la Beauté - Paris». When we asked the Czechoslovakian artist, Kolar, to interpret The Fine Art of Flying he responded with his famous, multi-image rollage technique. "Paris", he reflected, "is a love affair with a fascinating woman - she will open many worlds to you and yet always draw you back". Air France leaves Paris for the world more than 150 times every day. And every flight is a love affair.

Connections make the world go round.

Dhirubhai Ambani never ceases to amaze. The Ambanis have pulled off a most successful coup in bagging Larsen & Toubro. Almost every businessman would love to have done it himself. There is no doubt that Ambani will add significant strengths to L&T and in business terms it makes great sense.

However the Reliance — L&T link raises a number of very serious issues. We at *Business India* have consistently argued for freer play of market forces and have welcomed even hostile takeovers as being both logical and necessary. In no other country in the world are existing managements protected against such takeovers, except in rare cases where monopoly or national considerations weigh against them. But do we really have free markets? Or has Ambani been favoured in any manner by government.

The institutions control over 40 per cent of L&T's equity. Ambani could never have attempted this feat without a clear nod of approval from government. And as is well known this could have been cleared only at the level of the prime minister. What could be the reason for this?

There are several other extremely successful businessmen in the country who also would have liked to try and take over L&T. Would say a Tisco or a Birla or Thapar or any one else for that matter, have been permitted to use their corporate resources to mount this takeover by whatever name one calls it. In no free market is one group given preference over others.

Then, L&T has been one of the best professionally managed companies in the country. It has a great track record and has grown into one of the largest companies in the country. No one family has controlled the company. Just as no one controls IBM, or Citicorp or ICI. Can we also not have professionally run giants compete against family dominated companies?

What is worse, is that nowhere else in the world is there such secrecy in deals involving public companies. Reliance has used public funds for this acquisition, a significant portion of which must have come from recent public issue of RPL which is a subsidiary of Reliance Industries. Yet only days ago the Ambanis were denying any takeover. L&T is also a public company with thousands of shareholders. Surely the management owes a duty to its shareholders to inform them about any pending deal. These considerations, not only common, but mandated by law, in every other free market are entirely absent here. But it must also be pointed out that, unfortunately inspite of a plethora of laws on every subject, there are virtually no effective laws in this respect. Of course we have the MRTP act and a Companies Act that is the longest in the world. Yet even the layman knows that where the government so chooses it can either tie-up any company in knots forever — or it can simply ignore them entirely.

We must have a level field for all. It is these considerations that mar this coup.

• Pepsi impact

Your article, 'Pepsi blockaded?' (Cover Feature, 19 September) was interesting but rather incomplete. It talked only of bottled soft drinks popular in Bombay, in a story meant to look at the national industry and Pepsi's impact on it. Further, the soft drink market does not mean only bottled cold drinks any more. One has to take into consideration squashes, crushes, concentrates, milk-based drinks, the tetrapack, and so on. Your article seems to highlight the battle against the entry of Pepsi as a personal one, particularly, of Ramesh Chauhan. Any other industrialist would react as he has in his attempt to knock some sense into the politicians.

Will the entire industry be hit with the entry of Pepsi, now that it is through? Will they really be able to meet their export commitments? If they fail, what will be the options left to them? Will the economy of Punjab flourish? And in the final analysis, if a cola-based drink can do so much for the Indian people, why did Coca Cola, the greatest and the very biggest have to go?

B. THADHANI
Bombay

• Mastershares

If shares held in a minor's name are to be sold, the prevailing practice is to ask the seller to produce a court order before the sale can take place. The Unit Trust of India has exempted Mastershares from this rule. Despite this, brokers continue to insist on a court order.

As a result, Mastershares are not very liquid. People who have invested in these shares in the names of their minor children are stuck with the shares as they cannot sell them without a court order. Will the stock exchange authorities please bring out a notification informing the brokers and the public for this exemption? And will the Unit Trust please do the same?

Z.A. D'SOUZA
Bombay

• Vindhya Telelinks

This refers to your Corporate Monitor on Vindhya Telelinks (19 September). The company has been promoted by the M.P. Birla group and not the S.K. Birla group as mentioned.

• BP's white elephant

This refers to the item, "BP's white elephant" (Listening Post, 19 September). We would kindly draw your attention to the fact that the Bombay-Pune oil pipeline belongs to Hindustan Petroleum Corporation and not to Bharat Petroleum Corporation.

A.S. KOTWAL
Manager (Public Relations)
Bharat Petroleum Corporation Limited
Bombay

• Conservation not favouritism

With reference to your article "Organising villages against development" (Speaking Out, 25 July), we would like to point out that Sweden, with an eigth of the land area of India, produces 8 to 15 times every item of forest based industrial product that we produce. Sweden continues to be green but India has gone brown. It has become fashionable to condemn forest based industries as the cause of destruction of forests and government departments as corrupt. The fact of the matter is that we have the same share of corrupt men in the Forest Department, as we have in other walks of life, nothing more nothing less. It is the same genepool and we claim no exception; but we are not its only members.

The statement that the area of plantation was increased from 10,000 hectares to 30,000 hectares, has absolutely no basis. The agreed area, to be planted over 10 years, is 30,000 hectares in all cases, and Karnataka Pulp Wood Ltd, has only 6,000 hectares so far.

The Ranebennur sanctuary was created through eucalyptus plantations in a totally degraded and treeless area. Today it has 3,000 black bucks and several Great Indian Bustards, considered to be "extinct" in the region. Condemn M/s Harihar Polyfibres, Condemn Karnataka Pulp Wood Ltd, but please don't condemn an innocent species which has a useful role to play. Charges against eucalyptus have been manufactured by the multinationals manufacturing paper and pulp based in the temperate region, against the tropical countries, which can produce it through eucalyptus at half the cost.

The condition that the Chief Conservator of Forests may permit marginal adjustment of areas does not refer to making available areas with tree growth. It relates to making available areas from reserve forests or revenue lands transferred to the

department, not included in the provisional transfer permitted by the government. This is to provide for a manageable extent for the raising of plantations only. The areas handed over to Karnataka Pulp Wood Ltd, are barren areas, degraded beyond redemption by overuse through grazing and hacking and misuse through incendiary fires. The sites have practically no soil and much less a tree cover to support "cattle and sheep grazing, gathering of grasses and vines by craftsmen, and picking of seasonal fruits and herbs by women". In reality, the area being barren does not support any of these. Incidentally, the use of the bulldozer is for ripping the soil which is infertile and compacted and not for clearing forests.

The formation of joint sector undertakings for raising captive plantations was floated by the government of Karnataka in 1978 — not in 1984. It was an offer to all the 20 forest based industries in the state to raise captive plantations to meet their raw material requirements at their own cost in degraded areas rather than depend on the forest department or on plantations raised at government cost in the reserve forests. There was no response except from the government owned Mysore Paper Mills. In 1981, the Forest Act was amended empowering the government to annul the rates entered into in the agreements with the forest based industries by which the rate for eucalyptus to Harihar Polyfibres, was increased from Rs.24 per tonne to Rs.264 per tonne (today the rate is Rs.490 per tonne). This resulted in a spate of writ petitions against the government and, simultaneously, approaches for forming joint sector undertakings. In case of Harihar Polyfibres, set up in collaboration with Karnataka Pulp Wood Ltd, the offer was agreed to in 1983, subject to the withdrawal of writs. Incidentally, thereafter, in 1984, the Forest Act was again amended to empower the government to free itself of the commitment to supply the quantity specified in the agreement. Thus, against 190,000 tonnes specified to be supplied per annum, today in case of the Jurla unit, the supply averages [illegible] at Rs.490 per tonne.

Samaja Parivarthan Samudaya had filed a writ against Harihar Polyfibres regarding pollution. It may be a strange coincidence that just prior to the dates of hearing of the case, every time, fish were found floating in the river making headlines in the journals. It is the same party which has filed the writ against Karnataka Pulp Wood Ltd.

It is for the country to decide. Shall we import paper and pulp though it would cost us, in terms of foreign exchange, Rs.2,000 crores per annum? If we are to meet the need internally, shall it be at the cost of the state from plantations in reserve forests? Or shall we offer wastelands, not to the private sector, but to joint sector undertakings in which government holds the majority share? What are the alternatives? Are we clear about them.

As long as industries exist, they will find their raw material at any cost from any where unless we decide to close them. Harihar Polyfibres and Mysore Paper Mills are already procuring 60 per cent of their raw material from private farm lands. This is because, the government withdrew from supplying the committed quantity in the interest of meeting the rural needs. Even now, if 30,000 hectares of degraded/wastelands are not utilised for raising captive plantations, 30,000 hectares of farm land would go under eucalyptus, or to the extent of what would have gone to meet the small timber and firewood needs would be diverted to the industry, while these public lands will continue to remain degraded.

• Best & Crompton mess

Your report on Best & Crompton (22 August) was revealing as well as startling. After a long innings two of its top executives left it when things became too hot. Some managers leave behind a healthy organisation, while others leave behind a trail of bitterness. The executives left probably because it was difficult for them to continue in the messy state of affairs created by them. What has happened to professional management?

EXPORT

Success often comes to those who dare and act, it seldom goes to the timid.

- Jawaharlal Nehru

Dear Export Executive,

We offer attractive partnership terms.

Please write with details.

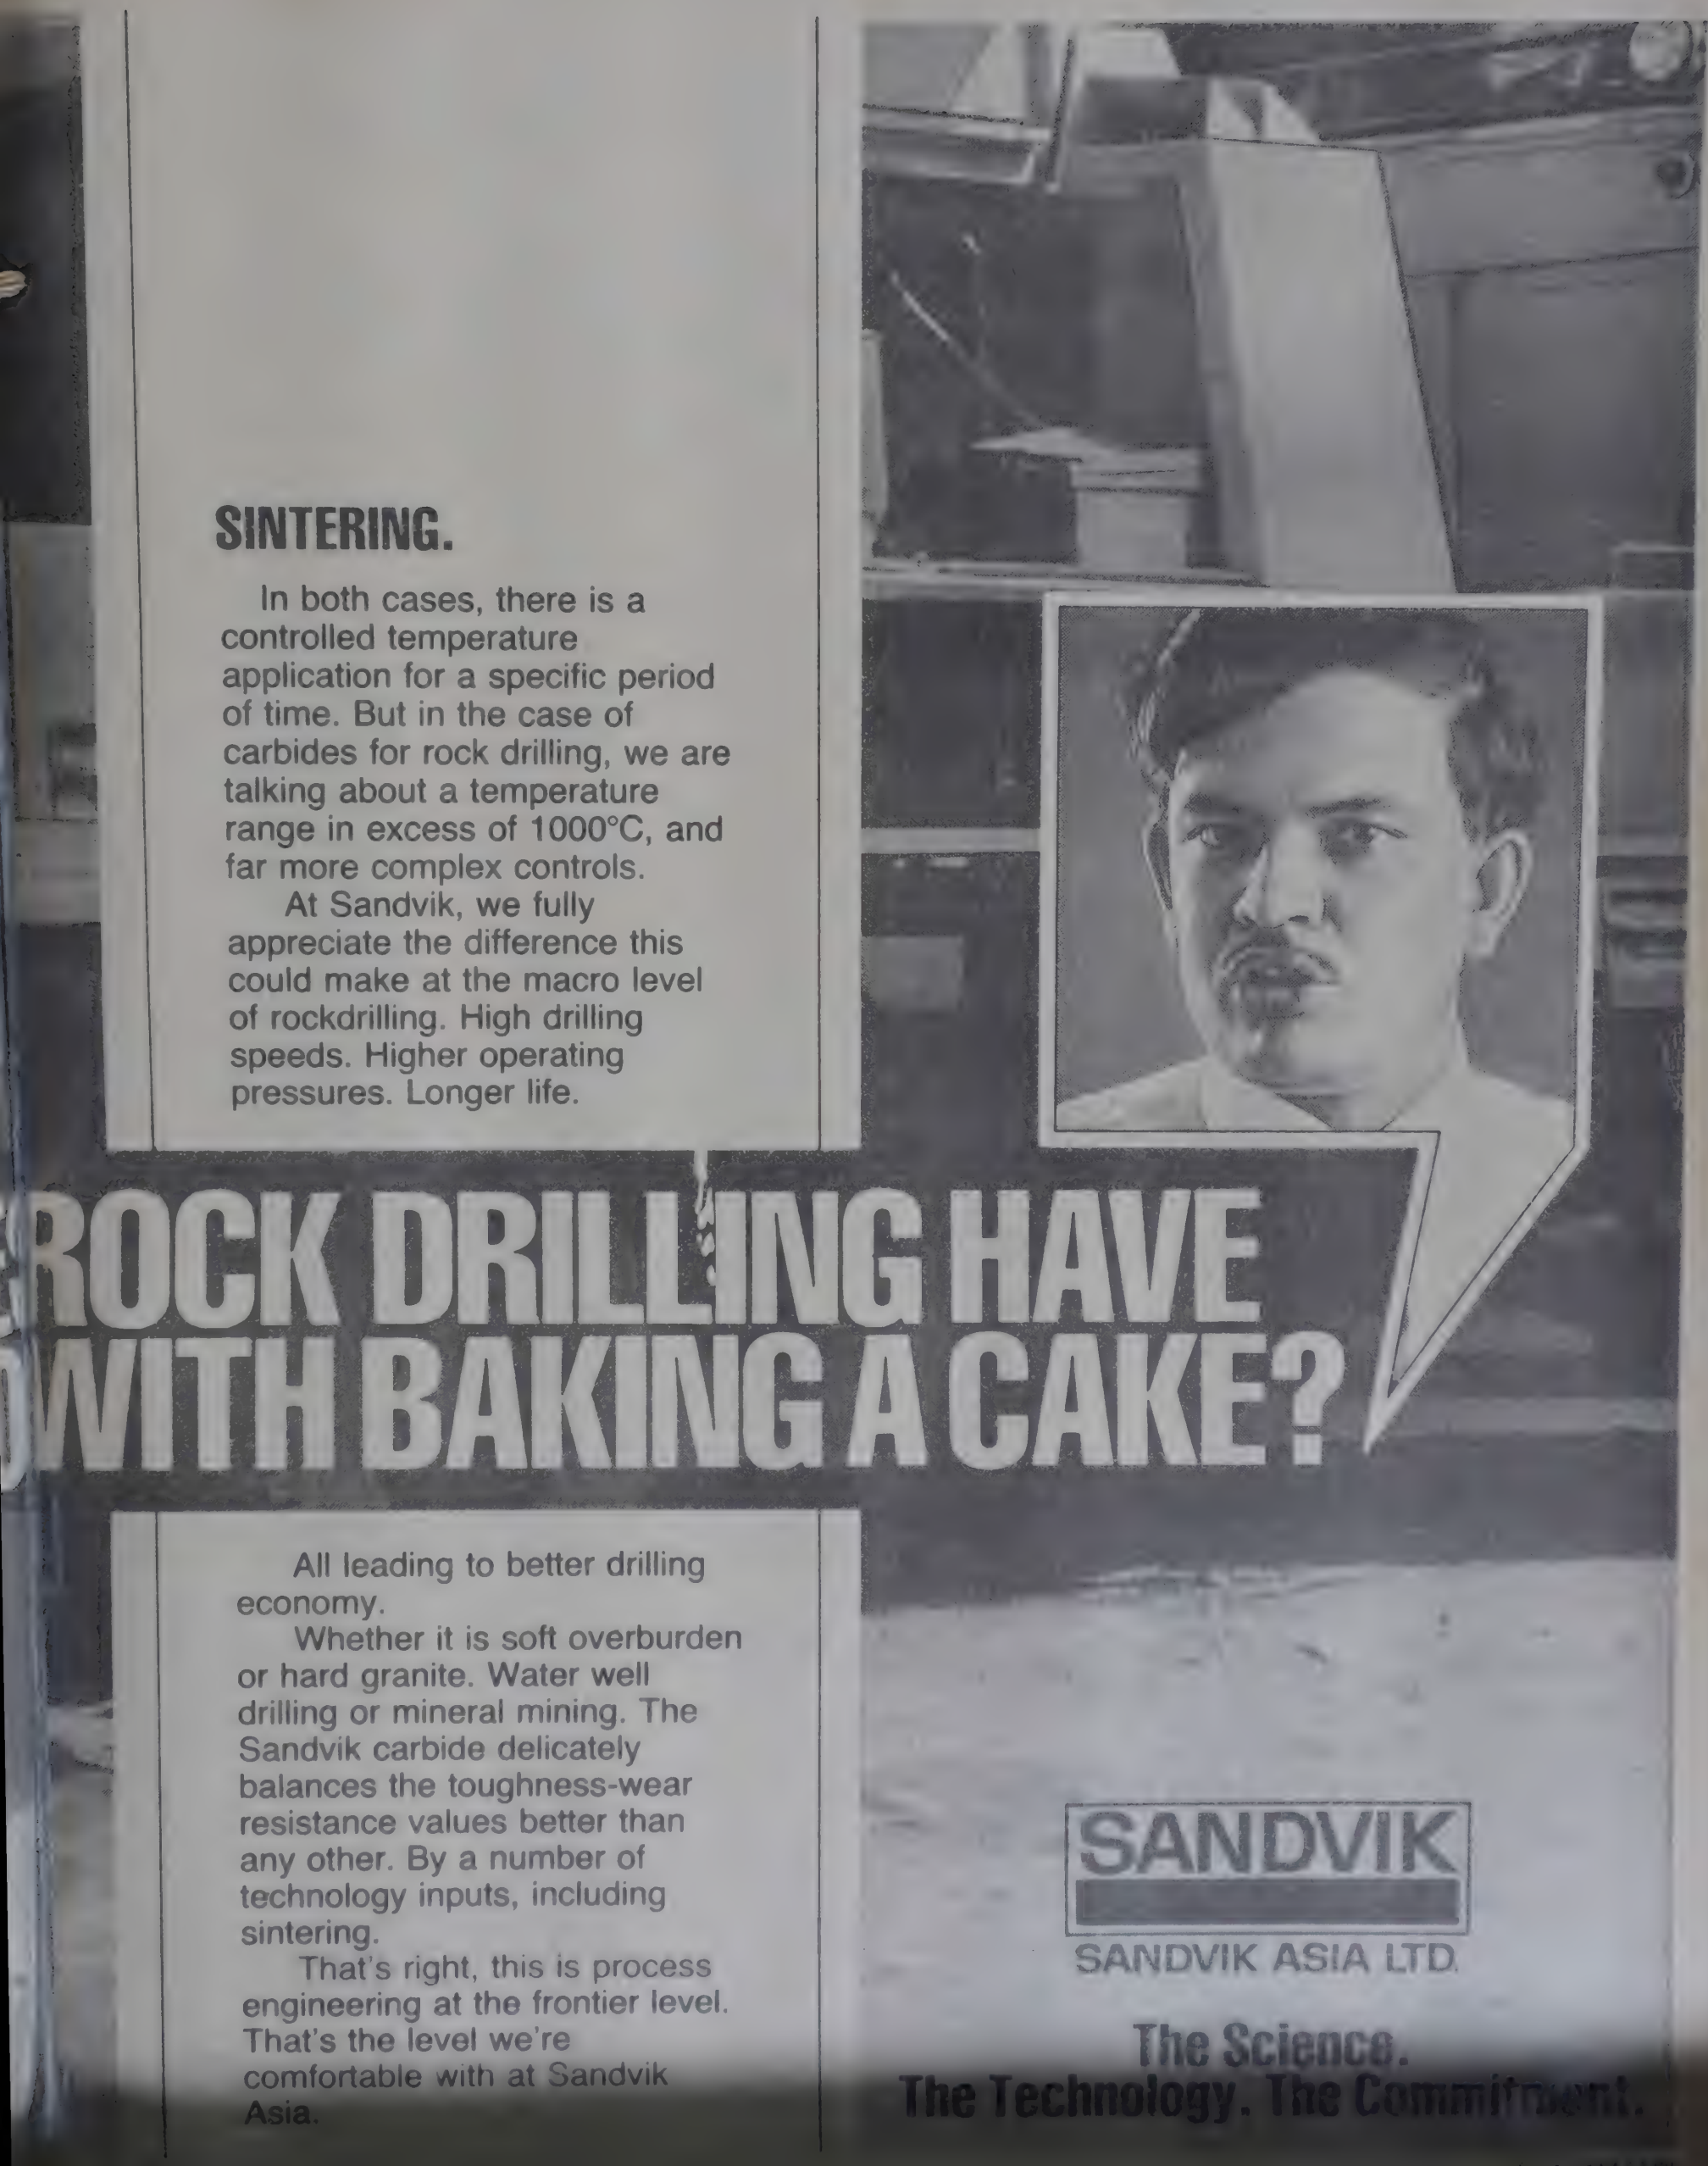
IN COMMO



SINTERING.

In both cases, there is a controlled temperature application for a specific period of time. But in the case of carbides for rock drilling, we are talking about a temperature range in excess of 1000°C, and far more complex controls.

At Sandvik, we fully appreciate the difference this could make at the macro level of rockdrilling. High drilling speeds. Higher operating pressures. Longer life.

ROCK DRILLING HAVE WITH BAKING A CAKE?

All leading to better drilling economy.

Whether it is soft overburden or hard granite. Water well drilling or mineral mining. The Sandvik carbide delicately balances the toughness-wear resistance values better than any other. By a number of technology inputs, including sintering.

That's right, this is process engineering at the frontier level. That's the level we're comfortable with at Sandvik Asia.

Dabbas, Bangalore style

In emulating Bombay, Bangalore has taken one more important step. On the heels of industrial expansion, pollution, parking problems, *bhel puri*, congestion, traffic snarls, *pav bhaji* — all a la Bombay — comes the quintessential Bombay feature, the *dabba*.

R. Chandramouli of Indira Nagar provides "Mouli's home made lunch". Chandramouli is a commerce graduate and has a diploma in computer science, but decided to dabble in *dabba* operations a year back. The client makes a refundable deposit of Rs.125 and each lunch costs Rs.6.60. The menu includes tongue twisters like *vetthakozhambu* and *morukozhambu* or there is avial, or elicheri. The sambar is not watered down. Though the service is currently confined to Indira Nagar and Mahatma Gandhi Road, Chandramouli obviously plans to expand operations because he has submitted a proposal for a Rs.2-lakh project to his bankers. Will the city also duplicate Bombay's unique dabbawalla network?

ARUN BHATIA, *Bangalore*

Ramayana at TTD

To relieve the tedium for devotees queued up for darshan at the Tirupati temple complex, the Tirumala Tirupati Devasthanam (TTD) had installed closed circuit TVs. During the long, shuffling wait — which lasts for eight hours at times — devotees could watch programmes of devotional music or dance.

In keeping with the new shape of things though, the TTD has now started playing videos of Ramayana, the TV serial epic. For the common man among the devotees at least, this should be a real boon, from TTD and Ramanand Sagar, ill-equipped as he is to appreciate the finer points of archanas and kirtanas.

UPADHYAYULU B.S. CHANDRA SEKHAR, *Tirupati*

Sacred polythread

The sacred thread worn by many Hindu men is a religious symbol. It is generally made out of handspun raw cotton. However the man who wears it finds it difficult to maintain the thread since it often snaps due to wear and tear and needs frequent replacement. And each replacement means another religious function. As we head into the twenty-first century, with technological innovations coming up every day, some Hindus in Madurai city in Tamil Nadu have introduced a thread

A sacred thread made of terry cotton fibre is now on sale in Madurai. The manufacturers claim that this thread lasts longer and is easily maintained. A set of three threads costs Rs.1.50 whereas the cost of the conventional thread set is Rs.0.50.

V. THIAGARAJAN, *Bangalore*

Conflicting interests!

In front of the eletricity office in our town is a board which exhorts citizens to switch off lights when not in use. In the same office, however, there is a 100-watt bulb which is always on, even though there is enough natural light during the day. When asked about it, an employee told me that it was kept on as an indicator of voltage fluctuations!

B. RAMA RAO, *Yemmiganur*

Arms and the nation

Consider the following; arms trade in the world in 1987 totalled $ 35.1 billion. The Third World made purchases equalling two thirds of that, or $ 24.7 billion. Of that, in turn, India spent $ 5.2 billion. Iraq, who was at war with Iran at the time, bought $ 3.5 billion worth of weaponry

These figures, recently published in the annual report of the Stockholm International Peace Research Institute (SIPRI), show that India was the largest arms importer in 1987. If not more — ie, apart from the multitude of moral, political and other questions that this gives rise to — at least we have one answer to how our already meagre foreign exchange reserves are down.

This age we live in!

Family man to friend: "Lisa is now 14 and quite grown up. So I bought her a TVS-XT."

Friend: "Is it 100 per cent IBM compatible?"

P.B. GURUDUTT, *Bangalore*

Cure for work

Japanese companies are taking steps to wean their employees from workaholism. STARTS, a Tokyo real estate company, with 400 employees, started giving their people an extra 1,000 yen for every day of paid vacation they actually took. But only four or five people take a vacation each month and most of the time, it is the women who take leave. Daiei, an Osaka medical equipment maker with 300 employees, has issued a company fiat that the management (36 people in all) must take 10 consecutive days of vacation at least once a year. They get 100,000 yen to spend when they do it, too. Daiei went on the five-day week, back in 1973. Mitsuwa, a Tokyo electric equipment manufacturer with 460 employees went on a five-day week from this June. They have had a "take your birthday off" programme since 1964; each employee receives on his birthday 500 yen for every year of age! Susumu Kogyo, a Kyoto electronics parts maker with 400 employees, gives 10-year veterans an extra five days and 20-year people an extra week's vacation. But the best part of all is the 600,000 yen bonus and free airline ticket to anywhere in the world on a person's fifteenth anniversary at the company.

After 10 years in the Long-Term Credit Bank, people can have an extra 30 working days off as study leave — paid, of course. Of these 10-year people, 53 per cent go on overseas trips, 28 per cent go on domestic trips, 2 per cent spend the time on hobbies and exercise, and 17 per cent study for specialist exams. The bank foots study bills upto 200,000 yen and so far every 10-year person has taken the extra time off.

R. RAGAVAN, *Bombay*

Unusual school

In the recently held all India competitive entrance examinations for the various IIT's and other engineering and medical colleges, students of the Sector 10 school, run by the Bhilai Steel Plant, secured 32 positions, the maximum from one school in the whole country. And this is not a flash in the pan — the school has been turning in similar performances for years, and setting some kind of a record in the process. Because of this, the school was the target of an investigation, a couple of years ago, to ascertain if any malpractices were contributing to such results. The investigators, however, did not find anything incriminating. The total number of students from the Bhilai Steel Plant township who have secured admission in medical and engineering colleges this year is around 300.

PUSHPINDER BAKSHI, *Durg*

Captive cup

If you ever visit the Seshasayee Paper and Boards Ltd .(SPB) plant at Erode (near Salem) in Tamil Nadu, you'll probably get a pleasant little surprise. Visitors to the plant are served tea in paper board cups styled in Origami, the Japanese art of paper modelling. Apparently, the employees of SPB use the waste paper board to make the cups. After use, the cups are repulped and recycled.

Luckily, for SPB, the excise authorities have not yet taken exception to this one instance of "manufacture for captive consumption"!

RAVI PADAKI, *Goa*

White business in the capital

All the concepts of marketing, business promotion, entrepreneurship, and managerial effectiveness — learnt otherwise at great cost by the sons of the rich at American business schools — are well used in the milk booths of New Delhi. An observer will notice how effectively the principles of time management and profitability are applied by small-scale industrialists who do "business in business".

While colony residents strive hard to maintain a queue to collect one or two litres of milk, our time-conscious manager steps into the scene, muscling past all those in the queue, with milk cans of capacities ranging from 10 to 20 litres. He — now playing the role of the situational manager — exercises his authority with coarse abuses, and silences the resisting public. If yet another well-built and stronger entrepreneur does manage to supersede him in the queue having adopted the same strategy, he protests and preaches discipline, murmuring at the same time, "There is absolutely no discipline in the country. God alone can save our motherland."

In the meantime, the babu in charge of the vending booth maintains the status quo by remaining silent. He, of course, is using the technique of management by indifference.

Going back to the time-conscious manager, who now turns entrepreneur: collecting milk from a number of booths, he optimises inputs by adding 40 to 50 per cent of water to produce value-added milk, of "superior" quality.

The adulterated milk is then delivered punctually at the doorsteps of citizens. The more enlightened among the latter seem to have carried out a cost-benefit analysis and concluded that the time wasted in the queue is costlier than the premiums they pay for "superior" quality milk.

Profit is estimated at Rs.5 to Rs.5.50 per litre of fresh milk. Thus, he can earn Rs.50 to Rs.100 a day. The investment required for this business is very small — about Rs.50. The business seems to be quite remunerative since within a short time of starting their business, one can see these promoters visiting the milk booths on new scooters or motorcycles, with huge cans.

G.G. RAJAN, *New Delhi*

Starting from square one

The following comments on the Soviet Union by D.C. Kothari, prominent industrialist, appeared 25 years ago in the *Economic Times*.

"The Soviet Union," he said, "is drifting from its original path of uncompromising Marxist-Leninist communism to a course of realistic revisionism.

"This drift," he added, "is exemplified by the remarkable disparity in emoluments and status among the workers, the attempt to provide them with an increasing variety of the comforts of life, the recognition by the state that incentives are necessary for better efforts on the part of human beings.".

AN ELECTRONIC TYPEWRITER SO ADVANCED, IT CAN EVEN CHECK YOUR SPELLINGS

ACN. INDIA'S ONLY ELECTRONIC TYPEWRITER WITH THE SPELL CHECK.

Buy an ACN Electronic Typewriter and you will never make a spelling mistake again. Because the moment you do, the ACN Spell Check will stop you. Then refer to its mammoth, over 80,000 word dictionary and, before you know it, correct the mistake.

Now imagine how it can improve the efficiency of your office. Give you clean, crisp, flawlessly typed documents. Even when you're rushed for time.

After all, it's technology from Nakajima All, Japan. The world's largest electronic typewriter manufacturer. The technology behind the success of best-sellers like Triumph Adler, Smith Corona, Sears, Olympia and now ACN.

Enterprise D A

All sewn up?

Have the Chhabrias sewn up the battle for Gammon? Does Subba Rao, the long time Gammon chief have a chance?

It is reported that the Chhabrias will have a 33 per cent block of shares in the company by the time they are done. They have already bought a 13 per cent shareholding from the Gammon family, have picked up another 10 per cent from the market and are expected to pick up yet another 10 per cent.

Subba Rao claims to have had the support of 41 per cent of the shareholding in the company at the last annual general meeting. That was before the Chhabrias had begun their buying spree.

Subba Rao has made it amply clear that he does not intend to transfer the Chhabria shares. In his view, since they intend to take over the company, he is fully justified in his actions.

With the current 'liberal' policy towards takeovers it is unlikely that the company law board will take kindly to such a refusal by a chief executive.

A pitched battle between the two seems inevitable.

Is Delhi a must?

Ashok Goenka, chairman of the General Insurance Corporation, has been continuing on a virtually day-to-day basis, ever since his term expired almost two months ago.

Apparently Goenka has adopted too low a profile, and not pushed hard enough and therefore his situation was literally forgotten. Reportedly his extension till he retires early in 1991 is likely to come through.

The government took several weeks to give Nadkarni of IDBI his five year extension. Surely the finance ministry knows when the terms of the heads of the most important financial institutions expire.

Or is visiting Delhi a must?

Three tiers for the market

The age of multiple level primary and secondary market is not far away. According to knowledgeable insiders, the Bombay Stock Exchange (BSE) commissioned a report on the possibility of introducing multi-tier stockmarkets in India. The study was undertaken by the Bombay branch of the international accounting and management consultancy firm, Arthur & Andersen. Entitled "A report on the multi-tier market structure" it recommends two and half levels in the stockmarkets roughly corresponding to an over-the-counter market, an unlisted securities and a market with full listing which exists currently.

Reports indicate that the BSE has accepted the recommendations. These have now been forwarded to the ministry of finance, whose reactions are awaited.

World links

Air-India is planning to join hands with one of the four computerised reservation consortiums in order to protect its yields. The airline business worldwide is increasingly becoming dependent on sophisticated computerised reservation systems. This allows travel agents from all over the world to access the airlines' booking system directly. Several European and Far East carriers in recent years have collaborated to develop reservation systems, with esoteric names like Galileo, Amadeus and Abacus. Air-India officials feel that in the next five years any airline would have to necessarily depend on such systems for a substantial portion of business. Rather than develop an independent system which would cost tens of millions of dollars its much cheaper and quicker to plug into an existing network.

Going great guns

Since R.P. Goenka's loss of Dunlop, he has developed a large appetite for new acquisitions. Clearly not satisfied with Harrisons Malayalam, ICIM and perhaps General Foods (see *Business India*, 3 October, 1988), Goenka continues to look for new alliances.

As part of the Dunlop deal, Chhabria has had to bow out of Bayer and Goenka has taken over his share. While the Germans have over 51 per cent, there were two Indian groups earlier represented on the board. Now there will be only one. Goenka has taken over the Raychem company in India. Earlier this was a small professionally run company that ran into problems inspite of the backing of the American giant. Raychem sells a variety of hi-tech products to a wide spectrum of organisations from ONGC to BEST.

Inspite of all these deals, merchant bankers in Bombay know that Goenka is happy to look at more companies still.

Vimal again and again

Not satisfied with the L&T coup, (*see Cover Story*), the Ambanis have done it again. This time with Wang computers, from Boston, USA.

It is well known that Wang has been looking at setting up a manufacturing facility in India. But having had problems in China with a local company, Wang only wanted to offer a technical collaboration without an equity commitment.

The others in the race were the Thapars and Ashok Birla. The Ambanis are apparently quite happy to do business on Wang's terms. A few years ago Reliance was considering a tie-up with IBM but Big Blue's terms were believed to be stiff.

The flow continues

There seems to be a new entrant into the detergent business almost every month. The latest company that has decided to join the flow is Henkel, the West German chemical giant.

Their partners for this new venture will be Tamil Nadu Petrochemicals.

Speculation continues

Some of the top economic and financial slots have been finalised recently, with Bimal Jalan going to the IMF, Arjun Sen Gupta continuing at the IMF as special advisor to the IMF chief, Montek Ahluwalia continuing at the PM's office, and Nadkarni being extended for five years.

But speculation still continues about a few other jobs. Inspite of vehement denials by all, reportedly Malhotra may not remain as Governor at the Reserve Bank much longer. It is said that his wife Anna, also a senior IAS officer, currently chairman of the Nhava-Sheva Port Trust in New Bombay is likely to go to GATT in Geneva. Malhotra himself may then also get a prestigious overseas assignment. D.N. Ghosh of State Bank who has been both a bureaucrat and a banker is being tipped to be the new Governor.

And who will take his place? Reportedly none other than Ratnakar former chairman of Canara Bank who has been waiting in the wings to be called for a larger assignment

Camdessus delivers Deshmukh lecture

Speaking at the Reserve Bank's fifth C.D. Deshmukh Fund Memorial Lecture in Bombay on 4 October 1988, Michel Camdessus, managing director of the International Monetary Fund, expressed appreciation of Deshmukh's support of multilateratism. Camdessus spoke on the evolving international monetary situation, focusing on the stability of the exchange rate, the role of the SDR and symetry of adjustment.

Speaking about the stability of the exchange rate, Cam-

Camdessus: India has been cautious

dessus said that while volatility in exchange rates had "prompted nostalgia, a return to the Bretton Woods system is not feasible in a world in which capital markets are the prime determinants of exchange rates, and in which governments are no longer the dominant actors they once were in international financial markets". Camdessus however stressed that there was a need for the development of international co-ordination on economic policy similar to that being practised by the group of five or the group of seven.

Speaking about special drawing rights, Camdessus said that they were created with two basic purposes in mind, as a supplement to existing reserve assets and to serve eventually as the principal reserve asset of the international monetary system. The SDR is still not used as a medium of exchange, though it is used to some extent as a unit of account. There is no broad support among the Fund's membership to add to the stock of SDRs and it is unlikely that the SDR is likely, in the short run, to become the principal reserve asset of the international monetary system.

Camdessus complimented India on its cautious financial policies which has enabled it to avoid debt-related problems, but he stressed the need for responsibility of economic adjustments to be shared more equitably worldwide and thus made more manageable.

Rupee-rouble exchange rate revised

The exchange rate between the Indian rupee and the Russian rouble has been revised to Rs.16.8969 per rouble with effect from 7 October 1988. The earlier rate was Rs.16.3924 per rouble.

The revision is in terms of the protocol signed between the governments of India and the Soviet Union on 25 November 1978, providing for periodical adjustments in the rupee-rouble rate on the basis of changes in the value of the Indian rupee in terms of the multi-currency basket.

US considering request for super computer

The United States has informed India that its request for a second super computer was being processed expeditiously contrary to reports suggesting that Washington had reservations about safeguards to ensure that the technology is not passed on to other countries

India's request for the $ 15 million YMP-132 supercomputer was among the subjects discussed at an hour-long breakfast meeting in New York between external affairs minister P.V. Narasimha Rao and the US secretary of state, George Shultz.

CSIR's risk report on Hazira in

The Council of Scientific and Industrial Research (CSIR) last fortnight presented the risk analysis report on the Hazira gas processing complex to Col. S.P. Wahi, chairman, Oil and Natural Gas Commission. The study, a culmination of six months of efforts by five CSIR laboratories has identified parts of the complex prone to hazards, predicts frequency of failure of equipment and determines risk potential. The report suggests measures to mitigate risk, and improve general safety and reliability of the complex. It also suggests plans to deal with emergencies effectively to minimise damage to human life and environment.

BHEL bags Malaysian order

An export order worth Rs.5.56 crores for setting up 132 KV substations in Malaysia has been bagged by the state owned Bharat Heavy Electricals Ltd.

The contract awarded by National Electricity Board, Malaysia, envisages installation of one substation each at Upper and Lower Sungai Piah Hydro Station. It involves supply, erection and commissioning of generator transformers, circuit breakers, power cables and other auxiliary equipment. The work is scheduled for completion in 1991-92.

BHEL will set up two substations in Malaysia

India joins tea cartel

India and Sri Lanka have agreed in principle to rejoin the International Tea Promotion Association (ITPA) from which they had withdrawn in 1984 and 1983 respectively. The association will tackle the task of generic promotion of tea. It is also expected to encourage co-operation among producers and exporters in the related sphere of production, quality and unrealisation.

ICICI raises marks from DEG

The Industrial Credit & Investment Corporation of India (ICICI) has signed an agreement for a line of credit of DM 25 million from Deutsche Finanzierungsgesellschaft fur Beteiligungen Entwicklungslandern GmbH (DEG). This is the first such credit made by DEG to any Indian financial institution. The proceeds will be utilised to finance imports by Indian co

panies in which DEG has equity participation. The credit will be for a period of 8 to 12 years. The interest rate will be linked to the rate for German bearer bonds fixed for each sub-loan.

DEG is a German financing and consultative institution for direct private investments in developing countries. The sole shareholder is the Government of the Federal Republic of Germany. DEG finances private joint venture companies in developing countries through equity participation and long term loans in accordance with its general financing policy.

India at Automechanika '88

The Indian contingent at the Automechanika exhibition at Frankfurt is one of the largest ever, with 27 individual companies taking part. The exhibits will be a wide range of vehicle components like leaf springs, radiators, rubber and rubber to metal bonded parts, automotive fasteners, lamps and bulbs, brake parts, propeller shafts, fuel pumps, cables etc. which have been successfully introduced in the industrialised markets of the world including the Federal Republic of Germany.

The Indian exhibitors at the Automechanika 1988, apart from seeking to increase their exports in the European market, will also be looking at the possibilities of technical tie-ups with European firms.

Federation for EPZs

The individual associations of the six export processing zones (EPZs) in the country have joined forces to form an apex body — the Federation of Indian Export Processing Zones' Industries Association (FIEPZIA). The intention is to identify common problems and to evolve a national approach to the development of the zones which have to function in an international environment.

FIEPZIA will act as a data information center for the industries in the zones in order to guide and assist new entrants. The federation will also bring out bulletins and newsletters periodically, in order to communicate developments in India and abroad.

Changes in MRTP

The industry ministry has refused to raise the asset limit of MRTP undertakings from Rs.1 crore to Rs.5 crores. The refusal is based on the "liberal" licensing policy recently extended to the industries. The ministry however, has accepted two other amendments proposed by the company affairs department. Henceafter, companies who manufacture items based on indigenous R&D will be exempted from Section 22A of the Companies Act.

NEC bags telecom contract

The World Bank-aided contract for supply of optical cables and associated equipment has been awarded to Nippon Electric Company (NEC) of Japan by the department of telecommunications (DoT). Notice for international competitive bidding for the contract was issued in March 1986. Out of the 18 companies who had quoted for both equipment and optical cables Fujitsu of Japan emerged the lowest bidder followed by Ericsson of Sweden and the NEC.

The latter, however, questioned the DoT's evaluation of tenders and lodged a protest with the World Bank in early 1987. Consequently, fresh tenders were invited and the NEC thus bagged the contract on 9 October 1987.

Deemed exports benefits for medical electronics sought

The department of electronics (DoE) has put forward a proposal to grant deemed export benefits to domestic manufacturers of items which are not being produced in the country or those which are allowed to be imported at concessional rates of duty.

Medical electronics: deemed exports status

Addressing a workshop on policies and procedures in electronics, K.P.P. Nambiar, secretary, DoE, said that to start with the scheme would be restricted to the manufacture of medical equipment only. Depending on its functioning it would be later thrown open to other items which would attract a low rate of duty.

Action plan to boost revenue

The income-tax department has launched an action plan to maximise collection of revenue and dispose of all assessments by the end of 1988-89. Speaking at a recent conference of chief commissioners of income tax in New Delhi, the union finance minister S.B. Chavan said that every rupee of assessed demand should be collected under the action plan. He asked officials to give top priority to the need for finding ways and means of augmenting revenue. They should strive to take income-tax revenue to a commanding position in the overall direct and indirect collections, he said. According to Chavan, 1.2 million people had been brought within the tax net following the survey work initiated in 1986-87. The growth of income tax revenue was however not commensurate with the growth of economic activity, he said.

Urbanisation report released

The final report of the national commission on urbanisation has stressed on improving and upgrading slums, increasing shelter and conserving the existing housing stock. The report has recommended that the high prices of the land be reduced down to the production costs. It also recommended provision of housing finance at interest rates lower than commercial rates with 20 to 30-year repayment periods.

Indo-Pak chamber of commerce to be established

India and Pakistan will soon set up a joint committee of the chambers of commerce and industries of the two countries to give a fillip to bilateral trade, according to commerce minister Dinesh Singh, who was in Islamabad last fortnight to attend the GATT trade ministers' conference. Singh said that the Pakistani president Ghulam Ishaq Khan had agreed to such a committee.

The idea was first mooted by leading traders of Pakistan during the meeting of exporters and importers addressed by Singh in Islamabad. He held three separate meetings, first with Pakistani commerce minister, Mehboob Ul Haq and his officials, second with Pakistani traders, exporters and importers and industrialists, and third with Ishaq Khan.

Sales tax exemptions struck down

The Supreme Court has struck down total or partial sales tax exemption granted by three states to local manufacturers of television sets. Under the exemptions granted by Rajasthan, Madhya Pradesh and Andhra Pradesh local manufacturers of TV sets did not have to pay any sales tax while those with manufacturing units outside these states were required to pay the tax. A division bench comprising Justice Sabyasachi Mukharji, Justice M.H. Kania and Justice S. Rangnathan, while striking down the exemptions, said that while past transactions would not be affected, sales tax would be payable at a uniform higher rate on all TV sets from 16 September 1983.

Gramophone Co of India to manufacture CDs

The Gramophone Company of India (GCI) decided to set up a compact disc (CD) manufacturing plant at its Dum Dum factory at a cost of Rs.3 crores. After years of non-profitability, this would be the first major hi-tech diversification undertaken by GCI. The plant is being set up under the "project development scheme" under which companies seeking expansion and modernisation are entitled to import capital goods up to an upper limit of Rs.2 crores (exclusive of import duty). The plans will initially produce 12,000 CDs a month and later increase production to 30,000 CDs a month. Aiming to attain complete indigenisation in about two years, the company hopes to achieve a turnover of Rs.30 crores by 1989.

Foreign CDs: GCI will soon follow suit

CPI base change mooted

The labour minister Bindheshwari Dubey said it would be desirable to change the base year for the consumer price index for industrial workers from 1960 to 1982 so as to adequately reflect the actual consumption pattern of the group as revealed in the survey conducted in 1981-82. Presiding over the last national level tripartite meeting on the new series of index numbers with base year 1982, Dubey said the existing series had become unrealistic as it depends on a base year which was nearly three decades old.

Sardar Sarovar project cleared

The controversial Sardar Sarovar project on the Narmada river in Gujarat has been accorded investment clearance by the Planning Commission. Conceived nearly four decades ago, the largest river valley scheme in the country has generated severe criticism from environmentalists for its ecological implications. The planning minister, Madhavsinh Solanki, said that the clearance was subject to the state government complying with the conditions laid down that take into consideration the environment implications.

The first phase of the Rs.6,406.04 crore World Bank assisted project would take six years to complete while the entire project would take 17 years for completion. Encompassing one of the largest canals in the world, the project would take the water from the Sardar Sarovar near Baroda to the dryland areas of Saurashtra and north Gujarat regions.

Peugeot engines for Allwyn Nissan LCVs

Mahindra and Mahindra is developing a new engine in collaboration with Peugeot of France. The engine will be used in Allwyn Nissan vehicles. The new engine — the XD-3 — which belongs to the same family as those used on Mahindra's diesel jeeps is likely to be indigenised within about three years.

M&M-Peugeot engine soon

BIFR backs rehab plan for Titaghur Paper

The Board for Industrial and Financial Reconstruction (BIFR), which was reluctant to recommend the liquidation of the Titaghur Paper Mills, is backing a company proposal for a Rs.78-crore rehabilitation package. The board feels that TPM is part of a core industry, and needs to be kept alive in the public interest. At a meeting on October the board considered various problems of this sick unit and decided to approach the agencies concerned for revival of the company.

Moser-Baer launches floppy disk

Moser-Baer (India) Ltd, a new company, is marketing floppy disks under the Xydan brand name manufactured in technical collaboration with Xidex Corporation, USA. Xidex manufactures Dysan, one of the best-selling floppy disks in the world.

Take the world in your stride.

SUPPORT SYSTEM

800 COMPUTER PROFESSIONA

As you venture further into the vast and mercurial world of computers, take a closer look at the company you keep.

Does it offer you anything more than standard systems and software? Promise to support you with any special services? Develop for you specific computerisation, expansion or upgradation plans? Or actually design products for you?

Chances are that it doesn't. If you're not with PCL, that is.

Re-defining the scope of support services

At PCL, support doesn't merely mean after sales service. It is concern that starts even before you place an order with us. We help you assess your hardware needs. Choose software packages that are ideal for your operations. [Or even develop customized software for you.] Train your personnel on computer utilisation and get your computer centre on the go!

And that's not all. Our major investment in terms of time, money and manpower has been in the area of research. Developing hardware and software products with state-of-the-art information technology. Ha special focus on systems based on the world's most powerful chips 68030, 68000 and 80386 working in environments like UNIX, XE and IRMX. In areas like porting exercises, the update and modifica of operating systems, terminal emulation, local area networking, process control, and data acquisition and message switching syst amongst many others.

Meeting industry-specific needs with special products and service developed for segments like defence, education, steel, railways, petroleum, chemicals, etc.

Exploring the true potential of UNIX

PCL is one of the few companies whose work in UNIX, the ope system of the future, has yielded some dramatic results. A whole of software for scientific, research and engineering applications CAD/CAM/CAE. Special tools and 4 GL packages to help you cre your own application software. And a host of compilers/utilities

ROM PCL

NATIONWIDE

make communication, text processing, database management and other business applications simpler under UNIX.

In addition, we are working on new operating systems and system bridges that aim to combine the advantages of MS-DOS and UNIX. To give you the best of both environments : one simple and popular, the other powerful and versatile. So that your PC, besides working independently, will also be upgradable to one that can work intelligently in a multi-user UNIX environment. Having transparent access to the resources and power of UNIX. Even while retaining the use of the vast library of MS-DOS software.

The proof is in the performance

Our foresight, research and development notwithstanding, at PCL we believe that the day-to-day proof of our service expertise lies in the uptime we manage to maintain on our installations. And that, we are proud to declare, stands at a phenomenal 99.8%!

Add to that the perfect coordination between our service groups – Customer Services, Application Support, Systems Engineering, Industry Marketing and Customer Engineering – and you will understand how we manage to offer all the services outlined above.

And the reason why about 70% of our customers always come back for more! Will the competition ever catch up?

UNIX, XENIX/MS-DOS and IRMX are trademarks of AT & T, Microsoft and Intel respectively

If you travel Executive Class in the air, shouldn't you stay Regency Class on the ground?

At Hyatt Regency Delhi, the book of hospitality translates into the global language of business travellers.

The Hyatt Business Centre, replete with hi-tech facilities, awaits your urgent command. With personal computers, telex and telefax machines, and a discreet secretarial service in attendance.

For those of you who wish to fly higher still, the Regency Club presents an entire floor of corporate luxury.

Thoughtful little touches like special elevator passkeys, a concierge service and personalised stationery complement elegantly appointed rooms and suites. While an exclusive lounge and a conference room complete the ideal executive environment.

If a workout is part of your daily schedule, step into the Hyatt Fitness Centre. A nine-station multi-gym, jacuzzis, chill pools, saunas, steam baths, massages and a swimming pool rejuvenate your tired muscles. While tennis courts beckon the sports-minded.

Four restaurants pamper the executive palate. Valentino's serves the flavours of Italy. Pearls, authentic Chinese. Aangan is a taste of India. While Cafe Promenade brings you the world.

At the end of a long, hard day, unwind at the million-dollar club discotheque, Oasis.

You'll soon find that Regency Class at Hyatt Regency Delhi takes on a special meaning. Hospitality redefined for business travellers.

Indo-Gulf Fertilisers on stream

The gas-based fertiliser complex of Indo-Gulf Fertilisers & Chemicals Corporation Ltd set up in Jagdishpur in Uttar Pradesh has been commissioned ahead of time at a lower cost than projected.

The complex is designed to produce 445,000 tonnes of ammonia per annum, which will be converted into 726,000 tonnes of urea.

Natural gas supplied by Gas Authority of India through the HBJ pipeline is used as feed stock for manufacture of ammonia and urea. The fertiliser complex has its own power generating station to meet its full power requirement.

The technical know-how for the ammonia plant has been provided by Haldor Topse As of Denmark and for the urea plant by Snamprogetti SpA of Italy.

Munshaw Exports holds seminar in Brno

Brno Engineering Fair is an annual international event in Czechoslovakia which attracts exhibitors from many countries. Technical seminars are also held during this fair.

Munshaw Exports of Bombay conducted a technical seminar in Brno on 20 September on the textile bleaching, dying printing and finishing machines manufactured by SLM-Maneklal Industries, Bombay.

The seminar has created renewed interests in Czechoslovakia about Indian textile machinery.

Mather & Platt bags Rs.1-crore export order

Mather & Platt, in its drive to secure export orders, has been successful in getting a bulk order for supply of plurovane pumps and impellers from Peacock Inc, Ontario, Canada worth Rs.1 crore.

Recently, the company also secured a order for design, manufacture, supply, erection, testing and commissioning of 8 CCW pumps from Maharashtra State Electricity Board for its Chandrapur Thermal Power Station worth Rs.3.5 crores.

Elkem introduces wear-resistant material

Elkem Metallurgy Ltd, a company specialising in the field of electric smelting furnaces and allied equipment is diversifying into related areas.

Micro silica is used in various industries such as construction, refractory, power, mining, and general engineering. The Elkem microsilica has physical and chemical characteristics which enhance a vast range of concrete, refractory and polymer products.

P.P. GUPTA

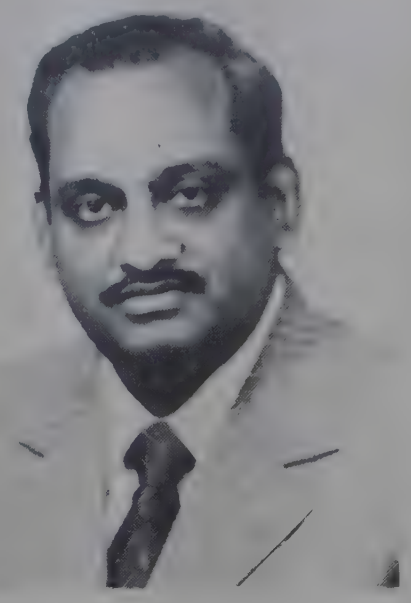
CMC Ltd has bagged a major Rs.10.3-crore order from the Nhava Sheva Port Trust (Bombay's new port now under construction) to implement the central computer system for the port's container terminal. CMC

outbid five other companies (two of them Indian) for the order.

This is the second World Bank-funded project that CMC has bagged; in 1986 it was hired to provide consultancy services for the Narmada project, says P.P. Gupta, chairman and managing director of CMC. The Nhava Sheva order is a breakthrough for the Indian computer industry. "It proves that we are more than capable of executing complex projects in the information technology business."

NARESH K. BAJAJ

Given the growing demand for processed foods in the country, it comes as no surprise that companies are diversifying into this area. "We felt that there was a demand for processed foods and this was borne out by a market survey," says N.K. Bajaj, chairman and managing director of Amrit Banaspati Company Ltd, which is one of the largest vanaspati manufac[illegible] in the country. In 1978,



the company had a sales turnover of Rs.149.24 crores (nine months) with a profit before tax of Rs.3.91 crores.

Bajaj is now promoting another company, Amrit Protein Foods Ltd, located at Ghaziabad which is expected to go public in December 1988. Amrit Protein will produce paneer, desserts, etc, from soya milk. The project will cost Rs.14.5 crores to put up of which Rs.5.83 crores will come from equity and the balance from term loans. The promoters will contribute Rs.3.36 crores.

N.S. KUMAR

A technocrat with 17 years of experience in the electronics industry, both in India and abroad, N.S. Kumar is a co-promoter of a Electro Scan India Ltd (ESIL), a joint venture project which will produce line output transformers (LOTs) for colour TVs with Electronics Corporation of Tamil Nadu (Elcot); Plessey SpA of Italy is the foreign collaborator.

The LOT is a critical component and most of the requirement has so far been imported. Kumar expects a good market for his products. "In fact, our capacity will meet only 30 per cent of the projected demand for 1990," he says. According to Kumar, ESIL has already received encouraging enquiries from TV manufacturers. The company expects to achieve a turnover of Rs.2.5 crores in the first year of production and Rs.6.4 crores in the fifth year.

JAGDISH ANAND

Jagdish Anand, president of the Association of UK Chartered Accountants of India, is organising a three-day conference in New Delhi, beginning 16 November to identify ways in which the accounting profession can promote bilateral trade, joint ventures, foreign investments, transfer of technology and other commercial transactions.

According to Anand, the conference, titled "A Conclave of Financial Minds", will "reflect a breeze of liberalisation in economic administration which is now blowing over the globe".

A large number of chartered accountants are expected from the SAARC countries, which together have more than 850 UK-qualified chartered accountants — India tops with 481.

The conference is expected t promote awareness of the over all economic and commercia conditions prevailing in the re gion. It is hoped that this wi result in the development of permanent forum to exchang professional experience and ideas and identify areas of co operation and specific projects

S.N. KHAITAN

"SWIL's Rs.20-crore modernisa tion cum expansion scheme wil increase the company's turn over to Rs.100 crores within five years," says S.N. Khaitan, chair man. The Calcutta-based com pany of the Satya group manufactures speciality compo nents for the paper industry and non-ferrous strips and wires.

The plant at Uttarpara, We Bengal will be modernised t produce high-grade double layer synthetic fabrics for con sumption by the newsprint an paper industry. SWIL is also se ting up its own machine build ing division at Uttarpara i collaboration with Megathen of West Germany. A big expan sion programme has bee chalked out for the non-ferrou division at the company's stri plant at Nasik.

SWIL enjoys the distinction o being the first company in th eastern region to install an im ported robot. The company al has plans to produce robots in digenously.

LARRY DICKENSON

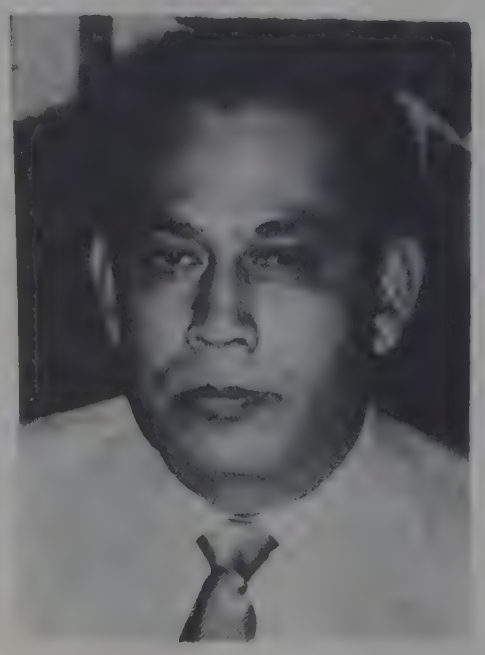
According to Larry Dickenson, vice-president, international sales, of the Boeing Commercial Airplane Company, India is emerging as a major market for commercial aircraft. "It's a booming market here. Even substantial additions to capacity are proving inadequate to cope with the growth in traffic," says Dickenson. Evidence of the importance that Boeing attaches to India is that two senior managers of its international sales division, Keith Bergstrom and Dinesh Keskar, have been given exclusive charge of India.

Dickenson feels that the Boeing product range fits neatly into the fleet requirements of Indian Airlines and Air-India. But so far Airbus Industries ap-

pears to have had a stranglehold on the Indian market. Dickenson argues that the 747-400 which goes into service shortly (with a record 153 orders on hand) and the 737-400/500 more than match the requirements of Air-India and Indian Airlines. "That is why we have launched a major sales effort."

ABUL AHSAN

Abul Ahsan, secretary general of the South Asian Association for Regional Co-operation



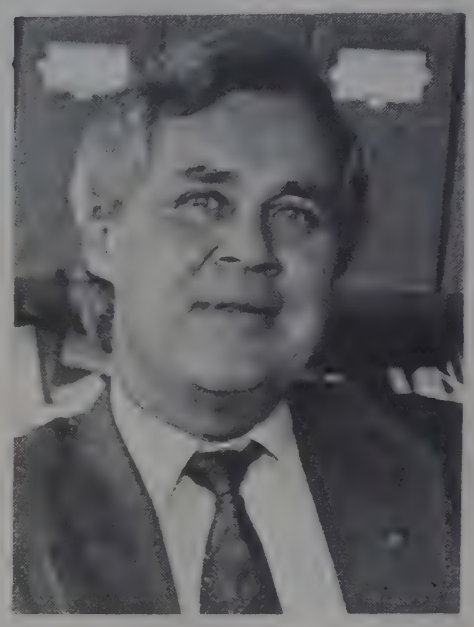
(SAARC), spoke recently at the Indian Merchants' Chamber in Bombay on SAARC's current activities and future prospects. "Although SAARC's achievements so far have been modest, its current objective is to provide only the framework within which discussions can be held," he said.

SAARC had been conceived along the lines of the European Economic Community (EEC), but, according to Ahsan, it was too premature to expect the same level of interactions among SAARC's member countries because of the historical and cultural background.

"SAARC's approach has been to start with non-controversial issues," said Ahsan. Issues such as non-aggression pacts between member countries and water-sharing were not within the purview, and had to be handled at the level of the heads of state, he said. An important issue under discussion is intra-regional trade and the possibility of organising "import substitution on a regional level", he said.

E. R. EVASON

E.R. Evason, president, Society of the Plastic Industry of Canada, was in the country on a fortnight's "exploratory" visit. He headed an eight-member delegation that consisted of representatives of the Canadian plastics industry and the Ontario government. Over 63 per cent of Canada's plastics industry is concentrated around Ontario and reported total sales of Canada $ 15 billion in 1987. It is the fourth largest manufacturing industry in Canada and, according to Evason, will continue to grow through the nineties at twice the country's GNP rate. "So," he says, "the Canadian plastics industry has much to offer India in terms of technology as well as commodity products."



Currently, India's imports of plastic products from Canada is negligible. Considering that in 1988-89 the country's import bill on polymers is expected to be as high as Rs.1,400 crores, Evason sees tremendous potential. "Canadian production of commodity resins is six or seven times the country's requirements. There is export potential here.

ANDREW LAI

"The market for local area networks (LANs) is growing at over 120 per cent in Asia, and India may be part of the coming boom," says Andrew Lai, Asia-Pacific chief of Novell Netware Inc, the world's largest LAN company. "Our networks are already operations at key Indian companies like MTNL, SAIL, Escorts and Rallis."

In India to formally announce a tie-up with Bombay-based Zenith Computers Ltd, Lai said the company offered three types of LAN for users: EOS (entry-level operating system), SFT (system fault tolerance) and advanced netware.

"We picked Zenith for a partner," says Lai, "because of its country-wide support base, high quality of technical talent and a firm commitment to adhere to our standards of servicing."

Novell controls 60.8 per cent of the LAN market in the US alone," says Lai. "This compares with 19.9 per cent for IBM.

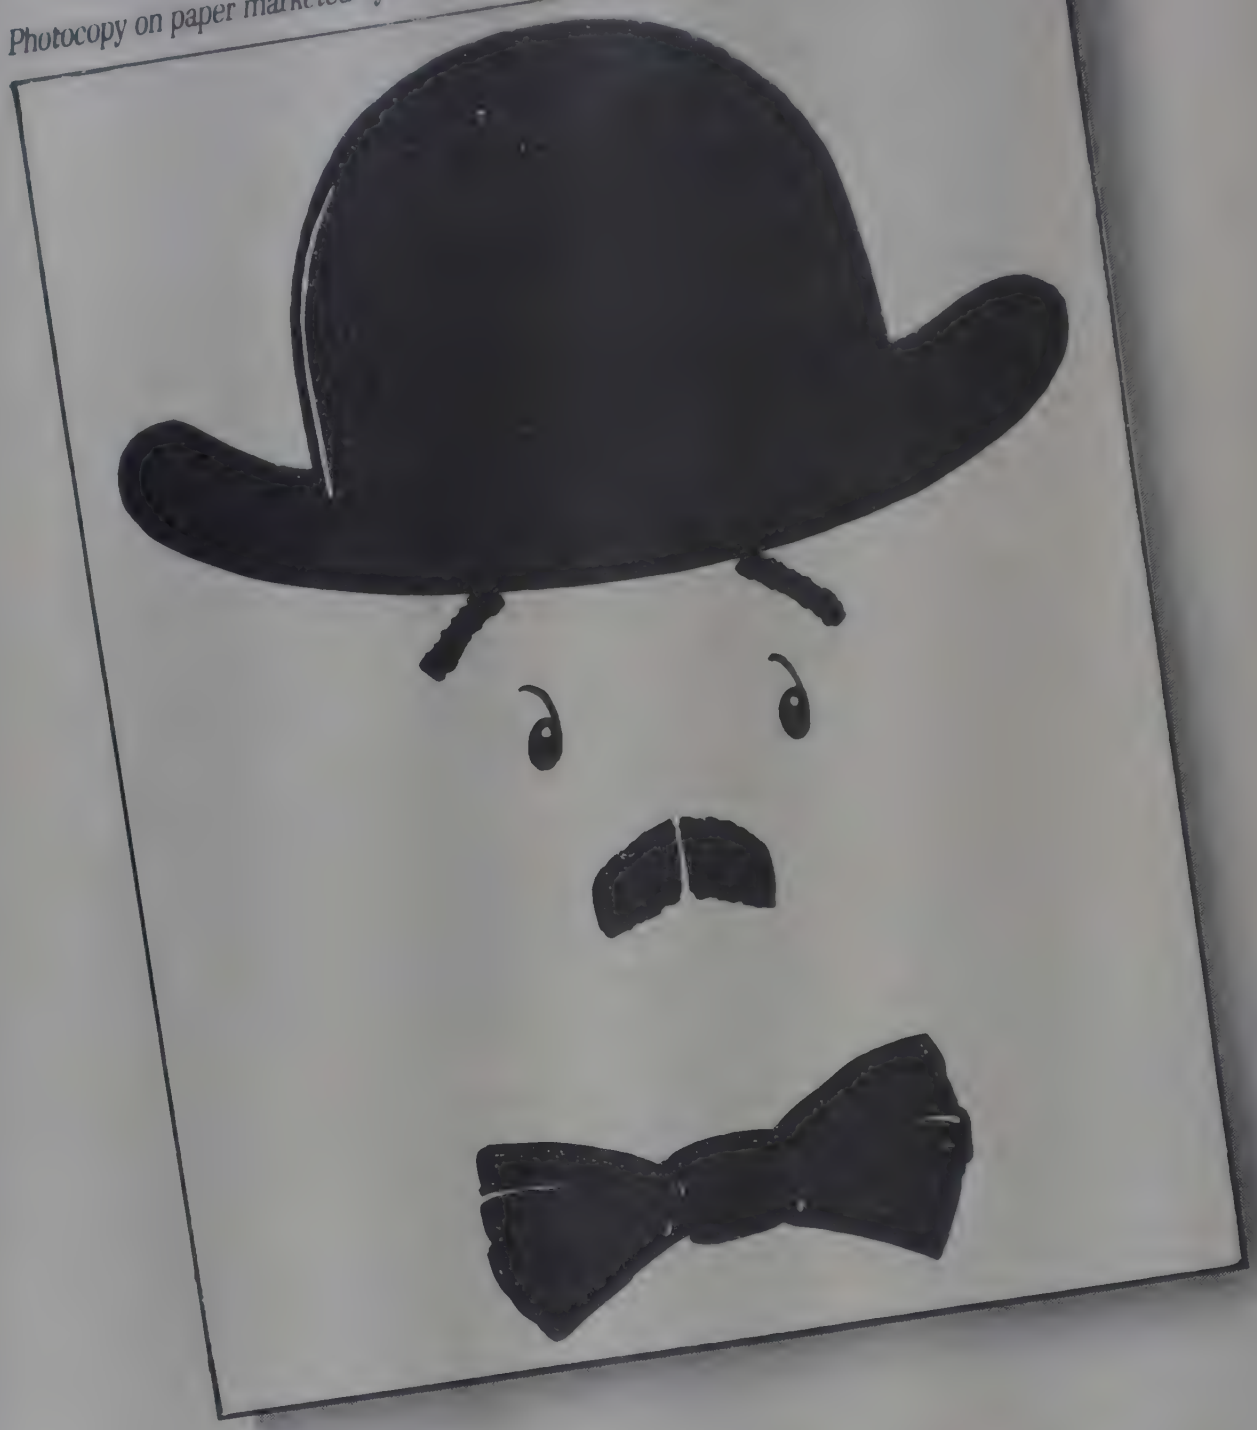
ADAM OSBORNE

"It should be possible for India to be the next Korea," says Adam Osborne, the head of Paperback Software International. Osborne was in India to give a series of lectures sponsored by the National Institute of Information Technology, on the microcomputer revolution.

Unlike Japan or South Korea, there is a large group of English speaking programmers in India who would have no problem in understanding the requirements of the US market, said Osborne. But he felt that India needed to make the transition from shipping programmers to the US to exporting software.

Paperback Software had a turnover of $5 million in 1987, and specialises in marketing low cost, high value software for IBM personal computers. Osborne is more well known as the founder of Osborne Computers which manufactured the worlds first portable computer. The company collapsed in 1983

Photocopy on paper marketed by a leading copier manufacturer.



Any resemblance between

The photocopies above look similar, don't they? They should, because the one on the left has something seemingly in commo with the one on the right, on Sunshine Copier Paper.

In both, the surface has been specially treated to protect the most critical and expensive part of a copier, the drum (Sunshi Copier Paper is 'surface-sized' to eliminate 'fluff' and is that much better for your copier).

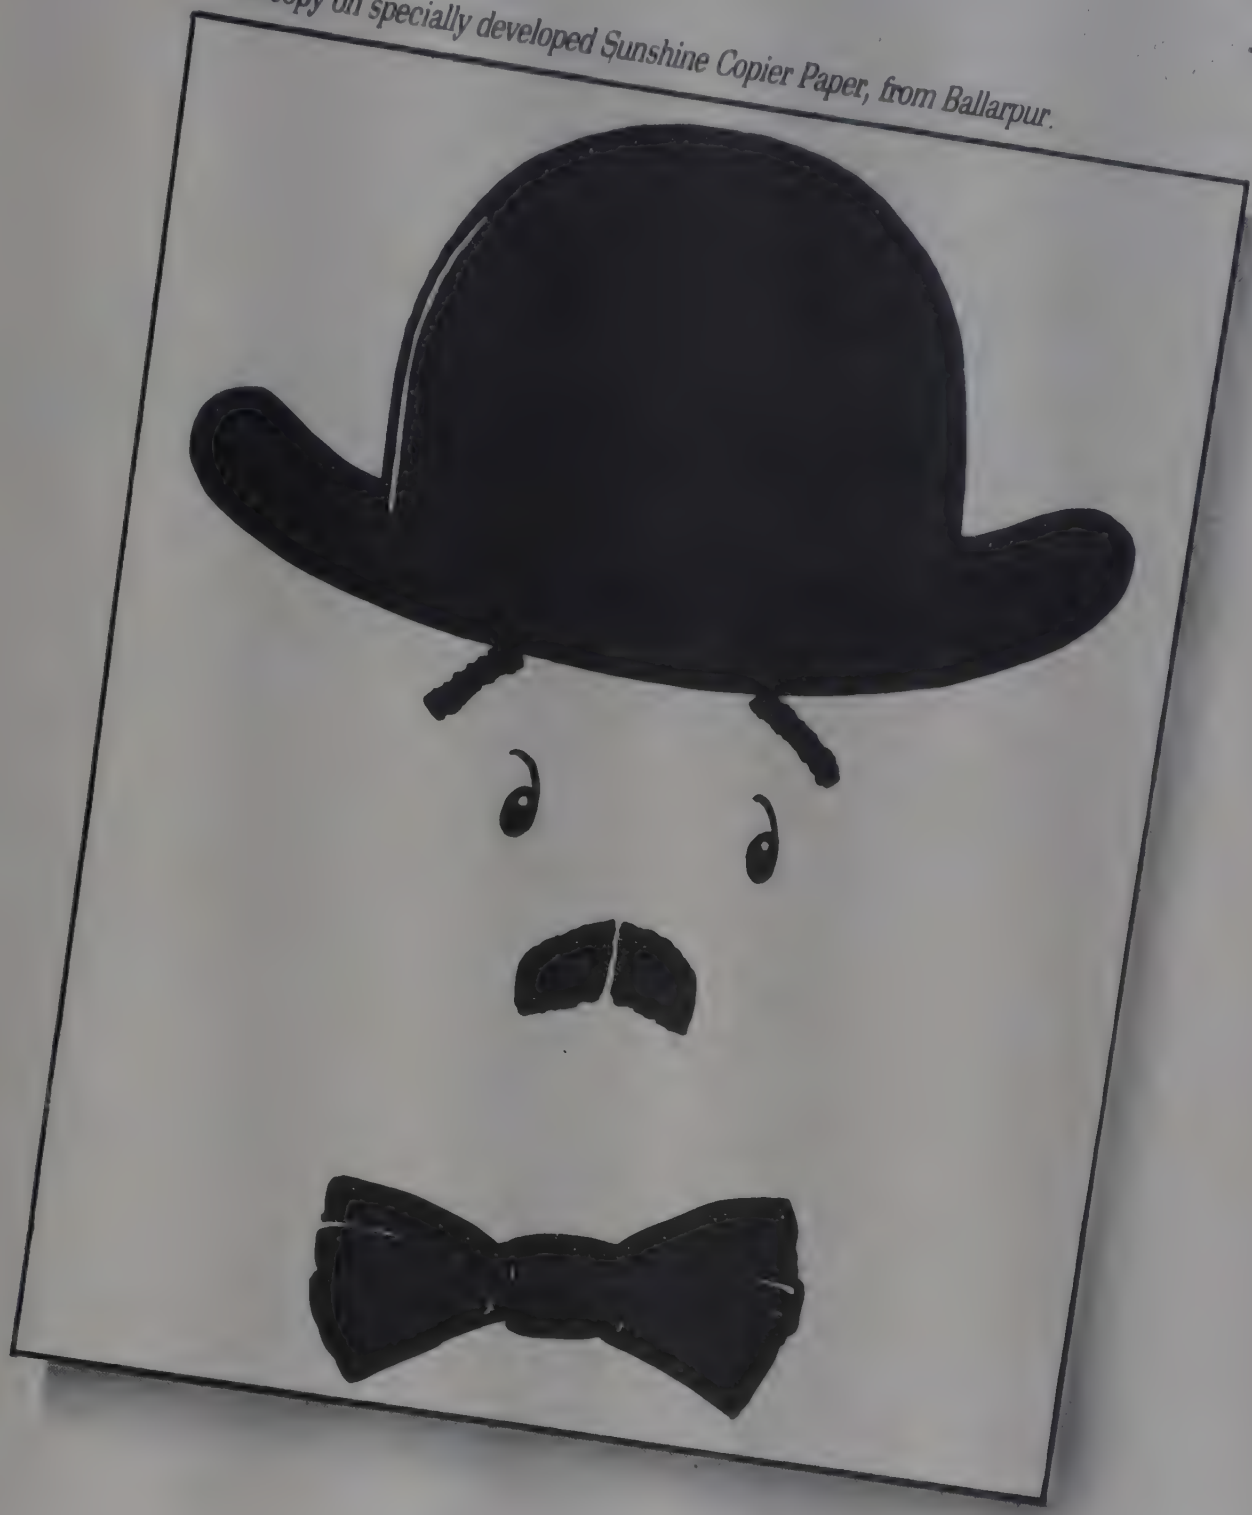
Both are also of the right stiffness and are precision cut to size, to prevent paper jams.

That's the seemingly similar part. The differences are as follows, and can only be called 'the superior features' of Sunshine Copier Paper.

- Its extra sunshine like brightness is because of special high brightness pulp. So, the copies come out sharp and remain orig looking for a long, long time.

The Thapar Group

Photocopy on specially developed Sunshine Copier Paper, from Ballarpur.



two is entirely superficial.

- It is easily available (important if you are using your copier on a daily basis).
- It costs 15%– 20% less (when you're the leading speciality paper manufacturer, a price edge comes easy).

Now can you think of any possible reason why you shouldn't use Sunshine Copier Paper? Tough isn't it?

Sunshine
COPIER
PAPER
For better copier care.

The pathbreakers

Render chemicals and softeners obsolete in water treatment

Now there's a new route to prevent hard water scale on water-cooled circuits of compressors, AC condensors, heat exchangers, generating sets and such equipment.

Colloid-A-Tron. The non-chemical water treatment equipment, brought to India by Inteco-Colloids under technical collaboration with the Fluid Dynamics Group U.K., the world leaders.

The Colloid-A-Tron eliminates the use of expensive chemicals, has no moving parts and requires no maintenance. And is the best, safest and most economical method, saving energy and increasing efficiency of the equipments.

The Colloid-A-Tron is simply fitted into the water pipeline within 30 minutes and requires no running costs,thereby paying for itself in a short time.

What's more, the Colloid-A-Tron is backed by a one year money-back guarantee, a five year replacement warranty and free after-sales service through an extensive national network of Colloid-A-Tron distributors.

Go in for the best there is!

RJEELING

almy days are ere again

s the tourists from Calcutta who make o almost the entire tourist population uring the pujas trickle into Darjeeling, ie town has started dressing itself up gain. The Darjeeling Mail, the most pop-lar overnight train that connects Cal-utta with New Jalpaiguri, the nearest ailhead to Darjeeling, goes packed again. he state-run tourist lodges in Darjeeling s well as in Kalimpong are fully booked or the coming season, as are all the eading hotels in Darjeeling. Says P.N. howmick, general manager of Sinclairs lotel, "We are fully booked for the pujas. Inquiries started coming in September nd the position now is that we are actu-lly having to say 'no'."

Cautious return. Bhowmick, however, varns against high expectations for this ear. "Tourism is not a magic affair whereby the tourists will come instantly ow that peace is declared. People are still cautious. Most would like to wait for he December elections (to the Hill De-velopment Council)."

A number of smaller hotels, which form the bulk of tourist accommodation in Darjeeling, catering primarily to the Bengali middle class are still empty, says N.D. Gurung, an employee of one me-dium-sized hotel. But he is confident that next summer onwards there will be a boom comparable with that of the early eighties and possibly even exceeding it.

The 180,000 tourists who come to Dar-jeeling every year are the mainstay of the hill resort's economy. In mid-1986, how-ever, tourists had to pack up and leave abruptly right in the middle of the peak May-June season following the first ru-mble of the GNLF agitation in the hills. The local people insist that even during the height of the trouble not a single tourist was physically threatened or harmed. Yet, the "bad publicity", kept tourists away. In this period, Darjeeling saw barely 25,000 tourists a year, mainly foreign.

Darjeeling's hotels just about managed to survive. A.K. Prasad, proprietor of Pineridge Hotel, says, "Normally we rent out a double room at around Rs.150 dur-ing the peak season, but during the agita-tion there were no takers, even at Rs.50 a day." Local weavers and owners of shops selling curios and woollen garments too have had a hard time finding buyers.

Things seem to have changed for the better after the recent agreement whereby the hills have been accorded a semi-autonomous status. But it will take a while for tourist traffic to return to old levels. Gautam Dutt, an official with the local branch of the Travel Corporation of India (TCI) says that the number of foreign tourist groups handled by TCI declined from 828 in 1985 to 542 in 1987. However, he adds that over the next few years, TCI expects a larger international tourist traffic.

Not quite ready. This could pose several problems. Darjeeling's civic amenities are wholly inadequate to cope with a sudden inflow of tourists. Apart from poor power and water supply, the Hill Cart Road, the arterial road which connects Siliguri with Darjeeling, is in poor shape. The century-old toy train — one of the major attrac-tions of the region, especially for tourists from countries which have practically abandoned steam locomotives — has not been running since 1985.

The tourist lodge at Tiger Hill — with a panoramic view of the major Himalayan peaks, including Everest — and 14 trek-kers' huts at Sandakphu were burnt down by the agitators. Both were tourist fa-vourites. Also, the government-run tour-ist lodges at Mirik — the newly developed tourist centre which attracted several vis-itors during 1984 and 1985 — have been partially damaged. The lodge and forest rest house at Kalimpong have been badly damaged.

D.K. Lama, secretary of the Darjeeling municipality, says that steps are already being taken to improve the civic ameni-ties so that Darjeeling is ready to wel-come the puja tourists. According to local authorities, Rs.3 crores are to be spent to improve the water distribution system alone.

Ashok Bhattacharya, director of tour-ism, West Bengal, refutes allegations that the government has done nothing for the hills. According to him between 1978 and 1987, the number of beds in private hotels trebled from 807 to 2,860. The capacity of the government-run lodges nearly dou-bled over this period from 354 beds to 690; this, he says, shows that major ef-forts have gone into promoting tourism. For the future, he adds, the state govern-ment has earmarked Rs.1.3 crores for the improvement and expansion of tourist centres at Kurseong, Darjeeling and Kalimpong.

There are complaints though. The cen-tral government tourism authorities, ac-cording to travel agencies in Darjeeling, haven't done any justice to Darjeeling. There have been no publicity campaigns in line with what has been done for Kash-mir or Rajasthan, they point out.

A major problem, according to Dutt, is the number of restrictions a foreign tour-ist faces. A foreigner requires a special permit from the central home depart-ment to come to Darjeeling, another for Kalimpong and yet another for Sikkim. Tourists get irritated at having to pro-duce their permits and passports at every step, says one tour operator.

There is a growing feeling that Darjeel-ing at the moment is almost saturated and more pressure will spoil the atmo-sphere of this hill town. The surrounding areas, which have as much potential for tourism as Darjeeling, could be developed.

■ MADHUMITA BOSE

BENZENE SHORTAGE

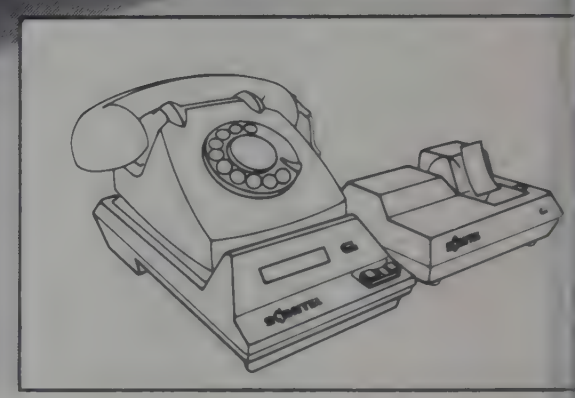
Severe but temporary

Benzene, a very important intermediate for a large number of chemicals, has been in short supply for the last couple of months. As a result, a large number of chemical units, small and large, are find-ing it difficult to run their plants.

Among the larger units, Hindustan Or-ganic Chemicals, Herdillia Chemicals, and Adarsh Chemicals and Fertilisers are the worst affected. These plants produce benzene-based chemicals like phenol, maleic anhydride, nitro-chlorobenzene, etc which are in turn used by a host of chemical units to produce leather chemi-cals, pharmaceutical products, dyestuffs, pesticides, paints, and so on. The short-age forced these plants to shut down completely for quite some time during August and September. Exporters of chemicals lost Rs.20 crores worth of or-ders in the last four months, says an industry insider. After repeated pleas the government allowed some imports. "But even today we are getting just about 50 per cent of our requirement," says a se-nior official of Adarsh Chemicals.

Sudden change. Till last year the supply of benzene in the country was more or less sufficient to meet the demand, though a small quantity used to be im-ported. In fact, after the Bharat Petro-leum Corporation Ltd's (BPCL) aromatic

INTRODUCING SCANTEL



The little instrument that helps cut big telephone bills

Yes. New Scantel helps cut down phone bills.

What is Scantel?

- A microprocessor based device.
- Can be connected to direct and board lines.

What does Scantel do?

- Records all call details — the date, time, numbers and duration.
- Beeps after every 25 units indicating approximately Rs.20/- billed.
- Selection of STD and ISD stations.
- Bars STD & ISD calls after office hours.
- Records 'out-of-order' period.
- Monitors external tapping of lines.
- Can be connected to internal meter for exact and concessional charge read-out.
- Prevents misuse of lines.
- Cuts phone bills by upto 20% during first billing period after installation.

Scantel is brought to you by the Chowgule Group's office automation equipment division. Offering you a nationwide network of sales and service centers . . . 14 branch offices, 32 service centers monitored by over 1 service engineers. To give you the very best.

Get new Scantel — today!

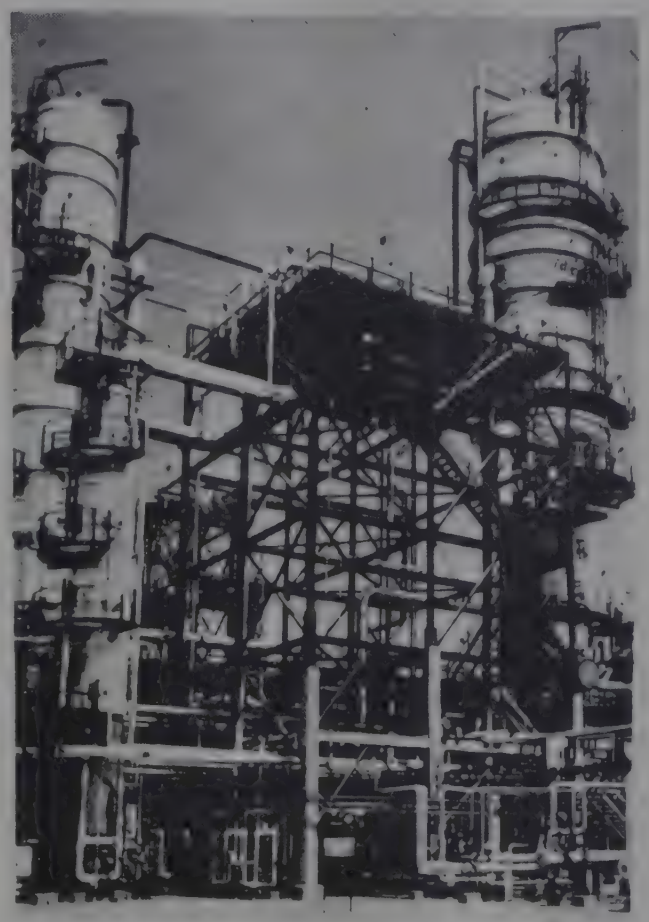
CONTOUR ADS-CIL-70

lant went on stream in late 1985, the nstalled capacity of the industry exeeded the total demand. And according o the Bharat Petroleum officials, its benzene plant's capacity was not fully utilsed because of insufficient demand. "Last year, in fact, we were thinking of exporting some benzene," says an official in the marketing department.

In 1988, the situation changed completely. Two new linear alkyl benzene (LAB is the basic input for detergents) plants set up by Reliance Industries Ltd and by Tamil Nadu Petroproducts Ltd each with a capacity of 60,000 tonnes a year, went on stream around the beginning of the year. Benzene is an important raw material for LAB, constituting one-third of the total requirement in terms of weight. These two LAB plants could manage to get their supply without much difficulty, because they had entered into a contract with Bharat Petroleum. This, however, deprived the smaller consumers of their requirements. There has also been a tremendous spurt in exports of benzene-based chemicals (along with other chemicals) this year. As a result the demand for benzene went up to 14,000 tonnes per month from around 10,000 tonnes last year.

There have been problems with supply too. The two largest producers of benzene, Bharat Petroleum (83,000 tonnes a year) and Indian Oil Corporation (48,000 tonnes), together account for about 64 per cent of the industry's total installed capacity of 205,000 tonnes. The other manufacturers of benzene are IPCL (installed capacity: 33,000 tonnes) NOCIL (15,000 tonnes) and SAIL (26,000 tonnes). These units, however, do not contribute much to the overall supply; half of IPCL's production is earmarked for captive consumption, NOCIL's capacity is small, and production at SAIL plants is erratic. At the end of last year and the beginning of this year, the benzene plants of both IOC and Bharat Petroleum were shut down for days together for regular maintenance work as well as because of technical problems. IOC, however, claims that despite the shutdown it achieved the normal level of production.

Imports permitted. Whatever the reasons, the fact remains that there was an acute shortage of benzene. After dilly-dallying for some time, the government finally allowed IOC, the canalising agency, to import 7,000 tonnes, of which it has so far imported 4,000 tonnes. The STC also imported 2,000 tonnes. Thanks to this, the shortage was eased to some extent.



Reliance's LAB plant: a large consumer of benzene

Meanwhile, the commerce ministry, in consultation with the Chemical and Allied Products Export Promotion Council (CAPEXIL), has drawn up a list of consumers for priority allocation. The export-oriented units are being given top priority followed by those producing import substitute chemicals, and so on. The government has directed manufacturers to stick strictly to the priority list when supplying benzene.

Will imports of benzene continue? Possibly not. Bharat Petroleum, whose annual production so far has not been even half of its installed capacity due to lack of demand, is planning to step up its output this year to its full capacity. Also, the long-awaited benzene plant of Cochin Refineries is expected to be commissioned in February next year. With this, the industry's installed capacity will go up by 85,000 tonnes to reach 300,000 tonnes.

Demand too is expected to increase considerably to 230,000 tonnes after FACT's caprolactum plant goes on stream next year (benzene is a major raw material for caprolactum). But with an installed capacity of 300,000 tonnes, there is unlikely to be a shortfall at least in the next three years. So the current shortage of benzene is in all probability only a temporary phenomenon.

■ DILIP MAITRA

COTTON

Growers on the warpath

On 2 October, around 200,000 farmers from all over Maharashtra – many of whom travelled on top of packed trains and buses — converged on Gandhi Maidan at Kolhapur for a rally organised by Sharad Joshi's Shetkari Sanghatana. The rally was held in protest against the decision of the Maharashtra State Cotton Growers Marketing Federation to retain 25 per cent of the profits it earned last year in a price fluctuation fund.

Buffer against loss. Under the Monopoly Cotton Procurement Scheme, introduced by the Maharashtra government in 1971, raw cotton must be sold to the federation at a guarantee price that is supposed to cover the cost of cultivation. The federation then sells the procured cotton at market prices. Profits earned are distributed to the farmers. Losses are borne by the federation. It is to compensate for this loss that the price fluctuation fund was instituted.

Decrying the 25 per cent deduction, Joshi said that the chief minister had buckled under pressure from the Congress high command. "Deductions for the price fluctuation fund were justified when the guarantee price of cotton procured under the scheme was 20 per cent higher than the all-India support price. Now that the guarantee price is equal to the support price, a 5 per cent deduction for the fund is fair enough," Joshi insists.

Government sources, however, insist that the Rs.309-crore loss suffered by the federation in 1985-86, arose from the difference in the two prices, and finally had to be borne by the government.

Meanwhile, on 30 September, the chief minister of Maharashtra, Sharad Pawar, declared that there was a surplus of Rs.213.40 crores over the guaranteed price for 1987-88. Of this surplus, Rs.121.46 crores had already been paid to the farmers and Pawar announced that Rs.38.59 crores would be distributed to the farmers from 1 October. The remaining Rs.53.35 crores is being set aside for the price fluctuation fund and is the root cause of the Sanghatana's protest.

The Sanghatana has announced a series of agitations to be conducted during the ensuing months. "From this moment," declared Joshi on 2 October, "Sharad Pawar is banned from stepping

Joshi at Kolhapur: generating fervour

into any cotton-producing village. This time the ban will apply exclusively to Pawar, unlike in 1984, when he was the sole exception to our ban on politicians."

"Soft spot." From 14 November, the women's wing of the Sanghatana, Mahila Aghadi, will gherao banks "till the courts decide on the insolvency petitions that the farmers have filed concerning the bank loans provided for farming". The Sanghatana has already filed 92,000 insolvency petitions in various courts all over the state. To protest against the centre's support for synthetic fibres, the Sanghatana has decided to lay siege to Dhirubhai Ambani's Patalganga unit from 12 December onwards. The farmers, says Joshi, will not allow any synthetic fibre at all to be taken out of the plant "in order to force the government to change its textile policy, as Rajiv Gandhi's soft spot for Reliance Textiles is well known".

As already made clear by Joshi, the farmers' agitation is in support of their demand for reducing the deduction for the price fluctuation fund to 5 per cent. The outcome of the agitation is being viewed with some scepticism. Yet, judging by the enthusiasm and the fervour of those assembled at the Kolhapur rally, the Maharashtra government may be left with little choice but to accede to the farmers' demands.

FOOD PROCESSING

Seminars galore

With the approval of the Pepsi project and the formation of the food processing ministry, a whole lot of industrialists are looking at the food processing industry seriously. The wave of seminars being held on this subject is perhaps a reflection of this new-found interest.

Two seminars were recently organised by FICCI and one by the Agricultural and Processed Food Products Export Development Authority (APEDA which comes under the ministry of commerce). Speakers at these seminars pointed out that the thrust in agro exports has been on traditional bulk commodities like tobacco and tea rather than on "processed" foodstuffs. A change in focus towards processing and value-adding was called for.

Negligible value addition. At present, value addition through tertiary and secondary processing is hardly 12 per cent, compared to around 64 per cent in the US. Simultaneously, agro exports, as a percentage of total exports, have dropped from about 30 per cent in the seventies to around 20 per cent in the eighties.

In his keynote address at the National Conference on Agro Exports (organised by APEDA) the minister of state for food processing industries, Jagdish Tytler, emphasized that "there is a need to introduce energy- efficient and state-of-the-art technology available in all segments of the food processing industry". At the same time, he said, not much is going to be achieved by wholesale technology imports, so the import of technology has to be selective.

One complaint heard several times during the seminar was that India's export thrust has been woefully misdirected. When the favourite flavour all over the world is pineapple we insist on marketing mango. When markets abroad have umpteen varieties of jams and jellies fighting for shelf and display space in supermarkets, is there any point in exporting them at higher costs, asked the speakers.

Expensive raw materials. The main constraint to profitable exports is the price of raw materials. From 50 paise a kilo in the mandis, the price of tomatoes catapults to Rs.6 or Rs.8 in the urban markets, from where the food processor normally buys raw stock. At times, during the drought last year tomatoes were selling in urban markets at Rs.24 a kg. How then, can a manufacturer of ketchup match international prices, speakers asked.

At the seminar on food processing and the marketing scenario, it was pointed out that fiscal incentives like concessional rates of interest, re-structuring of excise and custom duties and market promotion support will have to be provided. Recommendations included placing certain items on OGL (open general licence), importing high quality hybrid seeds, tapping foreign investment, promoting large co-operatives, etc. The director of the Central Food Technology Research Institute, Mysore, Dr. B.L. Amla, suggested that measures be taken to bring down cost over-runs in the industry. A viable raw material policy, supported by technology upgradation and energy conservation would go a long way in bringing down cost, he added.

P. Murari, secretary at the ministry of food processing said at the seminar that the centre would be convening a meeting of state agencies in processed foods to fix responsibilities in promoting the industry.

Quality control. At all the seminars, great stress was laid on quality. It was felt that in a market like processed foods, stringent checks need to be made on quality and other parameters like pack-

Everybody's talking about food processing

This could be your last picture of a power cut

Switch on instant power with Gensets from Batliboi

Hundreds of installations all over the country have switched to Batliboi to stay ahead in the power game.

The reasons:

aging. This could start with a well-structured domestic policy which would emphasise the production of "adulteration-free products, full of nutritional value".

It was felt that the popular attitude among food processors that anything can be dumped on the domestic market, would have to be fought through government bodies and consumer organisations. Only a high sense of quality consciousness would enable a quantum jump in exports, Murari emphasised.

■ S. LALITHA

PULSES

Bypassed by the green revolution

On 3 October, the import duty on pulses (moong, lentil, kabuli) was raised from 10 per cent to 35 per cent. The move was initially greeted with alarm by most traders. The wholesale market, however, has not reacted and prices have increased only marginally. On the other hand, retail prices have gone up by Rs.2 to Rs.4 per kg (16 to 20 per cent).

Despite the periodic exhortions to increase productivity in pulses, the green revolution has virtually bypassed pulses. The total production of pulses has hovered in the range of 9 to 13 million tonnes for two decades. The per capita availability of pulses, which was 79.9 grams per day in 1959, came down to 38.9 grams per day in 1985.

Inadequate data. Data on pulses is woefully inadequate. The report of the Comptroller and Auditor General, 1987, says that the agriculture ministry did not have separate data (sown area and production) for irrigated and non-irrigated land in the districts covered under the centrally sponsored scheme for the development of pulses (PDP).

Out of Rs.32.4 crores made available under the PDP to 13 major pulse-growing states during the Sixth Plan, only Rs.26.93 crores was spent. As a result the PDP had no impact in the major pulse-growing states of Bihar, Haryana, Punjab, Rajasthan, UP and West Bengal. In fact, there was a decline in area as well as production during 1984-85 (the last year for which figures are available) as compared to 1970-71. It is estimated that of the total area under pulses, the percentage under irrigation declined from 8.98 per cent in 1970-71 to 7.95 per cent in 1982-83. In some states like Andhra Pradesh, Haryana, Karnataka, MP, Maharashtra, Rajasthan and Tamil Nadu the per hectare yield was much less than even the national average.

Due to these low levels of production the government has permitted import of pulses under open general licence (OGL). Imports have steadily increased from 102,000 tonnes in 1982-83 to 450,000 tonnes in 1985-86 to 800,000 tonnes in 1987.

Propping up prices. According to trade

Pulses: left behind

sources, there are three reasons for the increase in duty. The main reason is to protect the interests of farmers by propping up prices which are expected to fall this year due to surplus production. Production is expected to increase from 12.5 million tonnes in 1986-87 to around 14 million tonnes this year. The other reasons are to conserve foreign exchange (the value of imports in 1987 was Rs.350 crores) and increase revenue collections.

A long-time observer of the pulses market feels that farmers will not really benefit from this increase in duty. What is necessary is a more effective price-support mechanism. The National Agriculture Co-operative Marketing Federation of India (NAFED), the government-designated procurement agency, works sporadically, if at all, opines another market watcher. He feels that NAFED resorts to tokenism by procuring a few lakh tonnes of pulses once in a while. It is necessary to procure pulses in large quantities to maintain prices at a level that will induce farmers to cultivate pulses and maintain the per capita productivity which has fallen drastically.

With both the consumers and the farmers coming out losers, the only people who stand to gain are the middlemen. In the absence of any effective procurement mechanism the middlemen double up as hoarders and create artificial shortages which result in high retail prices. In the short run, the increase in duty may curb imports, but what is needed is more cultivation within the country. This can only come about by ensuring an effective price support mechanism. As one trade source said, "Bring pulses under the purview of Sam Pitroda's technology missions and we shall definitely see an improvement."

■ SHIV TANEJA

Air-India: is there a free passage here?

AIR-INDIA

Flying through turbulence

An administrative order issued by Air-India, withdrawing first class travel facility for all its employees below the grade of deputy director, has boomeranged. Labour relations have soured and passengers have been inconvenienced; worse still, the corporation has suffered a loss of over Rs.1.5 crores.

The order was one of several measures taken to revive the corporation's profits which had crashed by Rs.74 crores. Air-India closed the year ended 31 March 1988 with a loss of Rs.44 crores.

Work to rule. The Air-India Aircraft Engineers' Association (AIAEA) was the first to react to the order. It circulated a note among its members asking them to work to rule. They were soon joined by the Airbus pilots, eight of whom reported sick on one day. This, coupled with a shortage of aircraft, forced the airline to cancel at least 18 flights and reschedule many more between 30 September and 6 October.

According to Mario Gracias, general secretary of AIAEA, the order takes away one of the perks that staff — aircraft maintenance engineers (AMEs), pilots, flight despatchers, flight engineers and some officers — have been getting for close to 25 years now.

The management apparently felt the need to make the first class more exclusive. "The presence of a large number of employees in the first class damages the image of the airline. In fact, Air-India's first class is generally known as the staff class," says a management source in the corporation.

Before the order was issued, the first class travel facility was available to employees in the grade of Rs.1,400-2,480 and above, and their spouses, once a year, subject to the availability of seats. However, according to the management, the number of employees in these grades had risen tremendously since the facility was first granted and nearly 1,300 had become eligible for it. This meant an occupancy of twice that number of seats a year.

According to union statistics, however, not more than 1,000 seats — of a total of 15,000 first class seats a year — are used by employees. A union source points out that since staff passage is subject to load the airline can prevent employees from travelling merely by selling more tickets. He says, "They are only making us scapegoats for their inability to sell." Says Mihir Bandyopadhyay, vice-chairman of the International Transport Workers' Federation (ITE), "There have been deliberate attempts to divert attention from the main issue and lower the trade unions' image by saying that they were agitating for the luxury of first class travel."

Industry trend. The management argues that Air-India is one of few airlines in the world which still gives its staff this facility. The trend in the industry, according to it, has been to stop the practice.

Employees are also put out by the fact that they were not taken into confidence when such a step was being contemplated. "The other airlines negotiated this issue with their unions and compensated the employees well," says Gracias. He does not think that the extra economy class passage offered as compensation to Air-India employees is enough.

At the time of going to press, the unions had had two inconclusive discussions with the management. The management's stand has been that an administrative order could not be withdrawn due to technical reasons and that it was willing to negotiate the compensation. The unions, on the other hand feel that they should not tolerate any "unilateral imposition of an adverse change in service conditions"

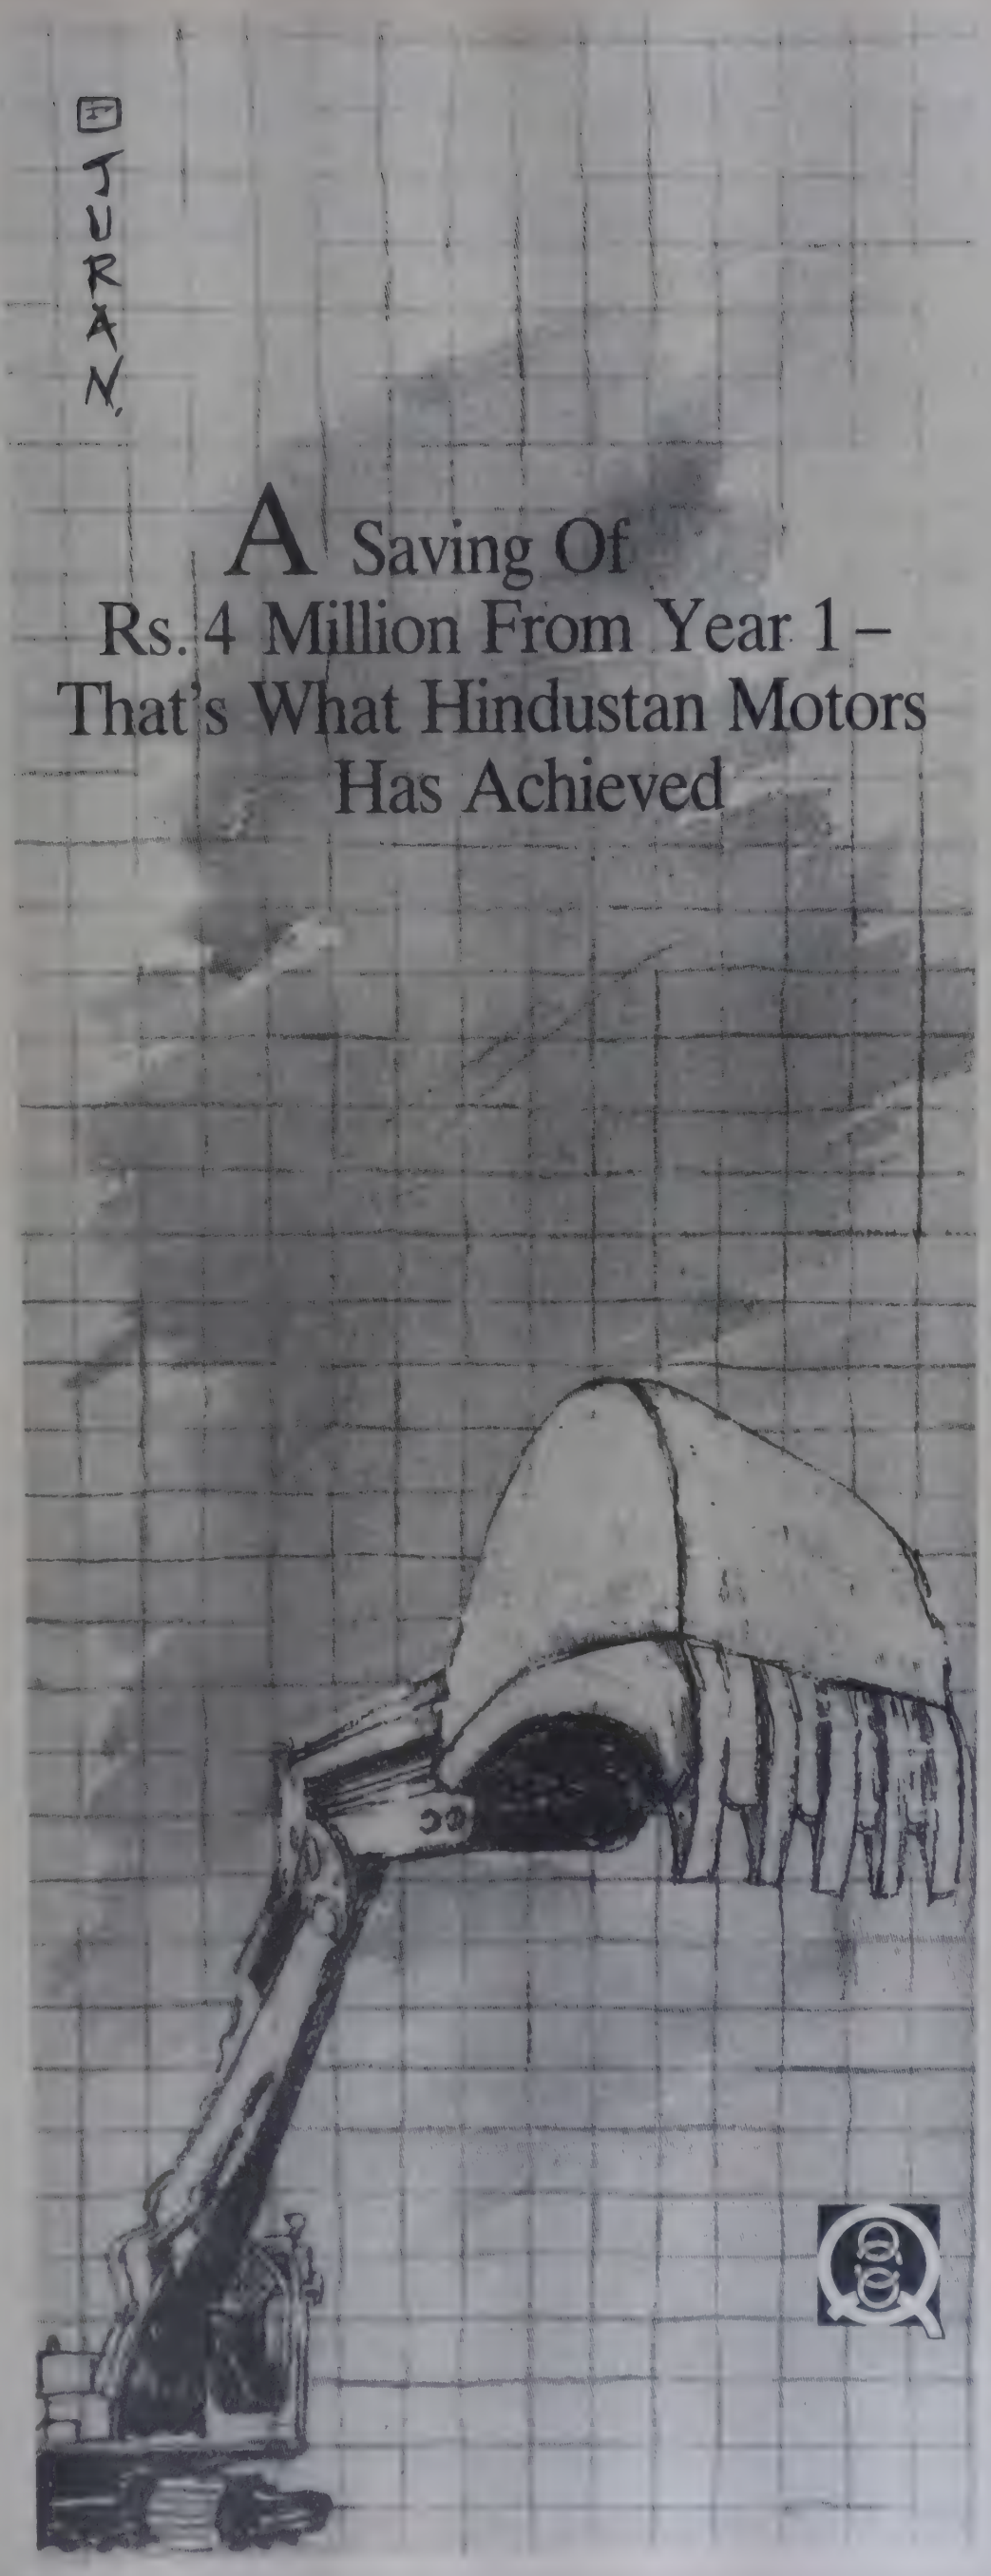
A Saving Of Rs. 4 Million From Year 1 – That's What Hindustan Motors Has Achieved



Juran on Quality Improvement

This is the programme that the Earth Moving Division of Hindustan Motors is successfully implementing. With results that are truly astounding. A saving of about Rs. Four million, with a promise of more to come.

What is this programme?

Most organisations are unaware of the extent to which chronic problems of poor quality can erode profits. These problems add to cost, constrain pricing and slice off market share. Tackling these hidden chronic levels of poor quality and permanently reducing them is the Juran definition of quality improvement.

Through his video series, Juran on Quality Improvement, Dr. J. M. Juran gives managers a structured and proven process to carry out quality improvement projects. The programme is usable by service organisations and manufacturing industries. It assures immediate and continuing results.

The Key Elements of the Programme

Sixteen videotaped sessions guide managers through actual company improvement projects. A comprehensive array of user guides and a Quality Improvement Reference Library provide support. In addition, the Juran Institute offers the assistance of its affiliates.

Let Juran Work for You

Fourteen international affiliates form the global network of the Juran Institute. Qimpro Consultants Private Limited, Bombay, is part of this network which provides access to Dr. Juran's programmes, including Quality Improvement.

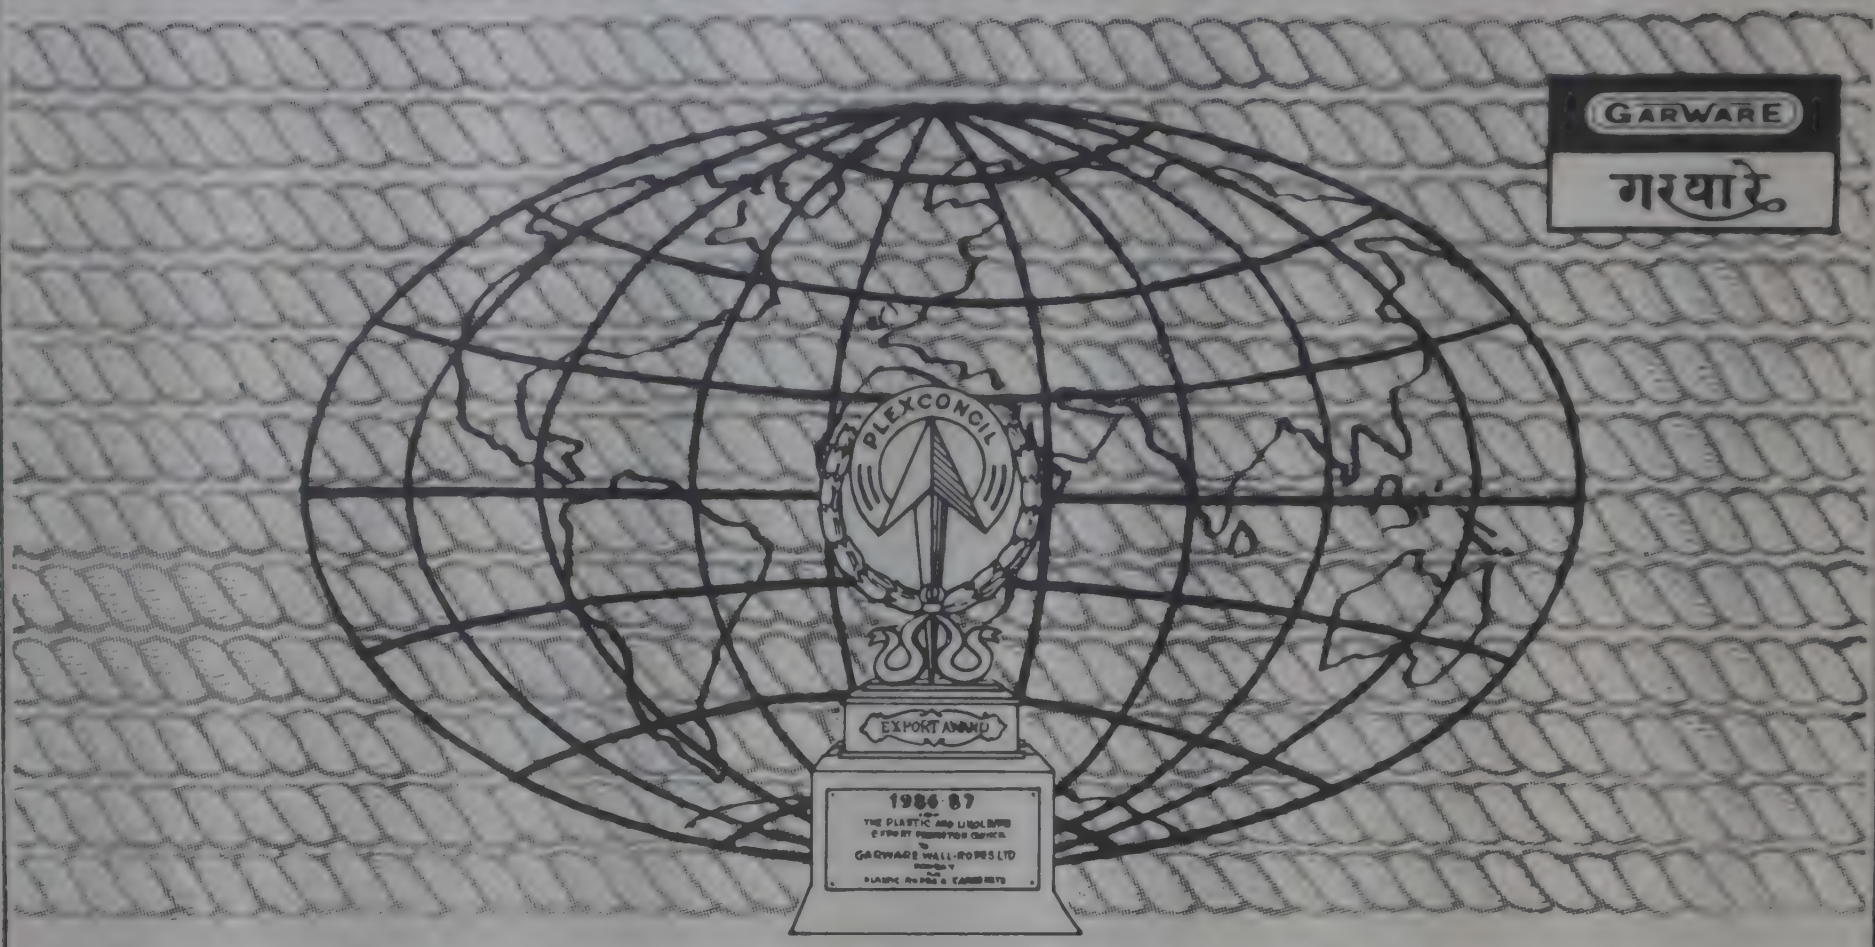
Exploring new horizons is an obsession with us...



No wonder we have roped in the globe – practically the whole of it!

Garfil

ROPES & ROPE SYSTEMS

Commencing as a pioneering Company in India, we are now stepping into our second decade as the most trusted name in the world for Synthetic Ropes and Rope Systems.

With our sound technological and marketing base and backed by a dynamic Research & Development team, our wide range of products have roped in newer markets and applications in India and the world over. Today, we also produce sophisticated Rope and Rope Systems, widely used in oil exploration in India and abroad, and have been entrusted by Dunlop of U.K. with a sole selling agency in India to supply their wide ranging products for the Oil Industry.

Our export network at present extends to over 30 countries including highly developed ones like U.S.S.R., U.K., Germany, Australia, New Zealand, besides the traditional Middle & South East Asian markets. No wonder our export efforts have received wide recognition from the Government of India and Maharashtra. Laurels which any young exporting company like ours, can be proud of.

Emboldened by success on the export front, we are setting up a 100% Export Oriented Unit for the manufacture of Synthetic Ropes at Pune, the first of its kind in the country. We are planning to instal the most sophisticated state-of-the-art machinery in this Unit to ensure the highest international standards for our "GARFIL" range, which has already carved a niche for itself in the world markets.

We believe the world is our market and Government recognitions reflect the strength of our convictions.

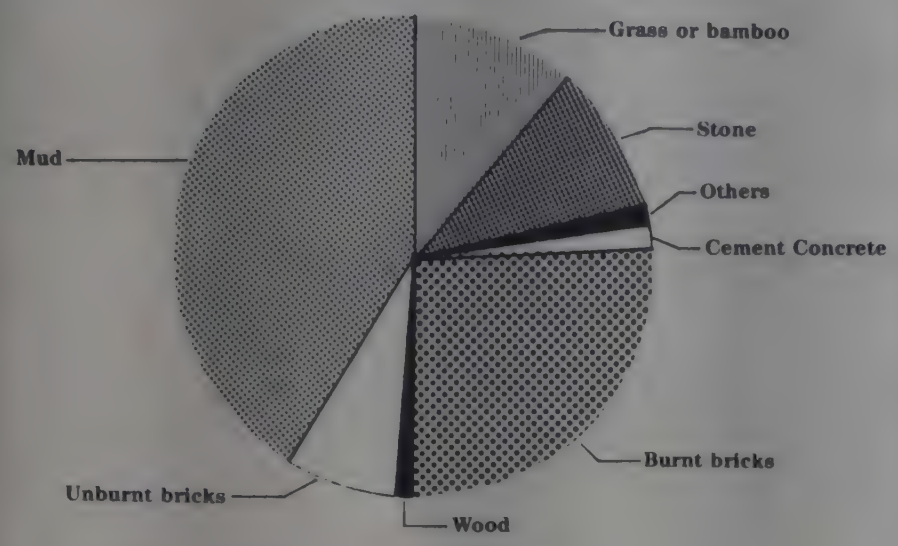
Shree Ada/9'88

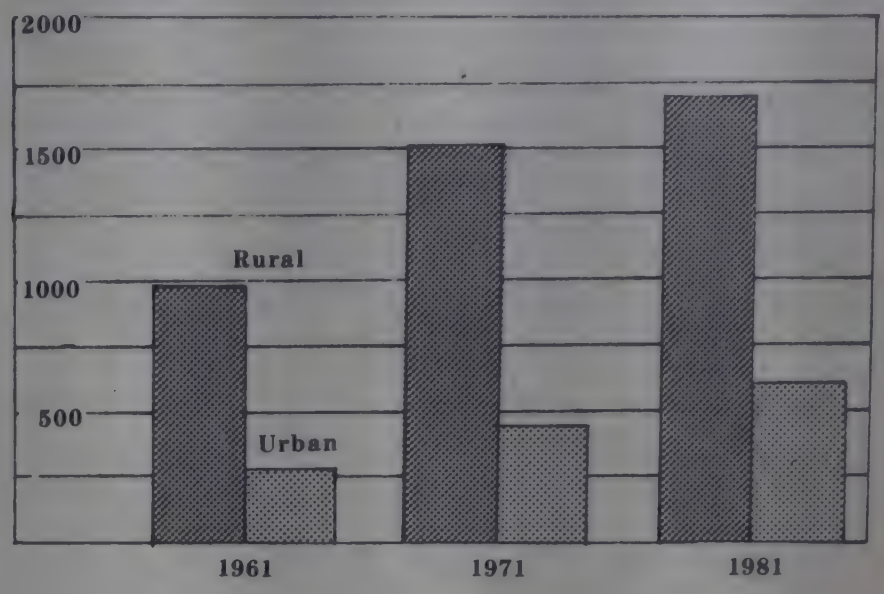
Housing condition as percentage of total number of houses: 1981



In the decade 1971 to 1981 the housing situation for the masses has not improved. Over 60 per cent of all houses are still built of poor materials. Only about 36 per cent of the houses are built of bricks and stone. The majority of the states have a large percentage of houses that are built of poor material. Only Punjab, Haryana, and Himachal Pradesh have over 60 per cent of houses that are built of reasonably good material.

Houseless population

(in '000s)



.In spite of government exhortations about growth in housing the fact is that the number of persons without a roof over their head has actually increased over the last two decades. The situation is particularly acute in rural India where about 1.7 million people are homeless. The housing shortage which was about 25 million units in 1985, is expected to grow to 29 million units by 1990.

Money and banking (scheduled commercial banks): There has been a marginal increase in broad money (M3) and aggregate deposits in the month to 23 September 1988. Though total credit has increased by Rs.1,466 crores, food credit has declined by Rs.252 crores in September. The busy season credit policy envisages a significant increase in credit over the next few months.

(Rs. crores)

	23 Sept 1988	26 Aug 1988	11 Sept 1987	% change over month	% change over year
Broad money (M3)	173,818	173,016	149,495	0.46	16.27
Agg. deposits	133,986	133,555	112,049	0.32	19.58
Bank credit	78,889	77,423	68,085	1.89	15.87
Food credit	1,369	1,621	4,049	−15.54	−66.19
Cred/dep ratio	58.88	58.85	60.76		

Wholesale price index: The wholesale price index for all commodities has declined by 0.38 per cent in the month to 10 September 1988. In primary articles there has been a sharp fall (6.6. per cent) in the price of oilseeds. In manufactured products the price of jute hemp and mesta textiles has risen by 11.1 per cent in the month under review.

(1970-71 = 100)

	10 Sept 1988	13 Aug 1988	12 Sept 1987	% change over month	% change over year
All commodities	434.4	436.1	408.8	−0.38	6.3
Primary articles	404.9	413.0	388.9	−1.96	4.1
Mfg. products	418.8	415.7	386.9	0.74	8.3

Consumer price index: The consumer price index for industrial workers has increased by 13 points (1.7 per cent) in July, as against 1.3 per cent in the corresponding period last year. There is also a sharp rise (1.5 per cent) in the index of urban non-manual workers.

	July 1988	June 1988	July 1987	% change over month	% change over year
Industrial workers (1980 = 100)	795	782	724	1.7	9.8
Urban non-manual workers (1984 = 100)	135	133	123	1.5	9.7

Industrial production index and infrastructure: The industrial producton index increased by 2.1 per cent in May. Power generation increased by 3.8 per cent as compared to August 1987. There was a fall of 5.2 per cent in thermal generation, while hydel generation shot up by 23.9 per cent. Steel production was higher in August 1988 by 7.8 per cent when compared to the corresponding month a year ago.

	Latest month	Previous month	Year ago	% change over month	% change over year
Ind. prod. index (1986-87 = 100)	173.7(5)	170.20	153.00	2.10	13.50

FENNER PB

Fenner

The undisputed leader for over 50 years

You know it's the best, when it's Fenner

India a major beneficiary

World Bank loans to developing countries worldwide exceeded US $ 19 billion, according to the World Bank annual report 1988. Of this amount US $ 14.8 billion or 78 per cent was from the International Bank for Reconstruction and Development (IBRD), and US $ 4.5 billion from the International Development Association (IDA), the soft loan window of the World Bank.

Of this total disbursement, India was a major beneficiary and it received $ 2.3 billion from the IBRD and $ 717.2 million from the IDA. This amounts to about 16 per cent of total World Bank lending.

Some of the major projects in India funded by the World Bank during 1988 were: a $ 360 million national dairy project; a $ 350 million drought rehabilitation project; $ 350 million assistance to improve the operational performance of a state electricity board in Uttar Pradesh; $ 295 million to develop the second phase of the offshore South Bassein gas field; $ 360 million in technical and financial support to the two largest development finance institutes to help them meet their requirements for long term resources; a $ 390 million railway modernisation project which includes, among other things, the renewal and upgrading of 4,000 track kilometres on heavy density freight routes and a $ 250 million loan to the Housing Development Finance Corporation which should go a long way in augmenting the resources of the HDFC.

The projects assisted by the World Bank have in certain cases been a mixture of IBRD and IDA loans. But what is more interesting is the diversity of lending to different projects which helps to build up and strengthen the infrastructure of the country.

The Asia region as a whole received $ 7.7 billion of which India was the largest beneficiary followed by China and Indonesia. The report, however, stresses that in spite of the great diversity of countries in the Asia region, the surge in exports was strong amongst most countries.

India in particular has witnessed a strong growth in industrial production coupled with an impressive performance in manufactured exports, which in the past year grew at about 25 per cent in value (10 per cent in real terms). This growth was despite the fact that there was a severe drought which led to a slowdown in the rate of industrial production. The report attributes this rather good performance by industry to the industrial policy reforms and liberalisation of the economy. For instance, the telecommunications industry responded by opening up the telecommunication-equipment manufacturing to the private sector. The electronics and computer industries have benefited by the liberalisation of imports.

The growth in manufactured exports is the result of a combination of factors. The new export-import policy has to some extent liberalised imports and given additional incentives to exporters. Also, exports were facilitated by the de facto devaluation of the Indian rupee, especially aganist the deutschmark, yen and sterling.

The report is appreciative of the way India succeeded in mitigating the worst effects of the drought. This to a large extent was due to timely government action and the existence of a well established institutional infrastructure to deal with calamities.

In this regard, India was supported by the Bank through a drought assistance project amounting to $ 350 million. This timely assistance facilitated imports of agroindustrial inputs, petroleum and petroleum products, nonferrous metals, as well as industrial equipment and spare parts.

Be that as it may, the focus of the Bank's operations, ie, poverty alleviation, is still evolving. A status report on the problem of poverty has concluded that there is much about poverty and how to address it effectively that is not known, and solutions to counter this problem have still to be found.

FIRST REPORT OF THE NINTH FINANCE COMMISSION

A tactful performance

The Ninth Finance Commission's recommendations, as expected, have been welcomed by some states like Maharashtra and criticised by others like Gujarat, Karnataka, Kerala and West Bengal. It seems the Commission has been judged in these quarters by the financial transfers it has recommended (*see table*). But the more important questions, whether the Commission has fulfilled the high expectations that have been raised by it, and the implications of its recommendations for the Eighth Plan, need careful consideration. Since the report covers only the last year of the Seventh Plan (1989-90) and by and large the Commission proceeds on the basis of the 1988-89 estimates of the Eighth Finance Commission, it needs in many cases a strenuous effort to see the problems ahead.

In making its recommendations, the Commission was asked to "adopt a normative approach in assessing the receipts and expenditures on the revenue account of the states and the centre". This is a departure from the "gap-filling approach" of the earlier Commissions, where the receipts and non-plan expenditure of the centre and the states were taken broadly on the basis of the actuals and trend growth rates.

The Commission however stuck to the gap-filling approach in the case of special category states where the nature of the terrain and the structure of the economy do not permit the adoption of norms, but tried to work out the tax revenue norms on the regression basis for 14 major states. These states were sub-divided into three groups: four high income states; five middle income states; and five low income states.

Both Tamil Nadu and Gujarat raised the issue of compensation for revenues lost due to prohibition (estimated at Rs.388 crores and Rs.238 crores), which was at least once regarded as national policy and which the Constitution had provided for. The Finance Commission paid no heed to this argument.

Applying the tax norms, the Commission found that for Gujarat, Maharashtra, Karnataka West Bengal, Bihar and Orissa, the trend tax revenue estimates were lower than the normative ones. Since 1989-90 is the first year of application of tax norms, some downward adjustments were made in the differences, but this was to serve as a signal for 1990-95 when the full rigour of the new discipline will be felt.

A different approach to tax norms, the Representative Tax System Approach — which requires the estimates of proceeds under each tax category at the average rate of all the states put together, and will therefore require more time to work out — was to be tried for 1990-95. While in principle the same treatment was to be given to central tax revenues, a practical norms approach could not be found, and the Commission had to use the previous approach.

The evolution of expenditure norms is a difficult job and could not be attempted in the short time at the Commission's disposal. It therefore by and large adopted the Eighth Finance Commission's 1988-89 estimates with adjustments for price increases and a 3 per cent increase in real expenditure. Separate specific calculations were made for items like interest on debt, pensions and elections. Severe warnings were sounded against the adoption of new social welfare schemes like old age pensions, pensions for destitutes and widows, and unemployment benefit, and even the extension of the coverage of old ones discouraged. It was made clear that these would have to be financed out of the states' own resources. No further increase in personnel or non-plan items of expenditure was to be permit-

ted. Strict limits were also laid down for central subsidies.

The Commission was not asked to confine itself to non-plan revenue and expenditure. This change required it to know the size of central and state plans on revenue account, and the revenue resources to be mobilised for the plan. Since the Seventh Plan had already been finalised, it was easy to work out revenue plan assistance on the basis of the entire Seventh Plan, assistance to the states, the proportion to be given in grants, and the Plan grants drawn so far. Even then, items like centrally sponsored schemes and the states' share in external assistance had to be left out.

To avoid overlapping of jurisdiction, the Finance Commission stated that it did not intend to encroach on what it regarded as the preserve of the Planning Commission. It only laid down the Plan grant for each state but not its sectoral distribution.

When, however, it comes to 1990-95, the Finance Commission will find no such easy way out. Will the size of the Eighth Plan be known and its distribution among the centre and the states already be decided on by the Planning Commission before the Finance Commission applies its mind to it? The capital account of the plan has hitherto been outside the jurisdiction of the Finance Commission and this constitutes the major part of the plan. Revenue plan expenditure, which may legitimately be a part of the Finance Commission's functions, is decided along with capital expenditure as an integral part of the total plan. Unless the Finance Commission works almost as a part of the Planning Commission or it takes a great deal of responsibility in plan formations, its task will be formidable.

There is a still more difficult situation that could ensue. Even the limited norms that the earlier Finance Commissions laid down have not been observed; and there is a legitimate apprehension that the much wider norms the Ninth Finance Commission lays down may be departed from. In the past there was a safeguard as the Planning Commission estimated plan surpluses independently of the Finance Commission, more realistically and at much lower amounts.

The state plan size was decided by the Planning Commission in consultation with the states. The latter were anxious to get as large a share as they could for themselves and the Planning Commission used it as a lever to press the states to economise and mobilise additional resources for the plan. Plan assistance was also used as a pressure mechanism to make them accept the advised plan pattern, but there was no laying down of norms or prescriptions. All these past procedures and practices will be upset. It is difficult to visualise the new plan and assistance patterns that will emerge.

One must congratulate the Finance Commission on the tactful way it has performed many of its functions. Central state financial relations is a sensitive subject, and the way the terms of reference were framed by the central government without adequate consultation with the states that the centre will be dealt with by it in the same way as the states in all relevant aspects

The risk is great in the present climate when for the last eight years we have been financing revenue expenditure out of borrowing. The Commission has been asked to keep in view the objective of "generating surpluses for capital investment", and it has taken this point seriously. As one goes through its report, one can sense its agony at the grave financial situation the Indian economy has been facing, and its determination to save the situation. But as it rightly states, the norms it can lay down are only for the purpose of determining financial transfers. These can prove powerful only over a long period if the major problem lies with the stable states, and people are keen on development. As it is, the Centre can also depart from the norms and its power to do so is greater as it can borrow larger amounts and raise more by deficit financing. The Finance Commission can only prove effective if its observations are taken seriously by Parliament and the union cabinet. Of that there is not much evidence.

One must congratulate the Finance Commission on the tactful way it has performed many of its functions. Central state financial relations is a sensitive subject, and the way the terms of reference were framed by the central government without adequate consultation with the states that the centre will be dealt with by it in the same way as the states in all relevant aspects.

There are only two adjustments it has made about which one might feel somewhat disturbed. It has reintroduced some weightage in the distribution of income tax and excise levies among the states to statistics of persons below the poverty line, and it has recommended grants for special problems of urban decay and environmental degradation. Is it worthwhile for every Finance Commission to challenge its predecessors on small points and start minor controversies? Are not problems of environment and urbanisation essentially planning problems?

THE WONDER THAT IS INDIA

The India Magazine now gives you India like never before.

Well researched, informative articles on India, her people, culture, traditions, festivals, folklore, crafts, music, environment, wildlife.

Written by renowned scholars and leaders in their fields sharing their experiences and information, discovering the wonder, the charm that is India.

Every month, every issue — informative, original, beautifully produced, to be read, enjoyed and preserved.

The India Magazine — for you and your family, to treasure and refer to for years to come.

Why did Ghose have to go?

The mystery of Bhaskar Ghose's removal from Doordarshan gets more unfathomable everyday. The search for a replacement is on and the new incumbent will have to battle the constant suspicion of pliability. If the government expects the new director general to play a Goebbelesian role, one thing is certain — it will be a difficult task from the very start because Ghose had ushered into Doordarshan an era of Glasnost that neither viewers nor producers are likely to forget in a hurry. He had begun the process of setting standards and norms, of footage for the opposition — in short, fairness to the subjects as well as the audience.

But ultimately, a bit like Doordarshan's audience itself, Ghose was a captive. Inexplicably, barely a month after the PM had congratulated him on the good work he had done, Ghose was gone. That aside, there was support for Ghose even from his direct boss, G.K. Arora. As secretary for information and broadcasting, Aurora was prime mover of the attempt to make Doordarshan a more credible medium. And, indications available suggest that support for this shift in policy had come from the very top.

More outrageous than the act of removal was the manner in which the whole matter was handled. Ghose received a call on a Sunday afternoon and was practically ordered to hand over charge immediately. He, rather wisely, did it in a more civilised manner on a working day. The face-saving device of shifting Ghose to the department of culture has done little to assuage the feelings of the bureaucratic rank and file who have seen dismissals of this kind happening once too often in Rajiv's government.

Insiders at the centre claim that the removal of Ghose represents further evidence of Rajiv Gandhi's rapidly weakening political clout within his own cabinet. There are, in fact, indications that Ghose may have been a kind of ritual sacrifical offering in Rajiv's attempts to appease members of his own team. If that were so, there is need now to assess what the strengths of the newly emerging power blocs are. These formations could well affect the way the Rajiv government (if that is still the correct term for the incumbent administration) begins the process of preparing for the polls.

Yet, somehow the power bloc that allegedly had Gandhi's hands tied on the Bhaskar Ghose business does not seem to be a credible force. It is difficult to imagine Ajit Panja, H.K.L. Bhagat and K.C. Pant, who have little in common, form a lobby on an issue such as this. It is more likely that individual ministers, in a bid to both assert their authority as well as play their own games, are using figures within the council of ministers to achieve their own ends. Sometimes the reverse happens, as when a prime ministerial whim combines with a minister's passion to overrule the rest of the cabinet (witness the Pepsi decision). Whichever way the process works, the net result seems to be the repudiation of the spirit of cabinet government — never a very strong point of central governments form many years now.

Undermining itself

There must be some solace in company. Nothing else could explain the attempts of the beleaguered central government to destabilise Congress(I) state governments. Most political observers agree that such a process does seem to be on. In Uttar Pradesh, where V.P. Singh's influence is greatest, the reigning chief minister, N.D. Tiwari, is made to feel insecure. It is an open secret in Lucknow that Veer Bahadur Singh, who made way for Tiwari and earned a berth at the centre, still dispenses favours and carries clout in state matters.

To make matters worse it is reported that Tiwari's reports to get clearances for several large and pending projects seem to have run into rough weather in the very ministry which Tiwari presided over till recently.

In Gujarat, Maharashtra and Madhya Pradesh the tale is the same. Chief ministers are uncertain how long they will last. In all of them, arch rivals of the chief ministers seem to be rearing their heads with central support.

As a result of this induced instability, some party observers believe that local party outfits are demoralised and in some cases defunct. By inducing uncertainty, to ensure that nobody pays too much attention to the mess at the centre, the Rajiv government may well be, according to these observers, causing longer term damage.

As if creating disturbances in Congress-controlled states were not enough, last week, there was increased speculation of a change in Punjab. There were reports that Governor S.S. Ray would be eased out, and given a cabinet berth at the very least, and a new strong man brought in; all this cannot be doing much good to adminsitrative morale in the state.

While much is being made of attempts by the PM to soothe ruffled feathers in Madhya Pradesh Congress circles, during meetings with Motilal Vora and the chief minister, Arjun Singh, there is little evidence that attempts at destabilising Congress ruled states will come to a halt. For the moment at least, such short term ambitions seem to be sufficient fuel for central activity. All that the chief ministers can hope for is that, if polls in Tamil Nadu are announced, attention may be diverted away from Congress controlled states to those that they hope to capture.

Loan talk

Joyous announcements of cheerful export figures, notwithstanding the disquiet on the balance of payments front, are beginning to be made. While it may be too early for whistle-blowing, there are those in New Delhi who believe this is an indication that India may once again be on the verge of borrowing more money from the multilateral agencies.

A steady stream of officials has, it is noted, been winding its way to Washington on one pretext or the other. The IMF chief also made a visit to India, albeit on a completely different mission — namely, giving a speech on the fact that imports are mounting steadily. The result: more suspicion.

The reason for the speculation, however, is that the recent changes in banking regulations were announced when the IMF chief just happened to be in town. The government has been proudly bandying the decision as one which marks a move to deregulation of the financial markets. Unfortunately, not many people seem to have bought this line.

As to the timing of the predicted loan, sceptics suggest that the negotiations for the loan will probably be completed only when the finance secretary's term ends. Given that the government has not decided who to nominate for the top Indian slot at the World Bank, all these decisions seem to be interlinked. And, in the meantime the million dollar question still hangs fire. Will we or won't we borrow?

■ DILIP CHERIAN

L&T

The Reliance alliance

With the Ambanis of Reliance becoming the largest non-institutional shareholders of engineering giant L&T, the intense speculation about who will guide its destiny after chairman N.M. Desai retires in March next year has now been put to rest. And the Reliance group seems all set for a scorching pace of growth, aided perhaps by a few more "strategic alliances"

NAME Reliance Industries Ltd.
REGISTERED ADDRESS Maker Chambers IV, 3rd floor, 222 Nariman Point Bombay 400 021
YEAR OF INCORPORATION 1966
CHAIRMAN Dhirubhai M. Ambani
PLANT LOCATIONS Patalganga, Maharashtra Naroda, Ahmedabad
BUSINESS ACTIVITY Synthetic fibres, rayons, nylons, and detergent intermediates
RECENT SHARE PRICE Rs 208
DIVIDEND 25 per cent

"Dhirubhai Ambani asked me one day, 'How's your company doing?' I replied, 'It's not mine. It belongs to 1.5 lakh shareholders. It's faring fine.' Dhirubhai then went on to ask, 'Can I purchase some shares?' To which I replied, "Go ahead. Anyone has the right to do so. I have no objection!"' — N.M. Desai, at the company's EGM held in Bombay on 10 October.

On the face of it, a straightforward share acquisition. Beginning July, the Ambanis of Reliance Industries picked up over 12 per cent of the Rs.56 crore equity capital of engineering giant Larsen & Toubro (L&T), at a cost of at least Rs.70 crores. In the process, they drove its share price to a high of Rs.148. Come September and the L&T board decided, on the 23rd, to co-opt two new directors — Mukesh Ambani, the quietly confident, elder son of Reliance's irrepressible chairman Dhirubhai Ambani, and M.L. Bhakta, solicitor, Kanga & Co, and a trusted director on the Reliance board since 1975.

When *Business India* talked to Henning Holck-Larsen over the telephone about the Ambanis acquiring a stake in the company he founded, he said, "It is a good development." However, a month ago, when *Business India* had asked Larsen whether a family-owned group could run L&T, he had said, "Only a professional management can run the company."

When Desai, at the company's extraordinary general meeting (EGM) held in Bombay last week, said, "Anybody can buy our shares, we cannot block their transfer. We believe in corporate democracy," he was hardly convincing. If it really were all that simple and straightforward, there was no reason for so much secrecy and denials of any board changes on the part of a management that prides itself on professionalism and a commitment to shareholders.

DENIALS

For months there was intense speculation about the Ambanis making a concerted bid for L&T. (*Business India*, in its issue of 25 July 1988, was the first to report that the Ambanis were eyeing L&T). The Ambanis denied it while the senior L&T management, led by chairman N.M. (Nicky) Desai, turned incommunicative. As late as 26 August, when the L&T board met to consider the Rs.80-crore convertible issue, senior company officials denied there would be any change in its composition in the near future. (The corporate grapevine has it that this day fell in the inauspicious month of *shradh*, so the co-option of Mukesh and Bhakta was postponed!)

But now, all the uncertainty is put to rest. Press reports based on partial information, market rumours and hearsay have been proved right:

Mukesh Ambani: quietly confident

Bhakta: a trusted man

the formidable Ambanis have indeed emerged as the single largest non-institutional shareholders of L&T, edging out rivals like Rahul Bajaj, Aditya Birla and the ubiquitous Chhabria brothers. And in the process, they have entered the takeover game with a bang. It is clear that from now on the Ambanis will not hesitate to acquire companies they consider strategic to their business objectives. Understandably, this has given big business the shivers — the Ambanis' formidable financial muscle and political clout is legendary.

"BASELESS"

Last week itself, a rumour on Dalal Street that Siemens India was next on the Ambanis' shopping list sent its equity zooming to a dizzy Rs.120. The Ambanis dismiss the rumour as "baseless", saying that they are only negotiating with Siemens to set up the captive power plant at Hazira for their petrochemicals complex. (But then they denied having any interest in L&T too — so nobody's ready to believe them.) *Business India* also learns that the Ambanis are seriously considering buying into IEL Ltd (51 per cent equity held by ICI of UK) and Bombay Suburban Electric Supply Co Ltd (67 per cent held by institutions).

By all accounts, Dhirubhai Ambani and Nicky Desai came to an understanding some four months ago whereby Ambani would acquire a significant equity stake in L&T and gain representation on its board. Publicly, of course, Desai dismisses any such preconceived "alliance". But few will believe him. At the EGM held in Bombay last week, Desai told shareholders, "I do not know for sure whether the Ambanis have bought L&T shares. We have not received any shares for transfer." But he also added, "However, I believe they have bought shares." He further revealed that Mukesh Ambani and M.L. Bhakta, both Reliance directors, would join the board the next day. "Mukesh is young but a very capable person," he said. "Bhakta is a reputed professional with Kanga & Co and a director of Reliance Industries since 1975." Moreover, just a few days before the EGM, Desai along with five key directors, met Dhirubhai Ambani at his office in Bombay's Nariman Point and assured him of their full support.

Why did Desai, the man who built L&T along with Henning Holck-Larsen and the late Soren Toubro over the last four decades, "ally" with the Ambanis? Off-the-record interviews conducted by *Business India* with a cross-section of industrialists, merchant bankers, L&T insiders and others in the know reveal that Desai may really have had little choice but to ally with a powerful family house. The bell began to toll last year when Dubai-based corporate raider Manu Chhabria started picking up L&T shares from the stock-markets. By end-1987, Chhabria is believed to have picked up a little under 1.5 per cent of the company's equity capital through some investment companies.

L&T's equity is widely held by the public. Apart from the institutions, which own over 40 per cent, no single shareholder owns more than 1.5 per cent (*see table 1*). This makes the company a prime takeover target for anybody who has enough money power and the blessings of the institutions (read New Delhi).

Given the concerted bid by the Chhabria brothers and the hotting up of the corporate takeover game, which the Rajiv government appears to be acquiescing in, Desai must have realised that sooner or later L&T would be up for grabs. Moreover, the amendment to the Companies Act last year makes it virtually mandatory for the board of directors to transfer shares to any buyer. As Desai himself explained, "If the directors do not transfer the shares within 60 days, they are answerable to the Company Law Board. And today, the Board would never approve a decision to refuse transfer."

Manu Chhabria: out of the reckoning

Rahul Bajaj: left behind

SBI MUTUAL FUND INTRODUCES TAX - SAVING MAGNUMS

Save up to Rs. 5,250 in Income Tax

SBI Mutual Fund offers you an easy way to add to your income. It's called the Magnum Tax Saving Scheme, 1988-89. Here's how it works.

Your investment in the Scheme is 'mutualised'. That is, it's pooled together with investments from other members of the Scheme.

The Fund re-invests this accumulated money, in the equity shares of new companies covered by Section 80CC of the Income Tax Act, 1961 (I.T.A.).

And, from your taxable income, you are entitled to a deduction of 50% of your investment in the Scheme.

You can invest any amount in the Scheme. However, the maximum amount that qualifies for the 50% deduction is Rs. 20,000 – that is, your maximum deduction can be Rs. 10,000.

This deduction could save you upto Rs. 5,250 depending upon your income.

How to maximise your tax savings

Investments covered by 80C of I.T.A., such as NSC, PPF, LIC give you a deduction of 100% on the first Rs. 6000 (better than Magnums), 50% on the next Rs. 6000 (equal to Magnums), and only 40% thereafter (less than Magnums).

So after investing Rs. 6000 at 100% deduction, place the balance in Magnums. Because with Magnums you could also get a higher rate of return due to capital appreciation.

Three other tax benefits

First: Income from your Magnums together with income from certain other securities is tax exempt up to Rs. 10,000 per year under Section 80L of the I.T.A.

Next: Your investment in Magnums is exempt from Wealth Tax within the overall limit of Rs. 5 lakhs under sub section 1(A) of Section 5 of the Wealth Tax Act.

Lastly: The Fund would receive and pay all income by way of dividends, interest etc., without any deduction of tax at source.

IF YOU BUY TAX-SAVING MAGNUMS ONLY FOR THE TAX SAVING, YOU COULD GET MORE THAN YOU BARGAINED FOR.

Potential profits from capital appreciation

When the SBI Mutual Fund buys shares in new companies, it will choose the ones most likely to succeed with the help of its financial expertise.

So it's likely that such shares will rise in value... and so will your Magnums. The potential of profit being gained from capital appreciation is, therefore, very high.

Resale and loan facilities

You can sell your Magnums back to the Fund at a repurchase price which will be announced periodically. But if you sell within three years, suitable additions will have to be made in your taxable income in the year of sale.

You can also retain your Magnums and take a loan of upto 75% of their face value.

Minimum investment: Rs. 1,000

Rs. 1,000 will buy you 10 Magnums each with a face value of Rs. 100.

When can you buy Magnums?

Any time between August 1, 1988 and March 31, 1989.

Short, simple procedure

Designated branches of the State Bank Group and other authorised banks will handle Tax Saving Magnums.

The application form is simple. Just fill it up and pay in your subscription. You are guaranteed allotment of any number of Tax Saving Magnums as long as your form is filled up completely and correctly.

Yes, tax saving has never been easier!

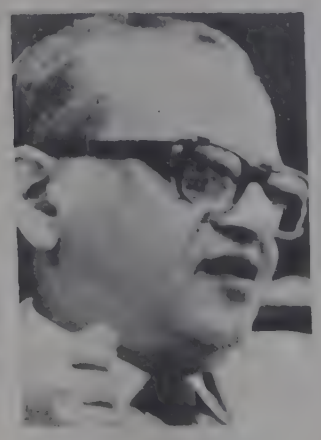
SBI MUTUAL FUND

MAGNUM

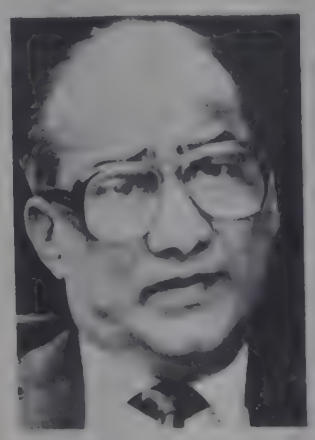
TAX SAVING SCHEME, 1988-89

LINTAS SBI MF 71 2418

Subramaniam: a Desai loyalist?

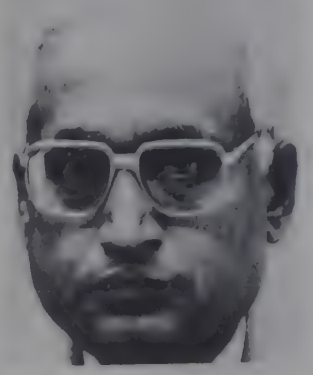


Rao: leaving in a huff

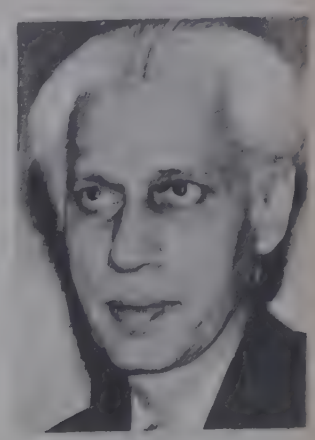


Pradhan: retiring next September

Ramakrishnan: dynamic



Kashyap: supporting change



Kulkarni: new directorship

Last year, in what was widely perceived to be a "defensive strategy", L&T applied to the government for approval of a scheme to offer stock options to all its 25,000-odd employees. The scheme envisaged a preferential issue of debentures fully convertible into equity at Rs.30 per share. Result: the employees would come to own 10 per cent of L&T's equity and strengthen the ability of the management to ward off raiders. Initially, the finance ministry is believed to have welcomed the proposal. But later, when L&T made a formal application, it developed cold feet. Finally, last May, the Controller of Capital Issues (CCI) rejected the scheme on the ground that the existing guidelines did not provide for such an issue of capital offered exclusively to employees. The CCI decision set off speculation in corporate circles that Desai had failed in his bid to ward off raiders. Desai of course dismisses any defensive intentions and simply says that the proposed scheme was "ahead of the times".

SEVERE DISCORD

A serious problem at L&T has been that its top management has been riven by severe discord in recent years. Since 1986, three top executives have left the company: K.S.S. Mani, the liaison man in Delhi, B.G.N. Patel, finance, and M.H. Pherwani, planning and development. The major reason for their exits, claim L&T insiders, was serious differences with Desai. And now, U.V. Rao, vice-president in charge of the most profitable switchgear and electronics business group, has tendered his resignation. This was following the appointment announced last month of S.R.R. Subramaniam, vice-president (excavators, shipping, personnel) — perceived to be a Desai loyalist by company insiders — as president and managing director of L&T from April 1989.

Rao, an L&T veteran and senior to Subramaniam, is widely regarded as a highly competent person. Said Henning Holck-Larsen, on the telephone, "U.V. Rao is a highly competent professional. His departure would be a loss to L&T." Significantly, Rao did not attend either the company's EGM last week or the board meeting on 9 October which Mukesh Ambani and Bhakta sat in on. He has been away on leave and could not be contacted for comment.

Another senior vice-president superseded by Subramaniam is D.L. Pradhan who is in charge of L&T's cement division. However, Pradhan is due to retire in September 1989. So he may not have much reason to complain, unlike Rao who still has six years ahead of him. Similarly, C.R. Ramakrishnan, the highly competent boss of the fast-growing construction group, which contributes over one-third of L&T's sales, is due to retire in December 1989. S.P. Kashyap, vice-president in charge of steel, mining and other equipments business, is also regarded as a Desai loyalist, and so is S.D. Kulkarni, the new vice-president, finance, who replaced Patel last year.

Desai joined L&T when he was only 22 years old; he grew under the wings of founders Larsen and Toubro and took over in 1978 with Larsen's blessings. No other manager in L&T has that kind of stature. Desai has always kept the succession issue vague. He may have felt that as long as he was around, he could somehow keep the top management together, but none of his successors would be able to hold it together for long. According to some company insiders, by not naming a successor Desai could wield absolute power. Last year, the financial institutions too had expressed concern over the fact that Desai had not identified a successor. Desai refutes all the allegations, saying he has full confidence in his professional managers and that they can run L&T even after he is no more on the scene.

The internal dissensions in the senior management had an unexpected fall-out that blotted the image of L&T in June last year. The Company Law Board (CLB) issued show cause notices to the L&T board under section 408 of the Companies Act. Under 408, the government has wide powers "to prevent oppression" of any members of the company and "to safeguard the interests of its shareholders or the public interest".

The show cause notices charged the company and its directors of favouring Desai and his wife with residential flats at rates far below their market values, of donating funds to organisations his wife and daughter were associated with, of high capital expenditure incurred without adequate scrutiny, of a misconceived diversification into shipping that resulted in big losses, and so on. It is widely believed that the CLB said that its notices were based on information supplied by some disgruntled senior executives. Subsequently, the CLB said that it did not find it necessary to appoint government directors "for the time being", and suggested that the institutions should be more active and revamp the management if necessary.

All these developments — corporate raiders on the horizon waiting to move in at the right time, the government's rejection of the stock option scheme, internal dissension, the CLB judgement that questioned the quality of the board's decision making — left Desai with little choice, corporate watchers feel, but to look for a "white knight" who would deliver him and L&T from all their travails.

FULL BACKING

And Desai's choice fell on none other than Dhirubhai Ambani. Some people say that once the Ambanis set their eyes on L&T, they got the full backing of the government and its institutions. So the others in the fray, Manu Chhabria, Rahul Bajaj, Aditya Birla, quietly moved out. And according to stockmarket sources, it is highly unlikely that the Ambanis could

Yes, now we've a new name. For some it's news. Because they didn't know that the company's name was actually Hi-Beam Electronics Ltd and Solidaire only a brand name. It is one of those rare cases when a brand name has outgrown the company's. So we thought it's better to call ourselves as Solidaire India Limited.

Moreover it should also give us an extra thrust to our ambitious expansion and diversification programme. Increasing the production capacity of Colour and B&W Televisions to meet the ever-growing demand. Diversifying into Electronic Tuners and hi-tech components — all import substitution items.

Solidaire India Limited

Watch out! Solidaire has more interesting news to share with you

Solidaire 10
A DECADE IN CONSUMER ELECTRONICS

Solidaire India Limited,
10, First Main Road, Adyar, Madras-20.

Insight-si-796

have picked up over 6.7 million shares from the open market. They claim that most of the shares must have been acquired quietly from the institutions. If this is true, the institutions' equity holding in L&T should show a sharp decline when its books close for the Rs.80-crore convertibles issue after a couple of months.

But Desai gives other reasons for tying up with Dhirubhai, "We have had business dealings with the Ambanis for many years now. They were unusual clients. We were impressed with their dynamism and farsightedness. Dhirubhai is one of those rare individuals who makes his assumptions come true, who translates his dreams into reality. We at L&T are always receptive to new ideas, new persons, so that we can all collectively widen our horizons."

For L&T, the alliance with Reliance will mean a much greater financial strength and greater risk taking capability. The undisputed political clout of the Ambanis should translate into a much faster growth of L&T's core business: heavy engineering. Despite top class engineering manpower resources and a professional style of functioning, this premier company has often been hamstrung by its inability to get government approvals and to compete with favoured public sector companies.

L&T lost out in its bids for the Nagarjuna fertiliser project (to the K.V.K. Raju group in Andhra Pradesh) and the Mangalore refinery (to Aditya Birla's Grasim Industries), even though it has the capability to design and fabricate key equipment like pressure vessels, heat exchangers, and ammonia converters. L&T has also to compete with public sector companies like Bharat Heavy Plates & Vessels Ltd (heat exchangers, pressure vessels), Bharat Heavy Electricals (power equipment), Mazagon Docks (oil platforms). The latter enjoy a 10 per cent price preference in tender bids, purchase preference, and sometimes even outright nomination.

EASING CONSTRAINTS

With its sophisticated fabrication capabilities, L&T can make boilers for power generation but is not permitted by the government to do so. In January last year, 40 per cent of L&T's new heavy engineering workshop at Hazira was lying idle, while Mazagon Docks had yet to hand over an oil platform to ONGC which it had promised to deliver by mid-1984! The Ambanis' entry into L&T is expected to substantially ease such constraints and propel the company faster ahead.

The Ambanis stand to gain much more. First and foremost, they are moving into the driver's seat at L&T. There can be little doubt as to who will call the shots. Over the next 15 months, there will be four vacancies on the L&T board. Rao, Subramaniam, Pradhan and Ramakrishnan will have to be replaced. As one L&T insider remarked: "It is open doors for the Ambanis." Second, despite some setbacks and external constraints,

Table 2

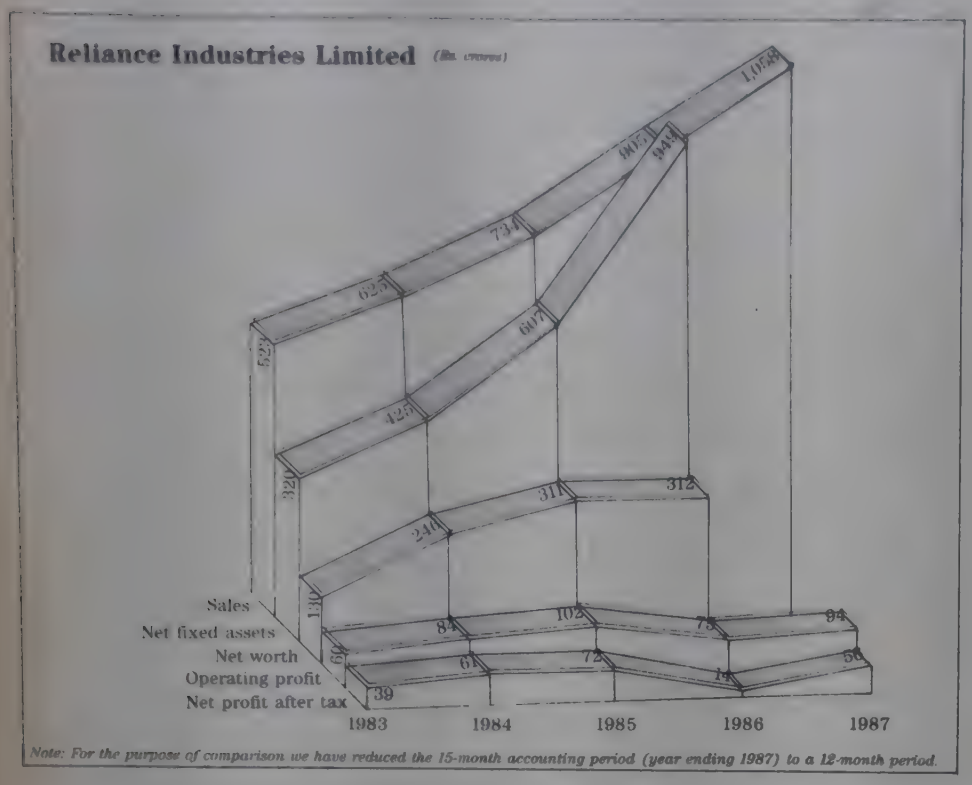
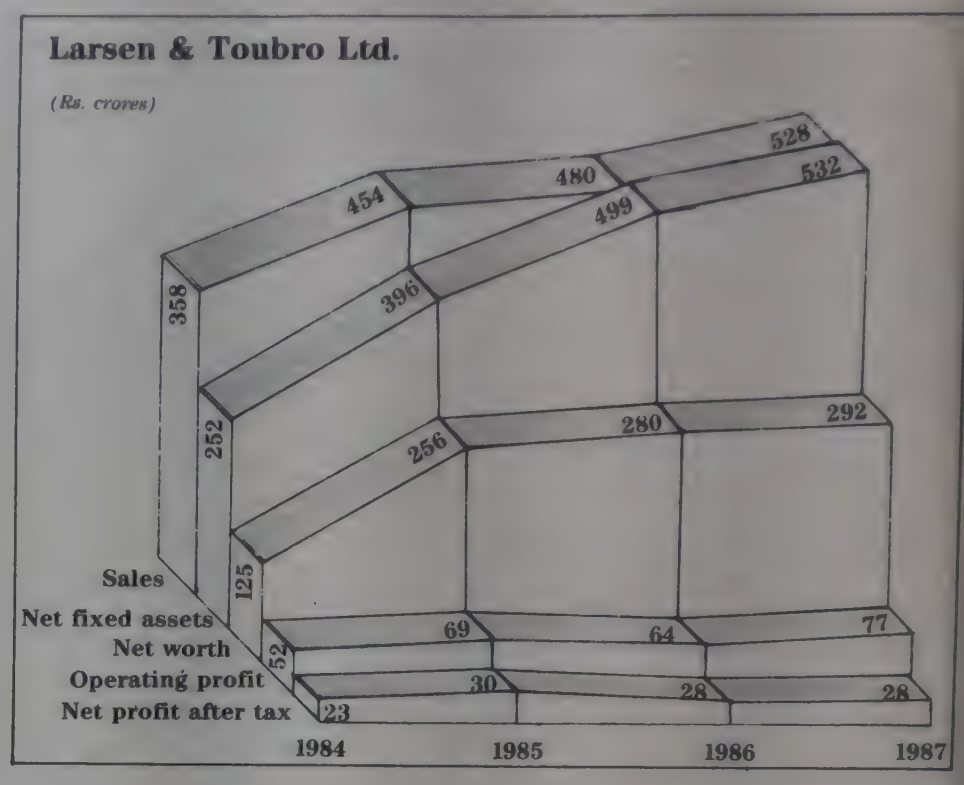
Nuclear end-shield boring at L&T's Powai works: sophisticated engineering skills



Note: For the purpose of comparison we have reduced the 15-month accounting period (year ending 1987) to a 12-month period.

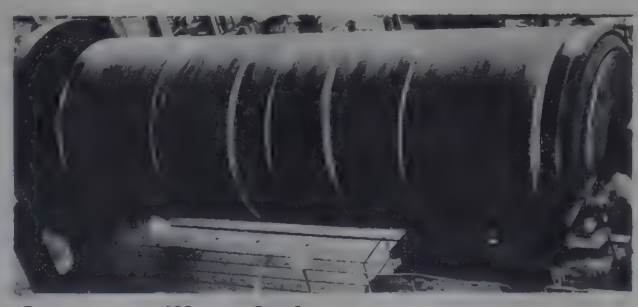


L&T has still managed to grow quite impressively. Since 1978, when Desai took over from Henning Holck-Larsen, the company's sales, assets and profits have grown manifold. Its debt raising capacity is a formidable Rs.440 crores. And today, with the increasing liberalisation of licensing and investment in core sectors of the economy, the opportunities for L&T are enormous.

In terms of engineering skills and professional management, L&T is incomparably superior to Reliance. In fact it may not be an exaggeration to say that today L&T is critical to Reliance consolidating itself in its newly-started petrochemicals operations that have largely been set up with the help of foreign engineers. For instance, once the Hazira petrochemicals complex starts operations, L&T's heavy engineering shop located there can be expected to get Rs.30 crores of business every year from support and maintenance activities alone. L&T will also serve as a launching pad for the Ambanis into capital-intensive or high-tech areas like construction, electronics, fertilisers, oil refining, power generation, and turnkey contracting both in India and overseas.

The Ambanis will provide the fund-raising power, the ability to get clearances from New Delhi and timely project execution skills. L&T will provide a top class engineering skill base that can confidently implement ambitious, mega projects entailing huge investments. As the Ambanis put it, the Reliance-L&T alliance is "a lethal combination of entrepreneurial and professional skills." Desai agrees and sees L&T "internationalising its business operations" in the years ahead.

Pherwani of UTI, Nadkarni of IDBI: fully backing the Ambanis



Cement mill on lathe

However, some L&T insiders fear that "the company will go down" if it is run like a family operation and if its professional culture is tampered with. Despite the hype about having "the latest technology" and the undoubted skills of "high finance", Reliance is an extremely centralised, family-run operation. It lacks the in depth engineering skills and professional management so vital to diversified, high-tech business house it is transforming itself into. Reliance is essentially a commodities producer (to date it has made most of its money from only one commodity: polyester yarn) unlike L&T, which makes sophisticated products that embody a high level of design and engineering skills. Reliance's operating experience is restricted to textiles, fibre, yarn, textiles trading (petrochemicals like LAB and PTA have just been introduced). L&T on the other hand offers a mind-boggling range of products and services: from crown corks to nuclear end-shields, from heat exchangers to rocket motor casings, from constructing civil-engineering marvels like the lotus-shaped Bahai temple in New Delhi to shipping.

Thus this first major share acquisition by the Ambanis will serve as force multiplier for the Reliance group. Virtually overnight, its scope of operations expands to another seven businesses: engineering, construction, cement, shipping, switchgear, electronics, consultancy. Clearly, Reliance has a lot to acquire in L&T.

If L&T is regarded as a Reliance group company, which for all practical purposes it now is, then the Reliance group balloons in size. Its asset base expands from Rs.2,200 crores to Rs.3,100 crores, turnover from Rs.1,500 crores to Rs.2,100 crores, net worth from Rs.,1050 crores to Rs.1,400 crores, and market capitalisation from Rs.3,000 crores to Rs.4,000 crores (*see table 2*). This takes the Ambanis a big step closer to the Aditya Birla group, the second largest business house in the country in terms of sales after the Tatas, according to a recent listing in *The Economic Times*. And once Reliance Petrochemicals goes on stream three years from now, the Ambanis may well begin to move closer to the No.1 slot. No mean achievement for Dhirubhai Ambani, son of a simple school teacher from Porbandar who started with nothing just 30 years ago.

NEW CREDIT POLICY

A whiff of liberalisation

Partial deregulation — the hallmark of the new credit policy — is very much in line with liberalisation in other sectors of the economy. It is expected that bank credit to industry will now be driven by actual market prices

Saturday, 9 October seemed to be just another hot October afternoon in Bombay. For the bank chairmen and executive directors, assembled in the conference room of the RBI headquarters in Bombay, the occasion was apparently just another credit policy announcement for the approaching "busy" (because it is harvest time for the kharif crop) season.

The general expectation was that, with the banks having an overall excess liquidity of around Rs.1,800 crores, the statutory liquidity ratio required to be maintained with the RBI would be raised by one percentage point. But the union ministry of finance and the RBI had decided that this time round the announcement was not going to be as tame as that. The 1988-89 busy season policy — effective from 10 October — has far-reaching implications.

- The credit authorisation scheme (CAS) which regulated the working capital limits of borrowers has, for all practical purposes, been abolished.
- The bank lending rate for commercial borrowers which had been fixed at 16.5 per cent since April 1987 will now cease to have a ceiling. It will however be subject to a minimum of 16 per cent.
- Borrowers are now free to transfer accounts from one bank to another without the "losing" bank having to issue a no objection certificate as required earlier.
- Participation certificates (PCs) have been reintroduced as a short-term instrument to broaden the money market.
- Certain changes have been made in the lending for housing finance by banks.

Comments a senior RBI official, "The new policy will be continuously reviewed. This is our stance at the moment, as we see it happening in the second half of 1988-89."

The new policy was obviously being worked on for quite some time. Sources in Delhi reveal that Raju Chelliah, member, planning commission, has been working on it for the last several months. Thus, the new initiatives should not be linked only to the current liquidity in the banking system. It is just that it provided the right environment to push the package through.

With interest rates freed, the CAS considerably watered down, and transfer of accounts permitted, the busy season credit policy seems like the dawn of a new competitive era which might force commercial banks to become more market-oriented. While it is true that lending to industry or commercial lending constitutes only 10 to 20 per cent of total advances, the fact is that banks depend on this segment for profits. Thus the new policy is significant, though it does ignore the priority sector and sick industries.

For the borrowers too, the introduction of a flexible lending rate would imply a premium on the quality of account. A customer with good track record could definitely gain and others lose. In short, efficiency is to be rewarded.

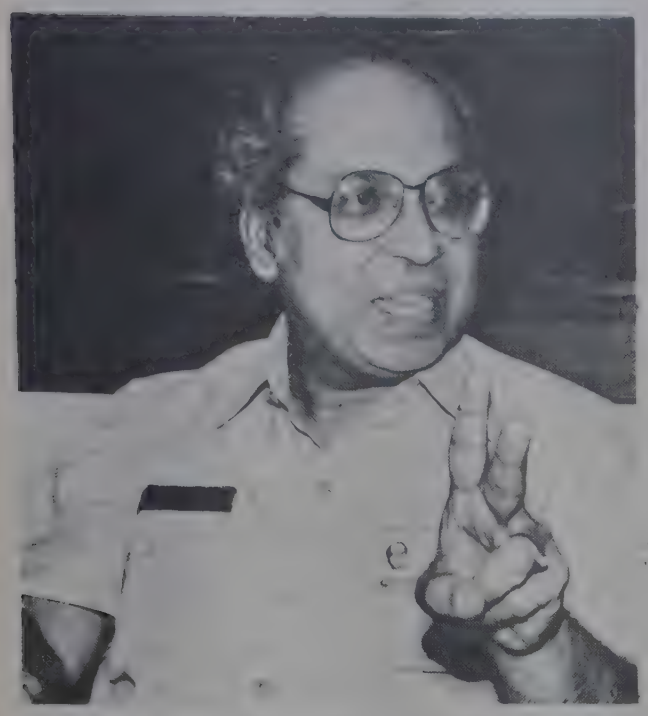
Malhotra: bringing good news for industry

DIVIDED OPINIONS

Opinion on the real impact of the new policy is divided. Not all bankers and customers are convinced that it will lead to any drastic change of scenario. "There is only an aura of liberalisation," sums up Kalyan Banerjee, chairman and managing director of Exim Bank.

When the CAS was introduced in 1964, it was relevant in a scenario of rationed capital. The idea was to allow for sectoral allocations in a situation where big business controlled the major banks.

As RBI governor R.N. Malhotra's communique to the scheduled commercial banks notes: "CAS was intended to ensure that bank credit for large borrowers does not make a disproportionate draft on lendable resources of banks to the detriment of other borrowers. This scheme was also aimed at promoting financial discipline and optimal use of



Banerjee: only an aura of liberalisation

bank credit." When CAS was first introduced, the limit was Rs.1 crore — all working capital credit of Rs.1 crore and above to industry required the prior sanction of the RBI. The limit was raised from time to time and stood at Rs.5 crores.

With the Ghore and Tandon committees set up subsequently, the focus of the CAS moved from ensuring sectoral allocations to scrutinising individual accounts. This is evident from the inventory norms and quarterly information systems (QIS) that accompanied CAS applications.

With the latest review, the RBI has decided to withdraw the system of prior authorisation of working capital credit. In its place it has been proposed to subject all applications above Rs.5 crores to post-sanction scrutiny by the RBI. "This is a recognition of the fact that the banker knows better than we sitting here," says the RBI official quoted earlier. "Our judgement is that banks will and ought to observe credit discipline on their own." V. Mahadevan, deputy managing director, State Bank of India, agrees, "Now that we have no one to veto our decisions, we have to become more responsible."

"MORE RISKS"

The moot point is, did the CAS serve the purpose for which it was created? While most bankers and customers agree that the RBI machinery was geared to clear CAS cases in a relatively short time (35 days), they feel that the strict CAS guidelines often were not in line with the needs of specific industries. "We can now take more risks and offer a better credit package to industries, and bankers can stand by customers in tiding over their temporary difficulties," says D. Basu, managing director of SBI Capital Markets.

There are some who feel more strongly about the CAS having outlived its utility. Says the chief executive of a financial services company, "In my years as a banker, I have never known of a good borrower not getting money; CAS was being observed more in the breach." Says V. Shankar, vice-president for corporate banking, Bank of America, "CAS became a little bit of an anachronism. And today it is not as much the dismantling of the CAS structure that is significant as is a devolution of responsibility to the banks." Mahadevan of SBI points out, "However, we will still have to stay within

BOX 1

PCs — well balanced and timely

Apart from other things, the new credit policy has also reintroduced inter-bank participation certificates (PCs), which had been phased out during I.G. Patel's tenure as the RBI governor.

PCs enable a lending bank, temporarily short of funds, to borrow from another bank. The newly introduced PCs are of two categories: risk sharing and non-risk sharing.

- If a bank borrows from another on a risk sharing basis, the RBI has stipulated that the period of loan should be restricted to between 91 and 180 days. The rate of interest, to be determined between the issuing participating banks, would be subject to a minimum of 14 per cent. Also, the level of participation in any specific case should not exceed 40 per cent of the outstandings in that account.
- The tenure of a non-risk sharing PC cannot exceed 90 days at a mutually decided rate of interest, not exceeding 12.5 per cent. This allows participating banks to take recourse to the bank that issues the PCs in case of default. However, the amount of non-risk sharing PCs taken by any bank will be added to its total deposits. Hence, proportionate reserve ratios will have to be maintained.

Says R. Kannan, executive vice-president for corporate banking, Canbank Financial Services Ltd, "The banking system was badly in need of instruments of temporary asset transfer. The PC scheme is a well-balanced package which takes care of differential pricing for risk-taking and debt adminsitration cost, with a built in safety mechanism against over indulgence."

Earlier, the working group on the money market, chaired by N. Vaghul, chairman and managing director of ICICI, had recommended the introduction of PCs as instruments (besides call money restricted to 90 days) for short term funds within the banking system. This would be in addition to the inter-bank call money market. PCs phased out earlier were only the non-risk sharing variety and not restricted only to banks. The Unit Trust of India and Life Insurance Corporation were also allowed to participate and were active lenders, making it difficult for RBI to have any control on liquidity at any point of time.

Comments V. Shankar, vice-president corporate banking, Bank of America, "What you are going to see is syndication of working capital credit through the media of PCs." PCs are basically securitisation of loans. Effectively, they will help banks to sell cash credit at a price within the band permitted by the RBI. Thus, one could expect a dynamic money market in place of the state market that exists today.

For the existing short term inter-bank instrument, ie, call money, the Indian Banks' Association has set a ceiling rate of 10 per cent. However, in times of tight liquidity, the rate is known to have been exceeded, unofficially of course. In order to make such transactions above board, the RBI-run Discount and Finance House of India (DFHI) has been allowed to operate in the money market without a ceiling rate. Thus, in tight money market situations, the DFHI can borrow from banks at higher rates provided it can, in turn, find a borrower.

According to an RBI official, the logic behind this is that since the DFHI only earns a margin between the borrowing and lending rates, it would not be in its interest to push up the call market rate. It will thus only reflect market conditions. Its role in money market operations will lead to multilateral negotiations with DFHI as the mediator, rather than bilateral negotiations.

We'll deliver. Wherever on earth. SKYPAK The worldwide couriers.

BOX 2

What corporate customers have to say

"Freedom of choice" and "premium on efficiency", these are the stock reactions of bankers and corporate customers to RBI's busy season credit policy announced on 9 October. Here are some customer viewpoints.

N.A. Soonawala, director, *Tata Industries financial adviser to Tata companies*

On the credit authorisation scheme (CAS)
Why should one feel that the RBI is the custodian of bank discipline? The RBI is adequately represented on the boards of banks and has the right to inspect bank books. If banks are lax with their customers the RBI should pull them up.
On transfer of borrowal accounts
I don't put much store by transfer of borrowal accounts. The fact that there is a consortium of banks means that one company deals with many banks at the same time. Therefore I don't expect companies to change banks for the sake of it. But yes, it is nice to feel that there is flexibility and freedom.

Davendra Ahuja, *chairman and managing director, Twentieth Century Finance Corporation*

On the CAS
While it has improved discipline within the banks and among borrowers, CAS has also delayed genuine applications for enhancement of credit because it was put in a strait jacket. Now the onus is on the banks.
On the new interest rate structure
The big borrowers will get a 0.5 per cent deduction on cash credit interest rates. I expect marginal borrowers to suffer. However, I don't see interest rates becoming volatile unless money market conditions become extremely tight over a long period.
On the new credit policy
What happened in the market for products will now happen in the financial services industry. This is the first step towards liberalisation.

S.V. Venkateshan, *group financial controller, Essar Group of Companies*

On transfer of borrowal accounts
I would not think of taking such a step overnight. I would definitely ascertain whether the new bank can sustain the account over a long time. For instance, the strength of the State Bank of India (bankers to the Essar Group) in servicing accounts is unrivalled and its response is very good too. Currently, they offer the best foreign exchange rates. How many other banks can match the SBI? The freedom to transfer accounts will give the big banks an added edge over the medium and small banks. It is the latter who have to be on their toes. On the other hand, for medium-sized borrowers this is a very good opportunity to select banks on the basis of efficiency and service.
On the new interest rate structure
The new structure will definitely lead to a distinction between prime borrowers and others.

M.V. Wagle, *group finance director, TI Group, Madras*

On the interest rate structure
The new lending rate will not really help industry as most banks have heavy overheads and priority sector obligations. They will certainly not be able to lower the lending rate.

R. Seshasayee, *executive director (finance), Ashok Leyland*

On the interest rate structure
Hitherto, marginally performing companies have been clubbed with the good companies. Now the banks will definitely favour good companies.

the broad guidelines of the RBI." But there is the other side too. "Often banks used the RBI as a buffer against outside pressure and to steer clear of unworthy borrowers," says S.M. Pathak, general manager, Bank of India.

With flexible interest rates, blue chip companies are happy that there is now a premium on efficiency, and banks have a tool to motivate clients to perform well. And the freedom given to clients to switch banks is expected to encourage banks to offer satisfactory service. Comments Basu, "Service will be a decisive factor in transfer of accounts and not the graded interest rates."

The common belief among bankers is that cash credit interest rates will move in a narrow range — not beyond 17 per cent. The better borrowers will command the minimum rate. Therefore, they would have no interest in transferring accounts. It will only be the slack performers who, in their quest for better rates, will look for banking options.

This will, however, be more the exception than the rule. Given the longterm nature of the banker-client relationship, frequent shifts in accounts are not envisaged. Flexible interest rates will put to test the ability of banks (mainly the nationalised ones) in evaluating company performance to determine applicable interest rates. Says Mahadevan, "Before the introduction of the fixed 16.5 per cent rate in April 1987 we operated on a 17 to 18.5 per cent band. We then had an internal rating system on a 5 point scale. Now we will revert to it."

In the circumstances, how will banks forming a consortium come to a consensus on perceptions about borrowers? SBI has already scheduled meetings with its other consortia lenders to apprise them of rating norms.

"There should be a relationship between credit-worthiness and interest rates, and in my view companies should be encouraged to ask for a rating from the Credit Rating Information Services of India Ltd (CRISIL)," says an outside director on the board of the RBI. (Pradip Shah, the managing director of CRISIL, was out of town and therefore not available for comment on the new opportunities for CRISIL.)

The partial deregulation might make India more interesting for foreign banks who are geared to make use of the new flexibility. Also, they are not required to fulfil any priority sector commitments, so the new norms will have an impact on their total advance portfolios. As far as the public sector banks are concerned, the Sukhomoy Chakravarty Committee had said that their organisational structure needs to be reviewed if monetary policy is to have a desired impact. However, the instruments of transmission of the monetary policy, namely the banks themselves, remain the same. Long used to physical controls, will they be able to effectively readjust to fiscal controls?

■ BASUDEV DASS and KEYA SARKAR

In business there's no substitute for experience. And TVSE is backed by 75 years of TVS experience.

The TVS Group, a large Rs.900 crore group is behind TVS Electronics. A group that's one of the largest industrial houses in India. A group that comprises 21 companies and employs 27,000 people, with operations that span the entire country.

The TVS Excellence

It's not the size of its operations however, that TVS is known for. In fact it's better known for its high quality, it's reliability, its solidity, its tradition of customer support.

Its vast experience, ranges from fleet operations to an extensive automotive marketing network, from the manufacture of auto ancillaries to 2-wheelers.

TVSE: The same tradition

For TVSE, the strengths of the TVS group are advantageous to the computer peripherals business it is committed to. Strengths it can draw upon to provide the Indian computer market with the finest range of computer peripherals. On par with the best in the world.

Shipment of Videocon TVs from the Ahmednagar plant

VIDEOCON

Growing out of the small screen

Known until recently as a producer of television sets, the Videocon group is now spreading its wings. It is already manufacturing washing machines and audio cassette tape recorders and plans to manufacture video cassette recorders and a host of home appliances

The colour television (CTV) industry in the country has been booming for the last five years. And riding high is the Videocon group of Maharashtra. In just five years, it has emerged as the second-largest seller of TVs in the western region (next only to Onida). The group is now also making a thrust into other regions in order to become a truly national brand.

Videocon is establishing new companies to manufacture video cassette recorders, audio-tape recorders, washing machines and a host of other home appliances; these new products are expected to more than treble the group's turnover to Rs.850 crores in the next three years from the present Rs.250 crores. The group is also gradually coming out of its cocoon of closely held family-owned companies and floating large public limited companies of which at least one has a large foreign equity participation. Moreover, it has also bagged an export order from the USSR for 100,000 CTV kits valued at Rs.25 crores.

THE HELMSMAN

The Videocon group belongs to the Dhoots who settled in Ahmednagar district of Maharashtra nearly 150 years ago. Venugopal Dhoot (37), the eldest of the three brothers (the other two are Rajkumar and Pradip Kumar) who manage all the activities of the group, is the man who steered the family's interests into manufacturing. Venugopal's father, Nandlal, started a sugar mill in Aurangabad district of Maharashtra in 1958 but it was soon converted into a co-operative and the family lost the business. The family, which has considerable landed property, continued with trading activities in cotton and the dealership of Bajaj Auto's two-wheelers and three-wheelers. Even today, Venugopal claims, the family's Bajaj Auto dealership is one of the largest in the state and does about Rs.25 crores worth of business every year.

The major breakthrough for the family came in 1983, when Venugopal, a graduate in electrical and electronic engineering, set up Videocon India, the first TV manufacturing unit of the group, at Ahmednagar in Maharashtra. "In those days after the Asiad in Delhi, the government liberalised the licensing of TV manufacture; we thought it a good opportunity to enter the field," recalls Venugopal. But many others too jumped in prompted by the low capital investment required (TV manufacture consists largely of the assembly of bought-out components). There were far too many manufacturers and several were thrown out of business. Videocon survived and emerged as one of the most successful ones. The group today comprises one public limited company (Videocon International) and six companies closely held by the family, all selling TVs under the Videocon brand name. It sells 145,000 CTVs a year — 15 per cent of the national market with at least 160 other manufacturers.

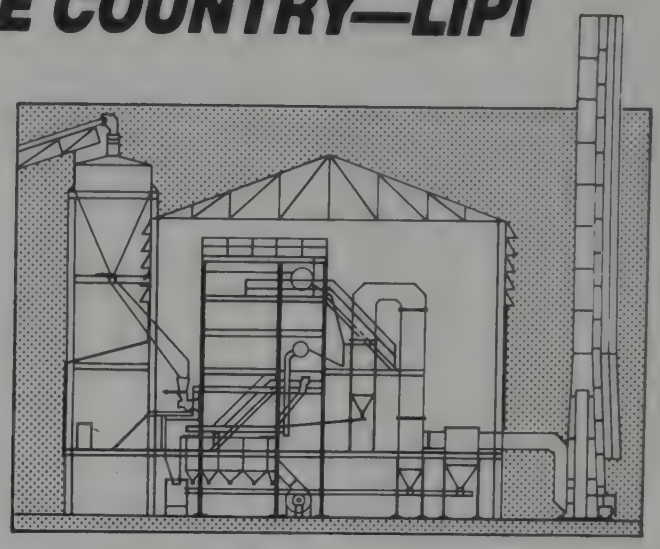
How did Videocon succeed where so many failed? For one, the marketing strategies of the group, which aimed at the lower end of the CTV market, paid off. "Videocon colour TVs are the most popular because they are priced lowest," observes a TV dealer in Bombay who also sells CTVs of other companies.

From the very beginning Videocon kept prices low, although it could very well have charged more because in the initial years CTVs were in short supply. "The idea was to establish the brand name by a large volume of sales at low margins," says Pradip (29), the youngest of the three brothers, who now looks after the marketing of the entire group.

DISTINCT SEGMENT

Another company, which came into the market around the same time, and has been immensely successful is Onida. Onida, however, aimed mainly at the upper end of the market with its high-priced

NOW GREAVES COTTON BRINGS YOU PACKAGE WATER-TUBE BOILERS FROM ONE OF THE STRONGEST TECHNOLOGY COMPANIES IN THE COUNTRY—LIPI



LIPI boilers measure up to international standards.

LIPI boilers can burn coal and other fuels like bagasse, rice husk, groundnut shells and wood bark.

Major segments of Indian industry depend on LIPI for cost-efficient boilers.

LIPI package water-tube boilers have steam generation capacity of 1 to 6 tonnes/hr.

Dry steam is what you want from LIPI boilers. Dry steam is what you will get—at all loads. Package water-tube boilers from LIPI have quick unmatched ready-to-steam ability. The entire pressure part is shop-assembled and hydraulically tested before despatch. Which means minimum work at the installation site.

LIPI boilers now come to you with a guarantee of quick, efficient after-sales service and spares through Greaves network of branches.

Now can you give yourself even one good reason for not going full steam ahead with LIPI?

range of CTVs with ultra-modern features. Clearly, there are two different segments in the CTV markets and the marketing approaches are different. "A common buyer looking for a colour TV wants a reliable set with good picture quality at a moderate price and this is what we offer," says Pradip. After establishing its brand name Videocon introduced high-priced models (including the highest priced "picture-in-picture" model) but its low-priced models still account for nearly 60 per cent of its CTV production.

The question is, how could Videocon sell its CTVs cheaper and outprice others? One advantage was that it enjoyed a sales tax benefit of 15 per cent for five years. Videocon enjoyed the benefit because its unit in Ahmednagar district was eligible for incentives under a package scheme for backward areas launched by the Maharashtra government in 1979. This scheme was subsequently replaced by a new one in 1983 which was less attractive to new entrepreneurs; many in the industry feel this was done to favour Videocon and block potential competitors. Videocon meanwhile could continue to avail of the old scheme since it was set up in 1982.

"Venugopal is very close to people in the state government and could thus influence the government," says one. Venugopal admits that he knows people at the top not only in Bombay but also in Delhi. "My family has a long association with the Congress party since the days of my grandfather who was a Gandhian and a freedom fighter," says Venugopal who was the vice-president of the Ahmednagar Congress (I) district committee till recently. But he flatly denies pulling strings in the government. "The scheme was in effect from 1979 and we came up in 1982. It was an open scheme and any one else could have taken advantage," he says. "Besides, the total quantum of benefit was not unlimited, but restricted to the value of investment in fixed assets on a cumulative basis".

FABULOUS INCENTIVES

One reason for Videocon's marketing success is the fabulous incentives it offers to dealers. In fact, in wooing dealers, many say, it has outsmarted everyone. "Last year I sold 700 Videocon colour TVs and got two Maruti cars, no one else offers such incentives," says a large dealer on Bombay's Lamington Road, who also sold 300 CTVs of other makes. That's not all. In September this year Videocon took 410 of its 600 dealers from all over the country on a five-day trip to Singapore which is estimated to have cost the company about Rs.25 lakhs. No wonder that at many shops Videocon TVs are available at a price lower than the recommended price of the company (which includes the trader's margin).

Videocon's quality too has been consistently good. Even G. Mirchandani, owner of the company which manufactures Onida TVs, admits, "There is absolutely no doubt that Videocon makes good TVs."

Moreover, as a dealer points out, its after sales service is as good as that of the other popular brands in the market. Adherence to quality and aggressive marketing helped Videocon establish itself in the market; sales of CTVs went up to 145,000 in 1988 from 22,000 in 1985 and that of black and white TVs to 91,000 from a negligible number in 1985.

The group has also spread its wings; besides Ahmednagar where it has five units manufacturing kits and finally assembled TVs, Videocon now has units in Delhi, Ahmedabad, Cochin, Bhopal, Hyderabad and Calcutta. In Aurangabad it has established a unit under a new company. The Delhi and Aurangabad units manufacture kits and also assemble TVs; the other plants assemble TVs using kits from the units in Delhi, Ahmednagar and Aurangabad. A major reason for setting up assembly units in various states is to take advantage of sales tax concessions for sets produced within those states. Another reason was to reduce the transport cost of TVs and thus compete with local brands.

Interestingly, the group which until now was largely family-owned is setting up several public limited companies. It made a beginning in 1987 when it set up a large TV manufacturing unit at Aurangabad under the name Videocon International Ltd (VIL). The Rs.9-crore project which went on stream early this year, will manufacture 100,000 CTVs, 200,000 electronic tuners and 200,000 extra high tension transformers (EHT), when fully operational. (TVs manufactured by VIL are being marketed under the Videocon brand name.) "This project was a major test of our group image when we went to the public," says Rahul Sethi, deputy general manager (commercial) of VIL. "And we have passed with flying colours; our issue was oversubscribed 30 times in an otherwise dull market."

SHARE FLARE

Incidentally, VIL has declared an interim dividend of 18 per cent in its very first year of operation. The company reported a net profit (after tax) of Rs.1.79 crores on a turnover of Rs.43 crores for the 12 months ended September 1988. As a result the price of VIL's equity shares shot up from Rs.29 to Rs.45 in the space of one week in October.

Meanwhile, the group is also enlarging its product range in a big way. From being essentially a TV manufacturer, it is now expanding into other areas of consumer electronics and home appliances. It has already set up a small unit in Walluj near Aurangabad in Maharashtra for the manufacture of washing machines. The unit which has been set up with technical knowhow from Matsushita Electric Company of Japan (makers of "National" products) began operations in September last year and is currently manufacturing 4,000 washing machines every month, one-third of them sophisticated microprocessor-based machines. "There were hardly any reliable washing machines be-

ing made in the country. So we decided to manufacture them," says Rajkumar.

At a later date Videocon will set up a public limited company under the name of Videocon Appliances to manufacture washing machines in a big way. The collaboration agreement with National has already been approved by the government. The project profile has already been submitted to ICICI which will provide financial assistance. The Rs.15-crore project will also manufacture electric motors for home appliances, air-conditioners for cars, mixers and refrigerators.

Recently, the group launched a range of stereo music systems. The sets are manufactured in Ahmednagar in collaboration with Toshiba of Japan. The systems are cheaper than those of the market leader, Philips (according to dealers they are cheaper by 15 to 20 per cent). "Our prices are lower because our overheads are much lower," explains Pradip. The audio product division also has an ambitious plan to expand its production from around 50,000 sets this year to nearly 400,000 sets in 1990 (Philips' current annual production is around 1.20 million pieces per annum). "The consumer response has been good and I think Videocon will give Philips a run for its money," says a dealer in Bombay, who also sells Philips sets. D.L. Jain director and vice president (consumer electronics) of Peico Electronics however does not feel threatened. "It is just another passing shadow. In the past Sonodyne and Cosmic gave us hell but we have bounced back" says Jain.

Perhaps the most ambitious project Videocon has in hand is the video cassette recorder (VCR) project for which it has already received a letter of intent (LOI) to manufacture 300,000 VCRs. Videocon is one of only three private firms (the other two are BPL-Sanyo and Kalyani-Sharp) that have been granted permission to manufacture VCRs. There were nearly 60 applicants of which six were shortlisted. Those who were shortlisted but did not get the LOI are Philips and a consortium of five TV manufacturers — Weston, Crown, Dyanora, Salora and Sonodyne. How did Videocon manage to bag the VCR project while older firms did not? Critics of Videocon point to Venugopal's tremendous political clout. "There was absolutely no logic in choosing Videocon and Kalyani; the only explanation is that they have the right political contacts," says one of the unsuccessful contenders. Venugopal, however, maintains that these allegations are totally baseless. "We were chosen because we had already made some investment for the manufacture of VCRs at our Aurangabad plant."

Videocon's TV kit assembly line

A DGTD and Department of Electronics (DoE) team paid a visit to VIL's factory at Aurangabad. Says K.P.P. Nambiar, secretary, DoE, "It was found that Videocon had invested about Rs.1.5 crores for manufacturing the video tape deck." Others find it strange that investments were made before getting the approvals.

TOSHIBA TIE-UP

Videocon's VCR plant to be set up at Aurangabad will be in collaboration with Toshiba Corporation of Japan under the new name Videocon-Toshiba Ltd. The project will cost Rs.55 crores and will be floated as a public limited company in which Toshiba will have an equity stake of 25 per cent. At full capacity the company's sales turnover is expected to touch Rs.400 crores per annum. Currently, however, there is a cloud of uncertainty over the project. The Japanese government has reportedly imposed a ban on the transfer of VCR technology to India. But Naveen Mandhana, executive director of VIL who had recently been to Japan, feels that the Japanese companies will be able to persuade their government to waive the ban.

Does the group have the ability to manage a big business? "Yes," say those who know the Dhoots well. C. Lakshmaiah, deputy general manager of ICICI, the lead financial institution for the VIL and Videocon Appliances projects, says, "The way the group has established itself within a short period proves its entrepreneurial ability. I am sure it is capable of handling a much bigger business now." Says S.K. Shelgikar, advisor to the Videocon board of directors, "All the three brothers are very receptive and have quickly adapted themselves to changing business circumstances." The management style of the group is also changing fast; it is co-opting professionals on to the board. For example, Mandhana, who has been working with the group for the last five years, has been given a free hand to run VIL. Venugopal, the managing director of the company, now spends more time on the new projects of the group.

Will the Videocon group soon be ranked among the country's corporate giants? It may be a little early to make a prediction; the future of the group depends heavily on the success of the new projects in hand. ■

ARVIND MAFATLAL GROUP

Going all out to export

An ambitious export plan for petrochemicals and cotton textiles has thrust the Arvind Mafatlal group into the news. The group is confident of making exports of Rs.350 crores, if its expansion and modernisation plans come through

It was certainly uncharacteristic. The Mafatlals have not exactly been a dynamic group in the last two decades. So it was quite surprising that one faction of the Mafatlal group, ie, the Arvind Mafatlal companies, was the first to announce a major export commitment in response to the government's demand for export plans from all major industrial houses in August this year.

Since the family split in 1979, the Arvind Mafatlal group (turnover: Rs.848 crores) comprises two petrochemical companies, National Organic Chemical Industries Ltd (NOCIL) and Polyolefins Industries Ltd (PIL), and two textile companies Mafatlal Industries Ltd and Mafatlal Fine Spinning and Manufacturing Co Ltd. The four companies, which currently have an export turnover of Rs.40 crores (mostly from the grey cloth exports of the textile units), have submitted ambitious plans to the government: total exports worth Rs.350 crores by the end of the next decade, ie, by 1999-2000. "I agree it is a very ambitious target," says Arvind Mafatlal, "but we are a very old business house and we cannot afford to lose our credibility by saying things we cannot stand by."

What are the group's strengths that make Mafatlal so sure of delivering the goods, how well do the export plans fit in with current government policy, and how appropriate is such long-term planning in the context of the global scenario? In short, why the export plan now?

As far as petrochemicals are concerned there was no question of exports earlier. With a majority of petrochemical products in short supply in India and with sizeable imports, exports were banned. The present acute balance of payments crisis has however forced the government to think differently.

First, the government is now willing to accept local shortages in petrochemicals. Thus, the industry can now firm up export commitments, irrespective of the market conditions in India. Second, although petrochemical prices are not subject to statutory control, the government

Textiles: all set to take wing?

did take a very keen interest in pricing. So even in times of acute shortages, companies could not make enough profits in the domestic market that would enable them to develop the export markets. The government is now willing to allow a certain price flexibility. Third, domestic prices of naphtha, the main raw material for petrochemicals, has ranged between $250 and $270 a tonne compared with the international prices of $130 to $150 a tonne. The government is now willing to supply naphtha at international prices for production earmarked for exports. This includes deemed exports of petrochemicals to downstream processing units.

ADDING VALUE

"Although the government has realised that even if there is a shortage in the domestic market there is a need for India to export, it makes little sense to import petrochemicals on the one hand and export them on the other," says M.S. Patwardhan, managing director of NOCIL. It is value-added products that must be exported. Thus, although it is possible to export just petrochemicals, NOCIL and PIL have plans to make downstream plastic products (from ethylene and PVC) and then export. For this, the plan is to involve medium and small scale processors who will buy the raw material from NOCIL or PIL and sell the converted products back to the two companies for exports. Thus, the projected export turnover includes direct exports by NOCIL and PIL as well as turnover from converted products. For the latter, the Mafatlal companies will act as an export house.

These plans seem to fit in well with the export scheme submitted to the government by the Plastics and Linoleum Export Promotion Council (Plexconcil). The export of plastic processed goods from India was only Rs.64 crores worth in 1987-88, and the council hopes that this will touch Rs.130 crores by 1988-89. However, this target is based only on the export potential of traditional plastic goods like moulded and extruded products, spectacle frames, polyester film, linoleum, and a variety (almost 50) of miscellaneous products which India has been exporting to as many as 106 countries.

In recent years, there has also been a surge in domestic capacity of non-traditional products like heavy duty film, multi-layer film, bi-axially oriented polypropylene (BOPP) film, high density polyethylene (HDPE) woven sacks, and moulded luggage and containers. Given the low domestic consumption, Plexconcil feels that spare capacity could be used to process for exports; this could earn almost Rs.400 crores a year.

However, the markets for these products have yet to be identified. "With so many goods being exported to so many countries, we have spread ourselves too thin and really do not have an idea today where exactly to target our products to get a reasonable market share," says K.P. Nanavaty, regional manager, Indian Petrochemical Corporation Ltd (IPCL), the public sector petrochem giant. Predictably, even Patwardhan wasn't quite sure of the destination of converted products while N.M. Dhuldohoya, managing director of PIL, admitted that "specific market surveys are yet to be conducted."

What are the chances that a flood hit factory will show profits in the same year?

Why you should meet the people who know the answers to questions like this.

United India. A company where we are answering such questions all the time.

Seems a rather unusual way to keep busy, doesn't it?

The truth is, it is precisely this that keeps us at the forefront of the insurance business.

Let's explain. We at United India are forever trying to settle claims faster. So that our clients are back on their feet as quickly as possible.

With the result that today we are geared to assess and settle any loss incurred by a client in double quick time. Be it due to flood or fire. Riot or breakdown. Theft or earthquake.

To be able to do this, we must understand risks. Completely. So we ask ourselves all sorts of questions. And find answers to them.

This attitude of carefully studying our clients' risks before covering them, is a deeply entrenched habit at UI. Which is why, we know so much about risks. And how to manage them. Which is why, you will benefit by meeting us.

Call us, at United India. At any one of our 983 offices. We'll share our experience and innovative expertise with you. We'll analyse the risks that your business faces (believe us, you'll be surprised how many there are).

We'll help you control and minimise them.

Our team of top-notch underwriters (we have Engineers, Lawyers, Chartered Accountants and Veterinarians!) will custom-design a comprehensive cover for your business. Competently and efficiently.

Call us, at United India. Together, we'll make risk management work for you.

UNITED INDIA INSURANCE CO. LTD.

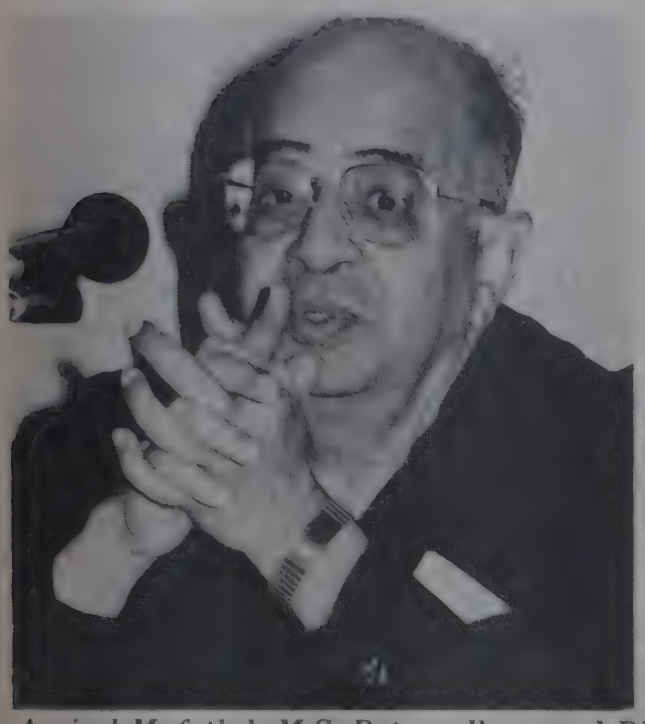
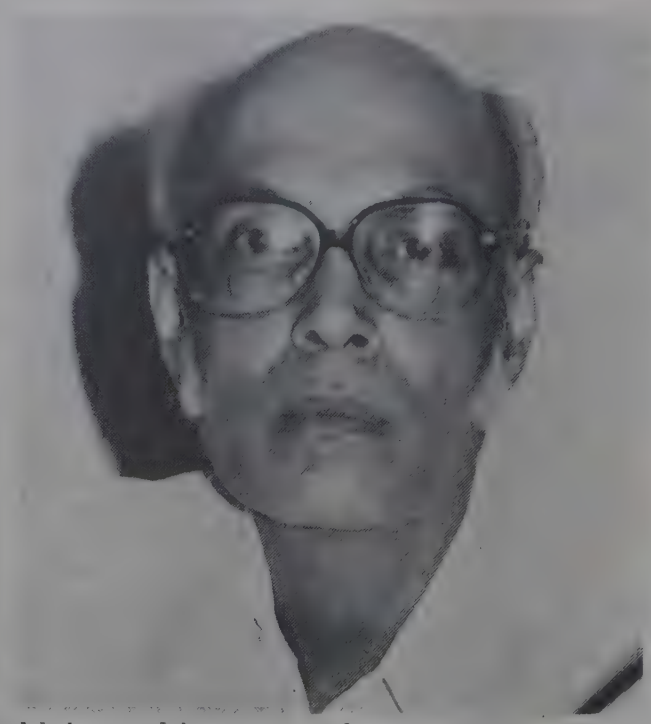
स्वतंत्रता के चालीस वर्ष
FORTY YEARS OF FREEDOM
1947 1987





Arvind Mafatlal, M.S. Patwardhan and Dhuldohoya: big export plans

Commenting on NOCIL and PIL's export targets, M.P. Taparia of Supreme Industries, one of the biggest processors of plastic raw materials says, "If they are thinking of selling petrochemicals in raw material form, exports should not be a problem, but otherwise to achieve a turnover of Rs.35 crores in just one year would be a tremendous feat." Taparia, who exported around Rs.35 lakhs worth last year, hopes to step up exports but is categorical about not going through the Mafatlals or other export houses. If more of the medium scale processors think like him NOCIL and PIL might have problems. It is the processors in the small scale who would probably like to go through the Mafatlal companies provided, of course, their quality is good enough for exports.

There is also one major precondition for the success of the group's export plan for petrochemicals: the government's approval of NOCIL's plan to expand its ethylene capacity to 300,000 tonnes per annum (tpa) and PIL's expansion of its HDPE capacity to 150,000 (tpa). The application has been pending with the government for a few years now; it has not been cleared for environmental reasons -- NOCIL wants to set up its new capacity at its existing unit in the Belapur area near Bombay.

Arvind Mafatlal is hopeful of obtaining the license soon since, as he puts it, Sharad Pawar, the Maharashtra chief minister is "now even thinking of reopening the Union Carbide plant in Bombay itself". Patwardhan points out that without expansion, and more important, a modern plant (NOCIL's earlier plant came up in the sixties), it will be impossible for the Mafatlal companies to stay competitive assuming world prices of petrochemicals over the next decade remain as tight as they are now.

In fact, those critical of the Mafatlal export plan say that the group is making "premature noises" about exports to get the government's sanction on the pending licenses. Arvind Mafatlal defends his plans by pointing out that, given the country's foreign exchange reserves, an export turnover will be essential for individual companies to pay for their own foreign exchange requirements. If the approval does come through, the group expects to pay a part of the foreign exchange required for plant and machinery imports itself. Of the estimated project cost of Rs.2,000 crores, at least 25 to 30 per cent will be the foreign exchange requirement. The other reason for this uncharacterstic publicity of its plans, Mafatlal admits, is to create a public image about the company in case the government approval does come through and money has to be raised from the market.

FIRMER GROUND

The Mafatlals' textile export plans seem to be on firmer ground. Both the textile units of the group, ie, Mafatlal Industries and Mafatlal Fine, have been exporting for a decade now. Cotton cloth exports, which hovered around Rs.7 to 8 crores worth ten years ago, were almost halved at the time of the textile strike. This was, however, stepped up to around Rs.20 crores in 1986-87 and doubled to Rs.40 crores by fiscal 1987-88.

"Although almost 90 per cent of this Rs.40 crores was in grey cloth exports to the UK and Middle East, what is significant is that we have made a beginning in export of processed cloth also," says Hrishikesh Mafatlal, Arvind Mafatlal's son who looks after the two textile units. Of the Rs.50 crores worth of exports which the two units hope to achieve in 1988-89, the greater growth will be in processed cloth.

"With 25 per cent of the world's cotton acreage in India, there is tremendous scope for exports — all this time we were restricted to grey cloth exports because our processing capabilities were not up to world standards," says P.R. Amin, executive vice-president of Mafatlal Fine. The Mafatlal group has spent almost Rs.80 crores on modernisation of both weaving and processing in the last five years, and seems confident of being able to sell value-added processed cotton textile.

"In processed up-market textiles, buyers are looking more at quality rather than price," says Arvind Mafatlal. For upgrading quality, the Mafatlals have had for the last few years the expertise of Tootals, the Manchester, UK based textile house which has a turnover of 500 million pounds from marketing in 60 countries. "The principal to principal agreement we have with Tootals implies an informal commitment of marketing our textiles through them," says Hrishikesh Mafatlal.

"There is great scope for cotton textile exports to the US, Europe and the Far East," says R.P. Poddar, of Century Textiles, the other company exporting cotton textiles. "Its up to the government to provide the policy back-up," he says.

So the cotton is there, so is the weaving and procesing capability, and the markets. With the government's present emphasis on exports, the Mafatlals may well be able to live up to their commitments.

The prospects for Wimco today are gloomy. Match production, still its mainstay, has become unprofitable, with stiff competition from the cottage industry. And its diversification into processed foods has yet to show results. All in all, the company's new managing director has a tough job ahead of him

Wimco Ltd's managing director designate, Bengt Nordman, faces a challenging task. He heads a company which in 1987 suffered a loss, albeit for the first time in decades, of Rs.7.09 crores. Its main product, matches, which constitute almost 80 per cent of total sales, face severe competition from those made by the non-mechanised middle and tiny units. Wimco pays much higher excise duties — as much as 265 per cent more. There has been a lockout at its Calcutta plant for the last year and a half. Wimco's diversifications, Sun-Sip, Cleanfoods, and A.R. packaging, in which it has made significant investments, have rung up considerable losses. The strategy Wimco has employed since 1977 to fortify its position has not worked.

Kamaljit Singh: "hit by excise duties and drought"

Below: *At Sun-Sip, Hyderabad: holding out new hope*

TIME TO MOVE

By 1977, it was clear that with the government's insistence on reserving matches for the middle and tiny match units, Wimco, which had dominated the market for 50 years, had a bleak future if it stayed only in its traditional business. This realisation was accentuated when the Janata government tried to force Wimco out of match production by sharply increasing excise duties on its products.

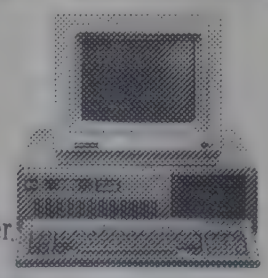
Wimco attempted a two-pronged strategy. In the area of matches, to get around the perennial problem of the supply of matchwood, it encouraged farmers in UP, Haryana and Punjab to grow poplars for its use. It also attempted to address a more quality-conscious, less price-sensitive audience by putting on the market high-quality "karborised" matches in cardboard matchboxes. According to S.S. Sami, formerly general manager, business development with Wimco, (and now president, Noble Soya House Ltd) the company, which had previously attempted to get its product into all the villages in the country, now selectively targeted urban areas.

Wimco also attempted diversifying into areas which fitted in with its existing areas of activity. It began to manufacture metal coated anodes and electrodes (chiefly used in the manufacture of caustic soda), as it already was producing chlorates which it needed for its match production. It also went in for the production of paper pulp to partially supply its own paper needs.

More adventurously, it ventured into the areas of cardboard packaging systems and the manufacture of fruit and vegetable concentrates packed in aseptic containers. The concentrates were aimed chiefly at the export market. Wimco's subsidiary in Hyderabad, A.R. Packaging, manufactures packaging systems, and the two other subsidiaries, Sun-Sip and Cleanfoods Ltd, are in food processing. Wimco has invested Rs.2.75 crores in share capital in these subsidiaries and has also advanced Rs.9.43 crores to them. All these companies have registered losses which have wiped out their share capital. Wimco intends to ammalgamate A.R.Packaging with itself and has reported details about the other two subsidiaries to the Board for Industrial and Financial Reconstruction.

According to Kamaljit Singh (who headed the company for 14 years, and will now be based in London with Wimco's parent, Swedish Match), Wimco was hit by two factors which were beyond its control. It reported an excellent performance

"HOW STRANGE. IT DOESN'T LOOK LIKE A NELCO COMPUTER."



Just because we're big in minicomputers, people tend to forget that we make anything else. So here's a gentle reminder.

Nelco also make PCs.

For use as network solutions. Stand-alone systems. Terminals for minis and mainframes. Data entry systems. And as CAD work stations.

They get the same quality of support that our minis do. And they have as outstanding a reliability record as our minis. So if you're in the market for a PC, take a look at the Nelco range.

Matrix PC. Matrix XT. Matrix AT. Matrix 386.

You'll find just what you're looking for . And more.

NELCO MATRIX

in 1985, but was seriously affected by major changes in excise in that year's budget and had to reduce its match production. Prior to this, the difference in excise between Wimco's cardboard matches and those manufactured by the cottage sector was only Rs.85 per case. In 1985 the difference between Wimco and the middle sector increased to Rs.175, while that between Wimco and the small sector shot up to as much as Rs.212.50 per case. Wimco became plainly uncompetitive.

Secondly, Wimco's diversification into food processing was hit by the prolonged drought of 1986 and 1987; the availability of critical raw materials like mangoes and tomatoes declined precipitously, reducing the capacity utilisation.

Wimco observers, however, are unwilling to accept Kamaljit Singh's explanation. According to them, the crux of the company's problem is its inability to formulate a viable long term strategy. This is evident in the absence of a succession plan. Four senior managers, R.K. Kutty (now president, Bhadrachalam Paper Boards), P. Krishnamurthy (now executive director, RPG Enterprises), S.S. Sami (now president, Noble Soya House Ltd), and B.K. Bhalla (now managing director, Shalimar Paints) had the potential to succeed Singh but did not. The company has had to bring in someone from the parent company.

Lack of foresight was also evident in Wimco's failure to accept a political reality. Since 1973, the production of matches had been reserved for the small scale sector and high excise duties on organised industry were an expression of this policy. Other companies, like Godrej and Colgate in cosmetics, or Peico and Bajaj Electricals in electronics and electricals, reacted aggressively in similar situations by buying products from small scale producers and marketing them under their own brand names.

Singh responds to the criticism by pointing out that Wimco was specifically restricted from trading in matches with the small scale sector between 1973 and 1987. The restriction was withdrawn when Wimco's share in the match market had fallen from about 45 per cent in 1973 to approximately 15 per cent in 1985.

IDLE CAPACITIES

Singh says that Wimco is now exploring the possibility of marketing matches manufactured by the cottage sector, but that is easier said than done, as match manufacture is a high volume, low value activity where production is highly decentralised. In addition, Wimco faces the hazard of having unutilised capacity along with a standing labour force. Wimco's match production slumped from 4,256 million boxes in 1982 to 3,370 million in 1987. The company's application to the Tamil Nadu government to close its Tiruvotiyur plant late last year was rejected. It also declared a lockout in its Calcutta plant in April last year after a breakdown in wage negotiations. The lockout has not yet been lifted. In such a situation, it would be difficult for Wimco to justify buying matches from other sources.

Now it looks as if the diversifications, into food processing, are likely to take off. While Wimco had initially targeted only the export market for its aseptically packaged fruit juice and pulp concentrates, a significant domestic market has developed recently. According to Sharad Vardhe, vice-president, food and trading, a healthy market for fruit concentrates has developed internally as a result of the launch of several aseptically packaged fruit based drinks. In addition, Vardhe says, the demand for tropical fruit in Europe and America is expected to expand dramatically. Sun-Sip is the only company in the world which has managed to package mango chunks in mango juice aseptically; other processors have been forced to freeze mango pulp. According to Vardhe, Wimco's subsidiaries will be able to develop high strength concentrates, enabling its products to be economically transported to the vast US market.

QUALITY-CONSCIOUS SEGMENT

Nordman sees no weakening of Wimco's commitment to the production of matches. He is confident that the central government will be willing to review the excise duty structure on matches. Nordman considers that the cornerstone of Wimco's strategy in matches is to continue to address a more quality-conscious market. Wimco will never be able to get into a price war with smaller producers; it can at best target a segment which will buy quality products even if they are pricey. Wimco's new matches, called Homelites, earn the company 30 per cent more revenue than its ordinary matches.

Wimco is also cutting costs by rationalisation of its workforce coupled with increasing productivity per employee. If such a strategy is successful, Nordman sees Wimco being able to participate in the growth of the match market, which is increasing every year by 4 to 5 per cent.

But this strategy is really not very different from what Wimco has been doing to date. Wimco's success rests ultimately on its ability to persuade the government to make changes in the excise structure.

GRASIM INDUSTRIES

Rebirth at Mavoor

The rayons unit of Grasim Industries at Mavoor, Kerala, has been shut down for more than three years. But now an epochal agreement among labour, management and the state government has paved the way for its reopening

Industrialists will have good reason to be pleased with what's happening in Kerala. The LDF government, along with the trade unions involved, has come to an agreement with the management of Grasim Industries to re-open its rayons plant at Mavoor. According to R.N. Saboo, executive president of Grasim Industries, "The LDF government's sincerity has been evident. It adopted a realistic approach and was fair and open-minded."

Grasim Industries' pulp and fibres divisions at Mavoor were closed in July 1985. The immediate provocation was a labour agitation. Yet the real problem — and the one pivotal to the current agreement — was the supply and price of raw material. In 1958, when the Birlas were first wooed to Mavoor, the state government had promised 200,000 tonnes of softwood every year. But it never supplied more than 122,000 tonnes to the Mavoor factory. And the price the company paid for this scanty raw material was very high, the management claims. Around 1974 it was paying Rs.22.50 per tonne of eucalyptus and Rs.18 to Rs.36 per tonne of bamboo. (The government was supplying eucalyptus at Rs.11.50 a tonne to the public sector Hindustan Paper Corporation.)

STEEP HIKE

In 1978 the state government hiked the notified price of bamboo to Rs.250 per tonne. Eucalyptus, the ideal raw material for pulp, then cost Rs.380 per tonne. Grasim Industries' management never paid these prices; instead, it went to court. The cases are still pending. Not surprisingly, raw material prices and supply were the central issues in the mammoth negotiating sessions in which the current agreement was hammered out.

At the time of going to press the terms of the agreement had not been finalised; even the broad terms were closely guarded secrets. It is learnt, however, that according to the agreement, which will be valid for five years, the state government has promised to supply the Mavoor factory with 200,000 tonnes of softwood a year (160,000 tonnes of eucalyptus and 40,000 tonnes of bamboo). Prices, however, continue to be a bone of contention: the management is learnt to have offered to pay no more than Rs.222 per tonne. And the Kerala government isn't happy with that.

Whatever its reservations about Grasim's demands, the government had no choice. Political pressure was mounting to re-open the Mavoor factory. Also, the government could do little to browbeat the Grasim Industries management. Aditya Birla can afford to keep the Mavoor factory closed. Most of what it produces is used in Grasim Industries' own viscose staple fibre unit at Nagda. With imported pulp being much cheaper, Nagda need not look to Mavoor at all — imported pulp costs around Rs.8,500 per tonne, while the cost of pulp produced at Mavoor is about Rs.11,000 per tonne.

The Kerala government will therefore have to agree to a price close to Rs.250 per tonne. But, if it does so, it is almost certain that other softwood users in the state, like Western India Plywoods at Cannannore, will demand wood at the same rates.

According to Saboo, the turning point in the long negotiations was the LDF government's acceptance of the concept of "fair wages and fair returns". This formed the theme of the crucial meeting that chief minister E.K. Nayanar and industry minister K.R. Gouri had with Aditya Birla.

Under the agreement, workers will get a Rs.32 rise in basic pay. In dearness allowance, every point rise beyond 150 will fetch a one paisa increase — from 25 paise to 26 paise. All told, the total increase in a worker's pay packet will be around Rs.140. The last wage rise was in 1978 — so the hike is not something most workers would want to write home about.

Worse, the Kerala government's reduced supply of raw material means a cut in production. At the agreed 200,000 tonnes a year, the factory will have to prune its daily production from 200 to 120 tonnes. Many workers will thus be rendered surplus.

The management claims that the Mavoor factory is already heavily overmanned. A work study is to be done by an autonomous body like the National Productivity Council or the Kerala State Productivity Council. The findings will be summarily accepted. After that, the management will redeploy and redistribute workers between its fibre and pulp divisions. It will also create a reserve pool of workers for both divisions. To reduce the workforce further, the company will announce a voluntary retirement scheme. But even after this, 250 workers will have to be retrenched.

Those left in the company, for whom 15 unions will sign the agreement, will allow the management to modernise the plant, provided it doesn't displace any more workers. Grasim Industries will have to pump in about Rs.15 crores immediately to get the Mavoor factory into shape again. Another Rs.20 crores is to be earmarked for modernisation.

MARATHON TALKS

The agreement, epochal by Kerala standards, was preceded by the most protracted and gruelling negotiations yet in Kerala's industrial relations. The state's labour commissioner, M.P. Joseph, must have himself spent over 500 hours in conciliation talks, which lasted for 10 hours at a stretch on occasion.

On the Grasim side, apart from Saboo, the key negotiators were I.H. Parekh, president, and D.P. Mandelia, adviser to Aditya Birla. The management, however, is not willing to speak to *Business India* on the agreement until it is ratified by the cabinet. The management acknowledges that the LDF government was willing to work out a solution from the time it came into power in March 1987.

The Mavoor agreement comes close on the heels of the one signed at Alind, where workers agreed to a wage freeze. If the Kerala government can nurture this image of a new-found pragmatism, it may be able to persuade more industrialists to invest their money in the state. Mavoor's painful rebirth would then not have been in vain.

Rediffusion/BH/7039

COMPUTERS

Mainframe warfare

Until a year ago, mainframes were considered too complex to be manufactured in India; in any case they comprised an insignificant segment of the computer industry. Now the demand for mainframes has grown to constitute one-fourth of the total market. ECIL and ICIM have already locked horns for a share of the market

Prabhakar: "our product is superior"

In the four years since the government announced the "new" computer policy which was to usher in a brave new world of bits and bytes, the Indian computer industry has undergone a radical transformation.

The impact of the liberal policy, which allowed for cheaper imports and fewer curbs on licensing, came in three phases. In Phase I the market for personal computers (PCs) expanded dramatically; the rules of the game were high volumes and low margins and several manufacturers understandably fell by the wayside. Phase II had manufacturers in the minis segment jousting for market share.

The time has now come for Phase III, which in film land parlance would be called "undoubtedly the biggest spectacle of them all". It concerns a hitherto insignificant segment of the Rs.250-crore computer industry: mainframes. "The battle today is to command the largest share in mainframes, powerful machines with large data processing capabilities," says an industry observer and with a sense of drama, adds, "the stakes are high".

HIGH STAKES

The stakes are certainly high for the three companies that got the government's benevolent go ahead for mainframe manufacture. The public sector Electronics Corporation of India Ltd (ECIL) has a tie-up with Control Data Corporation of the US to initially assemble and then manufacture the Cyber-830 and Cyber-930 models. The project cost is Rs.30 crores and the CDC range is to be marketed under the brand name Medha. In January 1988, International Computers Indian Manufacture (ICIM an affiliate of the ICL group of UK and until recently the largest computer company in India) put out its first Series-39 mainframe from its Pune factory. ICIM spent an estimated Rs.9 crores on this project. And last month, PSI Data Systems, the Bangalore-based company, announced that it had signed a collaboration agreement with Honeywell-Bull of France to set up a new unit for mainframe manufacture.

In what can be termed the super-mini segment, PCS Data Products has a tie-up with Data General, again of the US (for the MV-15000 range), and Hinditron has a tie-up with the venerable Digital Equipment Corporation to manufacture the VAX range. The total investment in these projects is Rs.60 crores, about 25 per cent of the size of the computer industry. Is there sufficient demand in the market to justify such large scale investments?

The government and large public sector companies constitute 70 per cent of the market for mainframes. In recent years, both have computerised rapidly. Indian Railways has so far spent Rs.20 crores to computerise passenger reservations at the four metros; all the systems are based on imported DEC equipment. For the reservation system in Secunderabad, the Railways decided to shop for a local manufacturer; ECIL's tender was selected. The value of that single order is Rs.3.5 crores. Considering that the railways have ambitious plans to totally computerise passenger reservations, albeit gradually, Indian companies naturally expect a lot from this segment.

Other government departments too are shopping for mainframes. The home ministry recently invited tenders for a central computer system for the National Crime Research Bureau. Its value: Rs.20 crores. Mainframes for the head offices of nationalised banks are expected to cost Rs.50 crores. Says Veer Sagar, senior vice-president (marketing), ICIM, "Large private sector companies and foreign banks too have ambitious computerisation plans. But given the size of government it will always be the largest buyer." The annual demand for such large machines has been placed anywhere between 60 to 100. Says B.S. Prabhakar, managing director of ECIL, "An estimate of 100 machines is a bit on the higher side. Our own guess would be around 50 systems a year, a number which could gradually increase."

Considering that the average cost of each system is around Rs.1.5 crores the mainframe market would be valued at around Rs.75 crores. It is not surprising then that ECIL and ICIM are fighting for a share of the market, today. The battle has been controversial. Private sector computer manufacturers complain that ECIL, by virtue of being a public sector undertaking, has so far walked away with major government and public sector orders, placing companies like ICIM in a "difficult" situation.

ICIM, which has lost its pre-eminent position in the computer industry and reported a loss in the first six months of the current year, feels that selling the Series-39 is a question of survival. According to Veer Sagar, the company is aiming for a 30 per cent market share. ECIL's Prabhakar says that his company's Medha series should be able to maintain its 50 per cent share. Both products hit the market towards the end of last year and about 20 systems have so far been shipped — ECIL bagged 14 and ICIM the rest.

DIFFERENT SITUATION

ICIM's contention is that even when orders were placed through an open tender (and in several instances its price was cheaper than ECIL's) government companies preferred to buy from ECIL. The price preference allowed for public sector companies is not a new phenomenon and the computer industry is no exception. Industry observers cite the example of what happened initially in the PC market. "The so-called state electronic undertakings were given large orders by the government. These units bought PCs from the private sector and sold them to government under their own brand names. This did not hurt PC manufacturers because the market was large. In mainframes, where the investments are

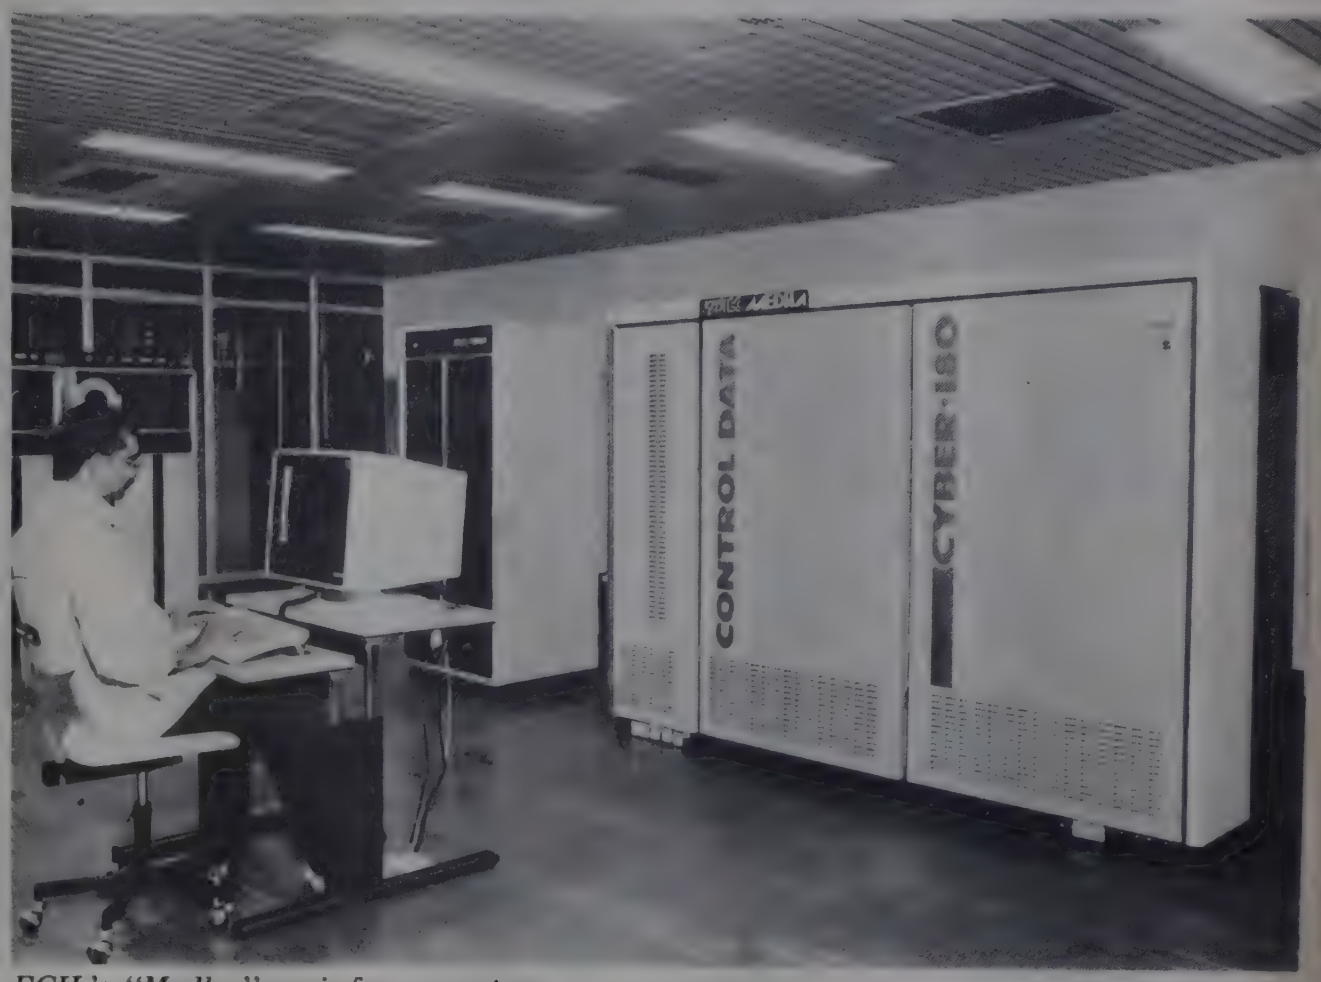
huge and the markets not large, the situation is quite different."

The department of electronics (DoE) maintains that it has taken a "neutral" position in the mainframes controversy. K.P.P. Nambiar, secretary, DoE has repeatedly asserted that there is no directive from his department which categorically states that government departments should place orders exclusively with ECIL. This view is endorsed by Prabhakar, "There is no government directive anywhere. In fact, we bid in competition by fair means. And we have been able to win orders because our product is superior and our prices competitive."

P.P. Gupta, chairman of CMC, which is widely regarded by the private sector as the "big brother" of the computer industry, offers an interesting insight into the controversy. "If there were two private sector companies in the mainframe market instead of ECIL and one of them was consistently losing orders, it would be interpreted as nothing more than bad luck. This issue has assumed an altogether different dimension because ECIL is a public sector company." However, computer manufacturers dismiss these observations and say that the record so far proves that ECIL has been given protection. "There can never be an official government directive on such a sensitive issue. But public sector chiefs are probably nervous about giving an order to a private company in competition with ECIL," says an industry watcher.

The benchmark evaluation of mainframe computers for the head offices of the nationalised banks is an example of how ECIL is indirectly favoured. Three months ago the Reserve Bank of India set up a committee consisting of representatives of the DoE, State Bank of India, and CMC Ltd. The committee was expected to study the requirements of public sector banks (for the first tier of their three-tier computerisation programme) and suggest a suitable system. The potential business from this segment is estimated at Rs.50 crores.



ECIL's "Medha" mainframe system

CLEAR INDICATION

In September, after conducting the usual benchmark surveys, the committee submitted a report whose second paragraph reads, "You will observe that ECIL system is found suitable for all banks whereas ICIM system is considered more suitable in category II banks with around 500 branches." A harmless sentence by all indications, but if one were to read between the lines, observers feel it is a signal to all public sector banks which way the order should be placed.

Moreover, ICIM's price in both the categories was lower than ECIL's (Rs.2.65 crores against ECIL's Rs.3.03 crores in category I banks, and Rs.1.76 crores against Rs.1.90 crores for category II). The most intriguing aspect of this exercise is that CMC, whose representative was on the committee, is now actively pitching its services as a consultant to public sector banks during commissioning. "If the banks request our services we will take it up," says Gupta, with a smile.

Neither ECIL nor ICIM can afford to regard the mainframe market as its fiefdom. There is competition from two sources: from imports of large machines which are allowed under OGL and from manufacturers of super-minis. For the first phase of the railway computerisation programme, CMC, which was chosen as consultant, imported a VAX system. During the second phase, the bidding process was restricted to Indian companies. According to Prabhakar, most of the industrial and data processing application systems can now be provided by local manufacturers. He says, "The DoE is aware of this and permission to import large systems is granted on a case-by-case basis. But imports should not be banned." It is estimated that at least seven to eight machines are imported each year. Ironically, IBM today sells more computers to India than it did before it opted to leave the country in 1978. SBI, RBI and ONGC have been among its important customers.

SURPRISE DECISION

Competition from the super-minis could be tricky. The Ordnance Factory Board (OFB) recently floated tenders for its Hyderabad unit. Besides ECIL and ICIM, PCS Data Products also submitted bids. The OFB first wanted to float global tenders but then grew interested in the Series-39, say ICIM officials. But a benchmark survey revealed that a powerful mini could meet the requirements. So, when the bids were opened, out went ECIL and ICIM and the Rs.5-crore order went to PCS.

PCS has been accused of undercutting (by upto 30 per cent) and not possessing a licence to assemble and manufacture Data General machines. Both charges have been denied by the company which claims it has an "interim" licence to assemble Data General machines until the Rs.8-crore project goes on stream in February 1989.

It is evident that dramatic changes are taking place at the higher end of the computer market. The stated objective of the government's liberalisation policy was to introduce competition in every segment of industry; it has certainly achieved it in computers. But the battle should be fought on equitable terms.

■ S.N. VASUKI with reports from SYED MAJEEDUL HASAN, Hyderabad

THE ANNUAL MAINTENANCE CONTRACT FOR YOUR PC. DOES IT MEAN YOU GET TO SEE YOUR SERVICE ENGINEER ONCE A YEAR?

Just like a birthday party, once a year. That's how rarely you get to see your computer maintenance engineer, particularly if you happen to be a small customer.

True your computer doesn't have a problem every month.

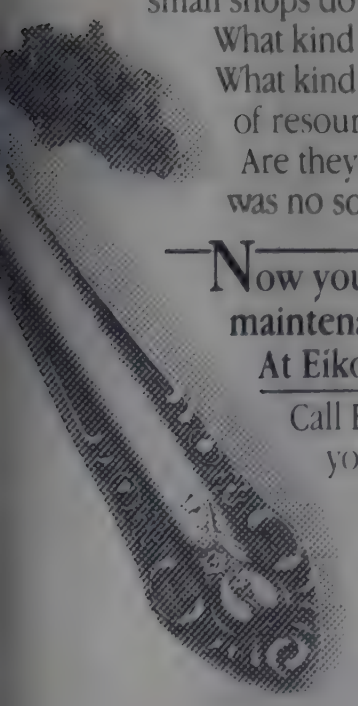
But preventive maintenance at least every quarter could make all the difference in the meantime between failures. Instead.... everytime you call, it's the same reply.

I'll get back to you

It never really happens unless you happen to be a top priority customer.

So what do you do? Go to the small shops down the road.

What kind of service do you get? What kind of spares? What kind of resources do they have? Are they good enough? There was no solution. But ...



Now you can book the finest maintenance engineers. At Eiko.

Call Eiko. No matter what your brand of PC.

Get yourself a maintenance service reputed to be the best in the country.

The only maintenance service of its kind, offered by a computer company.

Eiko PC Care

Backed by a full-fledged computer manufacturing company.

By a network of skilled service engineers.

By the facility to offer the best spares whenever you want it. Everything to take on where the others left off. .

Find out more. Ask any Eiko PC Care customer

WANTED CO-PROMOTER

The advertiser is holding a licence to manufacture a 100% import substitution high-tech metallurgical product of tungsten and molybdenum rods with Japanese collaboration. The project is estimated to cost around Rs.16.00 crores and is to be located in Mysore City. Entrepreneurs/large industrial houses/public sector undertakings interested to join as co-promoter, to invest, implement and manage the unit may kindly contact:

Box No. DA/277/LM/2, **Business India,** 157 8th Main Road, Vasantha Nagar, Bangalore 560 052.

CREDIT CAMPS

On a more sober scale

It was hot and stuffy. With over a thousand people packed into a village theatre hall it couldn't be anything else. The heat, however, only seemed to add to the expectations of the waiting crowd. Rubbing shoulders with the inhabitants from Valpoi and its surrounding villages in north Goa were Pratapsinh Rane, chief minister of Goa; Shantaram Naik, north Goa MP; D.N. Ghosh, chairman, State Bank of India; S. Krishnamurthy, managing director, General Insurance Corporation, and a host of senior bank and insurance officials. They were all waiting for the arrival of the man of the moment, Eduardo Faleiro, union minister of state for banking and economic affairs. The occasion was what in banking parlance is known as a "credit delivery programme" for the weaker sections or a "credit camp" in layman's language, organised by SBI.

The objective of the camp held on 23 September at Valpoi, the eleventh of its kind to be held in Goa since April this year (when Faleiro took over from Janardhana Poojary), is to give the the priority sector lending schemes of the nationalised banks a renewed thrust. Sanctioned loans actually handed out at these large public gatherings are believed to have tremendous demonstration value.

When Faleiro arrived and made his way up to the dais the halo around his head was all but visible. After all, he was bringing bankers from their air-conditioned offices to meet poor clients on their home ground. Goa is Faleiro's home state and the camp would give him much political mileage. But all bankers agree that Faleiro's credit camps are not mere binges, like the loan melas organised by his predecessor, Poojary.

Instead of the thousands of loan approvals at each camp which Poojary insisted on, Faleiro talks in hundreds. And the one month which the minister gives each bank branch to process a hundred applications is considered adequate. Moreover, as one SBI official emphasises: "It is a question of following the minister's targets in spirit rather than in letter." If we cannot find a hundred eligible beneficiaries we can stop at ninety two. There is no meaningless compulsion."

The camp at Valpoi covered members of 12 village panchayats; 1,606 members of the economically weaker sections were granted loans amounting to Rs.58.04 lakhs. Amounts ranging from Rs.3,000 to Rs.5,000 were sanctioned for varied activities like retail trade, bamboo work, cycle repairing, and for buying cattle, pumpsets and sewing machines. LIC and GIC settled claims totalling Rs.55,000.

The next day, 24 September, a similar camp was held in Assolna village in south Goa which brought the total amount sanctioned at the 12 credit delivery programmes since April to Rs.6.45 crores benefiting over 17,000 people belonging to 152 village panchayats (The 411 villages of Goa are organised into 380 village panchayats). As a result, the percentage of advances given at differential rates of interest (DRI) has risen from 0.44 per cent of the total deposits in Goa in December 1987 to 0.76 per cent in June 1988. (According to Reserve Bank of India guidelines DRI loans should amount to 1 per cent of total advances.)

In a a state where the credit absorption has been low compared with deposit generation, the credit camps have helped in giving advances a new push. "Bankers in Goa who were good at getting deposits are now having to go out and look for borrowers," says P.G. Kakodkar, chief general manager, SBI.

To ensure, however, that villagers do not interpret the whole exercise as a dole Faleiro, Rane and Naik in their speeches repeatedly stressed the importance of repayment. Six beneficiaries who had already repaid their loans were held up as examples and awarded certificates. (These certificates, according to local bank officials, are often framed up in the villagers' homes!)

Obviously pleased with the fact that Faleiro is allowing enough time for credit appraisals and also laying stress on loan repayments, Ghosh in his address (translated into Konkani by a bank officer) said: "What is being done in Valpoi will be repeated all over." He admitted that despite the high priority given to lending to weaker sections what had been achieved was not enough. But, he pointed out, the nationalised banks had adopted the "service area" or the "village by village planning approach". Students of Goa university, he said, would be enlisted in drawing up the village plans.

Pamphlets listing out various schemes of the banks and insurance companies were distributed at the camp. At the end, widows of landless labourers walked up to collect their insurance claims, premiums for which had been paid by the government — evidence of policies going beyond paper.

"A credit camp is an excellent awareness creating medium," said Faleiro in an interview after the camp. "Probably more so for the bankers," said Ghosh. As Krishnamurthy summed it up: "When you actually come here and see the conditions you can reorient yourself to the social policies of banks and institutions."

Faleiro at the credit camp: policies going beyond paper

THE HINDUSTAN TIMES
No special status for Punja
Pakistan must stop helping terrorists
Regional NPT rejected
out in Gujarat areas
A providential escape for 275

The Hindustan Times is the capital's largest circulated national daily newspaper today. And it has been the largest selling since its inception in 1924 :

The HT is always the first with news of national and international importance.

The HT carries in-depth and comprehensive analyses of vital developments.

The HT is a forum for discussions on a wide range of issues.

The HT carries fascinating articles written by men who know and think.

The HT Sunday Magazine in colour, carries interesting stories and articles for relaxed weekend-reading.

The HT with its 'Action Line' provides a forum that gives readers a chance to voice grievances and seek redress.

The HT, printed by latest offset technology with excellent reproduction quality, is the best produced paper from the capital.

The HT gives full return to the advertisers through its extensive reach and exposure.

The HT today, as in 1924, is still the most widely read newspaper in Delhi and northern India.

THE HINDUSTAN TIMES

We sell more. Because we tell more.

CFC-LAZARD TIE-UP

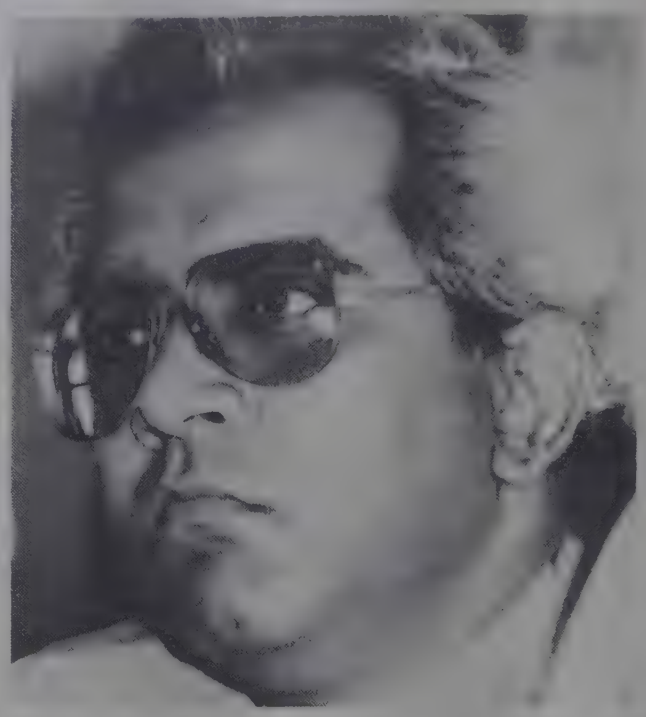
RBI sets a precedent

It may not usher in the Big Bang. But last week's announcement that the Reserve Bank of India, the country's central banking authority has permitted Lazard Brothers, London, to invest 25 per cent in the equity of the Bombay-based Credicapital Finance Corporation Ltd (CFC) is expected to internationalise several other merchant banks in India. "Independent merchant banks will now move towards converting their existing loosely defined financial collaborations like CFC has done," observes one manager in a merchant banking company in Bombay.

The amounts involved may not be significant — Lazard's investment in CFC equity is a small £200,000 on a repatriable basis. But that is hardly the issue, says the chief executive of a public sector leasing company, "It is high time we had organisations that are capable of genuine investment banking and CFC appears to have the capability. Let's hope it delivers." According to him the Indian merchant banking community has yet to see the introduction of technology in financial services and products, "but this could well be the beginning."

Lazard Brothers, one of London's leading merchant banks, has particular strengths in corporate finance, corporate strategy and advisory work, privatisation, mergers and acquisitions, and international financing. In India, Lazard Brothers is involved in raising foreign currency loans for Tisco, Reliance, Bharat Aluminium among others and is also ad-

Scott: earnings are linked to success



Bose: success after four years of hard sell

visor to the National Thermal Power Corporation. Lazard Brothers has ownership linkage through a partnership firm with Lazard Freres et Cie, Paris and Lazard Freres & Co, New York. Its investments in CFC gives it a presence in India which is quite similar to its arrangements in Hongkong and Tokyo.

For CFC's chairman Udayan Bose, former regional director of Deutsche Bank's International Finance Group, South Asia, it is a culmination of four years of hard sell to the union ministry of finance. It is the first time that a major international merchant bank has been allowed to participate in a joint venture with a private sector independent merchant bank. The agreement signed in London in the last week of September between Bose and Sir John Nott, chairman of Lazard Brothers, provides for an equity investment of Rs.50 lakhs by Lazard in CFC.

"The proposal was cleared on the justification that CFC earns foreign exchange either directly from Lazard or because of Lazard," says Bose.

The formalised agreement says that Lazards will train people from CFC, market services jointly and exchange ideas on new products and new techniques. In other words, CFC has access to Lazard's think tank.

The collaboration has brought much hope to in the financial services industry which has been on the decline. But given the dominant status of the public sector in this nascent industry, can such tie-ups help independent merchant bankers? The answer is "yes" provided such collaborations add value to the financial services and bring in new technologies which are unknown here. Comments John P H Scott, director, Lazard Brothers, "It is our experience that the customers in UK are unhappy about doing commercial banking and merchant banking with the same bank as there is a conflict of interest. Independent merchant banks such as Lazard, and Rothschild are in an unique position as they have no significant funding activities." "Current records suggest that the merchant bank subsidiaries of the major clearing (commercial) banks are losing ground to the independent merchant banks."

But the scenario is quite different in India. Practically the entire banking and financial institution sector is owned by the government unlike in the UK where no one bank has a market share anywhere close to what State Bank of India and Bank of Baroda command. And after 1986 with the change in the Banking Regulations Act (1949), the financial services companies within the private sector have now lost business to wholly-owned subsidiaries of nationalised banks.

Can foreign collaborations then help independent merchant banks? Maybe yes. With takeovers becoming so common, the need for financial sophistry has increased. And Lazard Brothers has a particularly good reputation in the area of mergers and acquisitions (M&A). Says Scott, "The bulk of our income comes from M&A deals and general financial advisory fees. It is an area where you need to be highly skilled and therefore in every successful deal the fees are high." For instance, in warding off a hostile takeover, the Dee Corporation, UK, paid total advisory fees of over 10 million pounds in 1987. And Lazard was the lead bank in this deal.

In its four years association, with Lazard, says Bose, "Lazard has really helped us in many areas. They have involved me in their London, Paris and New York meetings, in client calls. They treated this as a joint venture from day one." CFC has adapted several models from Lazard. One area is in billing its clients. The fee it charges reflects two things: amount of time spent on the job and how well the job was done.

Over the past several decades Lazard Brothers has evolved into what Scott calls "a high-quality conflict-free merchant banking organisation with a very high level of integrity". Can the new collaboration and others that are bound to follow give the Indian financial services industry a similar direction?

AMUSEMENT PARKS

Bombay's own Disneyland gets approval

Bombay will have its own version of Disneyland after all. Fun City, being set up in Uttan village on the outskirts of the north Bombay suburb, Borivli, was finally cleared by the urban development ministry of the Maharashtra government last week. Moreover, a couple of weeks earlier, the union finance ministry agreed to waive customs duty of approximately Rs.2.4 crores on the equipment that is being imported for the project.

Promoters happy. These developments came as a relief to the promoters, Merry Movements and Equipments Ltd, who had to stop work on the Rs.15-crore project for over six months in the face of a controversy regarding the legality of developing the 200-acre plot. Ram Naik, BJP MLA from Borivli, had been trying to stall the project since he first read about it more than two years ago.

The project, as described by M.K. Saran, managing director, Merry Movements, will have 17 rides and games. These will include a roller coaster, a "Trabaut" (a merry-go-round cum giant wheel) "Gravition", (which is similar to the zero-gravity simulator for training astronauts) and submarine and spaceship simulators, all imported from Europe. For the very young, the park will have paddle pools and bumpy cars, among other games. Older people, who are looking for some peace and quiet, will be able to hire colonial bungalows or cottages that evoke the diverse cultural ethos of the country or stroll down a forested path. Besides, there will be several walk-through shows, a fort on a hill, a palace on an artificially created island in a lake, swimming pools and camping grounds. With all this, according to Saran, the park can entertain 40,000 people a day, although he does not expect so many to turn up every day.

The project ran into trouble when Naik, worried about the inconvenience such a large project would cause to the burgeoning population of his constituency, raised the issue in the state assembly twice in 1987. He was told that no permission had been given for the project. So, when the ad campaign broke in April this year, he decided to go take a look.

Complaint lodged. The magnitude of activity confirmed his worst fears. A fleet of around 50 trucks was carrying soil to the site from a [illegible]ring plot where extensive quarrying had defaced the landscape. He reported this to the Konkan division revenue commissioner, R.B. Buddhiraja, and soon the bricks and earth-moving equipment were seized and a complaint lodged against the contractor.

Saran: free to go ahead at last

Apart from the environmental and ecological issues, Naik also questioned the non-agricultural use of land, development within 500 metres of the sea-shore against the late prime minister Indira Gandhi's directive, ownership of the land, and encroachment on government land.

As things now stand, it seems that Naik had not done his homework well enough. It is Saran who has won out, though after a considerable loss of time and money. "It took us more than five years to obtain the various permissions and certificates," says Saran, waving a bunch of documents including letters from the state and union ministries of tourism recommending the project, the import licences, the sale agreement for the plot of land duly stamped, and various sanctions and no objection certificates (NOCs) from the Bombay Metropolitan Region Development Authority (BMRDA), the Maharashtra Pollution Control Board, the Bombay Suburban Electric Supply Ltd (BSES), the Public Works Department (PWD), the Town Planning and Valuation Department of Thane district where the project is located, and the Uttan gram panchayat.

Says one official in the town planning department, who admits that the project will be a tourist attraction and a good money-spinner for the state, "The land has been barren and totally useless for years. Now the company is developing it and planting trees. The government has not contributed anything to the project apart from giving the various permissions. Even these have been given on condition that the development blends with the landscape, taking environmental factors into consideration. The permission for non-agricultural use of the land has been granted with a meagre floor space index (FSI) of 0.4 which is the same as that for agricultural land. Moreover, the promoter will have to provide for the infrastructural facilities."

"I am not against any entertainment," says Naik. "All I said is: if there are any irregularities, they must be checked." And with that ends the opposition to the building of Fun City.

COMPUTER TRENDS

Small systems will get an edge

Small and medium scale computer systems will gain greater precedence than large and costlier machines during the next five years, worldwide. Standards in operating systems, networking, datacom and hardware architecture will gain more priority than proprietary ones. UNIX, as an operating system of choice for medium and large scale systems, will come up as a prime force. And future buyers of computers will increasingly ask for integrated systems, common standards in hardware and software, and high levels of service and support.

These are some of the conclusions arrived at a one-day information industry seminar entitled "Directions '89", organised by the Indian branch of the US-based International Data Corp (IDC) in Bombay recently. The sessions were conducted by IDC's Asia-Pacific regional director, Len Rust, in conjunction with Cyber Media (India) chief Pradeep Gupta, IDC-India president Arun Mehta and computer consultant Prem Shivdasani. Others who were involved were Dr. A.K. Aggarwal, the director of the Academy of Computer Education (ACE), and Amit Dutta Gupta, director of Home Office Products Equipment (HOPE).

Rust, who had specially flown down from Australia, said the growth rate of the small systems (costing under US $ 100,000 each) market would grow from 42 per cent in 1982 to 67 per cent by 1992. Simultaneously, the growth rate in larger systems would fall from the present 41 to 33 per cent.

PCs TO THE FORE

The signs are evident even now. The old and large-size computer makers are growing at less than 15 per cent per annum, against 50 per cent plus for medium and small computer manufacturers. "IBM grew just 6 per cent, Control Data Corporation 1 per cent, and Unisys 7 per cent," Rust said, "whereas Apple Computer grew 50 per cent in 1987, Amdahl 56 per cent, Compaq 96 per cent and Sun Systems a whopping 120 per cent!" In 1988, the US hardware market would grow between 6 and 9 per cent, with PCs jumping the gun at 12 to 16 per cent; minis are expected to grow at 4 to 8 per cent and mainframes at a miserable zero to 4 per cent.

Rust: large market for small systems

UNIX, which has now garnered a US market worth $ 5 billion, has become virtually a byword with all start-ups, except PCs. By 1991, UNIX is expected to corner 20 per cent of the gross US hardware market.

However, much of the world scenario may not be actually reflected in the Indian computer markets. The share of computers manufactured as a percentage of India's GNP has been a miserable 0.13 per cent this year and is expected to barely touch one per cent by 2000 AD. In absolute terms, computers form a mere 7.9 per cent of the gross value of all electronics at Rs.375 crores today, and may form about 20 per cent of Rs.14,000 crores by the year 2000.

Prem Shivdasani, ex-managing director of ICIM Ltd (International Computers Indian Manufacture), founder-president of NASSCOM (National Association of Software and Service Companies) and independent computer consultant, spoke on the globalisation of the Indian computer industry. "Today, we have 38 tie-ups with foreign companies (11 in 1985). Of these, 13 are agency collaborations (five in 1985) and 25 are technical tie-ups (six in 1985)."

Shivdasani said increased interaction with foreign vendors would help Indians to cut down the technology lag, provide more attractive hardware features, and strive to meet after-sales service standards to match perceived international ones. "About 50 per cent of Indian users prefer indigenously manufactured systems with foreign tie-ups," he said. "But, foreign tie-ups do not necessarily mean success. The DCM-Tandy, ICIM-ICL, Tatas-Unisys and ECIL-Norsk Data tie-ups have not been resounding successes."

According to Amit Dutta Gupta, who has just set up HOPE in Delhi, "The right deployment of technology would hold the key to success by the year 2000 AD." He decried the Indian impulse to look to just the western markets for exports.

INCREASE MANPOWER

"By 2000 AD, Indian technical competence would be genuinely worth reckoning among developing nations," he said. "We can sell manufacturing knowhow, marketing and support, education and training, hardware and components and software applications." Gupta said about 3,400 training institutions train roughly half a million Indians on computers per annum, which ought to be boosted if we are to avoid the coming manpower crunch."

According to Aggarwal of ACE, software would grow in the exports and end-user computing markets and as sales by hardware vendors. However, during 1987-88, the growth rate has fallen to 41 per cent, against 60 per cent during 1985-86. The number of small-scale software vendors increased to 267 units during 1987-88, but 47 per cent of the market share of software is held by three large companies with revenues in excess of Rs.10 crores each.

Mehta, chief of IDC's Indian operations, said that the IDC survey had predicted a cumulative demand for minis at 8,000 units by 1991 and for PC-ATs at 26,030 units. "The current installed base of UNIX systems is under 2,000 each for minis and supermicros. Hence, the market can absorb at least 6,400 mini systems and at least 18,000 supermicro systems."

He said that the new application areas that may open up would include demand for expert and artificial intelligence systems, office automation, CAD, CAM, CAE (engineering), computer graphics and animation, imaging and CIM (computer integrated manufacturing).

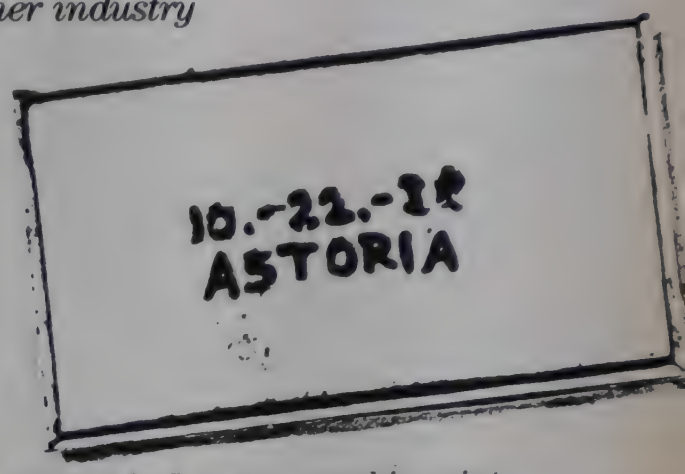
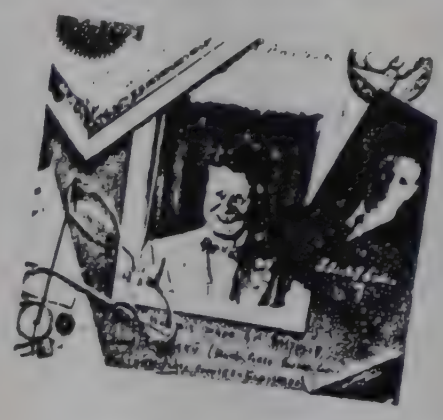
Fifty years of xerography

Xerography turns 50 on 22 October. A look back on the five decades of the copier industry



Carlson's first xerographic print



The Xeroprinter being demonstrated in the late forties by John H. Dessauer, Haloid's research head; Chester Carlson; and Haloid president Joseph C.Wilson. This early xerographic device, which printed on rolled paper, commanded public attention, but was never marketed

From Astoria, New York to Agartala, Tripura is a long distance, but not a daunting one if you consider the pace at which technology travels. It has, however, taken 50 years for the world's most durable plain paper duplicating process, xerography, to traverse the 10,000 miles that separate the two cities. Modi Xerox, India's largest copier company, set up its first full-scale sales and service facility in the eastern Indian city this year.

Fifty years ago, on 22 October, a patent lawyer named Chester Carlson working weekends in his own kitchen in Astoria, New York, formulated the principles of what he called electrophotography — the process of creating an electrostatic image on a photoconductive surface and then transferring the image on to a piece of paper. Electrophotography was later rechristened xerography from the Greek word for "dry" and "writing". The first image that Carlson transferred on to a plain paper that day bore the simple plain legend 10-12-38 ASTORIA.

All those working in the 300,000 or so offices in India who still endure the pains of using carbon or stencil copies for want of a copier will draw small consolation from the fact that unlike the computer, the motor car or the aeroplane, it took as much as 22 years for Chester Carlson's discovery to be put to large-scale commercial use. For nearly nine years nothing happened. It was turned down by as many as 20 companies, including the likes of IBM, Remington, General Electric and Kodak as an unusable technology before the Haloid Company, a small photographic paper manufacturer based in Rochester, New York, took up the challenge of developing the first xerographic machine. And it was another 12 years before Haloid realised what then seemed an impossible dream.

In the latter years in fact, developing the copier was a do-or-die strategy for the company. Its earnings from the photographic paper business were fast shrinking and the only way to survive was to develop and make a success of this new product. In fact towards the end, hard-pressed for money, it tried selling the technology to companies like IBM and Bell. IBM rejected the offer saying, "..it has no place to go, there really isn't a need for it, it is a very specialised thing, maybe you'll build 5000 (copiers)." Despite the heavy odds against it Haloid ploughed along. The company spent as much as $ 12.5 million, more than its entire earnings for the fifties, on developing the product. The world's first automatic plain paper copier, called Xerox 914, was unveiled in early 1960. Offices across the globe were never to be the same again.

Haloid's chairman, Joe Wilson, wanted to change the name of his company to something that reflected the new product he was developing. He paid thousands of dollars to consultants to come up with a suitable name but no one could do better than "American Xerographic Corporation" and "National Xerography Inc". Wilson wanted something more catchy. And then while on a walk outside his house in Rochester he saw a Kodak signboard. Kodak, the world's largest photographic company, was like Haloid, based in Rochester. George Eastman, its

Move up... to McDowell's

Unmistakably No.1... McDowell's

McDowell's

The soda with spirit

founder, had christened his first roll film camera Kodak because "it was short, easy to remember and began and ended with his favourite letter K". Watching the Kodak sign, Wilson came up with a new name for his product, the euphonious 'xerox'. He renamed the company Haloid Xerox and later changed it to just Xerox Corporation.

The success of Xerox 914 was astounding. Wilson himself had predicted in 1959 that the 914 would double the company's sales to $60 million by 1965. Revenues that year were $392.6 million. When in 1962 revenues had reached $115 million, a *Fortune* article had said, "No one believes that the 914 is going to keep on growing at its present rate forever." Apple Computer is commonly perceived as the fastest company to reach sales of a billion dollars — in nine years; Haloid, later renamed Xerox Corporation, actually hit that figure in eight.

Wilson like everyone else had underestimated not only the popularity of the product but also his own marketing innovations. A 914 cost roughly $ 2,000 to build. It was leased for $95 a month and four cents a copy for every copy over 2,000. As with every Xerox copier since, the per copy charges are a more important revenue producer than the lease rate. In 1967 it was estimated that each of the 9,000 914s in use brought in about $4,500 in revenue. This means that each 914 made an average of over 100,000 copies a year, well beyond the 2,000 a month allowed in the lease agreement. This also meant that Xerox recovered most of the cost of the machine in the first year of rental. Except for servicing costs, everything else was pure profit.

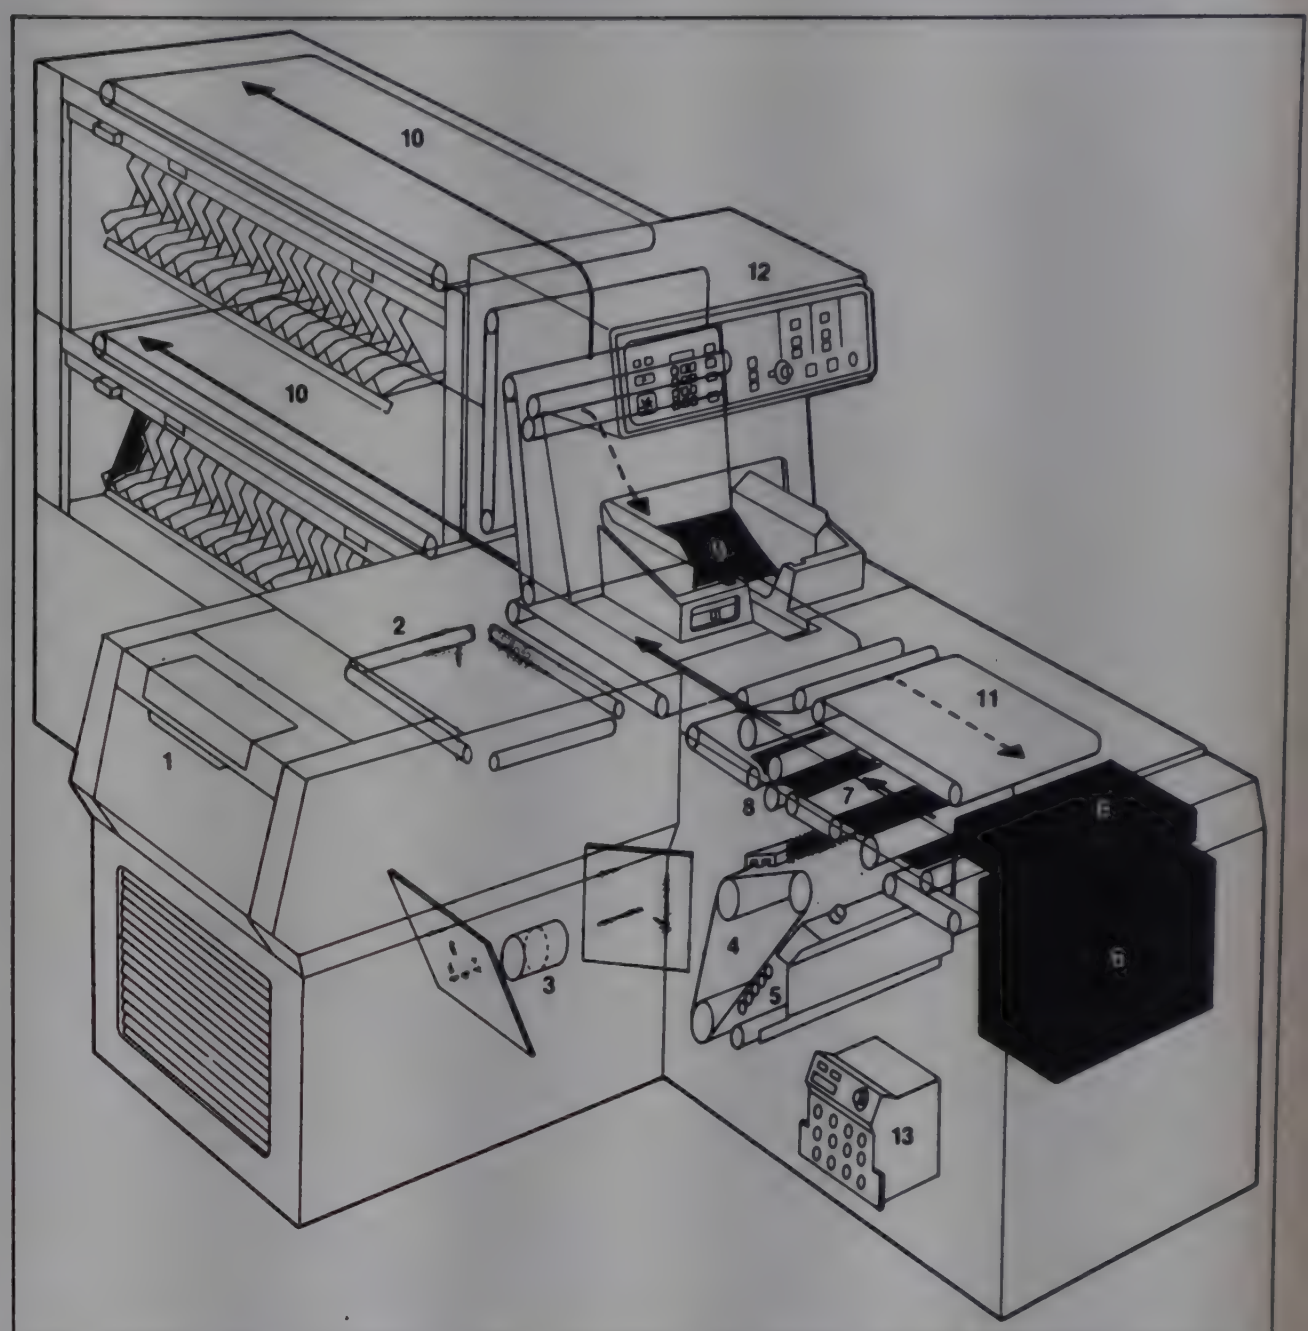
About 200,000 914s and simple variations of it were made around the world between 1960 and early 1970 when the company stopped manufacturing the model.

The 914 is estimated to have earned the Xerox Corporation profits of around $ 1 billion, more than any single product in corporate history. By 1970, Xerox was the 60th largest company in the US. Chester Carlson earned around $ 200 million for his discovery by the time he died in 1969. Joe Wilson, the other genius who fashioned Xerox's success, made around $ 100 million by the time he died in 1971.

Around the time of Wilson's death Xerox's halcyon days as an absolute monopoly began to come to an end. In 1970 the company's patent for a large number of its processes expired. That was just the beginning of the problems from which it would not recover till about the early 1980s. On 22 April 1970 IBM introduced its first office copying machine, the Copier I, to crack the Xerox monopoly. Xerox reacted by suing the computer giant for infringement of 22 patent rights. Xerox had licensed IBM to use some of the xerographic technology for computer applications. It accused the company of using it illegally.

The Xerox-IBM court case set the tone for the large number of litigations that the copier giant had to go through in the seventies. In fact this was a small-time affair compared to some others. In 1972 the Federal Trade Commission accused Xerox of illegally monopolising the office copier business. In 1973, SCM, an office equipment manufacturer, sued Xerox for anti-trust violations. In 1975, the Van Dyke Research Corporation also sued Xerox for anti-trust. IBM counter-sued Xerox. Many other manufacturers, copying service firms and even customers seeking anti-trust reliefs also went in for law suits. The very existence of Xerox was threatened as a result.

While Xerox concentrated on its legal problems, competition moved in, not only to expand the frontiers of xerographic technology but also to eat into Xerox's 90 per cent market share in the early seventies. Though IBM had problems with its copier, fellow hometowner Kodak burst onto the scene with its successful Ektaprint 100 in 1975. It made 70 copies a minute, thus attacking the mid-range



The working of a commercial copier: *the original document automatically moves from the document handler (1) to the platen (2) where it is exposed by lamps and mirrors through a lens (3) focusing the image (in same or selected reduced sizes) onto the photoreceptor belt (4). Magnetic rollers (5) brush the belt with dry ink which clings to the image area. A sheet of copy paper moves from either the main or auxiliary tray (6) to the belt, where the dry ink is transferred to it (7). The copy then goes between two rollers (8) where the dry ink image is fused to it by heat and pressure. A copy of a single-page document emerges in the receiving tray (9). Copies of multi-page documents go to the sorter (10) for collating into as many as 999 sets. If the sheet is to be copied on both sides, it returns by conveyor (11) to the auxiliary tray to repeat the process.*

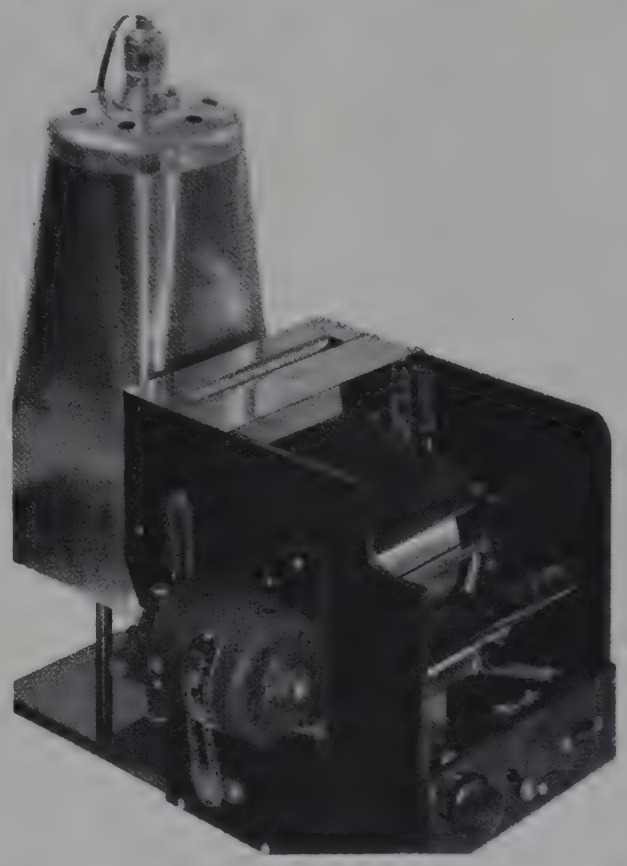
copier market where Xerox made most of its money. It was also the first copier to use microprocessor technology and was therefore far more advanced than anything Xerox could offer at that time.

Kodak's efforts at destroying Xerox's monopoly were followed by a sledgehammer assault by the Japanese starting 1975. And ironically, the man responsible was an American, by the name of Paul Charlap. He was the chairman of Savin Corporation, a small-time manufacturer of copiers. Charlap led a crusade to destroy Xerox's monopoly and in this venture he enlisted the help of many companies worldwide — a group of Australian scientists to develop the liquid toner that would be a step ahead of the powder toner that Xerox was still using; two American firms AD Little and SRO Interaction to help develop the roller to clean the drum of the liquid toner without scratching it; another American company Nashua to help in the marketing; a German company Kalle to market the product in Europe; and most critically, Ricoh, the Japanese giant to actually manufacture the copier.

The Japanese, led by Ricoh and Canon, were to bring about the second revolution in the copier industry in the seventies. They standardised the manufacture of a majority of the copier's parts with most manufacturers using the same vendors, unlike Xerox which still had units manufacturing parts exclusively for it. Besides, the Japanese had fully automated plants, which helped them keep inventory levels down to as low as a few days. All this brought down their production cost to half of that of Xerox.

Charlap introduced the Ricoh-manufactured Savin 750 in Europe in 1973 and in the US in 1975. In true Japanese style the copier was directed at a segment of the market that Xerox had consistently ignored, the low volume end. It cost Ricoh only about $ 600 to manufacture and it sold at around $ 5,000. The comparable Xerox machine sold for $ 12,000. Companies everywhere having gone through a recession and energy crisis were eagerly looking for a cheaper, more energy-efficient machine. Do you really want to trek down to the basement to use the expensive Xerox or put Savin machines on every floor? Or why lease a copier when you can buy one for what the lease costs you every year? These were the questions consumer asked. And the answer seemed to be: buy a Savin 750.

Besides, the Ricoh-made copier was much more reliable than anything Xerox had made till then. It could make 17,000 copies between failures and took less than 30 minutes to repair. The Xerox machine averaged 6,000 to 10,000 copies between failures and took up to twice as long to repair. As a result Ricoh's sales exploded. By 1977 it was placing more machines in the US than Xerox. In just three years, Xerox's share of the units placed in the US copier market fell from 82 per cent to barely over 50 per cent. Excluding Fuji Xerox (Xerox's Japanese partner), Japan's production of plain paper copiers swelled from 79,000 to nearly 400,000. The Savin 750 in fact was just the beginning, the other Japanese manufacturers like Minolta, Konishiroku, Toshiba, Matushita, Sharp and, mainly Canon, moved in swiftly to claim their share of the market. There was not much Xerox could do. The profits of Rank Xerox (Xerox's British partner) fell from £255 million in 1979 to £105 million in 1982; Xerox's own profits declined from $ 598 million in 1981 to $ 424 million.



Carlson's first xerographic apparatus. It never worked well, but researchers at Battelle Memorial Institute and Haloid Company later applied the resources needed to turn the basic discovery into functional machines

The Japanese success forced Xerox out of its slumber and for the first time in more than a decade it began to look inward to find out what had gone wrong. This effort started in the early eighties and by 1983 the company was on its way to making one of the most amazing comebacks in corporate history, something that probably left even the Japanese stunned. It started with a total rehaul of the top management structure of the company; followed by the introduction of competitive benchmarking, more emphasis on market research, reduction of the number of part vendors from 5,000 to 400, and a new look at quality.

Xerox's new 10 series of copiers was so sophisticated that it was difficult even for the Japanese to copy and mass produce. The series, launched in 1983, became the single most successful range of copiers in history. The company not only arrested the decline in market share but also picked up points along the way in the subsequent years. By the end of 1985, more than 750,000 machines had been rented or sold. The 1075 became the first Xerox copier made in America to be shipped to Japan. Xerox's sales peaked at $ 15 billion last year. Chief rivals Canon, Ricoh, and Kodak didn't do badly either. But Xerox had come back with a vengeance and there was no stopping the company from now on.

In the early eighties the Indian government threw open the local photocopier market to importers. As a result, in xerography's fifth decade, a nation which till then was content with carbon copies and cyclostyling found itself suddenly presented with an opportunity to buy and use the best contemporary copiers in the world like the Xerox 1045 and Canon NP 2015. So despite having virtually ignored the development of a whole new technology for more than two decades, India finally had access to state-of-the-art xerographic machines. The Modis, in collaboration with Rank Xerox, began manufacturing the Xerox 1045 and 1025 three years ago at their Rampur, UP facility, the only such plant in the country.

Modi Xerox now controls about 40 per cent of the estimated Rs.150-crore copier market in the country. The high duty levied on imports makes copiers twice as expensive as in Europe or the US and hence the slow 10 to 15 per cent growth in sales. The total copier population in the country is said to be in the region of 35,000. Only about 2.5 billion of the roughly 50 billion copies made in the country are made on copiers. And less than 10 per cent of the 300,000 offices have a xerographic facility. So there is still a long way to go. Maybe in xerography's 100th year we'll finally catch up.

The success of Seoul

Memories of the spectacle of the opening and closing ceremonies, the glamour of Flo-Jo, the artistry of the gymnasts and athlete recede, but others will remain: visitors to Seoul are not likely to forget the signs all around that South Korea has come of age. The success of Seoul is that the Olympics happened — without a hitch, smoothly and without a terrorist incident. The roads, hotels, airports, electronics were all ready on time — the people primed and the guests and visitors made comfortable. The South Koreans spent $ 3.5 billion to put up this show of shows. A second Asian nation had performed an economic miracle.

In 1953, South Korea was a war-ravaged nation in ruins, divided and overrun by military forces of many hues. The North Koreans were supported by Russian and Chinese armour and the country was divided at the 38th parallel; the South Koreans were supported by the Americans and their allies. There were over a million troops in South Korea then. Even today, in a population of about 43 million, the military and para military forces number around 600,000. As a result the nation's military budget continues to be very high (its percentage as a proportion of gross domestic product (GDP) had declined only because the latter has been growing at a rate between 12 and 20 per cent per annum during the last decade). Though there is no more war, covert North Korean hostility has kept South Korea's militry forces at near red alert.

In 1961, South Korea had a per capita income less than India's. By 1976, the Koreans were getting into their stride and putting up huge plants in a sensible manner. For instance, even then, their national economic strategy dictated that they should have a caprolactum plant; that plant was larger than any that exists in India today. They began producing cars for the first time, and in sizeable numbers. Their balance of payments position was critical, though their growth rate had just about hit double digits. That was maintained quite consistently, albeit with high inflation.

In 1979, Seoul applied for the 24th Olympiad in 1988. There was considerable dissension on the issue within the country and scepticism internationally. Nobody believed that Seoul would ultimately host the Games; nobody thought that the Koreans would be ready in time. But the International Olympic Committee decided in its wisdom that the Games should come to the most populous continent and Seoul was chosen in preference to Nagoya, which was the favourite, probably because Japan had already hosted the Olympics in 1964.

Today, the South Korean GDP stands at US $ 130 billion (Rs.180,000 crores) and its population at 43 million people, giving a per capita income of $ 3,000. Its exports stand at $ 50 billion (Rs.70,000 crores) and its balance of payments surplus in 1988 will be $ 8 billion (Rs.5,600 crores). They will have a fully convertible won (the Korean currency) in 1989.

A quick comparison with our 1988 figures, with over 800 million people, will further highlight their performance. India's GDP is Rs.250,000 crores and per capita income Rs.3,184. India's target for exports is Rs.20,000 crores this year and it hopes to have a balance of payments deficit of under Rs.5,000 crores. We export no ships or cars and import almost all our entertainment electronics — a good deal from South Korea. And what's more, South Koreans had their first free elections in 30 years in 1988.

Could India have put up such a performance? In perspective, our bid for the Olympic Games in Delhi in 1992 seems far-fetched. The effort that is required is phenomenal. Also, we must have at least a decade of double digit growth — like the South Koreans — before we can say we are ready.

The 1964 Olympics had marked the coming of Japan as an economic and industrial power. The opening ceremony of the 24th Olympiad on 17 September this year was a similar symbolic statement for South Korea. The outpouring of emotion, joy, pride and dignity of the Korean people made this an extremely moving ceremony. It is the quiet dignity and unity of purpose and hard work of the Koreans that will endure in our minds when the magic fades. That was the success of Seoul.

■ K H ADVANI

The Seoul of a new machine

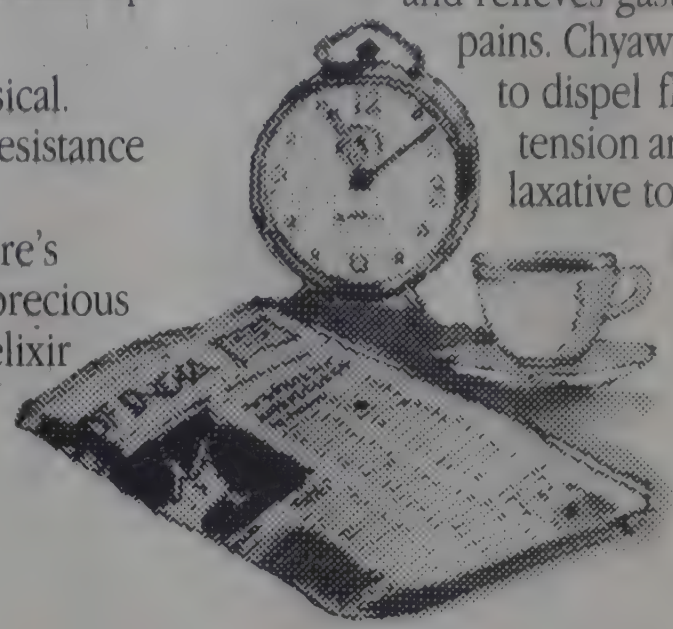
Your day goes something like this. Rush in the morning. Deadlines to keep. Meetings to attend. Targets to achieve. Snatched meals. Cups of coffee. After a hard day's work you get home. And all you want to do is sink into sleep. But you promised your wife an outing. So you keep pushing yourself. And the pressure builds up. Day after day.

Leading to fatigue – mental and physical. Tension. Digestion problems. Low resistance to common ailments.

To cope with all this, you need nature's own formula, created with over 46 precious herbs. Chyawan Shakti – the secret 'elixir of life' recipe handed down by the rishis of ancient times Brought to you by Dabur

Prevents acidity and digestion problems

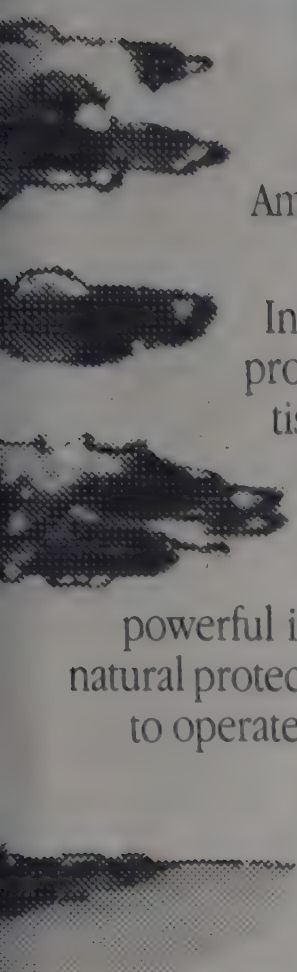
No more antacids and antiflatulence pills. A judicious blend of herbs like Akarkara, Lavanga, Madhu, and Mukta Shukti Pishti inhibits the formation of excessive acids, actually helps digestion, stimulates appetite and relieves gastric and intestinal pains. Chyawan Shakti also works to dispel flatulence caused by tension and acts as a mild laxative to encourage regular bowel movement.



SPECIALLY CREATED FOR F

Chyawan Shakti – combats stress, revitalises mind and body

To help combat the effects of stress on your nerves, Chyawan Shakti has ingredients like Draksha, Ashwagandha, Akarkara and Gokshur which act as demulcents and tonics. It is rich in Kesar, the legendary 'royal stimulant' for physical vitality. Together with Abhrak Bhasma and several other herbs, Chyawan Shakti tones up the metabolism, helps contract organic tissues, aids blood circulation and feeds both body and mind with readily assimilable forms of energy. Thereby building up stamina and invigorating the mind.



Rich in Vitamin C to fight illness

Who needs orange juice!

Chyawan Shakti is full of the goodness of Amla – the richest known source of Vitamin C and nature's best defence against illness.

In fact Dr. Linus Pauling, Nobel Prize winner, proved that Vitamin C actually revitalises body tissues, slows down the ageing process and builds up resistance to common ailments.

Along with other herbs, Chyawan Shakti acts as a powerful immuno-stimulant enabling natural protective mechanisms in the body to operate more effectively.

Fountain of Youth

Besides Vitamin C, Chyawan Shakti supplies you with Iron, Calcium, Minerals, Magnesium, Phosphorus and acts as an all-round health tonic. Keeping you feeling young and raring to go. And since it is wholly natural you can be sure there will be no harmful side effects. So go ahead and give it a try.

You have nothing to lose, except the adverse effects of stress and strain!

ICFAI ANNOUNCES

A Unique Correspondence Course

DIPLOMA IN BASIC FINANCE

(The DBF Programme)

ADMISSION NOTICE

Encouraged by the phenomenal success of the CFA Programme (Chartered Financial Analyst) meant for Financial Executives, The Institute of Chartered Financial Analysts of India (ICFAI) now launches a new and unique programme in Basic Finance, entitled the DBF Programme (Diploma in Basic Finance) through correspondence.

DBF Programme Design & Structure

The DBF Programme is designed to help the candidates get a good insight into Finance through structured self-study at home. The Programme covers the essentials of finance through a mix of four compulsory and two elective modules. Two-day Weekend Workshop Sessions will be conducted at major cities periodically to facilitate direct interaction between faculty and the participants.

Eligibility

Corporate executives, self-employed persons, entrepreneurs, bank and insurance executives, Government officers, defence personnel, teachers and others without a formal professional/academic qualification in finance. The Institute welcomes sponsorship of candidates from employers.

Prospectus

For Prospectus and Application Form, please write to the Administrative Officer (DBF) giving your address and enclosing a demand draft for Rs. 40 drawn in favour of 'The DBF Programme A/c ICFAI' payable at Hyderabad.

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA
Road No. 3, Banjara Hills Hyderabad-500 034.

MOULDS

We have been designing and manufacturing moulds and dies since 1970 and have 250 employees including engineers, designers, machinists, tool makers and moulders. Our engineers have been trained in the best tool rooms in the U.S.A. and are fully conversant with the latest techniques of precision mould manufacture.

We have a fully air-conditioned computer controlled tool room which is equipped with the best EDM's from Switzerland, three dimensional die sinkers from W. Germany, inspection and quality control machines from Japan and all other precision back-up machines.

We hold large stocks of the best imported alloy steels which are heat treated in our modern heat treatment plant. We can case-harden, harden, nitride and stress relieve all steels.

We are specialists in moulding the whole range of thermo-plastics and can ensure supply of moulded components to your requirements. Our moulding shop is equipped with ten Toshiba 150 ton fully automatic moulding machines, a Kautex blow moulding machine and a team of experts to run them.

Contact us for further information.

- High quality moulds for plastics and die casting industries.
- Moulded plastic components for general purpose and engineering plastics.
- Precision and electric discharge machining (spark erosion).
- Complex jigs and fixtures.
- Heat treatment of steels.

DREXEL BURNHAM LAMBERT

Massive suit

The leading Wall Street firm, Drexel Burnham Lambert, changed the face of corporate America through its introduction of junk bonds — high-yielding securities issued by less well-known organisations to finance takeovers and mergers. Junk bonds spread rapidly, and today most leading American investment banks have sizeable junk bond departments, though Drexel continues as the leading operator in this market. Recently however, Drexel has received a body blow in the form of a massive suit by the US authorities alleging that it has infringed various securities laws, and indulged in insider trading activities, some in concert with stock market operator Ivan Boesky who is currently serving a jail sentence for insider trading offences. There are hints that the present civil suit may be followed by criminal charges against the company and the head of its junk bonds department.

APPLE COMPUTERS

Mackintosh II

Apple Computers has launched an upgraded version of its best selling Mackintosh Personal Computer. The new model named Mackintosh II is 30 per cent more powerful than the current models and can be used for computer aided design, desk top publishing, financial analysis and scientific research. The new computer will significantly broaden Apple's market and bring it into direct competition with work station manufacturers like Sun Micro Systems and Apollo Computers. The new product will also preempt the new computer to be launched by former Apple chairman, Stephen Jobs, who left Apple after management disagreements and set up his own computer company called Next Incorporated.

PARKER PEN

Takeover by Reebok Shoes

In a $193 million transaction, Parker Pen Company is going to be taken over by Pentland Industries, the UK-based conglomerate which manufactures Reebok Sports shoes. Parker was the subject of a management buy-out for $100 million in 1986 but has run into problems subsequently over its plans for a public share issue to raise fresh capital. With the takeover by Reebok, Parker will have access to Reebok's marketing network in the US and the Far East as well as to Pentland's capital resources.

Ford-Nissan: billion dollar tie-up

PHILIP MORRIS

Withdrawal from Greece

In an unprecedented move, the US cigarette company, Philip Morris, has decided to stop production of its Marlboro brand of cigarettes in Greece and instead shift the production base to West Germany, because of the allegedly unrealistic pricing policies of the Greek government. The company has also complained to the European Commission about the Greek government's tax structure and cigarette pricing policy. Philip Morris plans to meet the demand in Greece by exporting from its plant in West Germany.

RAMADA

Friendly merger with Hyatt

The Ramada Inns chain is likely to go for a friendly merger with the Hyatt group, which is owned by the Pritzker family of Chicago. Ramada was previously discussing the sale of its international chain to the British Airports Authority, but the talks have been broken off. The company is now recommending a $400 million friendly merger with Hyatt subject to clearance by the US anti-trust authorities.

FORD

Tie-up with Nissan

Ford Motor Company has announced a tie-up with Nissan of Japan to produce vehicles in the US. The joint Ford- Nissan project envisages an investment of $1 billion for setting up a manufacturing facility to produce front-wheel-drive vans. Ford has co-operated earlier with Nissan and the joint project marks a strengthening of this relationship.

IBM

Change of ad agency

IBM has announced that it is sacking its advertising agency, Lord Geller, a unit of the J. Walter Thompson group and in its place appointing Lintas and Wells Rich Green as joint advertising agents. IBM is one of the world's most prestigious accounts with an advertising budget of $120 million per annum.

TWA

Going private

The shareholders of Transworld Airlines (TWA) have voted in favour of the plan of the TWA chairman, Carl Icahn, to privatise the company. Under the plan, the shareholders of TWA will be offered $20 in cash and $30 in debentures in exchange for their shares which will thereafter be wholly owned by Icahn. The move to convert TWA into a private company controlled by Icahn has been challenged by the TWA Pilots Association which has filed a suit alleging that Icahn is stripping TWA of its assets, burdening it with debts

■ ABHIJIT SEN

ADVERTISEMENT

Address by Shri A.L. MUDALIAR, Chairman,

THE INDIA CEMENTS LIMITED

to the Shareholders at the

Annual General Meeting on 23.9.1988

Let me begin by extending a cordial welcome to all of you at this forty-second Annual General Meeting of your Company. The Annual Accounts and the Directors' Report for the year ended 31st March 1988 were circulated to you sometime back and, with your consent, I shall take them as read. The year under review has had its travails and challenges and I shall be covering them a little later. It will perhaps be appropriate if I were to start out by sketching the broad profile of the overall economic environment.

The Indian Economic Scene

As you are all aware, 1987 was a difficult year with one of the worst droughts ever ravaging our agricultural sector and leading to a steep drop in foodgrain production. The good news, however, was the efficiency of the Government's drought management programme which not only contained the impact of the decline in output but indeed enabled the momentum of industrial growth to be maintained at over 7%. This and the strong performance of the tertiary services sector resulted in a modest rise in real national income which would ordinarily have declined. The growth rate of 25% in exports achieved during 1987-88 is indeed commendable but **sustained efforts to increase and diversify exports — cement is a case in point — are required to finance the increasing imports.**

It is also a measure of the increased resilience of the Indian economy today that the agricultural sector has bounced back into its growth path, now that rains have been munificent. The anticipated growth of national income by 7-8% in real terms for the current year will provide a solid backdrop to economic activities

The Government has continued on the track of liberalisation of policies with a laudably consistent resolve. In fact, licencing is hardly an obstacle now for the sector of industry which is not under the purview of the MRTP and FERA legislation. However, may I note here that **the pace of relaxation of bureaucratic process and procedures has not matched that of Government's policy thrusts. There is a case for triggering off the changes that are necessary in this regard so that the entrepreneurial dynamism of the Indian corporate sector may drive the engine of industrial growth at an accelerated rate.**

This is particularly relevant in the context of the deliberations on the Eighth Five Year Plan that have started. It is only through stable growth that we can step up resource generation particularly from the capital market. Also, a steady growth perspective is perhaps a sine qua non in India's situation of vast unemployment. To the extent that growth fosters efficiency, it also enables our products to gain in international competitiveness and so ameliorate the growing deficit in our foreign trade. Finally, it hardly needs to be pointed out that the really effective counter to inflation happens to be a milieu of growing output. I have no doubt that the Eighth Plan deliberations will be fully imbued by the urgency of maintaining growth at a high rate, as reportedly emphasized by the Prime Minister.

Before leaving the overall environment, I would also like to make a reference to our specific context in Tamilnadu which has undergone a sea change. In the death of Thiru M.G. Ramachandran, we have lost a charismatic leader of great stature and standing, who bestrode Tamilnadu politics like a colossus. Hopefully, a stable political scene will emerge in the State with the elections. In the meanwhile **it is gratifying to note the continued stress on industry and growth that has marked the President's rule in Tamilnadu. Improvement of the infrastructural sector that is being sought will be most important in raising the pace of industrial development in this State.**

Cement Industry — Scenario

It will now be appropriate to comment on the immediate context of your Company, namely the status of the cement industry. Aggregate installed capacity of cement in our country is 57.25 million tonnes and production from the major plants in 1987-88 rose to a little over 39.4 million tonnes from 36.4 million tonnes in 1986-87, i.e., a growth of almost 7%. The production target for 1988-89 has been fixed at 43.5 million tonnes. However, at the current level of output, supply is estimated to exceed effective demand by over 2 million tonnes. In the context of our developing economy where housing, roads and construction are of such transparent priority, this kind of mismatch points to the need for tuning up the economy in a continuing manner. Indeed, the strength of demand for housing is so great that the sheer backlog of requirements is estimated at over 29 million units by 1990 and at a huge 39 million units at the turn of the century even assuming the strong trend in the construction sector that is projected for the nineties in the Seventh Plan document. **If construction of housing is declared as industry, it will give a further fillip to this area of economic activity.** Likewise, as the Indian economy continues to get more and more energized, the need for more and better roads is only getting increasingly keenly felt. As noted by the Indian Roads Congress recently, cement concrete highways score highly over the conventional bitumen roads in terms of economy and ease of maintenance. Demand from this sector is, therefore, bound to intensify. Similarly, the application of cement in lining canals to eliminate water seepage can raise demand by a significant factor. Therefore, **I would tend to look at the oversupply situation as something of an aberration. Nevertheless, it highlights the urgent need for Government action to stimulate demand so that there is equilibrium and growth.**

Exports

It is estimated that the potent market for cement in c neighbouring countries is abc 2 million tonnes. In order that t Cement Industry can compe successfully in internation markets, it is essential that t Government removes the ban exports and formulates a policy providing adequate incentives Industry to compete in the nearby markets. The Ceme Regulation Account which substantial surplus can be utilis to support exports.

Profitability of Industry

Whilst strengthening of demanc likely to take time to plan a implement, the cement indus also merits support in battli against production problems a cost escalations. **Improve supplies of coal and power a an increasing imperative.** T mandatory 70% jute bag packi which has been subsequen reduced to 65% for industr located beyond 1200 kms. fro Calcutta, that is enforced on t cement industry is a hardsh given the runaway inflation in ju bag prices. (The price of jute bc for cement packing h increased from Rs.4.28 September 1987 to Rs.6. currently). **It is estimated that t increase in the cost of packir on account of this order for yc Company will be about Rs.1 Lakhs in a full year.**

I believe the Government is seiz of the situation and indeed t Union Budget proposals February 1988 were positi towards the cement industry. T **progressive reduction of the le quota on the industry culmin ting in decontrol and the rece increase of the retention price cement by Rs.47 per tonr although belated, will b universally welcome as t essential sector gets bett placed in the market envirc ment away from the shackles control.** However, the transiti has to be smooth and prope managed, particularly bearing mind the very considerab investment that has been ma by the industry, and especially older units, in modernisi technology and hardware.

Company Operations

I shall now refer to the operations of your Company. The profit from the operations for the year ended 31st March 1988, inclusive of other income, after providing for depreciation and interest is Rs 2.09 Crores as against Rs.1.76 Crores in the previous year. The year's profit is after provision for the interim advance awarded by the Arbitrators of Rs.58.8 Lakhs. Although the year had started on a strong note with firm trends in production and sales volumes, various adverse factors in the second half of the financial year affected the final out-turn of production and sales in the Cement Division of the Company. These adverse factors were a three-week strike, inadequate availability of coal and frequent equipment breakdowns. You will have read about these factors in the Director's Report The question of course is what are we to do about them as a Company? Your Board has examined the entire position in detail and various steps to strengthen the technical side of management and to improve monitoring and control systems along with a sharpened matrix of accountabilities for performance have either been implemented or are under way. This is a task made difficult by the fact that we have to overcome the lag of several years in the past, of operating without much of systems and accountability

The profitability and return on capital employed, however have increased marginally on account of the inherent strength of the Company's product in the market. The Company has been able to partially contain the increase in costs by measures for cost reduction including a programme of phased reduction in manpower under Voluntary Retirement Scheme

Foundry Division

As you all know, we have been losing every year in our Foundry Operations, despite investments made to enlarge the product range and to support the production process. We also upgraded the technical manpower in the Foundry, all on the premise that we would breakeven financially towards the last quarter of 1987. Instead the result was that we made and sold less castings than the previous year and incurred the highest loss so far, of Rs.171 Lakhs! Input cost increases not compensated by commensurate price increases and absence of delivery schedules against order placed by large customers has resulted in the division incurring larger losses.

Our discussions with several large users of Foundry products indicate that given the right management culture and marketing strength, our Foundry can earn profits like well run foundries do. **After careful analysis your Board has come to the conclusion that the Foundry Division should be organised as a subsidiary company of India Cements Limited, earning its own keep, rather than remain as a drain on your Company's resources. We are quite clear that we should make for growth of our Foundry and for this, the prerequisite is, we are advised, that the Foundry should look within itself for sustenance and growth.** Your Board, therefore, believes that it should be run as a free standing entity with the appropriate change in management culture which is necessary to give it a competitive edge. As an independent corporate entity, the Foundry Division will be competing in the mainstream of the market place for Engineering products and, we believe, successfully earning profits. At the appropriate time, your Board will be coming to you for support in order that formal steps needed to establish this subsidiary can be implemented. Meanwhile, your Board has engaged a group of Professionals to assist in the turn-round of the Division to profitability.

Audit Committee of the Board

You may kindly recall that in the Directors' Report of last year, a reference had been made to the formation of an Audit Committee of your Board, on the suggestion of the Industrial Development Bank of India. **I am happy to report that the Audit Committee has been active throughout the year reviewing the working, systems and controls and also the audit findings and helping in strengthening the management process in accordance with the terms established by IDBI.** Following the recommendations periodically made by the Audit Committee to the Board, your Company's Management is taking action, also to see that written procedures to regulate the conduct of the Company's operations exist. These procedures will ensure that accountability is complete for actions and defaults. In its terms of reference, the Audit Committee has the onus to ensure that the internal control system in the Company is effective and any misuse and wastage of Company's resources are reported to the Board.

We are also deeply concerned that some external forces seem to be attempting to disrupt the production processes to create an impression of poor management. The State Government authorities and All India Financial Institutions have been kept informed. **I am happy to record the confidence and support displayed by the Governments both at the Centre and State and the Financial Institutions in giving support to the Management in implementing various strategic policy decisions taken by the Board to tone up performance.** The Management are also taking action on the various recommendations of the Audit Committee, in order to ensure accountability at all levels of Management

Sankarnagar Modernisation

The Directors' Report gives you the status of the Sankarnagar Modernisation Project. The civil works are progressing and equipment erection will be commencing shortly. The Company has incurred an expenditure of more than Rs.14 Crores out of which Rs.7 Crores was provided from internally generated resources for the project. The progress of the project is satisfactory. In view of the necessity to conserve resources for investment in the Modernisation Project in Sankarnagar, the Board has recommended to maintain the dividend on Equity shares at 12%.

Sankaridrug Modernisation

In my address for the last year, I had informed you that various technical options for conversion of wet process of Sankaridrug works to the modern dry process were being considered. The operations of the plant at Sankaridrug works are unprofitable at the present costs and prices. I am glad to report that the Board of Directors has, in principle, approved a modernisation programme for Sankaridrug Works at a cost of about Rs.75 Crores involving conversion of the plant to dry process with latest technology. An application has been made to the Financial Institutions for term loans and we look forward to its early clearance.

Government Response

I have given you this brief resume of your Company's efforts in the technical and marketing areas in order to highlight what we see as the responses being expected from Industry in the National Programme for Industrial Growth. While Companies like yours are confident of playing their individual roles in the future scenarios, it is expected that Governments at the Centre and the State will also continue to extend their positive support and encouragement to the Industry in its pursuit of technological excellence.

Cess and Cess Surcharge on Limestone

I have covered in previous meetings, the question of Government's levy policy, mining leases, taxes, etc. The Cement Industry in Tamilnadu contributes about Rs.100 Crores to the Central exchequer and about Rs.50 Crores to the State exchequer in the form of taxes and duties. Most of the cement units in Tamilnadu are taking steps to modernise their old wet process plant by converting to the energy efficient dry process at substantial costs.

I have drawn attention earlier on to the cess and cess surcharge on royalty on minerals under the Tamilnadu Panchayat Act, which works out to 295% of royalty on limestone when no other State in the country has imposed such a high tax! The royalty rate on limestone was raised from Rs.4.50 to Rs.10 per tonne, i.e., an increase of 120% with effect from May 1987 Although the matter is pending in the Supreme Court, **may I appeal to the Government of Tamilnadu once again to reexamine the fiscal policy of levying cess and cess surcharge on royalty with a view to eliminate it, so that this does not affect the competitiveness of Tamilnadu units in the emerging free supply market scenario.**

Captive Mining Lease

There has been enormous delays by Government in the sanction of captive mining leases in the past. Further such sanctions were for short periods resulting in industry making frequent representation to Government, which was both time consuming and unproductive. The original Mines Act provided for 20 year mining leases, renewable for a further 20 years, so that industry could plan investment for scientifically mining of the limestone reserves. This policy was changed resulting in disruption of the production process at enormous cost.

The Tamilnadu Government under President's Rule have restored the period for which the mining lease is to be granted for captive mines of the cement units to 20 years in the first instance and subsequent renewal for 10 years for which we are grateful.

However, the delay in obtaining mining lease continues due to the insistence on the prior approval of the Indian Bureau of Mines of the detailed mining plans even for the captive limestone mines, which have been operated for more than two decades. I believe there are regular inspections of these mines by the mining regulatory authorities and therefore, the requirement of prior approval of the mining plans for existing captive mines of limestone owned and operated by the Cement Industry appears unnecessary

I have mentioned on previous occasions the importance of assuring enough mineable limestone reserves for the existing cement plants, particularly those which are embarking on modernisation of the wet process plants to dry process at enormous capital outlay. The financial Institutions including the World Bank insist that there should be enough mineable limestone reserves for atleast 20 years from the date of commissioning of the modernised plants. We have made repeated representations to the Tamilnadu Government in the past that the limestone reserves available within 20 kms. of the existing plants should be reserved for them and these reserves should not be frittered away at the risk of shortening the life span of the existing cement plants.

I am happy to record that the Tamilnadu Government recently issued instructions to the District Collectors and the Director of Geology and Mining that no mining lease need be granted to anyone other than the Cement plants within a radius of 20 kms of the existing Cement plants. This is most welcome keeping in view, the interest of the substantial work force employed in the cement factories and the social and economic development that has taken place around them.

It now remains for me to formally thank the Union and State Governments and the All-India Financial Institutions for their solid support during the year

May I also thank, on behalf of the Board, all the employees for their efforts in what has proved to be a very difficult year

N.B: This does not purport to be a record of the proceedings of the Annual General Meeting.

AN ALLOY OF THE FINEST METTLE

The pioneers of two continents come together to manufacture a new generation of heat treatment furnaces.

World famous EFCO, UK and GEC, India, with over eighty years of combined experience, join hands to introduce a range of highly productive and energy efficient heat treatment furnaces.

Custom engineered as well as standard furnaces, both electrical and fuel fired, that serve ferrous, non-ferrous and even glass and electronics industries.

Maintaining GEC's unsurpassed record of consistent range expansion and technology upgradation.

DROUGHT USA

What now, brown cow?

AP/WIDEWORLD

Drought country news is good, despite food scare

US crop falls short but is still able to feed world

BY DENNIS AVERY
in Washington DC

THE MOST AMAZING thing about the 1988 US drought—the worst in 50 years for the world's most productive region—is how little impact it is likely to have.

The world may be truly said to have weather-proofed its food supply when a major monsoon in Asia is followed immediately by a severe drought in the United States, and the two disasters together produce only a small blip on the world food availability chart.

Despite scary headlines and humanity's natural fear about famine, the US drought should produce no increase in world hunger, only a minor increase in food prices and no trend leading to increased hunger in the future.

Dry weather needn't mean food shortages. Today's weather problems aren't producing food emergencies because of the global food system's increasing capacity to produce huge amounts of food, store it safely and move it swiftly to where it is demanded. The year 1988 is demonstrating vividly the benefits of a world-wide food supply network.

The biggest reason for the world's recent food success in the face of drought is the breadth and power of the ongoing Green Revolution. That historic event was more than a few new wheat and rice varieties for Mexico and India. It was that moment in history in 1960 when the rest of the world joined the United States in systematically exploiting the potential of plant genetic science.

The Green Revolution has affected nearly all the world's countries. India's monsoon failure last year produced little hunger because high-yielding seeds had allowed the country to accumulate 23 million tons of grain stocks. Western Europe had no trend increase in grain yields before 1960; since then Europe's wheat yields have tripled. European wheat breeders think yields may double again in the next decade through hybridization.

Asia's rice yields have nearly tripled in the same period. Asian nations, like one-time rice importer Indonesia, are now satisfied with their rice production levels and are shifting lands toward oilseeds and feed grains. After a late start in seed research, even African countries like Zimbabwe, Zaire and Nigeria are beginning to make Green Revolution gains through higher yielding sorghum, corn and cassava varieties and new farming systems.

The world had 400 million metric tons (mmt) of food and feed grain in stock at the beginning of the 1988 crop year—two years worth of world grain imports and 40 years worth of food aid. Stocks are likely to total more than 300 mmt at the end of this blighted crop year. These stocks were so bloated at the beginning of the year that they won't be down to danger levels when it's over. The US "surplus" cropland—30 million hectares diverted from production—could have produced 110 mmt of grain, if that land were put back into production. That means this year's shortfall of 100 mmt could actually be made up in one season and in one country. As a result, the big drought will produce little hunger impact.

> Today's weather problems aren't producing food emergencies because of the global food system's increasing capacity to produce huge amounts of food, store it safely and move it swiftly to where it is demanded.

Farm product prices will increase somewhat in the world market. Consumers in Western Europe and Japan won't see much increase over their usual high prices. Moreover, since the whole world's farmers will be responding to the shortfall, the global price impact will be only a few percentage points—nothing like the doubling and tripling of food prices often associated with crop failures in isolated Third World countries.

Farm exporters like Argentina, Brazil, Thailand and Australia will sell this year's crops at high prices and reap billions in windfall foreign exchange gains. Argentina alone is projecting an extra US$3 billion in farm export receipts. That may help cut Third World debt. But the gains will be short-lived.

The world's farm surplus problems are likely to re-emerge as early as the fall of 1989. The drought is not a trend.

Farmers around the world, caught in a competitive struggle for market share, will plant more land, use more fertilizer, and the resulting big crops will likely drop prices back to or below their pre-drought levels.

As a result, don't expect an end to the world's nasty farm trade war. Surplus farm commodities are currently being sold off in places like the European Community and Saudi Arabia, along with surpluses in the United States. The forces driving the farm trade war are all still in place. They include:

- Rising crop yields in most countries;
- Slow economic growth and thus slowly growing food demand;
- Pervasive use of farm subsidies and trade barriers by dozens of countries.

The worst thing the 1988 drought might do would be to block the current negotiations to end the farm trade conflict. The Uruguay Round of the General Agreement on Tariffs and Trade has only 3 1/2 years to run. If high farm prices in 1988 and early 1989 fool the negotiating countries into believing that the weather-related shortfalls have resolved their basic farm surplus problem, it may be 10 years before the problem can again be addressed in a multi-lateral forum. The 1990's then would be doomed to waste billions of dollars on overbuilding agricultures in some countries while wasting farm assets in others.

Droughts seem to be an inevitable part of world weather and farmers' problems. Neither the US drought this year, the Indian monsoon failure last year, nor the African drought of 1983

Dennis Avery, former senior agricultural analyst for the US State Department, edits *World Agricultural Trends* for World Perspectives, Inc., Washington DC.

DROUGHT USA

represent any drought trend. Atmospheric scientists are approaching a consensus that the world is in a global warming trend—the so-called Greenhouse Effect—which might affect weather and crop production in the next century if we do not:

- Sharply cut the burning of fossil fuels that add carbon dioxide to the atmosphere.
- Eliminate the release of chlorofluorocarbons (CFCs) from aerosol containers and refrigeration units.

Global consumers can feel confident that farmers all over the world will respond to the tighter supplies and higher prices of 1988. US production is almost certain to rebound strongly, aided by the release of millions of hectares of cropland that were diverted this year. After the 1980 Cornbelt drought, US grain plantings jumped 5.6 million hectares. Grain production in Thailand and India is recovering from last year's drought. Argentina is expected to boost this winter's plantings of its "big five" commercial crops by some three million hectares. Brazil is talking about a 14 percent increase in corn and soybeans, with even larger soybean plantings possible depending on how much the US soybean crop is cut and how high prices can go. Bigger planted acreage and heavier use of fertilizer can also be expected in most countries in 1989, ranging from Canada and Sweden in the northern latitudes to Australia and Burma in the southern hemisphere, and from the high-tech farmers of Western Europe to the emerging export farmers of the Sudan.

With 1988 demonstrating the benefits of the worldwide food supply network, it would be highly ironic if the year also marked the collapse of prospects for farm trade liberalization. If the GATT talks fail, we can expect the world to resume its recent rapid trend toward national farm self-sufficiency.

At least 40 affluent nations have subsidized their farmers' prices lavishly in recent years. Most of these countries now consistently produce surpluses. (The newest members of the farm surplus club include Finland and Saudi Arabia.) The cost of farm subsidies has doubled in recent years to a total of more than $150 billion annually, even as the subsidies increasingly cancel out each other. That is the basic reason why the United States presented GATT last year with a seemingly radical proposal: that all countries phase out their farm price and production subsidies over 10 years. Farm subsidies would then be limited to social payments for farm families.

Such a reform would probably have been much more beneficial than most farm politicians would admit. Virtually all of the world's current farmland would have stayed in farming (it has no other use). Just about as many farmers would have been needed to farm it. The current heavy applications of farm chemicals in the affluent countries would have been cut back, reducing farmers' costs and cutting environmental pollution. Farmers would not only have gotten lower costs but also larger sales because more consumers could have afforded high-protein diets. Consumers would have gotten low-cost food and tax relief from the heavy burden of farm subsidies.

Unfortunately, these happy possibilities may have gone glimmering in the heat haze over the parched US Corn Belt this summer.♦

DROUGHT USA

International US food aid dries up

Impact strikes seven dozen countries on three continents

THE FARMERS in Argentina and Brazil are ecstatic over North America's moistureless misfortune. They are riding the crest of a multi-billion dollar boon due to wilting North American crops and favorable crop conditions at home. But the seven dozen countries on three continents that receive US food assistance will feel the devastation of clear skies over the US breadbasket.

The United States is the world's largest single donor of food aid. It provided this year about US$1.8 billion of such basic commodities as wheat, corn and non-fat dry milk (although the US Department of Agriculture has just announced it has run out of non-fat dry milk) to such leading beneficiaries as Egypt, India, Pakistan, the Philippines, Ethiopia, Bangladesh, El Salvador, Morocco, the Dominican Republic, Sudan and Bolivia. The US also offers, in addition, about $5 billion in export credit guarantees to help countries borrow to buy US commodities. Some programs are dependent on dwindling surpluses. Since others are denominated in dollar terms, higher grain prices mean less food tonnage shipped as food assistance. USDA officials conservatively project 4 to 10 percent commodity price increases but many feel prices will rise much higher. As a result, the hungriest of the world's countries may get less US food. This is the outlook for US food programs from USDA and State Department officials:

• Food For Peace or PL (for public law) 480: Since 1954, has delivered 656 billion pounds of food valued at more than $33.5 billion, but commodity price increases up to 25 percent will cut both concessional loan programs—where the recipient country is extended dollar funding on credit to purchase US commodities—and regular and emergency feeding programs.

• Overseas Donation Program (or Section 416): Provided approximately 300,000 ton of surplus grain for emergency feeding in fiscal year 1988. Its aim is to both alleviate costly surpluses and bolster the battle against hunger and malnutrition in developing countries. A State Department spokesman says, "It is now uncertain whether any surplus grain will be available in 1989 under Section 416."

• Export Enhancement Program: The program allowing developing countries to buy US commodities at competitive prices and reduce pressure on the PL480 concessional loan budget may not continue in 1989 because the drought has cut commodity surpluses.♦

Dry Nebraska means costlier bread in Cairo

US grain crop loss hits Egypt in pocketbook

BY MICHAEL GEORGY
in Cairo, Egypt

DROUGHT IN the sun-seared plains of Kansas USA is determining the politically dangerous price of a loaf of bread a half a world away in the sun-seared valley of the Nile in Egypt, a land where drought has been a way of life for millenniums.

For the lack of rain, the US wheat crop is down by at least 13 percent, the corn crop by 37 percent, and its soybean crop so withered the United States might have to import the commodity.

The US drought has provided the government of President Hosni Mubarak with few options about the price of bread, which is political dynamite. The decision of his predecessor, the late Anwar Sadat, to lift bread subsidies led to the riots of January 1977.

The 2-piastre loaf (about 5 US cents) still is readily available. But some Egyptian officials have mentioned the possibility of raising it to 5 piastres.

"They will have to increase the price of bread," says a Western agricultural attache. "It has to go up. Either that, or they will need a lot of money."

In a nationally televised speech marking the July 23 revolution of 1952, Mubarak gave his fellow citizens this economic lesson:

"We used to buy wheat for $82 per ton. This past June it cost us $110 per ton. Now in July, we are paying $149 a ton. Next year, when the effects of the drought become apparent and the amount of wheat decreases, the price will reach $240 per ton.

"Now we have to add an unexpected 576 million pounds (about $250 million) to the budget for wheat imports. Yet, we feed our bread to the goats and we throw our bread in the garbage.

"That's not all. Petroleum is also teasing us. We sold petroleum for $14 a barrel in June. Now we sell it for $12.75 a barrel. We cannot limit prices. How

AP/WIDE WORLD

> "We are starting to take the bitter medicine. We will have to bear it."
> *Hosni Mubarak*

can we limit prices when we import?

"When someone has a serious illness, he takes medicine. Sometimes, the medicine is bitter. But he has to bear it for his future, We are starting to take the bitter medicine. We will have to bear it."

Egypt, the world's largest recipient of US food aid, imported more than $762 million in US agricultural goods in 1987. Finding a way to respond to the consequences of the US drought will not be easy. The country already is hampered by a $44 billion external debt, a 25 percent inflation rate and a shortage of hard currency. Its 52 million population grows at the rate of 3 percent annually. It is emerging from eight years of drought in East Africa that has lowered the water level of the Nile.

"The drought is not unique," says Essam Radi, who as minister of irrigation wrestles with an age-old Egyptian problem. "It has happened many times since the ancient years."

The United States, Egypt's largest trading partner, furnishes 23 percent of its total imports. Egypt is the world's largest importer of US wheat flour and in 1987 was the second largest importer of US wheat. Once self-sufficient in food production, Egypt in 1987 alone imported six million tons of wheat and wheat flour.

Egypt purchases commodities from the United States under several loan programs, Under PL480, Egypt received $170 million in agricultural commodity loans from the United States for the import of wheat and wheat flour in the US fiscal year 1988. The Egyptian government is required to repay the loan at low interest over 40 years. The US drought has increased the price of wheat by 30 percent since January. Egypt will get one-third less wheat for its money.

"The increase in prices will affect the quantity which will be available for import," says Ahmed el-din Said, the first secretary of state for the Foreign Trade Sector. "That means we have to compensate the shortage from our own resources. That will place a heavy burden on foreign exchange proceeds."

The Egyptian government is under increasing pressure to generate hard currency. A May 1987 stand-by arrangement with the International Monetary Fund (IMF) helped Egypt reschedule $8 billion in debt on Western creditor government terms "more generous than had been granted to virtually any other debtor country," according to a US embassy assessment.

The fall in world oil prices since 1986 and the low water level of the Nile also has contributed to Egypt's financial problems. The water level has created power shortfalls. Egypt had to divert some petroleum from export to its power authority for use in power plants.

"The country could easily lose $500 million from its petroleum account," says a Western diplomat.

Egypt has started a campaign to conserve water, knowing how important the Nile is to its survival.

"The Nile provides us with everything," says Hajag Mohammed, 50, a farmer in the Nile village of Baharief. "We bathe in it. We drink from it. Our soul is in this water. The water from the Nile is like our blood."♦

Egyptian-born Michael Georgy reports from Cairo for the South-North News Service.

Now Available in Special Low-Priced Editions from the World Bank

World Development Report 1988

Each year the World Bank forms a team from among its top economists and development specialists and gives them a single assignment: review the current state of the world's economic and social development in one concise volume. Their year-long effort has paid off with a report that has become the World Bank's most widely quoted publication.

This year's report shows you where the world economy is headed and why, and how various economic policies would affect people in the developing world.

You also get an exclusive report on the role of public finance in development, based on the World Bank's extensive review of research and practical experience in this field.

Key features include the World Development Indicators—33 statistical tables that provide comprehensive, current, and reliable data on social and economic development for 129 countries. Take advantage of this handy reference that you will use time and again.

Official view: US crop still able to feed world

Despite drought, USDA official sees better harvest

BY DR. EWEN M. WILSON
in Washington D.C.

THE MOST DEVASTATING drought in half a century has burned up US crops and pastures. Hot, dry weather seared the heart of the Corn Belt, and by the end of July, nearly half of the contiguous United States were suffering severe or extreme drought. The drought raises major agricultural concerns. Chief among these are how the drought will affect US food and fiber supplies for both domestic and foreign customers.

As a major partner in world agricultural trade, the United States plays a big role. The United States exported about US$34 billion in fiscal 1988 and imported $21 billion. The drought is likely to reduce 1988-89 exports.

Early estimates indicate total US grain production may be off 85 million tons from 1987—equivalent to about 4 percent of world grain output. Corn has been especially hard hit; supplies will be down more than 37 percent from last year. Soybean production will be off 23 percent.

Fortunately, US grain stocks from last year, carried over into the 1988-89 crop year, will cushion production shortfalls and bolster supplies. About 110 million tons of corn are available for the 1988-89 marketing year from last year's stocks—nearly 60 percent of total US domestic use and exports. Wheat stocks of about 35 million tons equal 50 percent of expected total use. Wheat and corn supplies in 1988-89 are expected to be about 120 percent of total use. However, soybean supplies will be tighter.

Overall, total US crop supplies should be more than adequate to meet foreign and domestic customers' needs, but the prices will be higher than in 1987. Wheat prices at the farm may be up 45 percent from last year, corn prices up 30 percent, and soybean prices up 40 percent. We do not expect the drought to significantly affect food prices or the general economy.

Other producers also are facing weather problems. Canada has much the same weather patterns in its grain-producing Prairie Provinces as in the US Corn Belt. In the Soviet Union, periodic hot weather and dryness since early June is stressing spring wheat in the major growing area. But expected favorable growing conditions in the Western USSR could result in an even larger grain crop than in 1987.

In China, weather conditions are mixed with some areas having generally good crops. But the dry, hot weather in the Yangtze Valley and the North China Plain is affecting sensitive stages of development for key grain, oilseed, and cotton crops. Last year's drought in India brought grain levels down sharply and reduced irrigation supplies for the 1988 winter wheat crop. Early monsoon rains have provided a good start for the 1988 growing season.

The drought will not impair US longterm competitiveness. The United States will continue to meet subsidized exports as needed to remain competitive. Moreover, nearly 30 million acres of feed grain cropland could be returned to production in 1989. This tremendous cropland reserve could increase our exportable supplies by 80 million tons.

Short-term effects of the drought will be higher prices that may reduce pressures on the national budgets of exporting countries.

Weather is no substitute for long-term policy reform. And the impact of the drought will fade as the world market makes the necessary adjustments to deal with this year's natural disaster.♦

Ewen M. Wilson, a native of Kenya and a naturalized US citizen, is assistant secretary for economics at the US Department of Agriculture.

$3 billion grain boom creates shock in Argentina

More cash for crops has dark side on the pampas

BY JUAN CARLOS DE PABLO
in Buenos Aires, Argentina

THE US DROUGHT was an external shock in Argentina, bringing good news and bad news. Argentine farmers are riding the crest of a US$3 billion boom because of wilting North American crops and favorable crop conditions at home, but their added wealth means problems for their country's already beleaguered economy.

The country's trade surplus was expected to rise from $500 million in 1987 to $3.5 billion in 1988 because Argentine exporters were able to demand higher prices for their grain.

The drought reduced the US crops of corn and soybean, both commodities that Argentina exports. In Argentina, the dollar price of maize increased almost 80 percent between April and June, jumping from $70 to $126 per ton. The price of soybeans rose almost 60 percent during the same period, from $196 to $310 per ton.

The increase in the price of grains had unwanted affects. That is the bad news. The rate of inflation, already 20 percent monthly, rose an additional 2 or 3 percent.

Argentina has been left to wrestle with determining a response to this external shock. On one hand, the country must decide what to do with the increased inflow of dollars. On the other hand, it must figure out how to neutralize the harmful effects of the flow.

The government's decision depends upon its current negotiations with foreign banks over its $55 billion external debt.

To neutralize the unwanted effects of the external shock, the government faced the following choices, listed in ascending order of the effort required to mitigate economically harmful side effects:

- Do nothing;
- Subsidize the domestic consumption of grains, allowing producers to export the remaining level of production at the new prices;
- Introduce export taxes on grains;
- Appreciate the currency exchange rate.

What it did was create a cumbersome multi-tier exchange rate in an effort to extract more revenue from the trade boom.

It will buy dollars from primary producers for 12 australes (the rate was 1.5 australes to the dollar in 1987), and sell them to importers wishing to buy goods from abroad for 14 australes or more on a sliding scale, pocketing the difference, which becomes an equivalent of a tax on exports.

The government faces the danger of throwing the baby out with the bathwater, taxing producers so heavily they won't have the incentive to increase crops and take advantage of higher world prices.♦

Economist Juan Carlos de Pablo is executive editor of *El Cronista Comercial* in Buenos Aires.

WE PUT THE PEOPLE WHO GROW THE FOOD IN TOUCH WITH THE PEOPLE WHO NEED IT.

The key to feeding a hungry world is getting the food to where it's needed as efficiently as possible. At the Archer Daniels Midland Company, that's the job we perform each day. Our global processing and shipping network provides a vital link between the people who grow food and the people who put it to use. And that helps bring our world a little closer together.

THE SECTOR TECHNOLOGY AND MANAGEMENT PROGRAMME FOCUSSING ON FOOD PROCESSING AND METAL MANUFACTURING SECTORS

Management Training for Technology Transfer to the Developing World.

RVB, Delft: January 16 - April 20, 1989
Closing date for enrollment: November 1, 1988

Programme outline:

— Introduction	1/2 week
— Food Resp. Metal Technology	4 weeks
— Management	4 weeks
— In-Plant Applications	4 weeks
— Plan of Action	1 week

The program is directed at:

— Entrepreneurs/owners of medium-small size food processing resp. metal manufacturing industries

— Mid-level production managers of food processing resp. metal manufacturing industries.

In a number of countries Dutch NFP Fellowships are available. Please contact Netherlands Embassy.

For further information please write or telex:

Breaking through. Breaking ahead!

Indian Dyestuff Industries

High working capital requirements; recession in the textile industry, the company's main customer

The company has paid a dividend of 15 per cent for the year ended March 1988 compared with 14 per cent last year. Although the sales registered a growth of 11 per cent to Rs.182.73 crores (previous year: Rs.164.72 crores) the company suffered a loss of Rs.4.34 crores at net level. After withdrawing Rs.5.09 crores from the revaluation reserve, the company showed a profit of Rs.75 lakhs. It is only because of the balance of Rs.77 lakhs brought forward from the previous year that the company has managed to pay a dividend of 15 per cent amounting to Rs.1.13 crores. The operating profit rose up by 24 per cent to Rs.16.39 crores as compared to Rs.13.18 crores last year.

There has been a rise in the interest charges from Rs.8.92 crores to Rs.11.13 crores. The company's working capital requirement has increased tremendously. The provision for depreciation increased almost three-fold to Rs.9.60 crores. There is no tax liability. The cash profit has jumped by 23 per cent to Rs.5.26 crores (Rs.4.26 crores).

The textile sector, the company's main customer, continued to face demand recession; input costs too have gone up considerably. In order to reduce its dependence on the textile sector, the company has switched over to the manufacture of more sophisticated and specialised dyes and intermediates having high export potential. The value of exports during the year under review was Rs.25.38 crores (Rs.21.83 crores). The company's products are well established in the international market and the demand is growing.

The second phase of the expansion of the phthalic anhydride plant in Vadodara was completed in November 1987. The company also plans to modernise its cyanuric chloride plant at Vadodara.

The company sold 5,657 tonnes of dyes at an average selling price of Rs.263,390 per tonne; the average cost of manufacture was Rs.185,325 per tonne. At the end of last year the company issued 190,630 convertible debentures. After the conversion its equity will rise to Rs.9.41 crores and reserves to Rs.13.56 crores.

Ambalal Sarabhai Enterprises

Turns the corner after four years; major reorganisation; several units sold

The company which had been going through a lean period for the past four years made a cash profit of Rs.4.20 crores during the nine-month period ended March 1988 as against a loss of Rs.6.17 crores for the 12-month period ended June 1987.

Turnover and other income have both improved on an annualised basis to Rs.162.60 crores and Rs.5.56 crores. The other income consists of profit on sale of investments. The company disinvested its entire shareholding of 500 equity shares of Rs.1,000 each in its wholly-owned subsidiary, S.G.Chemicals & Dyes, in March 1988 for a consideration of Rs.2 crores.

The operating profit rose to Rs.14.55 crores (Rs.7.73 crores). The company has reduced its interest burden from Rs.13.90 crores to Rs.10.35 crores; this played an important role in its turnaround. The net profit was Rs.1.92 crores compared with a loss of Rs.9.44 crores in the previous year.

The beneficial impact of the revised DPCO pricing mechanism was only partially felt during the last three months of the nine-month period. In the last three months the company made a net profit of Rs.3.29 crores. The gross margin also improved to 19 per cent compared to 12 per cent for the entire year.

ASE has sold at par value, the Rs.99-lakh equity of Swastik Surfactants, a group company which had been a pioneer in the field of detergents and cosmetics.

The company has received approval for the manufacture of penicillin, erythromycin, vitamin C, insulin and other pharmaceutical preparations.

Mafatlal Fine

Exports higher; dividend paid out of reserves; huge contingent liability; need to conserve resources

The working of Mafatlal Fine for the year ended 31 March 1988 was adversely affected by the continued depression in the textile industry. Despite sales being higher by Rs.11 crores at Rs.167 crores, it was just able to maintain profits at the operating level. With higher interest and depreciation, net profit declined by nearly 70 per cent from Rs.2.68 crores. The profits for the year are insufficient to cover reduced dividend at 15 per cent on enhanced capital.

The textile division's sales at Rs.117.58 crores account for 70 per cent of total sales. The balance comes from the chemicals division. The textile industry is facing a number of problems and stiff competition from the handloom and the powerloom sectors. The frequent changes in the excise duty structure created further problems.

Mafatlal Fine recorded a 131 per cent jump in exports at Rs.30.92 crores (previous year: Rs.13.37 crores). The share of

	(Rs. crores)

MARKET PRICE (Rs)		
CURRENT	150.00	
1987: HIGH	435.00	
LOW	135.00	

exports in the sales of the textile division increased from 11 per cent to 26 per cent. With the company planning to boost processed exports, the percentage of export sales is likely to go up further.

The working of the chemicals division was better with sales higher by 33 per cent at Rs.49.33 crores. Aluminium fluoride, fluorocarbon gases and synthetic cryolite are the main products. The licensed capacities of these products have been re-endorsed at higher levels.

The company is disposing of the processing house of its textile division situated at Bombay. The factory buildings are about 70 years old and in need of repairs. With the municipality restricting alterations in the buildings (since they are located in a residential area), operations had become unviable. The sale of the unit would reduce fixed overheads and release funds for the day to day working of the company. The sale is unlikely to affect the company's working as the Navsari unit in Gujarat is well equipped to meet the processing requirements.

During the year, Rs.15.65 crores were invested in installing shuttleless looms, Autoconner machines and other fixed assets. The funds were raised by issuing equity shares on a rights basis at 100 per cent premium and by reducing working capital. The company needs to conserve resources as a part of dividend for the year is being paid from reserves. The company has huge contingent liabilities (Rs.17 crores) and has invested about Rs.1 crore in a joint venture with GIIC for a gas distribution project.

[illegible] profits may improve because of capital gains from the sale of the processing house. However, the prospects are not encouraging.

Warren Tea

Dividend stepped up despite lower profits; exports constitute 40 per cent of total sales; prospects for current year not encouraging

Warren Tea, in which Warren Tea Holdings Ltd, UK holds 73.5 per cent of the equity, has maintained profit at the operating level despite adverse market conditions. Like many other FERA tea companies, Warren is very liberal in declaring dividends. For the year ended 31 March 1988, it has stepped up dividend by 7.5 points to 30 per cent despite a fall of 21 per cent in the net profits.

Total sales were marginally higher at Rs.41.98 crores (previous year: Rs.40.06 crores). It sold 14.4 million kgs of tea (13.8 million kgs) registering a growth of 4 per cent over 1986-87. The yield per hectare of 2,324 kg (2,268 kg) is lower than the 2,960 kg yield of Tea Estates for the year ended 30 June 1987. The total matured area under cultivation was 6,258 hectares which produced 14.5 million kgs of tea.

With strong marketing support abroad, Warren exports nearly 40 per cent of its sales in rupee terms. Exports during 1987-88 registered a growth of 10 per cent to Rs.16.17 crores. While Tata Tea exports 25 per cent of its total tea sales, Mcleod Russel exports about 10 per cent of its total sales. Tea Estates sells its entire production in the local market.

Warren Tea converts sales at a fixed rate of exchange. However, with the Indian rupee declining against the major currencies the net realisation (which is received a few months later) is generally lower than the sales value converted at the fixed rate. The difference is debited to P&L A/c as "Loss on Exchange (net)" which was Rs.1.12 crores (Rs.1 crore).

The EPS has declined to Rs.8.87 (Rs.11.2). The gross margin has declined to 17.3 per cent (18.9 per cent) and net margin to 8.2 per cent (10.9 per cent). Tata Tea's gross margin is higher at 20.6 per cent and net margin is lower at 7.7 per cent. On sales of Rs.143 crores Tata Tea needs working capital of Rs.40 crores. However, Warren Tea operates with negative working capital. This is because, against Tata Tea's four months' sales be-

	(Rs. crores)	
Year ended 31 March	**1988**	**1987**
SALES	41.98	40.06
OPERATING PROFIT	10.51	10.54
INTEREST	1.96	1.80

MARKET PRICE (Rs.)		
CURRENT	57.00	
1988: HIGH	70.00	
LOW	47.00	

ing blocked in stock and debtors, Warren Tea's investment in these current assets is only a little over a month.

During 1986-87, Warren added a further Rs.4.52 crores to the gross block. With these additions, the development programme undertaken five years ago is now completed. The year end overdraft from banks was reduced by Rs.1.43 crores. The major source of finance was internal accruals — Rs.5.38 crores. The increase in negative working capital by Rs.0.68 crores was another source of finance.

The beginning of the current year is disappointing for Warren Tea. Although production is slightly higher, tea prices are lower than in the last year. The average realisation in 1987-88 was marginally higher by 95 paise to Rs.29.97 per kg. Warren may end the current year with lower profits due to uncertain and difficult trading conditions. But the major shareholder being the foreign company, the liberal distribution policy is unlikely to change.

Tata Press

Profits down; dividend reduced; squeeze on margins

Tata Press Ltd, which went public a couple of years ago, has reported a rather disappointing performance for the year ended 31 March 1988. Sales improved marginally to Rs.12.11 crores (previous year: Rs.11.80 crores), but margins have been under severe pressure.

and depreciation declined to Rs.2.57 crores (Rs.3.07 crores) and the pre-tax profit fell to Rs.0.73 crores (Rs.1.01 crores). However, this figure has been obtained after taking into account a depreciation charge of just Rs.0.55 crores (Rs.1.02 crores). The lower depreciation charge is because Rs.0.56 crores, the excess depreciation of earlier years, was written back. Thus, the actual depreciation charge for the year under review is Rs.1.11 crores. Accordingly, the pre-tax profit works out to just Rs.0.17 crores and the net profit Rs.0.14 crores, yielding an EPS of Rs.0.89.

The company has been affected by lack of demand. Its main business is printing — a sizeable number of its orders are for the printing of balance sheets and publicity material for public issues of capital. Due to amendments in the Companies Act and the depression in the capital markets, the number of such orders has been low. The company was forced to cut its prices, together with increased costs of production this led to a sharp reduction in gross margins. The cost of raw materials as a percentage of sales went up from 35.08 per cent to 37.65 per cent. There was also an increase in the expenditure on power, which, went up from 2.34 per cent to 2.64 per cent of sales.

However, the company is still on a sound footing so far as its finances are concerned. The debt to equity ratio remains within reasonable limits at 1.21, and about 25 per cent of long term funds have been earmarked for financing working capital requirements. Reserves and surplus amount to Rs.5.86 crores against an equity of Rs.1.57 crores giving a book-value of Rs.47.39 for the Rs.10 paid-up share. Of course, about one fourth of the reserves are from premiums collected on the issue of shares and conversion of bonds.

In the year under review, part of the dividend was paid out of the reserves and the company may be forced to further cut dividend during the current year.

The stockmarkets have reacted adversely to the above developments; the share price has dropped from over Rs.70 to Rs.41. It is likely that the price will drop further in the months ahead in view of the rather bleak prospects.

TRENDS

Hindustan Lever

The company's performance has improved marginally. Sales, at Rs.374.90 crores (for the first six months ended June 1988), are just 2 per cent higher than in the corresponding period last year. But the operating profit is 8 per cent higher at Rs.51.75 crores. The company has borne a significantly higher interest burden of Rs.11.35 crores (Rs. 7.86 crores). The depreciation charges are slightly lower at Rs.6.50 crores (Rs.6.92 crores). The tax provision is around the same level at Rs.12.89 crores (Rs.12.80 crores). This has resulted in a marginally higher net profit of Rs.21.01 crores (Rs.20.47 crores).

Raw material costs have risen appreciably to Rs.265.07 crores. This constitutes a heavy 70.7 per cent of the net sales value (67.20 per cent). The company's selling, administrative and distribution expenses have been substantially curtailed. In fact, even on higher sales, expenditure on this count is 26 per cent lower and stands at Rs.39.22 crores.

The company has been granted permission to set up a LAB plant. The plant, expected to cost around Rs.180 crores, will help in reducing costs, as LAB is a major raw material for detergents.

Hindustan Lever's R&D unit has made a major breakthrough. It has successfully produced virus-free potato micro tubers. India is among the few countries in the world to have achieved this feat of biotechnology. This will drastically cut the costs of storing and transportation for farmers. At present, these seed potatoes are available only in Himachal Pradesh, but they will soon be available all over the country. Hindustan Lever is one of only two FERA companies allowed to produce high-yielding varieties of hybrid seeds.

During the period, the company has added to its production capacity of soaps and synthetic detergents, by taking over Stephen Chemicals with a 51 per cent stake.

Lever's Sewree plant has been locked out since mid-June. This will result in a substantial production loss. But the company says that overall performance will not be affected as production in other units has been stepped up.

The company expects export sales of over Rs.100 crores.

Meanwhile, Hindustan Lever's first overseas venture with a non-Unilever affiliate has commenced production of vanaspati in Oman under the Dalda brand name. The company is looking for similar arrangements in other Gulf countries.

Brooke Bond

Brooke Bond has done exceedingly well in the second half year ended June 1988. (The company has now extended its year end to December.) Sales are higher by 10 per cent at Rs.218.58 crores. Profitability has shown a higher growth rate: operating profit, at Rs.25.71 crores, is 37 per cent higher. The interest burden is significantly lower (29 per cent) at Rs.2.07 crores (Rs.2.92 crores). The depreciation provision has been slashed to Rs.71 lakhs from Rs.2.30 crores in the corresponding period last year. But the higher profits have led to an increased tax provision of Rs.9.50 crores (Rs.7.40 crores).

The net profit has shown a tremendous improvement to touch Rs.13.43 crores (Rs.6.15 crores). The closing down of the automotive division and the loss-making seat and leather divisions has improved the company's profitability. The company is now operating at a margin of over 11.5 per cent, compared to 9.50 per cent earlier. Besides, its raw material cost per unit of sale too is lower at Rs.57.51 per cent (60.29 per cent).

On account of this encouraging trend, the board has decided to pay a 20 per cent interim dividend. This is the second interim dividend paid in the current financial year.

RESULTS ANNOUNCED

Blue Star

The company improved its turnover during the year ended 30 June 1988 to Rs.152.16 crores, registering a 22 per cent increase over the previous year. Dividend for the year has been hiked by two points to 18 per cent, of which 8 per cent has already been disbursed as interim dividend.

The gross profit for the year was Rs.5.08 crores (previous year: Rs.4.63 crores), of which depreciation takes away Rs. 1.07 crores (Rs.98 lakhs) to leave a pre-tax profit of Rs.4.01 crores (Rs.3.65 crores). After tax of Rs.1.15 crores (Rs. 1.10 crores), the net profit available for appropriation was Rs.2.86 crores (Rs.2.55 crores).

The dividend payout is Rs.64.66 lakhs (Rs.57.55 lakhs); Rs.6.33 lakhs has been set aside as under-provision for tax in previous years. The remaining Rs.2.15 crores has been transferred to the reserves.

Gujarat Ambuja Cements

Despite difficult conditions in the cement market, the company has achieved a turnover of Rs.90.14 crores during its first year of full operations ended 30 June 1988. With a production of 820,000 tonnes, the plant achieved a 117 per cent capacity utilisation. A maiden dividend of 11 per cent has been declared.

The company earned a gross profit of Rs.11.31 crores (Rs.7.17 crores in the previous nine-month period), of which depreciation charges were Rs.7.08 crores (Rs.5.07 crores), yielding a net profit of Rs.4.23 crores (Rs.1.79 crores). The dividend payout will be Rs.2.20 crores; Rs.2 crores go to general reserves and the remaining sum will be carried forward. The company hopes to do better in the current year, thanks to a good monsoon and the recent increase in the retention price for levy cement.

Crompton Greaves

The company improved its performance during the year ended 30 June 1988 with sales going up to Rs.343.2 crores (previous year: Rs.282.75 crores). Gross profit has risen to Rs.13.26 crores (Rs.11.32 crores), and the company has hiked dividend by three points to 18 per cent.

After depreciation of Rs.5.97 crores (Rs.5.07 crores), and tax of Rs.1.12 crores (Rs.90 lakhs), the net profit was Rs.6.17 crores (Rs.5.35 crores). Dividend payout is Rs.1.73 crores (Rs.1.44 crores), general reserves take away Rs.3 crores (Rs.2.69 crores), and the balance of Rs.1.44 crores has been carried forward.

Madura Coats

The company reported an improved performance in the year ended 30 June 1988. Sales have jumped 29 per cent over that in the previous year to Rs.258.49 crores, while operating profit after depreciation has improved by 20 per cent to Rs.26.64 crores. The company has hiked dividend by five points to 30 per cent. After deducting interest (Rs.14.46 crores), and adding non-trading income (Rs.3.39 crores), the profit before tax is Rs.17.85 crores (Rs. 12.02 crores in 1986-87). After taxation of Rs.3.68 crores (Rs.3 crores), the net profit is Rs.14.17 crores (Rs.9.02 crores).

IN BRIEF

Polyolefins Industries Ltd has put up a better show for the half year ended 30 June 1988. The net sales of the company have gone up to Rs.81.57 crores (previous year: Rs.77.16 crores). Gross profit has increased to Rs.15.75 crores (Rs.10.31 crores) and profit after tax to Rs.8.71 crores (Rs.4.72 crores).

Swadeshi Industries and Leasing Ltd has reported encouraging results for the year ended 31 March 1988. In view of the improved performance, the board of directors of the company have declared a dividend of 18 per cent. The company's project for manufacture of Stretch blow moulded PVC bottles at Palghar is in full swing. The company's order book position is healthy and it hopes to expand its production substantially in future.

Kaveri Engineering Industries Ltd has reported satisfactory results for the year ended 30 June 1988 with a turnover of Rs.16.03 crores (previous year: Rs.12.87 crores). Gross profit this year was Rs.2.14 crores (Rs.1.73 crores). Net profit was Rs.68.05 lakhs (Rs.64.54 lakhs). A dividend of 16 per cent has been recommended by the board of directors.

SIP Resins Ltd has declared a dividend of 18 per cent. Profit before depreciation, interest and tax was Rs. 99.3 lakhs, while profit after tax was Rs.33.01 lakhs. The company's main product, epoxy resin, is finding increasing applications in various fields.

Organic Chemicals Ltd has put up an excellent performance with a 70 per cent increase in turnover to Rs.17.87 crores (Rs.10.66 crores). Net profits have increased to Rs.90 lakhs, compared to last year's Rs.25.8 lakhs. The company has diversified into the manufacture of edible oils and has already started processing sunflower oil.

Nuchem Plastics Ltd has recommended a dividend of 15 per cent this year. The profit before depreciation was Rs.1.67 crores (previous year: 1.35 crores). Net profit was Rs.50.93 lakhs (Rs.45.72 lakhs). The company has developed a new product for converting brackish water into potable water and is also working on formaldehyde-based resins.

(JANGI LAL OSWAL)
MANAGING DIRECTOR

Scrambling for value

(For the period 26 September to 8 October 1988)

The upward movement of stockmarkets gathered further momentum during the fortnight under review. *The Economic Times* index of ordinary share prices rose to a new record level of 334.9, an increase of 11 per cent over the previous fortnight. Despite being burdened by an unmoving Reliance, the BSE Index rose 7.6 per cent to a new record level of 693.9. The ET index has now risen over 25 per cent through September, a rate that would be remarkable for any country over any period of its business cycle and even astonishing for a country that reeled under a drought last year.

This happened despite computer-related and alleged payment problems that delayed the opening of the Bombay Stock Exchange (BSE) by four days at the start of the settlement (although the other stock exchanges were open and moved quietly in this time). The BSE opened after the abnormal closure with a five per cent jump in the ET index for the day. But that was only the beginning. Broad-based rises continued through the fortnight, covering all industries.

Part of this was due to the fact that the rise fed on itself. Speculators who had been watching on the sidelines, waiting for downward reactions, decided that it was time to join the bullish herd. With everyone turning buyers, even normally well-priced and actively traded shares with slow price changes such as Hindustan Motors and Indian Rayon moved sharply. Shares with small floating stocks such as Fulford and Su-raj Diamonds increased by 30 per cent or more. As a leading broker put it, "Speculators are scrambling for value. Any company with positive earnings per share is being purchased by my clients. Such events are inevitably going to lead to the shares of several companies being overpriced with falls to come later when their corporate results don't keep pace."

Such thoughts, however, did not deter the buyers. Investors seemed to be saying that it did not matter if some of the shares they purchased were overpriced so long as their portfolios on balance were well-priced. Given the strong rebound of corporate profits that has been evident since January of this year, their optimism was perhaps not unjustified, though possibly put into action a little late.

If buyers tended to be somewhat indiscriminate in their choice of industries for purchase, they nevertheless had their favourite shares. Within the tyre industry, the news of a hike in tyre prices caused one of the more popular tyre company scrips, MRF, to rise from Rs.218 to Rs.290 before closing at Rs.230, while another popular one, Ceat Tyres, rose from Rs.81 to Rs.130. Modi Rubber closed more sedately at Rs.77, up by Rs.8, while J K Industries closed at Rs.47, up by Rs.7.50.

The polyester fibre group was in demand, following news of product price rises, with IEL adding Rs.8 to close at Rs.46. Indian Organic added Rs.6 to close at Rs.44. Agrochemicals were also in good demand following the good monsoon, with Bayer rising by Rs.90 to Rs.620 and Hindustan Ciba-Geigy also rising by Rs.90 to Rs.675. Nocil — with its high-profile product, MEG — rose from Rs.665 to Rs.825. Its rise was further fuelled by news of a rise in MEG prices and rumours of official clearance of its major expansion project.

Petroleum jelly filled cables and seamless tube making companies were also in demand, the latter particularly after the good results announced by Zenith Industries and Jindal Strips. Finolex Cables closed at Rs.365, up by Rs.66.25, and Vindhya Telelinks closed at Rs.136.25.

Mastershares entered the limelight for the first time since it started trading in early 1987. Its shares rose to Rs.13.50, up by Rs.1.50 on heavy trading volume. Aiding the rise were rumours of its shift to the specified list. Larsen and Toubro was heavily traded at the rate of 500,000 shares a day on expectations of a friendly takeover by Reliance Industries. It closed at Rs.145, up by Rs.22. Reliance shares were stagnant, meanwhile, closing a rupee lower at Rs.198. The converted Reliance 'G' series shares rose sharply from Rs.144 to Rs.156, bringing the gap between the old and the new shares closer to its historical level of 20 per cent. The advent of the pari passu rule is expected soon which should end the artificial and unnecessary difference between the two shares.

Corporate news continued to be encouraging. Escorts announced a 138 per cent rise in profit after tax for the first eight months of its functioning and an interim dividend of 12 per cent, up from 10 per cent in the previous year. GNFC announced a 27 per cent rise in after-tax profits to Rs.24 crores but chose to maintain dividend at 18 per cent, perhaps in hopes of giving a bonus next year. Vam Organic announced a nine rupee earnings per share and increased dividend from 25 to 30 per cent. Its share price rose by Rs.14 to Rs.117. Hindustan Cocoa announced a 17 per cent lower profit after tax of Rs.3.8 crores but raised dividend to 20 per cent from 30 per cent cum-1 for 1-bonus last year. A better current year has been forecast, leading to its stock price rising to Rs.115.50, up by Rs.6.75. Century Enka announced an interim dividend of 20 per cent. This is the first time that the company has declared an interim dividend and the event is probably linked to a longer accounting year and its excellent current performance. The market was lukewarm to a dividend that was less than a per cent of its market price of Rs.2,250. The share fell off subsequently to close at Rs.2,155, still up by Rs.285 for the fortnight.

The financial institutions were selectively buying cash shares over the fortnight, while yield conscious institutions like General Insurance Corporation sold shares such as SKF Bearings and Century Enka, along with the fortnight's early gainers, Bajaj Auto, Telco and Tisco.

With share prices at record highs, investors and speculators alike are now wondering which shares are still worth the investment. "Pick the fundamentals," is probably the most sensible answer, along with a caveat: many companies will be running to full capacity this year and are likely to be paying higher input costs because of supply bottlenecks or rising import prices (following the steady devaluation of the rupee). At the same time, industries that produce import substitutes are at the mercy of volatile international prices, such as falling oil prices which will reduce the cost of some petrochemical products. Rising wage demands also tend to follow good performance because this is the time that managers have the least resistance to raising wages. But wages cannot be reduced once raised. Accordingly, picking the fundamentals will increasingly require a look at a future that will not just be a projection of the past

■ RAFIQ DOSSANI

3 October, 1988
Coming home

I couldn't take it any more. I mean it was great for a while earning all those millions of dollars trading pieces of paper, organising loans to buy companies, selling bits and pieces of assets every day to pay off the loans and ending up with fortunes that would make politicians green with envy. Yes, I did get in too late what with wasting my time in Bombay in the latter half of 1986. But, despite Black Monday and SEC investigations into the Junkle King, things were all right at least for now. The good old savings bank account was awash with liquidity.

The problem was psychological. Every day after watching the Dow slip another few points, one leaves the office looking forward to going home and forgetting about this financial mess. But then, you get into the elevator and this metallic voice, unconcerned about 'Black Monday' or Drexel's problems passes judgement: "Going down; we are going down; this lift is going down." It's tough enough dealing with colleagues who complain about the market going down, their salaries going down, but then to deal with an unemotional doctor of gloom: "Going down" - that was the limit.

And, on the flip side, the Bombay market seemed ready to hit a new orbit. The clouds, apparently, were clearing and when the monsoons came (the right kind of clouds?), it looks like the BSE has done a better job than those satellites ISRO keeps on trying to launch. But it is good to be back, really. The sweat of god-fearing, paan-chewing bodies, rain water on the trading floor, and hocus-pocus accounting getting more creative and gutsy — where else would you get all that?

9 October, 1988
Mela

SK was visibly worried. And he was in a foul mood. When that clown came around to ask if we would like to hear some jokes, SK looked at him straight in the eye and said, rather curtly, "Why should I pay money to hear any, when I can look at one for free?" Yes, I do agree that this paying for being told jokes, having palms read, or caricatures drawn, is not cricket and should not attract a separate cash outflow, but there are codes of civility that one must adhere to.

"What is the matter, old chap" I asked gently breaking the spicy *seekh kabab*.

"I cannot understand what our government is up to. They spend 18 months and hundreds of crores of public money to prop up share prices, and then just when everything is going well for the markets they try to pull them down."

"Oh, come on, I think it is right of the institutions to sell shares and book profits in this market. They do have to answer to their shareholders and unit holders, you know..."

"Hah! I could dispute that point but that's not the issue."

"Are you worried about SEBI and its proposed activities, then? Don't you, and place your hand on your heart while you reply, sincerely believe that the public interest must be safeguarded? That a regulatory body must not only keep track of capital markets but also oversee their development? Tell me, truly."

SK laughed. "Are you going to ask me to pay you money for telling me jokes, too? When was the last time you read Lewis Carrol? If seven maids with seven mops could not sweep the sand of the beach even after sweeping for half a year, what do you rate SEBI's chances as?"

"Shall I call CRISL to find out?", I retorted matter of factly.

SK's laughter boomed all over the restaurant. "Yes, yes, you do want money for your jokes," he gasped, "New York has done you a lot of good."

"Control yourself, SK, or they may not allow me in here again."

"I'm sorry, dear chap, but you are in great form today. But the point is you're way off the mark."

"Allright, what is worrying you," I asked impatient at this game.

"Well, they want to start a casino."

"So?" I queried, not understanding the significance of what SK had just said.

"What do you mean by 'so'? What do you think our stockmarket is? And if they start a proper casino then no one will buy shares anymore. They'll all move to Nhava Sheva or Haji Ali every evening, return home early in the morning after pacifying their gambling instincts and sleep right through our trading sessions. Don't you think we should be worried?"

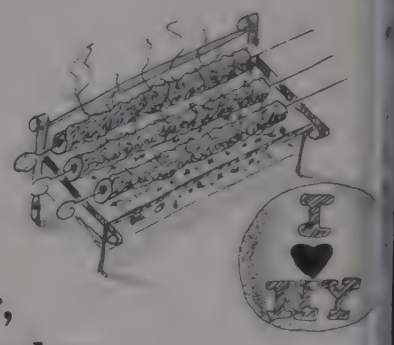
"Oh, SK, you exaggerate. The people who can gamble in those casinos have to have foreign passports. Indians will not be allowed to gamble. Yes, you may lose a few NRI clients but they account for only a small volume of speculative trading."

"In which world do you live, my friend? This is not New York, this is Bombay. Do you think that NRI deposits are coming only from NRIs? Or that Indians hav their money only in India? This count works on only five-letter words."

"Bribe! Surely you're not suggestin that someone could bribe his way int being allowed to play."

"No, no, my good man, the word I a referring to is 'proxy'. Indians will wat while their proxies play. And people lik us connected with the stock markets ca hibernate once again."

SK is generally right. Not always, bu generally. But I do think he is carryin things a bit too far. No, I am not referrin to his casino-phobia. The manager of th restaurant sent me a polite letter askin me if I would be interested in replacin their existing joke teller. A highly re spectable source, the manager noted, ha strongly recommended me. Now reall SK, that isn't cricket.



12 October,
Tadepalligudem

Ravindra Reddy is a small town sub broker. I met him in this sleepy Andhr town (merchant bankers do visit the out back, albeit once in a while) and we im mediately ventured into a long discussio on the stockmarkets. Reddy is distinctl unhappy that the massive expansion i the capital markets has barely had a impact in small towns.

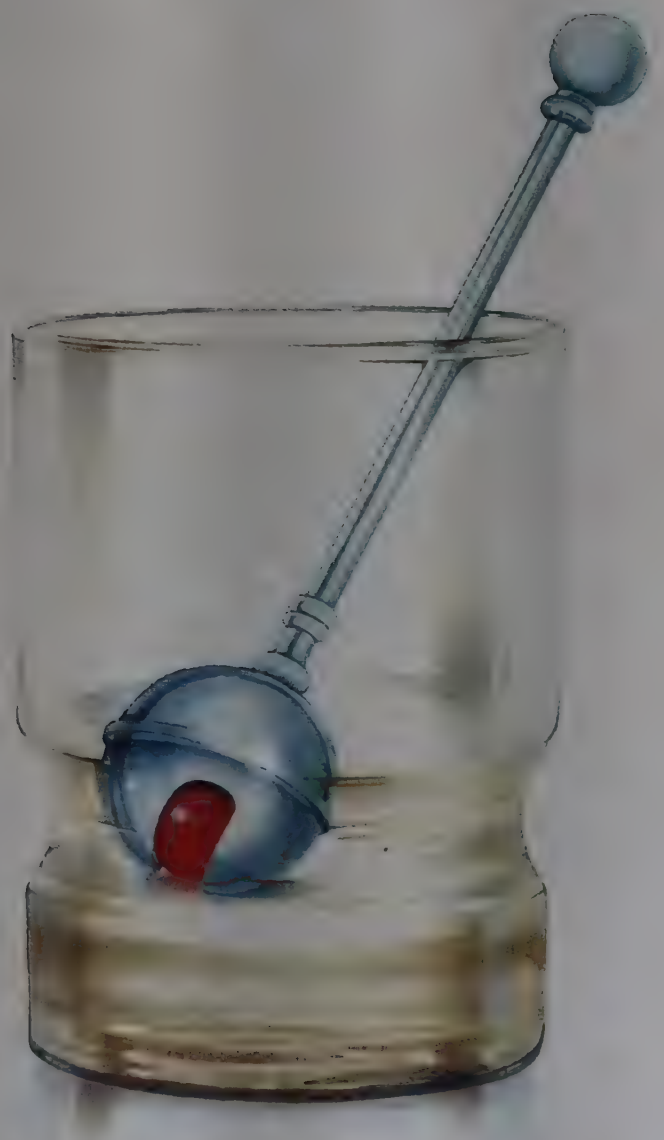
"You chaps are only interested in visi ing towns which accept credit cards" h says "people in small towns need to b educated about the markets. Instead yo send me 1,000 application forms for ever share isue that you manage"

"What do we do" I say defensivel sweating and uncomfortable (compan policy says three piece suits everywhere "There is a ceiling on issue expenses an our clients would only like to spen money in the metros where public re sponse is assured"

"And all you do with this money" sa Reddy "is to spend it on press confe ences. Projected sales in 1995 and ant cipated gross profit in 1999 mak exciting copy for your big city readers.

Seekh kababs and small town sub broker. They both sizzle.

REFILLS WILL OCCUR WITH RATTLING FREQUENCY.



CRUICKSHANK

Say 'Cheers' to a new arrival and discover that you'll want to keep cheering. Because you'll know that this one's got a great future ahead. At Parties. Among Peers. Among Friends. Everywhere. In fact, you'll find that its smooth, mature and distinctly elegant personality is going to be the toast of every party soon.

And reason enough to keep celebrating forever!

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per shares for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price.

A LOT OF MANUFACTURERS IN INDIA HAVE GOTTEN WISE AND PROGRESSIVE.

ARE YOU ONE OF THEM ?

All over the world manufacturers are switching over to the lamitube. For good reasons. For one thing, the lamitube looks so much better. You can print whatever attractive designs you want in as many colours as you like. Which means your product, standing on the shelves among so many others, stands out to catch the consumer's eye. And the lamitube is so much more hygienic. No messy grey oxides on your products. No wastage because of wrinkled tubes. No paste oozing out of the back of the tube instead of the nozzle. And no bursting.

So, if you haven't switched over to the lamitube yet, do it now. It makes a lot more sense.

Dentifrice: Colgate Fluoriguard 200 gm., Prudent, Neem, Close-up, Pepsodent Plus, Forhans, Solidox. *Pharmaceuticals:* Benitis, Moov, Lectrogel, Silver Sulphadiazene, Himax, Microbar. *Foods:* SIL Mustard, Peanut Butter, Mayonnaise. *Cosmetics:* Anne French, Lisa Pomade, Fair & Lovely. *Industrial:* Aquadis, Oleodis, Valvgrind.

Packaging in Lamitubes.
It makes a lot more sense.

Trading in debentures

The secondary market for debentures has historically been inactive. Out of the 900 odd debentures listed on the Bombay Stock Exchange, only about a hundred are traded at least once a month (about three dozen are traded every day). Over 700 debentures have not been traded even once this year. In comparison, over 450 shares are actively traded every day on the Bombay Stock Exchange out of a listing of about 2,200 shares, a considerably better proportion.

Several factors influence such a situation, the main one being the supply although thousands of small investors hold debentures, the largest blocks of debentures are held by financial institutions such as the Unit Trust of India (about 40 per cent of its portfolio is in debentures and other fixed-interest securities). Financial institutions hold debentures primarily for reducing the risk-level of their portfolios. Such debentures are either privately placed in the first instance by the issuing corporations or come to institutions from underwritten issues that are undersubscribed by the general public. These issues are subsequently traded among financial institutions in the over-the-counter market (ie, using dealers who specialise in debenture placements) without recourse to the exchange. This means that the supply of debentures coming into the exchange tends to be very small. The dealer market, on the other hand, is out of reach of small investors, since the value of the minimum lot size for a trade is usually Rs.1 crore.

Nevertheless, the debenture market in the exchange has not been stagnant. Several debentures are readily tradeable, for example, those issued by Ashok Leyland, Essar Shipping, Reliance (E and F series), Raymond Woollen, Voltas and Steelage. The Bombay Stock Exchange is looking for ways to improve the liquidity of the debenture market and, at one time, considered introducing separate trading hours for debentures in the same manner as has been done for odd-lot share trades.

Meanwhile, the current yield on debentures (which is the interest amount as a percentage of the market price) has fallen along with general interest rates over the past year from 16.5 per cent to below 15 per cent now.

The key factors that influence a small investor's decision to invest in debentures, as indeed in any marketable security with a fixed-return, are yield, security of principal and easy liquidity. All three factors are equally important, although issuing firms tend to publicise only the return factor. In fact, the return offered by initial subscription is legally limited to 14 per cent for non-convertible debentures and 12.5 per cent for convertible (including partially convertible) debentures, and most corporations offer the maximum permitted by law. As we shall see below, this return is significantly less than what the secondary market offers.

Most actively traded debentures offer similar terms — six-monthly interest payments and security of principal. Judging the security of principal and the timeliness of interest payments of a new company is difficult. As a rule of thumb, actively traded debentures tend to be safe ones. In fact, one of the reasons that several debentures are inactive is that the issuing companies have delayed or defaulted on interest payments or principal repayments.

Nevertheless, all actively traded debentures are not alike, the significant differences arising out of the convertibility and buy-back clauses. Debentures are either fully convertible into shares, partially convertible into shares or non-convertible. Fully convertible debentures tend to be the most actively traded and the activity in such a case mirrors the activity of the equity shares they will eventually become. Partially convertible debentures tend to be actively traded until conversion occurs, while the non-convertible portion that remains tends to become inactive offering yields that currently average 15 per cent per annum. Because of the low level of activity, potential buyers face high bid-offer spreads exceeding 5 per cent and the risk of being unable to sell when desired.

A similar situation holds for non-convertible debentures that were initially issued along with equity shares. Such "linked-issues", such as those by Vareli Textiles or Jindal Strips currently quote at yields of 15 to 17 per cent.

The most attractive non-convertible debentures from the buyer's point of view are debentures with the one-year buy-back clause. Such debentures are usually issued as stand-alone debentures without any convertibility or equity linkage. In order to make them attractive, the issuing corporation usually offers to buy-back at par value a holding of upto Rs.40,000 within a year from purchase. Such debentures can offer attractive yields and pose no liquidity problem since they are sold by the purchaser back to the company. Hence, they are the most sought after.

The premier such debenture in the market today is undoubtedly the Reliance F series. The size of its issue (Rs.270 crores) and the buy-back clause have given it a liquidity that no other debenture comes close to. To see why, consider the return to an investor who purchased these debentures after they went ex-interest on 1 September 1988. The purchase price on that date was Rs.95. A year from then, company will buy it back at Rs.100. Hence, the return from his investment is the capital gain of Rs.5 plus interest of Rs.15, for a return of 21 per cent per annum (actually, a little more than 21 per cent since the interest is paid half-yearly). The investor purchasing the debenture today would receive the first payment of interest in five months and the higher price of Rs.97 reflects the fact that the debenture already includes an interest component of one month, ie, approximately Rs.1.25. The table below gives the return from holding four such debentures and then tendering them to the company for buy-back after receiving two half-yearly interest payments.

The table also shows why current yield can be a misleading figure of return. For example, Unitech debentures have a current yield of 18.75 per cent, but the one year return using the buy-back provision is actually 43.80 per cent.

CHECK THIS OUT

BEFORE INSTALLING A COMMERCIAL FLOOR...

Ever since Linoleum was invented way back in 1863, commercial floorings have progressed in leaps and bounds — necessitated by the rapidly changing commercial environment, and customers who have become exacting in their needs.

1863: Linoleum
1949: Homogeneous Vinyl Sheets
1952: Vinyl Asbestos Tiles
1982: Sheet Foam backed Vinyl Flooring
1988: New TRANZIT SERIES – the latest in Foam backed Vinyl Flooring technology.

Today, more than ever, you should pay careful attention to your choice of commercial flooring. To ensure it can withstand the abuse of rush hour traffic, retain its beauty and last for years.

WHAT TO LOOK FOR IN A COMMERCIAL FLOORING

First take into account the activity within the area to be refloored. Then consider the ideal floor attributes that will meet your needs, before choosing a commercial flooring.

AREA	ACTIVITY	IDEAL FLOOR ATTRIBUTES
Reception Rooms	Medium — Heavy Traffic Mud, gravel, water enters into office	Durable. Various shades. Easy maintenance.
Corridors	Heavy Traffic	Durable. Maximum underfoot comfort. Easy maintenance. Sound insulated.
Typist Pools	Heavy Traffic. Office furniture present	Durable. Resistant to furniture indentation marks. Resistant to castor wheel marks. Easy maintenance.
Cabins	Medium — Heavy Traffic	Durable. Sound insulated. Light or dark shades. Easy maintenance. Resistant to furniture indentation marks.
Conference Rooms/Schools/ Hospitals	Medium — Heavy Traffic	Durable. Sound insulated. Light or dark shades. Easy maintenance. Resistant to furniture indentation marks and hygenic.
Canteens	Heavy Traffic. Hot food liable to be spilt	Durable. Stain resistant. Easy maintenance. Sound insulated.

Next, consider the different floorings available in the market ... like Vinyl Asbestos Tiles, Calendered Flooring and Foam backed Vinyl Flooring.

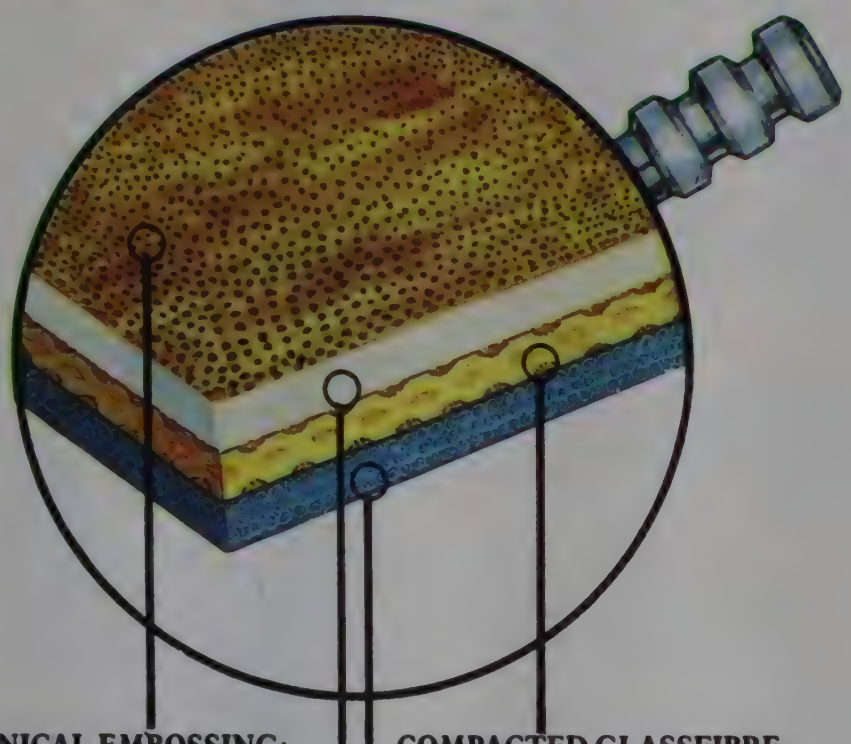
ATTRIBUTE	CALENDERED HOMOGENEOUS FLOORING	VINYL ASBESTOS TILES	FOAM BACKED VINYL FLOORING
ABRASION RESISTANCE	MEDIUM	LOW	HIGH
DIMENSIONAL STABILITY	≤ 0.4	≤ 0.25	≤ 0.1
SOUND INSULATION	$\Delta L = 2$	$\Delta L = 2$	$\Delta L = 15\text{-}16$
WALK COMFORT	HARD	HARD	SOFT
DESIGN/COLOUR	POOR	POOR	VARIOUS
WALL TO FLOOR CO-ORDINATION	NO	NO	MANY POSSIBILITIES
POROSITY	POROUS	POROUS	NON-POROUS
FIRE-RESISTANCE	GOOD	GOOD	GOOD
INSTALLATION	NON-FLEXIBLE MATERIAL HOT WELDING NECESSARY	BREAKING MATERIAL OPEN JOINTS ASBESTOS DANGER	FLEXIBLE MATERIAL COLD WELDING POSSIBLE

Considering the ideal commercial floor attributes required, Foam backed Vinyl Flooring comes out far ahead of both Vinyl Asbestos Tiles and Calendered Flooring. Good reasons why it's the most widely used commercial flooring in Europe.

In India, only Royal Cushion Vinyl Products Pvt. Ltd. manufactures Foam backed Vinyl Flooring under the brand name 'TRANZIT SERIES' in collaboration with world leaders Gerland of France.

Now double check whether the TRANZIT Series can match your needs.

THE TRANZIT SERIES HAS:



LIGHT MECHANICAL EMBOSSING: For zero dirt accumulation, scratch-resistance and non-skid properties.

TRANSPARENT PVC LAYER: Non-porous to ensure stain resistance. Tough, for maximum abrasion resistance.

COMPACTED GLASSFIBRE REINFORCEMENT: To prevent expansion and shrinkage and withstand maximum temperature fluctuations.

LOW DENSITY CLOSED CELL FOAM LAYER: To facilitate underfoot comfort, better sound insulation and best residual indentation.

All primary materials used in the manufacture of TRANZIT Floorings conform to the highest standards of quality. Unlike competitive floorings, no recycled material (which desequilibrates the product and weakens it) is used. TRANZIT Floorings are cold welded and come in 2m rolls. TRANZIT Floorings are available in neutral designs permitting easy colour co-ordination. Unlike other floorings, TRANZIT Floorings can be installed using a totally safe water-based adhesive, specially developed for the TRANZIT Series.

SPECIALIZED FLOORINGS — FOR SPECIAL NEEDS

FLOORING	PLACES FOR USAGE
TRANZIT ANTISTAT FLOORING. With a unique physiological antistatic property.	Computer Rooms.
TRANZIT ACOUSTIFLOOR For maximum sound insulation.	Hospitals. Schools. Recording Studios. Health Clubs.
TRANZIT DUTIFLOOR For maximum abrasion resistance.	Commercial Centres. Offices. Administrative Buildings. Banks. Restaurants. Shopping Centres.

Sintex - The only reliable and time-tested READYMADE WATER TANKS

SINTEX has proved its performance against all the tough and rough Indian conditions for more than a decade now. Dotting the Indian scene with lakhs and lakhs of installations — from Kashmir to Kanyakumari and Kutch to Kohima — Sintex Tanks are proving popular for all water storage and carriage applications.

Made by a unique moulding process on computer aided machines, Sintex Water Tanks offer a set of advantages unbeatable by others.

* Lightweight * Easy to install * Strong and Durable * Maintenance - free * 100% Leakproof and Rustproof * Most Hygienic * Available in wide range from 100 lits. to 20,000 lits. capacity and in different shapes. * Backed by excellent installation and after sales service through a wide network of dealers.

Sintex - World's No.1 Plastic Water Tanks

Taken by surprise

n Friday 26 August, these were the share prices of the six rips of investor contest 274. Bajaj Auto 263.75, Britannia 1.00, Century Enka 1,595.00, Eskayef 117.50, Glindia 54.50 nd SKF Bearings 1,380.00. By Friday 30 September Bajaj uto had flared up to 337.50. Century Enka to 2,005 and SKF earings to 1,780. The bulls have taken both the markets and ontestants by surprise. And we have no winner for IC-274.

How to enter
On the entry form given below are listed six popular scrips. All you have to do is to use your skills to predict the prices of each of these shares as on 11 November 1988, and send in your entry by 1 November 1988. The winner in accordance with the rules printed below, will get a prize of Rs.5,000. In the event there is no winner, the prize will not be carried over.

Every issue of **Business India** will contain a new contest. The entry which has all six correct answers will receive a prize of Rs.5,000. If no such entry is received, the entry which has 5 out of 6 correct answers will receive the prize. In the event of there being more than one winner, the prize will be shared equally. We repeat, if there are no winners, the prize money will not be carried forward.

ules:

There is no entry fee.

The list has been selected on the basis f what we consider are actively traded nd interesting scrips on Indian tockmarkets.

The price mentioned last in the official uotation list of the stock exchange (if here is a series of such prices against the ame of the share) will be taken as the orrect answer. The official list of the articular stock exchange, which will be eferred to, is given against the name of ach scrip. If for some reason the stock-market is either closed on 11 November 1988, or there are no transactions for the ix scrips chosen below, then the quotations for the nearest working day prior to 11 November 1988, will be used.

4 Variation from the correct answers are permitted within a range that is specified against the scrip.

5 Entries must be on the printed form given below. Any other entries will be disqualified.

6 Only one entry will be permitted per form.

7 Envelopes sent in should be marked Investor Contest. All entries must be received at **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, Tuesday, 1 November 1988.

8 **Business India** is not responsible for non-receipt of entries.

9 **Business India's** decision on the winning entries will be final and binding, and no correspondence in this regard will be entertained.

10 The contest is open to residents of India only. No employee (or any direct relation of any employee) of **the Business India group of publications** is entitled to enter the contest.

Name of scrip	Stockmarket official list to be used for comparing results	Prices as on Friday, 7 October 1988 (Rs)	Variations permitted from correct prices up to (Rs)	Prices as on Friday, 11 November 1988 (Please fill) (Rs)

INDIAN INSTITUTE OF MANAGEMENT BANGALORE

Indian Institute of Management, Bangalore, offers the following Management Development Programmes during the month of NOVEMBER, 1988.

MANAGING THE SALES FORCE (CONSUMER PRODUCTS)

November 14-18, 1988 : Fernhill Palace, Ooty
Faculty Leader : Prof. RK Vijayasarathy

HIGHLIGHTS: Indian Consumer Goods Marketing Scenario * Managing the Sales Force * Region Office Management * Behaviour Science Component * Input to Marketing Decisions.

PARTICIPATION: Branch Managers, Divisional Managers, Zonal Managers, Regional Managers, District Managers, Area Managers, Field Sales Managers, representing Public and Private Sector Consumer Goods Companies and who have a Direct Sales Supervisory responsibility.

Fee: Residential: Rs. 4,000/-
Non-residential: Rs. 2,250/-

GENERAL MANAGEMENT

November 14-26, 1988 : Harsha Hotel, Bangalore
Faculty Leaders : Prof. S Ramaswamy
Prof. TP Gopalaswamy

HIGHLIGHTS: General Management * Production Management * Marketing & Sales Management * Personnel Management * Financial Management.

PARTICIPATION: The Programme is Designed for Managers with at least 5 to 7 years of Experience in any Functional Area of Management, who would like to get an Overview of other Areas of Management. Participants should preferably be in their mid-twenties or early thirties in terms of age. They should have a Bachelor's Degree or Equivalent Professional Qualifications.

Fee: Residential: Rs. 7,500/-
Non-residential: Rs. 4,250/-

MANAGEMENT OF WORKING CAPITAL

November 16-19, 1988 : Ashraya International Hotel, Bangalore
Faculty Leader : Prof. R Vaidyanathan

HIGHLIGHTS: Characteristics of Current Assets and Working Capital Leverage * Cash Management * Electronic Funds Transfer Systems (EFTS) * Optimising Inventory * Credit Rating Analysis * Short-term Financing and Optimising Techniques * Monitoring and Control of Receivables * Bank Norms for Financing * Computer Systems for Current Assets Planning.

PARTICIPATION: Persons holding Senior and Middle-level Positions in the Areas of Finance, Materials Management, Production and Marketing are eligible to participate. Senior and Middle-level Executives from Banks will also benefit from this Programme

Fee: Residential: Rs. 3,500/-
Non-residential: Rs. 2,000/-

STRATEGIC MANAGEMENT OF PRODUCTION & OPERATIONS

November 17-19, 1988 : Hotel Ashok, Bangalore
Faculty Leader : Prof. TS Nagabhushana

HIGHLIGHTS: Developing Production/Operations Policies and Strategies * Strategic Alternatives for Building Production Capabilities * Technological Advances and its Impact on Production/Operations Decisions * Strategic Issues in Vertical Integration and Resource Planning * Deciding on the Right Product Quality for the Situation/Environment * Problems in Implementation of Production/Operations Policies and Strategies

PARTICIPATION: Directors/Vice Presidents, General Managers and Senior Managers in-charge of Production, Materials, Quality, Maintenance and other related Functions.

Fee: Residential: Rs. 3,500/-
Non-residential: Rs. 2,000/-

MANAGEMENT INFORMATION AND REPORTING SYSTEM

November 21-24, 1988 : Hotel Ashok, Bangalore
Faculty Leader : Prof. S Ramaswamy

HIGHLIGHTS: Need of Integrated Management Information and Reporting System * Organisational Requirements for MIRS to be effective * Computer and MIRS * MIRS for Production Function, Marketing and Sales Function, Materials Management Function and Finance and Accounting Function * Presentation of MIRS at various levels of Management.

PARTICIPATION: Senior and Middle-level Executives from Public and Private Sectors from all Functional Areas of Management.

Fee: Residential: Rs. 5,200/-
Non-residential: Rs. 3,000/-

COST CONTROL AND COST REDUCTION

November 23-26, 1988 : Holiday Inn, Bangalore
Faculty Leaders : Prof. R Narayanaswamy
Prof. Vatsala Nagarajan

HIGHLIGHTS: Cost Control as part of Managerial Control * Cost Control and Responsibility Accounting * Budgetary Control * Standard Costing and Variance * Investigation * Cost Reduction Need, Scope and Methods * Cost Reduction in Manufacturing and Materials, Finance and Marketing * Emerging Trends in Cost Management Systems.

PARTICIPATION: Executives from Production, Finance and Marketing in Senior and Middle-levels.

Fee: Residential: Rs. 4,500/-
Non-residential Rs. 2,500/-

PERSONNEL MANAGEMENT FOR NON-PERSONNEL EXECUTIVES

November 24-29, 1988 : Hotel Fidalgo, Goa
Faculty Leaders : Prof. SG Lele
Prof. BR Patil

HIGHLIGHTS: Organisation and Role of Personnel Department in Enterprises * Manpower Planning and Selection * Training and Development * Performance Appraisal * Wage Administration * Administration of Discipline * Communication in Organisation * Employee Motivation * Leadership Styles * Management of Change * The Industrial Relations Scene in India.

PARTICIPATION: Senior and Middle-level Managers in various Functional Areas of Management.

Fee: Residential: Rs. 4,900/-
Non-residential Rs. 3,500/-

A love affair with rice

S.S. Nagarajan, *is chief agricultural economist, Tractors & Farm Equipment Ltd, (TAFE)*

"Research findings cannot be translated into practice immediately, particularly in agriculture. Adaptive research is essential in order to test the findings; if found suitable for Indian conditions they can then be transmitted to the farmer for implementation," observes S.S. Nagarajan, chief agricultural economist, Tractor & Farm Equipment Ltd (TAFE). It is research of this kind that Nagarajan directs at J farm, a 200 acre model farm on the outskirts of Madras city, named after the late S. Anantharamakrishnan, TAFE's founder who was nicknamed J.

Nagarajan has spent a major portion of his professional life on research relating to rice, though it was on groundnuts that he first worked. After acquiring a BSc in agriculture from the agricultural college, Coimbatore, and winning the usual medals, distinctions and scholarships, he joined the Madras state agricultural department as an assistant breeder in 1954. Simultaneously he worked on a project on "calcium nutrition in groundnuts" and was awarded an MSc by Madras University. But in 1964 he opted to join J Farm as an agricultural agronomist, "since this institution was willing to recognise and encourage my research efforts".

Rice research. Adaptive research at J Farm has always centred on rice. "Universities concentrate only on the development of high-yielding varieties," observes Nagarajan. At J Farm the needs of three distinct groups are taken into account while introducing a new variety of rice. "The farmer wants a high yield coupled with low cost of production, the merchant expects a good recovery after the hulling process, and the housewife is concerned about its quality," he says. The emphasis, therefore, has been on identifying varieties of rice which involve "low-cost, low-risk technology"; varieties like IR 8 which did not meet this requirement, disappeared quickly.

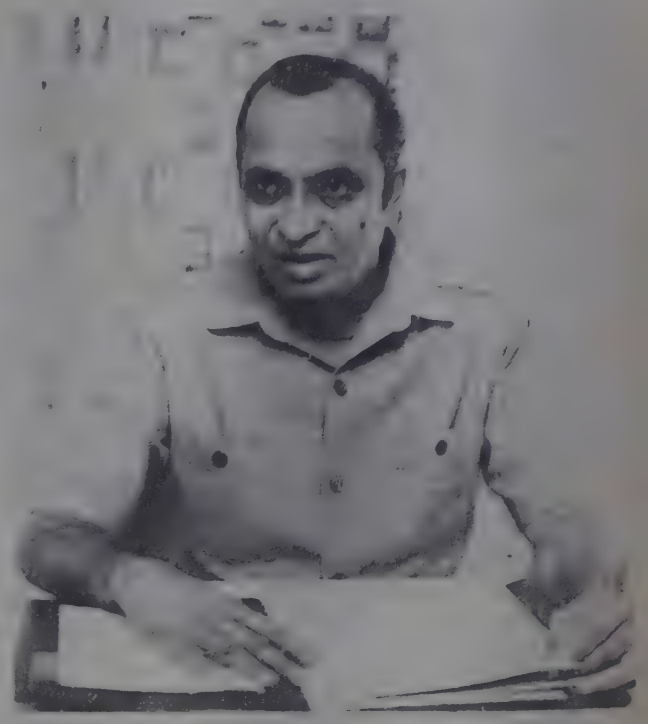
"The cost of production is the factor which ultimately decides how widely a variety is used," Nagarajan explains.

Among the successful varieties introduced by J Farm is IR 50. "We brought 500 gm of this rice from the Philippines and worked on it for five years, before discovering its adaptability to the soil of Tamil Nadu and weather conditions," he explains. Currently IR 50 is being cultivated on 1 million acres of land in the state. This was followed by "White Ponni" which is a fine table variety.

However, it is J 13 — a variety developed at J Farm — that Nagarajan is proud of, since it was developed from a culture. Short duration cultures of 110 to 113 days were imported from the International Rice Institute, Philippines. "Seventeen cultures were selected and worked upon. Tests proved that the thirteenth culture was eminently suitable for Indian conditions," recalls Nagarajan, and J 13 was born. It is a short-term crop of 100 day's duration, the plant cost is negligible and it is suitable for cultivation in drought prone areas. J 13 is cultivated on 1 million acres of land in Tamil Nadu, and is growing increasingly popular.

A catalyst. Nagarajan is also deeply involved in the second aspect of adaptive research — transferring the technology to the farmers. Regular Farmer's Day meets are held three times a year, at the farm — in April, July and January. Two or three farmers from each district are trained in the cultivation of these new varieties. "Our role is that of a catalyst," explains Nagarajan. "Seeds are supplied to farmers at a reasonable cost, and if we are supplied with details regarding the extent of land, the soil type, the rainfall pattern, etc, we offer advice, not consultancy." J Farm is entirely service-oriented and concentrates on small and marginal farmers. "It has taken us almost 20 years to win acceptance and approval," comments Nagarajan. Every year nearly Rs.5 lakhs are spent by J Farm on adaptive research and technology transfer.

At least a part of the success in transmitting technology must be attributed to Nagarajan's ability to rope in the media as a means of disseminating information. In 1964, A.N. Sivaraman, the editor of the Tamil daily Dinamani, visited J Farm and encouraged Nagarajan to write a weekly column on matters of interest to agriculturalists. This was followed by regular contributions to the Indian Express, Madurai. Later, Nagarajan also presented talks on technology, interviews with farmers and quiz programmes for farmers on All India Radio. Subsequently, with the opening of Doordarshan's Madras Kendra, Nagarajan has been a regular farm news presenter, handling



Vayalum Vazvum, a programme for farmers. For instance, he presented several TV programmes on the IR 50 rice variety, Farmers later began to call it "TV paddy".

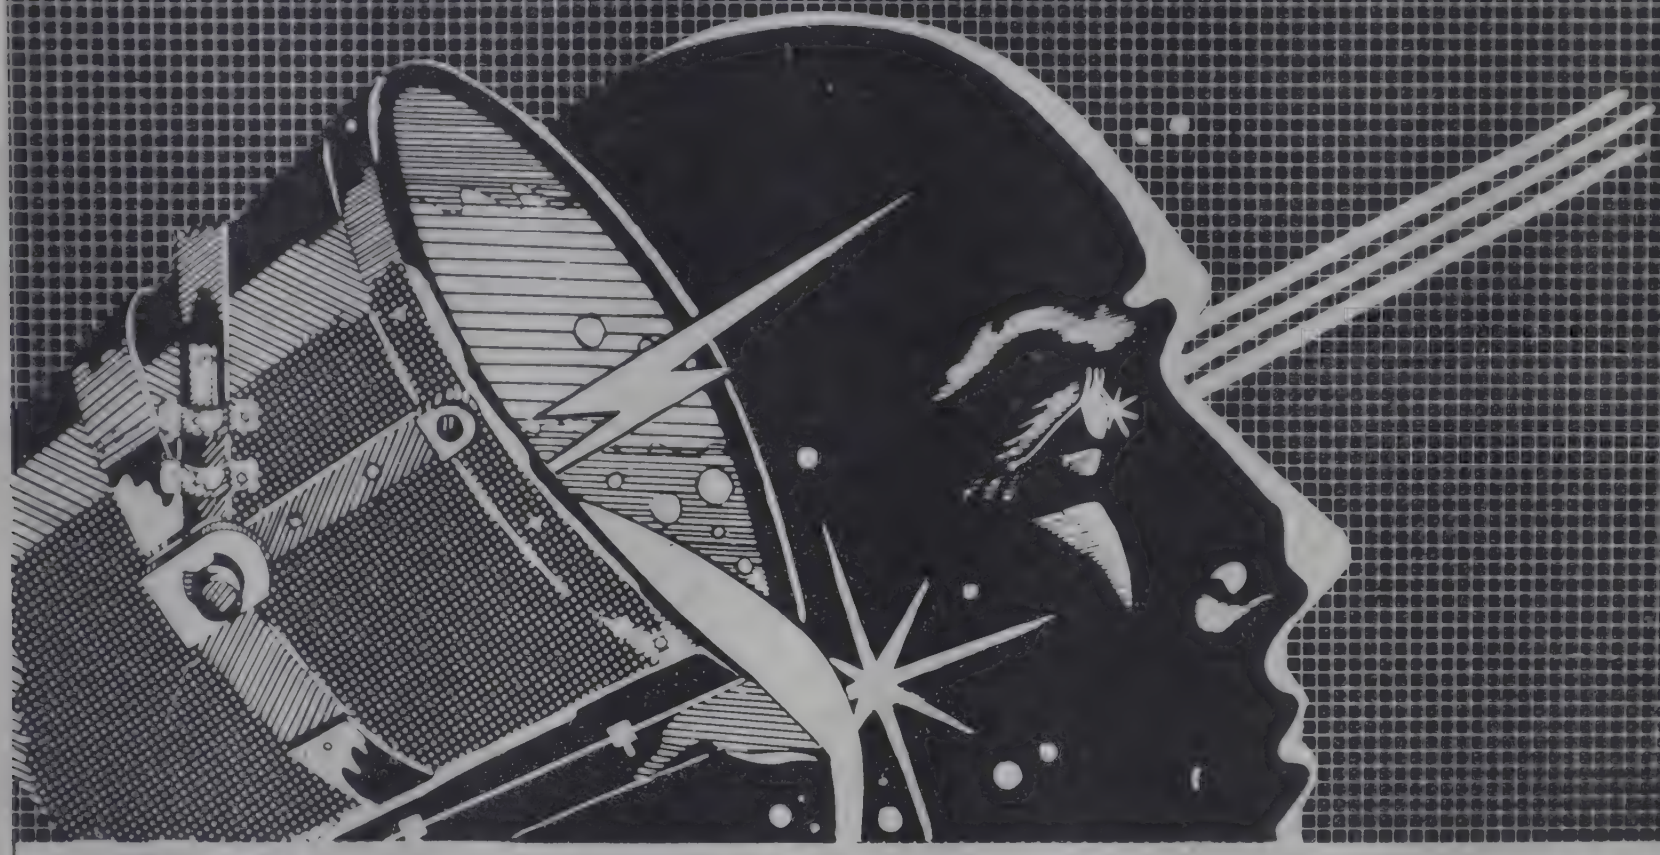
Next step. The next major programme which Nagarajan hopes to direct envisages the training of farmers in the technological and management aspects of agriculture. "Only 25 per cent of the technology percolates to the farmers. Lack of funds, the high cost of technology and its ineffective dissemination are hurdles," he observes. Indian farmers also lag behind in managing fund allocation for each aspect of the work. "For example 40 per cent of the expenditure should be allocated for manuring and plant protection," he maintains. Low yields have been a cause for worry especially since in India the average yield is 1,000-1,200 kg per hectare, while in other major rice-producing countries, yields are about 6,000 per hectare.

Nagarajan advises farmers in the Tamil Nadu region to go in for mango cultivation. "The best mangoes are often found in the driest regions," he maintains. "And the export potential is good."

Nagarajan has also written his share of books. During a study tour of the UK in 1970, he did a detailed analysis of mechanised farming in Britain. The results were summarised in a book entitled British Agriculture in Brief. "Transfer of technology is easier in Britain where the farmer has the basic education and is often a skilled observer of trends. Illiteracy is a major bottleneck in India," says Nagarajan. He has also written two books on paddy cultivation. Deeply involved as he is in agriculture, Nagarajan has little time for hobbies.

■ DHARANI K. PANI

WE MASTERMINDED THE SUCCESS OF INDIGENOUS TECHNOLOGY



Medium frequency induction furnaces upto 10 tons

Induction melting industry. An industry which was built on foreign technology. Which was dependent on the collaborators even for the slightest improvisation. An industry which had spread in India but had its roots elsewhere. That's when we thought of establishing a technology which was not adapted — but created for Indian conditions. And so was born Electrotherm. The magnificent master of indigenous technology.

What makes us the masters —

- ✲ Fastest melting at lowest cost.
- ✲ Reliable double system protection.
- ✲ Upto 97% efficiency.
- ✲ Static medium frequency generators upto 5000 KW capacity
- ✲ Built-in test facility.
- ✲ Optimum voltage system.
- ✲ No intermediate capacitor switching.
- ✲ Efficient and reliable closed loop cooling system.
- ✲ Durable and high efficiency steel frame crucibles.
- ✲ Safe and convenient layout.
- ✲ Rapid erection.
- ✲ Commitment to excellent after sales service.

We also offer —

- Induction heating and hardening equipments in mains frequency to radio frequency range.
- Specially designed furnaces to meet your specific metallurgical needs.

We are climbing the steps of leadership. Innovation and consistency have always been parallel with our excellent services.

We're Electrotherm. The milestone of indigenous technology.

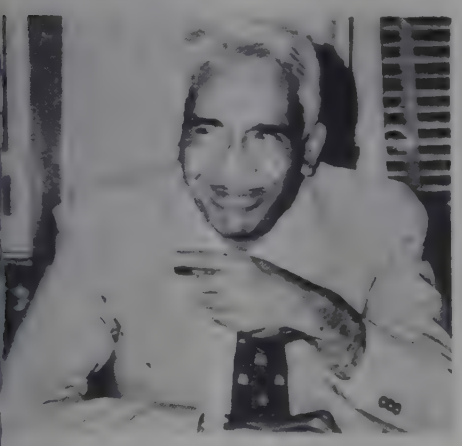
Projections/ET/4/88

NOT SO LONG AGO, **S.P. charya,** former chairman of li-uor giant, Shaw Wallace & Co, rabbed newspaper headlines very other day as he resisted he entry of takeover tycoon Ianu Chhabria. Today, with the ust having settled down, charya has quit the limelight nd found quiet refuge in Ban-alore, an old favourite of re-irees. His new status of "a rivate citizen" also helped him ut off a *Business India* corre-pondent on his trail.

True to his name, Acharya as decided that it is time he aught others a few lessons. He s believed to have taken up an ionorary professorship at the ndian Institute of Management



t Bangalore, with finance and usiness policy as his subjects. n fact, he is a faculty member or a programme on corporate xcellence to be held in Goa this ecember. His students, of ourse, must be anxious to be nitiated into the complex art of arding off takeover attempts.

With Chhabria's pal, Vijay Mallya of United Breweries, in the neighbourhood, Acharya may not find it easy to forget the Shaw Wallace episode.

THE SAVE A LIFE CLUB WAS START-ed in Madras to do just what its name suggests — save lives. A couple of months ago, 28,000 school children marched through Madras city to focus attention on the tragedy of innumerable lives lost in traffic accidents.

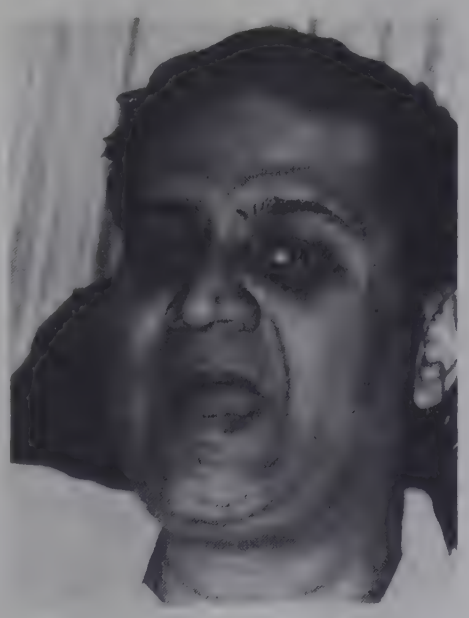
"We represent the most under-privileged of all people," says **Rekha Shetty**, vice-president, marketing, Apollo Hospital, and secretary of the club, "Whether an individual is a millionaire or a pauper, after an

accident he becomes someone who cannot speak for himself. He is unconscious and in need of help."

The Save a Life Club, which meets once a month, has a large number of members, including very successful professionals. "We believe that the participation of professional managers in a social cause can greatly improve its effectiveness. Our executive think tank, which is made up of top management professionals, has played a major role in making this an effective concept," says Shetty.

THEY SAY "YOU JUST CAN'T BEAT A Bajaj". And going by **Rahul Bajaj's** plans this certainly sounds true. Bajaj in fact plans to beat the lethargic Indian government by a whole year this time round.

For once though, Rahul Bajaj's aggressive competitiveness is not in the already conquered area of two-wheelers. He is on even more familiar turf — the family. The Bajaj family is currently gearing up to celebrate the 100th birth anniversary of



the group's founder Jamnalal Bajaj this year. Celebrations begin with the installation of Jamnalal's statue in Pune by the President of India and will be followed by the Bajaj Award ceremony which will be held in Wardha this year, not in Delhi where it is normally held. Says Rahul Bajaj, "The family certainly has a hectic time ahead." Since the government of India has chosen to begin its own celebrations of Jamnalal's anniversary in 1989, it seems as if for two years it's going to be Bajaj

THE QUEEN OF THE STAR-STUDded rock fest that shook the capital recently and attracted most of Bombay's glitterati was undoubtedly **Nandita Jain**, the effervescent and feisty sister of Samir Jain of the Times of India group. In a tribute to little sister's signal contribution to making the human rights concert an event that will be remembered for long, Samir Jain said, "There is no doubt that Nandita was the epicentre of this earthquake." The little lady, who beamed gleefully at the surprise party hosted for her by a well- known Bombay socialite, which had a real back street band (as opposed to Springsteen's E street band) in attendance, said, "And this is even before the start of our 150th year birthday bash!"

THE ALMOST UNIVERSAL HOWL OF protest that rose at the sudden sacking of **Bhaskar Ghose** from the top job at Doordarshan was heard all over the country. There were editorials galore and cartoons aplenty reviling the government for removing a competent soul from the largely incompetent idiot-box hierarchy.

Not everyone, however, mourned his exit. His pals from the theatre world were overjoyed; the day after Ghose was sacked, they invited him for a play reading session. Ghose's considerable talents as a thespian were one reason why he seemed to make the ideal choice for Doordarshan. But

now with the drama of exit having been gone through, Ghose may well go back to doing the kind of drama he loves best. As a rather wistful Ghose confided to friends last week, "I'll now have more time for friends, family and fun."

LOW PROFILE HI-TECH TYCOON **Shiv Nader's** parties are true to his style. Joyous but quiet. Typically, Nader who heads the nation's largest computer company, HCL, did not exactly crow from the rooftops about the whopping Rs.25-crore order that he just bagged from the US.

Says Nader, "The days of computer companies selling cheap labour are over. What we will now sell will go to the top end of the market in hardware."

HCL was, of course, uncertain till the last moment whether all the local red tape would be snipped through in time to get the order. Mercifully it all worked out. And right on schedule. HCL will begin deliveries by the end of this year and finish executing the contract by the end of 1989. So, while Nader and company may have taken time off to shake a leg, the long march has just begun

SICO'S ACFC

AUTO CANE FEED CONTROLLER

for maximum sugar recovery

FEATURES

1. Suitable for electrical, steam, hydraulic driven carrier.
2. LED Bar graph display for cane level and load on preparatory devices.
3. Interlocking facilities.
4. Easily replaceable cane level FRP molded stainless steel conductive type sensors.
5. Built-in fault find test boards for easy maintenance.

BENEFITS

1. Avoids the jamming, choking and over-loading on turbo generator etc.
2. Precise level control of cane bed for optimum feed to crushing mill for maximum extraction of juice.
3. Constant feed of bagasse to boilers for efficient operation and minimum steam pressure fluctuation.
4. Minimum wear and tear to the milling tandem and devices.

Sounding the alarm on ecology

Saving The Tropical Forests
By Judith Gradwohl and Ressel Greenberg
Earthscan Publication Ltd, UK, 1987, pp.207, £6.95

This is a businesslike, pragmatic look at ecology and an attempt to draw the world's attention to an emergency. For a long time now, it has been commonly believed that in the question of ecology, the choice is between conservation and people. That, according to the authors, is a misinterpretation of reality.

Tropical forests are disappearing at the rate of 50 to 100 acres every minute. The trend is escalating worldwide at a time when plants are becoming crucial to the development of the pharmaceutical industry. "In 1980," say Gradwohl and Greenberg, "the estimated value of plant-derived prescription drugs in the United States was $ 8 billion. Tropical forest plants worldwide are being screened for anti-cancer properties, and 70 per cent of the plant species known to possess anti-cancer properties are from tropical moist forests."

The situation in agriculture is nearly the same. Tropical forest plants are valuable sources of wild genetic stock for crops. Wild varieties of cultivated plants are used as tools by plant geneticists; the varieties growing in tropical forests have a long record of saving crops from major outbreaks of disease. For instance, wild forms of peanut found in the Amazon turned out to be resistant to leafspot; their introduction into plantations has resulted in savings estimated at $ 500 million per year. Similarly, fibres, oils and resins from tropical forest plants are used in making furniture, clothing, varnishes, pesticides, lubricants, adhesives and many household goods.

Scientists have recently begun to recognise the link between the burning of the Amazon and other tropical forests and the depletion of the ozone layer over the Antarctic. The burning of huge tracts of forests every year — for crop cultivation, for pasture land, etc — causes the release of gases and smoke which in turn reacts with and depletes the ozone layer. Findings such as this do get a lot of publicity and yet, the large scale burning continues as it provides easy, short term profits for a few companies, and livelihood for landless families.

Short term gain versus long term, regional versus global interests — this is the crux of the matter. A scientist of the Smithsonian Institute (the Washington-based research body), Michael Robinson, observes in the preface of the book that if rain forests were being destroyed because of stupidity or ignorance,education could conceivably lead to reform. But the problem, he says, is that they are largely being destroyed because of poverty and greed. He warns, "We are aware that we are facing the first human-created extinction cycle that is on the same scale as the major geological events of the past, but condensed into an incomparably smaller span of time."

If the destruction is not carried out by a few companies for their short term profits, then it is caused by "slash and burn agriculture". This pattern of deforestation, far more prevalent the world over, also has a worldwide ecological impact. As new forest areas are cleared and opened up, new roads are built (often specifically to encourage colonisation) and poor rural families, following the promise of abundant farmland, become homesteaders, usually with rights to farm public land as long as it is kept planted. But often, as in India, such encroachments are unauthorised and do more damage then good.

Many governments face an expanding population and a debt crisis; they have therefore few options other than the rapid extraction of natural resources to raise capital. Thus, they exploit products such as timber

The authors explain the process: the entire forest lot is first cleared. The cut vegetation is allowed to dry and then burnt. The planters immediately work the land afterward so that the crops have the benefit of nutrients such as the ash left by the fire. But even the tillers of such soil recognise that, after the first year, the fertility of the plot begins to decline and productivity decreases as weeds and pests appear.

Many governments face an expanding population and a debt crisis; they have therefore few options other than the rapid extraction of natural resources to raise capital. Thus, they exploit the most readily available products such as timber, minerals and oil. Ironically, many of the loans that have contributed to the burden debt were for the very roads and hydroelectric dams that necessitated forest clearance. In that respect, the lobby that is trying to revive the Silent Valley Project in Kerala — scuttled a decade ago — may want to review the dangers as explained in this book.

War has had an impact too, as in Vietnam. Forty per cent of the country's rain forests were destryoyed in less than a decade, through the use of herbicides and defoliants, and of course the damage caused by bombs and napalm.

The book was published in conjunction with an international exhibition organised by the Smithsonian Institute and scientists speculate that the loss of tropical forests will cause:

- destruction of tribes whose way of life depends upon forests;
- an increase in barren land and desertification in drier tropical regions;
- regional decreases in rainfall, exacerbating desertification;
- a global increase in temperature due to a rise in atmospheric carbon dioxide, leading to a rise in sea levels;
- extinction of a large number of animal species and potentially important food and medicinal plants;
- a decline in the population of temperate zone birds which migrate to the tropics;
- increased exposure and erosion of soil;
- and loss of hydroelectric power potential.

As Robinson states in the preface, "In stark summary, we are destroying irreplaceable species on an unprecedented scale without regard for their potential economic, aesthetic or biological significance."

"Given all the ecological constraints on the development of regions of tropical forest, is it realistic to suggest that the forests can be preserved for wildlife and put to sustainable economic use?" the authors ask. They provide an answer. It depends on the intensity of use and on a balance between short and long term gain. All around the world, in fact, models are emerging, in response to a growing awareness of the importance of tropical forests.

XLRI JAMSHEDPUR

MANAGEMENT DEVELOPMENT PROGRAMMES

XLRI,Jamshedpur invites participation in the forthcoming Management Development Programmes.

MANAGERIAL SKILLS FOR EMPLOYEE COUNSELLING

November 21-26, Venue: XLRI Jamshedpur
Programme Director: Fr. K. Cyriac
Course Curriculum: *Basic Techniques of Counselling, Classic and Modern Approaches, Helping Relationship, Skill Exercises, Listening and Responding, Performance Counselling, Problem Counselling, Group Counselling, Growth Labs, Group Dynamics.*
Participation: *HRD Managers, Personnel Officers, Administrators and Senior Supervisors.*
Fee: *Residential Rs. 3,300/-*
Non-Residential Rs. 2,600/-

JOB STRESS INDENTIFICATION AND INTERVENTION

November 28 - December 2, 1988, Venue: XLRI Jamshedpur
Programme Directors: Fr.R.D'Souza S.J., Prof. K.C.D'Souza
Course Curriculum: *Identifying Causes and Effects of Job Stress, Moderating Type A Behaviour, Individual and Organisational Strategies for Reducing and Coping with Job Stress.*
Participation: *Senior and middle level managers with responsibility for human resources development.*
Fee: *Residential Rs. 3,300/-*
Non-Residential Rs. 2,600/-

MANAGING HUMAN RESOURCES IN ORGANISATIONS

December 5-10, 1988, Venue: XLRI Jamshedpur
Programme Directors: Prof. K.C.D'Souza, Fr. R.D'Souza, S.J.
Course Curriculum: *Leadership Motivation, Interpersonal Skills Development, Performance and Potential Appraisal, and Organisational Development.*
Participation: *Senior and middle level managers in any area of management.*
Fee: *Residential Rs. 3,500/-*
Non-Residential Rs. 2,700/-

COMMUNICATION AND TRANSACTIONAL ANALYSIS FOR EFFECTIVE MANAGEMENT

Decemeber 12-17, 1988, Venue: President Hotel, Bombay.
Programme Directors: T.A. Mathias, K.C.D'Souza
Course Curriculum: *Theory of good communication, The art of persuation, Assertive communication, conference leadership Participation, Life scripts Communication, Games Communicators play, Communication strategies for the transactional manager.*
Participation: *Senior executives from any area of management Senior administrators in governmental trading or financial institutions.*
Fee: *Non-Residential: Rs. 3000/-*

INDUSTRIAL RELATIONS LAWS

December 19-22, 1988, Venue: XLRI, Jamshedpur
Programme Director: K. Mathur
Course Curriculum: *Role of trade unions, Employers and the State in Industrial relations, Central legislation relating to Trade Unions, Industrial Disputes, Job Security Discipline, Standing Orders, Work Rules and allied matters.*
Participation: *Senior and middle level executives dealing with industrial relations.*
Fee: *Residential Rs. 3,000/-*
Non-Residential Rs. 2,500/-
For further communication please contact:

PERSONNEL PRACTICES

Software industry sets the trend

The boom in the software industry has changed many things besides business systems and working methods. It has brought a new breed of engineers and professionals into the employment market and has changed many personnel practices. In fact, this industry could bridge the gap in personnel practices between the "twentieth century" nations and us.

The software industry has been the most active in the recruitment market in the last two years. The recruitment campaigns of most software companies have been aggressive and the advertising, attention grabbing and enticing. Most of the ads communicate the youthfulness of the industry and reach out to the young "dreamers" and the ambitious professionals with promises of exciting work, trips abroad and opportunities for rapid career development. The perks, the pensions, the stability of the organisation or the linkage to big houses are often glossed over. These ads probably played a role in changing the style of recruitment ads in general and underlined the need for companies to sell themselves on the recruitment market in terms of future plans rather than past glory.

MAJOR RECRUITERS

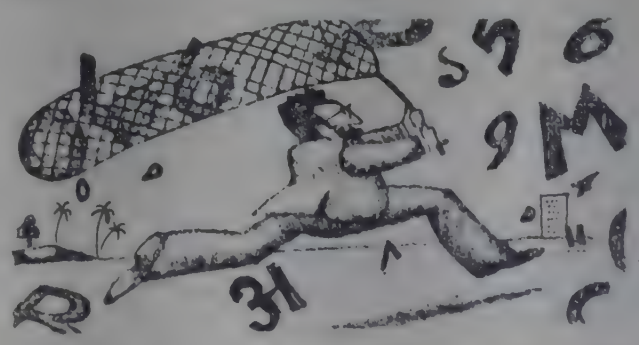
The major recruiters in the industry such as TCS, Tata Unisys, Datamatics and Hinditron, besides the large hardware manufacturing companies, have each been recruiting about a hundred professionals annually for the last three years. They have been joined by a growing number of foreign companies such as Texas Instruments, DEC (with Hinditron) and soon Hewlett-Packard. Companies like Citibank Overseas Software are also recruiting though in smaller numbers.

With the top dozen companies alone planning to recruit a thousand professionals next year, it is not surprising that the demand for software specialists continues to far outstrip the supply. Naturally, there has been an unprecedented rush for software courses. All engineering colleges have begun offering specialisation courses in computers and electronics. All kinds of institutes are offering computer courses; in the absence of any uniformity in course standards, this makes the task of recruiters more difficult. Most major recruiters therefore administer aptitude and skill/professional knowledge tests at entry levels. This practice has been accepted even in the IITs. Several of the foreign software companies have begun administering tests; this has made Indian companies review their own. In recent times the tests administered by Microsoft have been rated highly by potential candidates.

Earlier,professionals were reluctant to go through such written tests when they were insisted on by public sector companies or large companies recruiting engineers.

NEW APPROACHES

The software industry the world over is manned by young, highly ambitious professionals who are very "individualistic" and have values and goals different from those of professionals in other industries. Perhaps the influence of the literature from the West and the tremendous exposure people in this industry in India have to peers in the US has resulted in the similarity of personnel issues. This has meant adopting new and different approaches in attracting and motivating staff.



While the large software houses like TCS and Tata Unisys and companies like Citibank Overseas Software Co are still the favourites of candidates (mainly due to the opportunity they provide for going abroad), quite a few little known firms have successfully attracted professionals with the promise of interesting work and fast growth. The financial stability or standing of the recruiter is not as important as the exposure and opportunity for doing state-of-the-art-work. Even young engineers realise that unless they are constantly in touch with new developments (in the software industry, changes are bewilderingly rapid), they will be obsolete professionally.

It is therefore necessary for employers in the industry to constantly upgrade their own technology. Of course this is not always possible and hence the freelancers and small set-ups manage to stay ahead of the large companies.

But the problem then is, who will work on those jobs that still use older languages or systems. For several of our companies are not able to rapidly change from one level of technology to another. It has perforce to be the first generation of computer specialists who feel the pressure and pace of the current generation the most.

With western companies viewing India as a cheap source of software, the brighter software engineers are becoming more choosy about the kind of assignments they want. Most of the younger engineers and those from the premier institutes want to work on CAD/CAM or expert systems or operating systems software and not on business systems. But in India the opportunities in non-business software still remain fairly small.

PECKING ORDER

With the increasing number of computer training institutions, a pecking order on who does what kind of software job will soon develop. And user industries are undoubtedly going to get lower in the pecking order. That means new concepts such as recruiting staff on a contractual basis for specific assignments. With the aspirations being different this system would find ready acceptance. It would also enable problems of parity in salary vis-a-vis other engineers/peers in the company to be resolved.

The software industry has also experimented with changes in the conventional organisation structure. The structure of most of these companies is flat with minimal hierarchical differences. Designations are not important except in marketing jobs. Salary grades also do not follow the conventional overlap pattern. It is well accepted that a specialist could be paid a disproportionately high salary. Hence salary grades are often theoretical.

The intense competition for manpower and the consequent spiralling remuneration has resulted in frequent salary surveys and revisions. In fact, most companies in the industry review their compensation as often as twice a year. The rewards in the form of increments, cash rewards and foreign travel are also fairly immediate. All this has resulted in the human resources departments of these companies being more agile and often more innovative than in other industries.

■ ANITA RAMACHANDRAN

IF THIS DOESN'T MAKE YOU START SAVING OIL, YOU'RE PROBABLY NOT IN BUSINESS FOR PROFITS.

Name of Company	Oil saved per year- Kilolitres	Additional profit per year - Rs.*
Warner Hindustan Ltd	400	14,00,000
Vijay Kumar Mills	96	3,36,000
GTC Industries Ltd.	45	1,57,500
Digvijay Textile Mills	15	52,500
Rajkot Dairy	240	8,40,000
Nav Bharat Steel Rolling Mills	480	16,80,000
Visvesvaraya Iron & Steel Ltd	4,300	1,50,50,000
Shri Raghuvir Chemical Industries	20	70,000
Ashok Foundry & Metal Works	90	3,15,000
Man Industrial Corporation	570	19,95,000
J.G. Glass Industries	700	24,50,000

You are looking at the names of a few pioneers in the industry who are confronting the problem of oil wastage and taking steps to alleviate it.

And more importantly, saving themselves lakhs of rupees every year to add to their profit curves.

But what is surprising is that these thinking individuals are only a handful. Even in today's situation of acute oil crisis.

Surprising, considering that saving oil does not necessarily involve using only expensive, sophisticated equipment or changing plant machinery. Rather, it involves a simple change of attitude towards the problem.

Because once you decide to act on the problem, the rest becomes easy.

PCRA has already helped over 1750 industries, identified wastage areas and provided complete recommendation packages for increasing efficiency. For free.

These industries will testify that in most cases, the recommendations consist of simple measures to be implemented by you and your work force. Simple measures carried out with a new awareness. And a commitment towards the cause of saving that drop of oil.

So if yours is an industry that has already consulted PCRA, now is the time to act.

And if you haven't yet talked to PCRA, now is the time to pick up the phone or mail the coupon below.

After all, the profitability of your company is in your hands. And considering the high oil prices, it's about time you changed your attitude towards the problem. After all you are in business for profits, aren't you?

I am keen to know about fuel oil saving in Industry

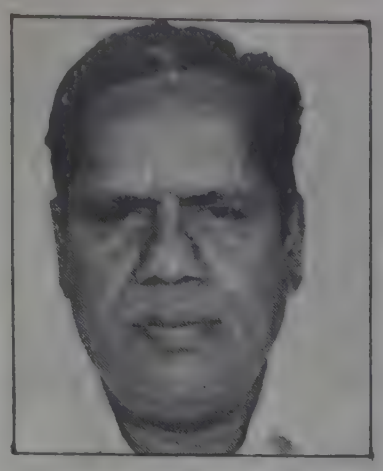
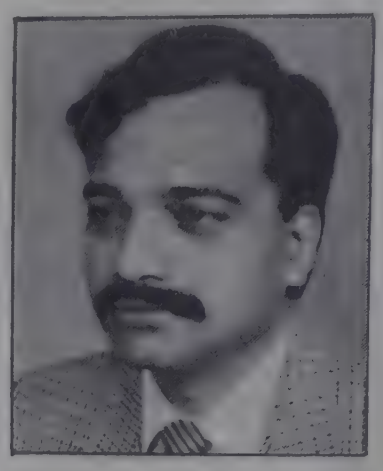
S. GANGULY has been appointed vice-chairman and managing director of Associated Cement Companies Ltd (ACC).



T.S. KRISHNAMURTHY has assumed charge as director (refineries and pipelines) of Indian Oil.

COLIN BANFORD has taken over as the new chief executive of Hongkong Bank, India.



PRASAD CHANDRAN has taken over as director (marketing) of the agrochemicals division of Searle (India) Ltd.

P.N. THAMPI, has joined as a director on the board of Telematics Systems Ltd.

A.A. MODI has been appointed chief executive of Jyoti Switchgears Ltd.

I.S. ALVA has been appointed general sales manager of Steelage Industries Ltd.

A. GAVISIDDAPPA has taken over charge of the hardware division of Bharat Heavy Electricals Ltd (BHEL).

P.C. GUPTA chairman and managing director of National Mineral Development Corporation Ltd (NMPC), has been granted extension of his tenure.

G.S. RAO has been appointed additional general manager of Maharashtra Electronics Corporation Ltd (MELTRON).

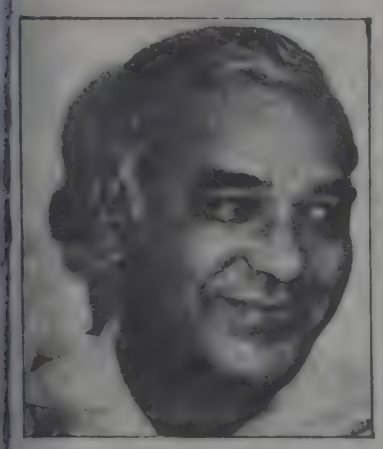
SATISH MIGLANI has taken over as chief executive of J.B. Advani (Mysore) Ltd.

G.S. VIJAY KUMAR has taken over as regional manager (western regional operations) of T.T. Krishnamachari & Co.

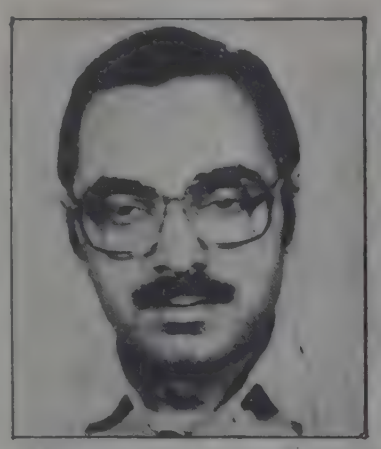
GILDAS LE LIDEC has been appointed consul general for France in Bombay.

G.L. LATH has been elected president and R.L. TOSHNIWAL elected vice-president of the Indian Spinners' Association.

K.G. SOMANI has been elected president of the 14th Council of the Institute of Chartered Accountants of India A.H. DALAL has been elected vice-president



SURESH S. NADKARNI, chairman and managing director of Industrial Development Bank of India (IDBI) has been given an extension of five years in his tenure.



A.K. MAGO has taken over as chairman and managing director of Maharashtra Petrochemicals Corporation Ltd.

S. SUNDRESAN has taken over as director (finance and administration) in Electronics Trade and Technology Development Corporation (ET&T).

N.D. PRABHU has been appointed chairman and managing director of Canara Bank.

ASSOCIATIONS

MINOO R. SHROFF has been re-elected president of the Indo-Japanese Association.

JASUBHAI A. PATEL has been appointed managing director of the Gujarat Co-operative Oilseeds Growers' Federation.

VINUBHAI PANDIT has been appointed chairman of Public Relations Society of India (Baroda Chapter).
PRABHA NAGRAJ has been appointed vice-chairman.

HARISH MAHINDRA has been re-elected chairman of the Indian Society of Advertisers.

KUMAR VIKRAM SINGH has been elected executive director of the Council of International Investigators Inc.

RAMGOPAL DUJODWALA has been elected president of the All India Manufacturers' Organisation.

D. SUBHA RAO has been elected chairman of the Indian Ferro Alloy Producers' Association.

K. AHMADULLAH has been elected chairman of the Planters' Association of Tamil Nadu.

Senior executive positions

A compilation of executive positions advertised in **Business India** and other major publications between 26 September and 8 October 1988.

NATIONAL

VICE-PRESIDENT (Finance) * *Sal* Exceptional * *Age/Qlfn* Between 40 and 50 * NS * *Reqd* Entreprenurial spirit, wealth of experience at senior most level * *Resp* Tax planning and management for group of companies with a turnover of Rs.100 crores, fund mobilisation and management * *Cont* Box No.6315, c/o The Hindu, Madras 600002 (H — 27.9)

PRESIDENTS * *Sal* Attractive + perks * *Age/Qlfn* NS * Engineering graduates with formal management exposure preferred * *Reqd* Ability to lead a team of professionals * *Resp* Change of major projects in the metallurgical industry * *Cont* Box No.AA/276/LI/1, Business India, Krishna Villa, 100 Park Street, Calcutta 700017 (BI — 3.10)

VICE-PRESIDENT (Operations) * *Sal* Attractive * *Age/Qlfn* NS * Mechanical/Electrical engineer, management qualifications preferred * *Reqd* 15-20 years experience in the converting industry, exceptional managment skills * *Resp* Operations management of a totally computerised magnetic media plant in central India * *Cont* Code No.CM/VP/101, Career Makers & Marketing Services, Personnel Selection Divison, 241 Defence Colony Flyover Market (Jangpura side), New Delhi 110024 (BI — 3.10)

VICE-PRESIDENT (Marketing) * *Sal* Attractive + perks * *Age/Qlfn* NS * Engineering + MBA (marketing) preferred * *Reqd* Experience as general manager/vice-president (marketing) in a large organisation * *Resp* Formulating marketing strategy and achieving large volume sales in the metallurgical industry * *Cont* Box No.AA/276/LI/1, Business India, Krishna Villa, 100 Park Street, Calcutta 700017 (BI — 3.10)

VICE-PRESIDENT (Finance) * *Sal* Attractive + perks * *Age/Qlfn* NS * Chartered Accountants/MBA (finance) from IIMs * *Reqd* Experience at the general manager/vice-president level in a good organisation * *Resp* Financial policy and strategy formulation, performance monitoring and control * *Cont* Box No.AA/276/LI/1, Business India, Krishna Villa, 100 Park Street, Calcutta 700 017 (BI — 3.10)

VICE-PRESIDENT (Finance) * *Sal* Exceptional terms * *Age/Qlfn* Around 40-50 years * NS * *Reqd* Experience at the senior most level ability to control a rapidly expanding multi-activity business * *Resp* Head the finance functions of a group of business companies with a turnover of about Rs.100 crores * *Cont* Box No.AA/244/BI/3, Business India, 59, Regal Building, Connaught Circus, New Delhi 110001 (BI — 3.10)

DIRECTOR (Organisation & Personnel Development) * *Sal* Attractive + perks * *Age/Qlfn* Around 40-45 years * NS * *Reqd* Proven track record of managing change * *Resp* All aspects of human resources management, the job will involve coordination amongst chief executives of various divisions of a large company * *Cont* Box No AA/276/MD/5, Business India, 59 Regal Building, Connaught Circus, New Delhi 110001 (BI — 3.10)

WEST

CHIEF EXECUTIVE (Works) * Baroda * *Sal* Attractive + perks * *Age/Qlfn* 38-45 years * Chemical engineering, management qualifications from reputed institutions preferred * *Reqd* 1[5] years works management experience in the chemical/plastics industry, including 7 years at senior levels. Exposure to industrial relations essential. * *Resp* Manufacturing operations, personnel management and finance and commercial functions. * *Cont* Code No. MS/4942, A.F. Ferguson Associates, Post Box 1786, Bombay 400001 (BI — 3.10)

VICE-PRESIDENT (Projects) * Bombay * *Sal* Attractive * *Age/Qlfn* 35-40 years * Management graduates preferred * *Reqd* Experience in executive positions required, experience with new projects would be an asset * *Resp* Identifying and developing new projects * *Cont* Chairman and Managing Director, 20th Century Finance Corporation Ltd, 25/26 Maker Chambers III Nariman Point, Bombay 400021 (BI — 3.10)

EAST

MANAGING DIRECTOR * Shillong * *Sal* Rs.10,000 per month + perks * *Age/Qlfn* Above 40 years * Engineering with specialisation in electronics, an MBA degree would be an advantage * *Reqd* 10 years senior management experience in marketing, export and import of electronic components, financial management knowledge preferable * *Resp* Manage existing units and initiate new projects for the Meghalaya Electronics Development Corporation Ltd * *Cont* Code No MS/4237, A.F. GENERAL SALES MANAGER
Telecommunication Industry

Delhi **Attractive Compensation Package**

INDIA TELE-COMP LIMITED has been promoted by DALMIAS, a multi-crore, multi-unit, diversified conglomerate with a 75-year standing in industry.

ITL is in collaboration with BRITISH TELECOM, Inc., U.K., one of the world-leaders in the field of communication technology and the 4th most profitable company in the world.

Today, ITL has a manufacturing facility at Dehradun which is built in accordance with contemporary international hi-tech standards. The Company operates through a national network of 4 Regional Offices and already has a 60-strong installation base of TEXTELs in the country. ITL is also firming up a few more prestigious collaborations to launch another range of hi-tech products soon. ITL regards human resources as its most valuable asset and has a tremendous commitment to product quality and customer satisfaction.

We are looking for a General Sales Manager capable of providing energetic direction to the sales activity in the highly competitive office-automation field. He should be a go-getting, self-confident person, preferably an engineering graduate, with an impressive track record of achievements in sales of engineering products where sales depend on diagnosis of customer needs, meeting these, and providing efficient after-sales service. He will be given a free hand to develop the sales strategy and direct the field effort through a team of highly qualified professionals, with an urgent concern for results in the near-term as well as in the longer run.

The position of General Sales Manager is regarded as one of critical importance to the Company, and successful performance in the position will lead to rapid development for top management positions in the Group. The remuneration package is not likely to be a constraint for an outstanding professional.

Applications giving full details of age, education, professional experience and achievements, should be sent within 5 days to :

The Executive Director,
INDIA TELE-COMP LIMITED
Telecom House, L-12, South Extension-II,
New Delhi 110 049.

*AFBC FLUIDIZED BED BOILERS

Modern State-of-the-Art Technology now brought to India by

ISGEC JOHN THOMPSON

In Technical Collaboration with, and under licence from

OUTOKUMPU OY of FINLAND

A fully Government owned Company

ISGEC JOHN THOMPSON now offers to Indian Industry the modern and fully-developed Bubbling Bed *ATMOSPHERIC FLUIDIZED BED COMBUSTION TECHNOLOGY for use with high ash, low calorific value coals, high moisture lignites and agro-waste fuels. This has been possible through a Government approved Collaboration Agreement for the manufacture of *AFBC Boilers.

While IJT have been working on the Fluid Bed technique for several years and have to their credit 3 Indian patents No. 154079, 154520 & 155593, the technical collaboration route was selected for speedy implementation of the process for commercial applications. After a world-wide search for this technology in various countries like UK, USA, West Germany, Austria, Sweden and Finland, IJT chose OUTOKUMPU OY of Finland. Outstanding features, proven design and years of actual operating experience of Outokumpu is hence available to boiler users in India

Outokumpu have been using this technology for several decades in their Mining Division. Suitability of this process for the purpose of steam generation was technically proved by Outokumpu several years ago with a number of commercial installations to their credit.

The main advantages of IJT-OUTOKUMPU *AFBC Boilers are

- High combustion efficiency
- Emission control capability
- Simplified fuel feed systems
- Multi-fuel capability
- Lower auxiliary power consumption
- Natural circulation
- Adaptability to conversions & retrofits
- Proven experience of Collaborator
- Manufacture at well-experienced Boiler Works
- Top class quality
- Prompt service

it never goes out of fashion.

Ever since Vedic times, colour has held a very special place in India.

Scholars and sages studied the psychological and physiological effects of colour on human life. Recent scientific findings indicate a closeness in thought to the colour symbolism studies of the great rishis.

Red.

Think red.
And you'll think anger.
Think red again.
And you'll think something else.
Courage.
Passion.
Pure natural emotions.
In fact each time you think red, you'll encounter different images.

Danger.
Drama.
Fire.
Vitality.
Will-to-win.
Vital force.
Desire.
Selfishness.
Sensuality.
But the most important thing is that red is all powerful in the world of colour.

MODI XEROX

MODI XEROX Invites High Calibre Professionals to join its Team

Modi Xerox is India's leading manufacturer of photocopiers. With a turnover exceeding Rs. 80 crores in the third year of commercial operations, the Company is poised for remarkable growth.

We are now looking for the following professionals to join our Manufacturing & Technical Operations at our highly sophisticated factory at Rampur (U.P.).

DESIGN ENGINEER : Should be BE/B.Tech. (Mechanical) with 4-5 years'experience in mechanical system design and development in either office automation or light engineering industry. Familiarity with vibration isolators, test rings, etc is essential and exposure to plastics would be an added advantage.

PLANNING ENGINEER : Should either be a Graduate Engineer from a reputed institute or a Diploma Engineer with 3-4 years' or 6-8 years'experience respectively in the Engineering Industry. Qualification in Materials Management will be an added advantage. Responsibilities include planning and scheduling of various product lines through computerised MRP system as well as light inventory control. Must possess good analytical ability, interative skills and the ability to get jobs done.

SENIOR ELECTRONICS ENGINEER : Should be a an Engineer with 6-8 years of hands-on-experience in digital and micro-computer hardware. Responsibilities include sourcing, installation and maintenance of electronic and mechanical equipment and tools used in the production of copiers and consumables. The candidate will also be expected to execute diverse electronics and communication projects. Ability to rapidly absorb a variety of technologies and to apply them to products undertaken is essential.

MATERIALS QUALITY ENGINEER : Should be a BE/B.Tech. in Mechanical Engg. with 3-4 years'experience in the Inspection Department of reputed Engg. company. Exposure to metrology lab experience would be an added advantage. Responsibilities include measuring data feedback through statistical tools and problem analysis, etc.

ASSEMBLY QUALITY ENGINEER : Should be a BE/B.Tech. in Electronics with 3-4 years'experience in Quality Engg. in a reputed Engineering company. Responsibilities include providing Quality Engg. support to the Assembly Quality function through planning and defect prevention.

SENIOR INDUSTRIAL ENGINEER : Should be a first class Graduate Engineer in Mechanical or Industrial Engg. with 6-8 years'experience in the Light Precision Engineering Industry. A post-graduate degree in Industrial Engg. will be an added advantage. Responsibilities include planning of manpower, space, plant and machinery requirements. Ability to design a balanced production line, conduct productivity studies, improve facilities and achieve cost reduction through value engineering and other studies is essential.

MANUFACTURING ENGINEER : Should be a First Class Graduate Engineer in Mechanical or Industrial Engg. with 3-5 years'experience in production of light precision electro-mechanical products. Must have some exposure to MIS/System Engineering. Responsibilities include machine configuration, reviewing engineering changes and maintaining manufacturing bill of material by introducing new parts as required.

SENIOR ENGINEER (PRODUCTION) : Should be a BE/B.Tech. in Mechanical/Chemical Engg. with 6-8 years'experience of machine tool, toolings/fixtures, machine shop/vacuum technology. Responsibilities include achieving target yield of photoreceptors, looking after toolings (e.g. diamond toolings), maintaining the effluent treatment plant and managing a team of skilled technicians. Good communication ability and excellent management skills will be an asset.

MANAGER COSTING : Should be ICWA or MBA in Finance from a premier Institute, with 4-6 years' experience in Costing in an Engineering Industry. The candidate must have handled this function independently. Responsibilities cover the complete costing function including material accounting and variance analysis for the manufacturing activity.

Our site at Rampur is a fairly self-sufficient colony, complete with amenities such as housing, school, club, social and recreational activities. It offers a stimulating work atmosphere and challenging opportunities for dedicated professionals.

At Modi Xerox, we take pride in recognising and rewarding high performers and offer one of the best training and development opportunities in the country. Compensation package for all these jobs are comparable to the best in the Industry.

"People must be told about available schemes"

Eduardo Faleiro *took over as the minister of state for banking and economic affairs in April this year. The spotlight has been on him to see how he lives down the excesses of his predecessor, Janardhana Poojary, and how he can give the nationalised banks and financial institutions a meaningful direction. Faleiro spoke to Keya Sarkar of* Business India *in his home state Goa*

You come to Goa at least once a month. How often do you visit other states?
In the last few months I have managed to visit 14 states. There is a pattern in the way in which I cover the states. I meet the MPs, both Lok Sabha and Rajya Sabha, to get primary feedback on the status of implementation of different financial schemes. I meet bankers, state government officials and of course the chief ministers to sort out pending matters. There is a lot of emphasis on the weaker sections because they feel marginalised. No scheme can be implemented without dialogue with the state governments.

Besides this I have had direct meetings with *gram sabhas* in Tamil Nadu and Maharashtra, *gram pradhans* in Rajasthan, young entrepreneurs in Bombay, rural voluntary agencies in Gujarat and now fishermen from all over India in Goa. This has given me a very different feedback — it puts you in touch with the direct beneficiaries of various schemes.

In the months that you have held this portfolio, what has struck you as the most crucial issues facing the banks?
There is a lack of awareness of the schemes among potential beneficiaries, not only of the schemes of the banks but also other financial institutions like insurance companies. We have to make people aware of the existing schemes. I feel that credit camps are an excellent means towards this end.

Besides this, I feel the banks are doing a wonderful job. Since nationalisation there has no doubt been a quantitative explosion for the banking industry, but there have also been tremendous qualitative changes too and banks have been doing an excellent job.

What is the government's current thought on bank restructuring along state lines or functional lines?
I do not think there is any need to restructure now. The system seems to be all right now. There are suggestions however for specialised branches for agriculture or small industries. But every bank has a culture of its own, its own momentum of growth, which will be destroyed if there is a restructuring. Rather we should work with what exists and adjust to circumstances

Would you say there has been a dilution of management in banks in favour of the unions — that they are having an increasing say in computerisation, transporters, etc?
No. I do not think there has been any dilution at all. The management has been dealing with the issue very well. The recently inaugurated SBINET, for example, is an excellent example of union co-operation with the management.

Looking at the bipartite agreements with IBA, would you not say that the unions are dictating terms in the banking sector today?
I haven't looked at the agreements, so I would not like to make any comments. However, I would say that strikes and bandhs are terrible things to resort to. The unions should remember that by striking they are harming the people, the customers, much more than they are affecting the management.

Why are the appointments of bank chairmen, executive directors, etc so delayed? Is it not possible to have some kind of succession plan so that there is not so much suspense after one man finishes his tenure and the next person comes in?
We have confirmed most of the pending appointments now — the managing director of State Bank, for example — and we are looking at the remaining ones soon. It is just that so many matters come to the ministry that we need to prioritise our concerns. Also, appointments of the top management are not easy decisions. Many of the nationalised banks are also functioning without a full board for a long time now. We are in the process of finalising the board appointments now.

What do you feel about the present competitive spirit within the banks? Certain nationalised banks are now tying up with foreign banks to offer a variety of services. What is the government's view on this?
I think the competitive spirit is good in the sense that it benefits the customers. As far as joining hands with foreign banks are concerned, I think both the RBI and the government evaluate such alliances to see whether they are in the interest of the country. That is the only consideration.

Three months ago at a press conference in Bombay you had said that the banks are in the process of finalising an action plan for the recovery of sick accounts. What is the status of that?
Yes we are working on that. I personally take a keen interest in the recovery position. At the different state level bankers' committee meetings I always stress on recovery — and it is not only talk — bankers are given specific targets, and questions are asked if they have not been able to fulfil them.

SUBSCRIPTION RATES

INDIA: ANNUAL SUBSCRIPTION Rs. 125
Plus Rs. 5 for cheques not drawn on a Bombay bank.

OVERSEAS (One year only)
Airmail only to Pakistan, Bangla Desh, Sri Lanka, Afghanistan and Burma Rs. 700 or US$58, West Asia, Asia, Europe, Africa & Australia Rs. 1,250 or US$105. North and South America Rs. 1,300 or US$110

Cheques to be drawn in favour of ***Business India***
Rates include airmail charges.

Unsolicited manuscripts cannot be returned unless accompanied by postage

LETTER FROM THE PUBLISHER

In India we have an almost uncanny ability to refuse to face the real issues.

The tragic air crashes at Ahmedabad and Guwahati last fortnight were the inevitable outcome of the steady deterioration of air services in India. Anywhere else in the world tragedies of this magnitude would have caused an uproar and led to deep soul searching. Unfortunately in India we have the amazing spectacle of an attempt to cover up the whole issue. The minister of civil aviation ought to hang his head in shame — instead he refuses to communicate with the media and orders all in the ministry and the airlines to do the same. Similarly the managing director of Indian Airlines refuses to say a word. Of course, pious declarations of sorrow are made by the politicians and airline functionaries, who believe that the tragedies will soon fade in public memory.

The air services in India were nationalised and made a public sector monopoly ostensibly to secure three main advantages. First, it was argued that the highest standards of safety would be maintained by the airlines. There would be no compromise on safety for short-term profits. Second, it was argued that only government would make adequate investments in modern aircraft and supporting equipment. Third, it was believed that enlightened government management would mean the best personnel policies and dedicated service by the staff.

On all three counts our airlines, particularly the domestic airlines, have failed badly. It is quite clear that there has been a steady deterioration in the maintenance of our aircraft. There is inadequate planning and inadequate infrastructure to support the growth of air services. There have been short term patch-work steps taken. The result is that both men and materials are constantly stretched and it was only a matter of time before a tragedy occurred. The airlines have also failed to make adequate investments in modern aircraft in keeping with the growth in demand and our national needs. The result is that existing aircraft are pushed to the limit without adequate engineering and infrastructural support mentioned earlier.

And the biggest problem is that the management of our air services has become hopelessly politicised. The result is that there is an almost complete breakdown in personnel management. There is inadequate training; the normal periodic checks have slipped badly; and there is virtually no attempt at building a team in what is essentially a service business. It is then not surprising that the staff are demotivated and quarrelsome.

It is time we re-examined many of our old paradigms. We must have completely autonomous exportations — public sector or private sector. And government should only be concerned on a day to day basis with safety and regulatory issues. World over everyone goes that this is the only sensible way.

It is time that we face the real issues.

• Rationalising terrorism

Your cover story on Punjab (3 October) was long-overdue. The article shows how business in the state has managed to survive, in spite of periodic bandhs, non-availability of labour and top executives, and government apathy.

The word 'terrorism' has become the standard excuse for everything and hides the actual problems faced by industry in Punjab. Yet it is a tribute to the hardworking Punjabi that things are kept going in the face of all sorts of hardships.

It is sad that the government thinks that Punjab can be made prosperous by handing out lollipops such as the Pepsi project. There is, I fear, a failure to face the problems directly and political considerations force the government to either go in for soft options or for such acts that get maximum publicity.

On their part, the Sikhs too must do some hard thinking and find ways of saving the state. Terrorism is serving neither their religion nor their image and the sooner people actively oppose it, the better it will be for industry. To rationalise terrorism by pointing to unemployment figures is both dangerous and irrational. Evidently, some hard thinking is required by all concerned to save Punjab and the country.

DINESH KUMAR
Chandigarh

• Missed details

Your article on Godrej & Boyce (3 October) was incomplete in parts. My firm B.K. Trading Syndicate has been dealing in Godrej products in the city of Bombay since 1968 till end June 1988.

The article does not mention another excise show-cause notice issued by excise authorities in 1983 or 1984 for evasion of excise duty because of the so-called 'optional service contract' charge. This was also stayed by the Bombay High Court. The article does not also mention that the advocate of the excise department did not put up any resistance in the High Court at the time of the admission of the writ.

Also, a factual error has crept in the article. The stay order by the High Court was issued in July this year and not last year. The writ petition which was ready for filing in June 1988 was ultimately filed in July that year, after a revamping of the sales pattern on a so-called uniform basis.

• Off the mark

Though the article on ELCOT (3 October) reported facts and my comments fairly there were two errors. You have quoted me as saying that ELCOT will wipe out accumulated losses by the end of the Seventh Plan. This is not correct. I had said that the accumulated losses will be wiped out in the course of the Eighth Plan. As you yourself have quoted earlier ELCOT hopes to make 1988-89 a no-loss year and that leaves only 1989-90 as the last year of the Seventh Plan. It would be obvious that the accumulated losses of the past many years cannot be wiped out in the first year after reaching the position of no loss in 1988-89. Also, many new projects are just coming up and will not be in a position to declare dividends by 1989-90.

While listing a number of new projects for various products under consideration, only SIETEX a local SSI success is referred to as the collaborator. While SIETEX is a likely collaborator for one of the products, the other projects will be in collaboration with a number of other private promoters.

• Inspiring leadership

Congratulations on bringing out the inspiring write-up on the Menons of Kolhapur (3 October). However, I feel the group deserved a more in-depth study.

As a former employee of Menon Pistons, I know that a key factor has been their people orientation and the company's success in developing a well-knit team of capable managerial and technical personnel.

The fact that Menon Pistons has not had a single day's work stoppage due to labour problems in the last six years speaks volumes for their labour relations and personnel policies.

I hope one can now look forward to your carrying more such 'success stories' in the small and medium scale sectors.

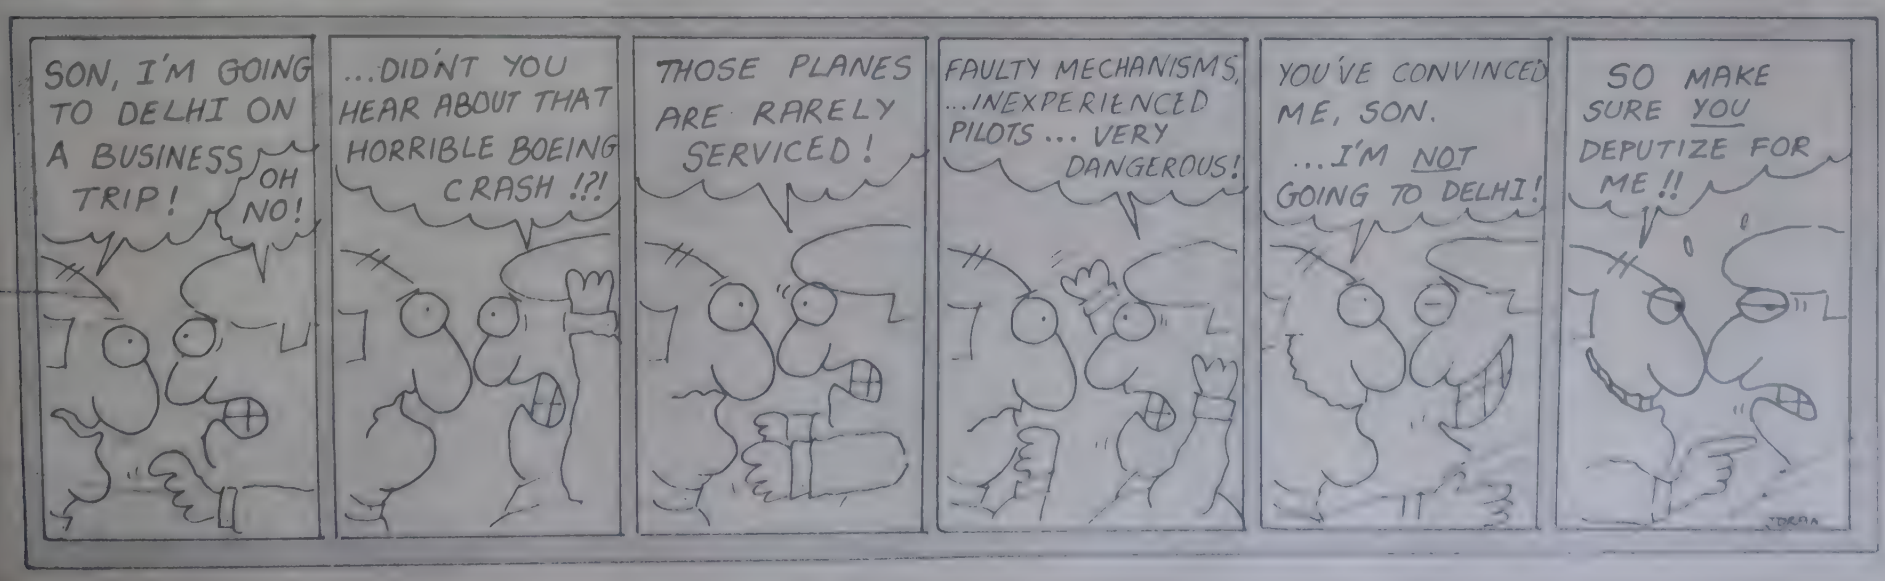
ANIL TANDON
New Delhi

• Derogatory terms

This refers to your cover feature 'Business in Punjab' (3 October). I am very sorry to note that you have permitted the use of words like "bhaiya" referring to a particular section of society. You must be aware

LIKE FATHER, UNLIKE SON

by Joran



SON, I'M GOING TO DELHI ON A BUSINESS TRIP!
OH NO!
...DIDN'T YOU HEAR ABOUT THAT HORRIBLE BOEING CRASH !?!
THOSE PLANES ARE RARELY SERVICED!
FAULTY MECHANISMS, ...INEXPERIENCED PILOTS ... VERY DANGEROUS!
YOU'VE CONVINCED ME, SON. ...I'M NOT GOING TO DELHI!
SO MAKE SURE YOU DEPUTIZE FOR ME!!

that the word bhaiya is used in a derogatory sense in Bombay. It is similar to words like "ghatis" and "annas" which refer to certain other segments of society.

These days there is a great deal of talk about national integration and nationalism; but it seems that you have not got the message.

ARVIND SINGH
Bombay

• Catch 22

In her special report on bank computerisation (19 September), Keya Sarkar has not been able to suggest an approach to effective bank computerisation. The article could apply to almost every computerisation effort in the country, whether in the public or private sectors. They are all guided by principles established in the sixties with second generation and early third generation systems.

The Rangarajan Committee's aim was "better customer service, housekeeping and MIS". The end result was, in some cases, better housekeeping and MIS but the same or worse service. Customers and bank employees are the victims of the wrong use of technology by bank managements, from the Reserve Bank downwards.

R.P. COELHO
Bangalore

• Unworthy accusations

This refers to the article, 'Telco shows the way, but can Rajiv follow?' by Mohan Guruswamy (19 September). The author, who was educated at Harvard and taught at a Boston university, seems to be ignorant of Indian conditions. He is talking like Rajiv Gandhi, promising to take India to the 21st Century when he first came to power.

Tatas have been thorough professional managers with their ears and eyes wide open to developments within the country and outside the country. It is unworthy on the part of the author to call them clannish managers, oligopolists, corrupt businessmen. etc.

Tatas have done well even in direct competition with Japanese LCVs and their vehicles have been completely indigenously developed

R.J. RAJI
[illegible]

• The idol worshippers

Jaswant Singh's article "The sociology of grovelling" (8 August), apart from being very thought-provoking, was also topical.

It is perhaps generally agreed that we Indians are idol worshippers in more senses than one. (Incidentally, this trait is no prerogative of any particular community in our country). What is not commonly agreed, however, is that this idol worship, this trait of abject obsequiousness and servility, is on the rise.

The author has rightly noted that this attitude is not confined to the ruling party but is also found in social circles. One should also add that it is not unknown in business establishments, where promotions are often based on the so-called loyalty index

The footage given to the prime minister on the national hook-up is a favourite subject of media critics and opposition parties alike. Yet, it is doubtful whether the coverage would be much less even if Doordarshan were made autonomous and independent of the government. If proof is needed, one has only to examine the news content of most of our dailies and periodicals where coverage on politics gets the lion's share. This in turn is often personality — rather than issue-oriented.

Opposition parties in India may be in a comparatively happier position in this respect only because their leaders do not have much patronage to distribute. In fact, one reason that different parties find it difficult to come together on one platform to form a united opposition may be that party politics is based not on issues but on personalities

• Centres of excellence

The study on brain drain, carried out by the IIT professors at Bombay made interesting reading (22 August). Dinesh Mohan's value judgement on the basis of this study is a reflection of his anguish at the selfish upper classes, rather than an attempt to assess whether the IITs are performing their primary role as centres of excellence.

"Brain drain", with its physical connotation of loss of an asset, is an appealing term. However, assets are only as good as the use they are put t Lamenting the search for success of a very hardworking and ambitious grou of young men is no substitute for asking where opportunities exist for utilising their talents.

The key factors for success in India must be reviewed to ascertain how many technically excellent men and women have been successful in displaying their abilities and professional approach. The accent on continuously borrowing technology in the march to 2001, must necessarily shift the scene of advanced technological action to foreign countries. While a C-DoT or an ISRO offers solace once in a while by providing challenging work, there are innumerable organisations where any kind of enterprise or innovation threatens the status quo.

The spirit of excellence needs to be nurtured with deliberate care in every sphere of activity. The seeds of the country's independent survival in the long term will be well sown in this effort to encourage meritorious performance with opportunity.

I view the successful performance of the IITs in producing internationally acclaimed technologists as a good first step. Engaging the 60 per cent who remain in nation building, by putting their professional expertise to use in challenging tasks is the vital next step

• Geep is doing OK

While your article on the drycells industry (5 September) highlighted its sorry plight, an error has crept into th article, which is prejudicial to the interests of Geep.

Geep has never invested in button cell production capacity as pointed out in your article, and so has not suffered the fate of a shut down. In fact, Geep has reported the highest rate of growth in production in 1987 and continues to do so in 1988.

The real thing!

A global tender recently floated by an Indian company asked for the "supply, installation and commissioning of IBM PC compatible systems (100 nos) along with accessories as per specifications" with "deviations from tender specifications".

It so happened that IBM itself responded to the tender. At the end of the audio-visual, a slide came up which read, "Deviations from tender specifications". And the IBM marketing respresentative who made the presentation said, "Gentlemen, I'm sorry, but we cannot offer IBM compatible systems as required by you. We can only offer IBM systems!"

Firm sent to prison!

Thousands of judgements ar delivered every day against and in favour of companies all over the world. But an unusual judgement has recently been delivered by a federal judge in Norfolk, Virginia. He sentenced the Allegheny Bottling Company to three years in prison and fined one million dollars on the charge of illegal price fixing. The allegation was that Allegheny, and its competitor, The Mid-Atlanti Coco Cola Bottling Co, had engaged in illegal price fixing between 1982 to 1985. Executives of the firm, for their part, have been sentenced to prison terms of six months.

SREENIVASAN NAIR, *Vadodara*

TV refund

Over 90,000 colour television owners who bought televisions in 1983 and 1984 could be in for a windfall if they paid more than Rs.7,500 for a set with a turret tuner and Rs.8,000 for a set with an electronic tuner.

It turns out that manufacturers had given an undertaking to the government that they would not charge prices above those figures.

But like many other buyers when Y. Satyavani of Kakinada bought a CTV, manufactured by Bharat TV Ltd, Bangalore, from Shri Raja Agencies, Kakinada, she paid Rs.9,150.

Unlike other buyers she took her case to the Monopolies and Restrictive Trade Practices Commission (MRTPC). The Commission found that the price fixed at the time of giving the undertaking included a reasonable margin of profit and Satyavani was entitled to a refund of Rs.1,650.

Breaking the ice, a hundred years ago!

A few years ago, someone suggested towing icebergs from Antarctica to Saudi Arabia to provide water to the desert land. At that time, many people laughed at the idea. But it was not really such an outlandish plan. Just a hundred years ago, there was a flourishing 'ice trade' between Bombay and Boston.

Ice was "harvested" in New England. After ponds froze over completely in the winter, they were cut into blocks and then these were transported by ship to Bombay. The first consignment apparently came to Bombay by accident but it demonstrated the possibility of transportation. From 1836, Jehangir Wadia and Co began importing ice on a regular basis. It was only after an ice plant was built in the 1880s in Bombay that the supply of ice was assured locally.

Eggscellence

In 1982, India was nowhere near the top ten egg producing countries in the world. Those were China, US, USSR, Japan, West Germany, France, UK, Brazil, Spain and Italy. Today, India is the sixth largest producer of eggs in the world, after the USSR, US, China, Japan and France. It has also become a full fledged member — the twenty third — of the International Egg Commission.

L.N. MURTHY, *Bhilai*

Executives and ladders

A veteran personnel manager, when asked about the executive levels or positions, made the following classifications.

Category 1: executives who mastermind the growth of the organisation;
Category 2: those who contribute and grow with the organisation;
Category 3: those who have been grown by other organisations;
Category 4: those who grow enough to quit and continue in other organisations;
Category 5: those who never grow, irrespective of the growth of the organisation; and Category 6: those who survive and might even grow at the cost of the organisation!

C. VARADARAJAN, *Madras*

Taking advantage of monopoly

The bald fact is that the Mahanagar Telephone Nigam Ltd (MTNL) is making money at the expense of the consumer. It has been charging an advance rent of Rs.1,950 for new telephones. This is expected to cover a year's advance. The customer has no choice but to pay the money, and has no right to any interest on it; as MTNL puts it, this is only advance rent.

With the number of new telephone connections being made and many, many more to come, one can imagine the amount that MTNL will collect through these forced deposits.

R. WADHAWANI. *New Delhi*

TVs of the future

The NHK Japan Broadcasting Corporation introduced its new HDTV (high definition TV) during the Seoul Olympiad. There were public demonstrations of HDTVs all over Japan and South Korea using special cameras, video equipment and broadcasting techniques. It was the first major international telecast using the new technology.

HDTV displays colours that are very close to the original RGB (red-green-blue) spectrum. The picture is so clear that it produces what looks almost like a 3-D image. The new technology is the result of 15 years spent on engineering efforts and $200 million on research.

Coincidentally, the 1964 Tokyo Games were used to popularise colour TV. But the problems which existed then have surfaced again: a lack of an international agreement on HDTV specifications. All such standards are agreed upon through the Comit Consultatif International de Radiodiffusion (CCIR). In the CCIR assembly of 1966 in Oslo, a single colour standard could not be agreed upon. This resulted in the emergence of three different systems, namely, NTSC (national television system committee), PAL (phase alternate line) and Secam (sequential colour and memory). The HDTV also appears to be destin d for a similar fate.

West European countrie however, are not going to l the Japanese make inroads into their flourishing consumer electronics industries so easily by accepting a system developed by the Japanese as an international standard. Thus, the Europeans are making an attempt to develop their own HDTV which would be compatible with existing 50 and 60 Hz systems. To 'evolve' its own HDTV, a 19-country association is undertaking a four year research project, called Eureka, under Phillips NV of Holland. The cost: $186 million.

Present indications are that HDTV by NHK will not be accepted as a standard, mainly because of the stiff resistance. The next official CCIR assembly is scheduled only after 1990, only after that will the shape of the TVs to come be established.

JITENDRA KUMAR. *New Delhi*

Short on devotion

As always, Bombayites celebrated Ganeshotsav with the usual devotion and gaiety. For the Lord's official vehicle, the rat, however, they had little reverence to spare. If sales data for zinc phosphide, a very effective rat killer, is any indication, suburbanites had obviously gone on an orgy of rat killing. While the rodent's seasonal infestation is unfortunate — coinciding as it does with the festive season — one wonders how the devotees reconcile themselves with the killing?

C.R. VIJAYKUMAR, *Rasayani*

The 5-star phone call

Patrons of 5-star hotels are quite used to being charged exhorbitantly for every little thing. Even so, hotels have surprises that will shock even the most hardened 5-star hopper. Like a certain gentleman who made an 11-minute phone call to London from the Taj Intercontinental, Bombay, and was presented with a bill of Rs.1,041. Not even the smiles and sugary tones that accompanied the bill took the sting out of it; the gentleman demanded a breakdown.

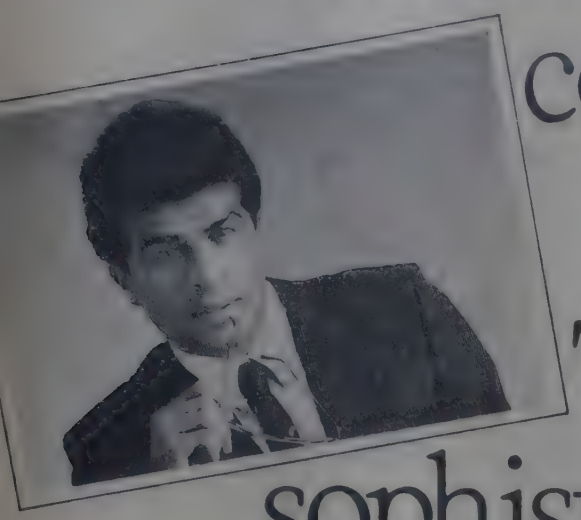
Apparently the bill

included P&T charges of Rs.528, administrative charges of Rs.418 (whatever that is) and expenditure tax, at the rate of 10 per cent, of Rs.95 (the government wishes it, so be it). That was that. The gentleman paid the Rs.1,041, swearing never to stay at 5-star hotels again and especially never to make 11-minute phone calls to the UK from one.

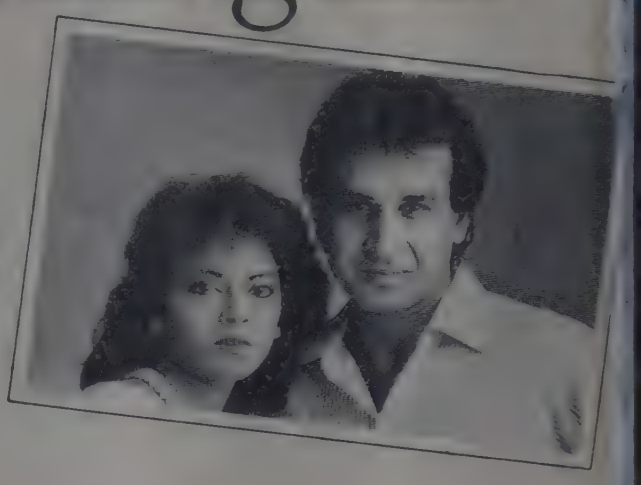
And international calls are not the only bad news. Even a local call can put you back a pretty penny in a 5-star. Consider the following rates charged in Bombay;
The Oberoi, Bombay: Rs.6.00
Taj Intercontinental, Bombay: Rs.6.60 Ramada Inn, Bombay: Rs.5.00 Holiday Inn, Bombay: Rs.5.00.

For someone who can afford a 5-star hotel, Rs.5 or Rs.6 may not make much of a difference, but when the P&T department charges 80 paise for a call, one can't help but wonder at the huge difference.

You are a manufacturer or retailer of high quality consumer or consumer-durable products.

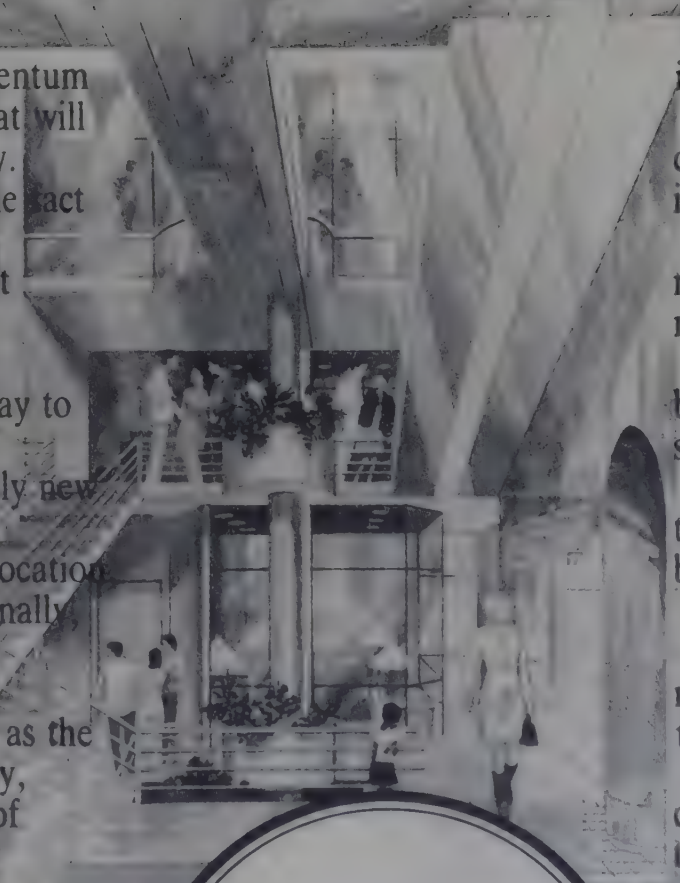


These are typical, educated, sophisticated, discriminating and affluent consumers living in one of India's metro cities.



A few weeks from now, a revolutionary retailing phenomenon could bring you face to face with them.

This is an invitation from Inter-Plaza to join the revolution.



Subtle at first, but gathering momentum apidly, a revolution is taking place that will hange the concept of retailing entirely.

At the core of this revolution is the fact hat today's affluent consumers are qualitatively different from the affluent consumers of a few years ago.

They have raised their levels of expectation. And they are willing to pay to have those expectations met.

What they're looking for is a totally new shopping experience.

An experience that encompasses location outlet ambience, service quality and finally, outlet prestige.

The Inter-Plaza solution.

To the affluent consumers as well as the retailer or manufacturer of high quality, premium-priced products, the arrival of nter-Plaza in India, is a revolutionary etailing phenomenon.

It satisfies both their needs.

For the consumers in search of a new shopping experience, it's a solution they are quite familiar with from their jaunts abroad: Harrods, Marks & Spencer, Macy's and Bloomingdale's.

To the retailers, Inter-Plaza is a solution to all their problems, too.

They get to lease or purchase an outlet at a prime location at Kemp's Corner in Bombay, Vasant Vihar in Delhi, Bashirbagh in Hyderabad and equally prestigious locations in Calcutta, Bangalore and Madras.

They get to use it, with full area for display and sales, designed to suit their individual needs.

They get the space without the overheads normally associated with acquiring and running the property.

They get a number of financial options by which they can lease or purchase the space.

And best of all, they get the assurance that the consumer traffic into Inter-Plaza will be of a high and consistent quality.

Profits. Before Inter-Plaza opens.

Inter-Plaza in Bombay and Delhi will be ready by late 1988 and in other cities during the first half of 1989.

We invite enquiries from manufacturing companies and retailers who are dealing in textiles, garments, cosmetics, jewellery, toiletries, watches, leather goods, furnishings and furniture, household appliances, electronics and electrical goods, food, confectionery, sports equipment, toys, beauty parlours, travel, stationery and almost any other consumer merchandise.

And, of course, from estate agents, to whom it is fully commissionable.

If you believe your product or service can exploit this opportunity, write to us with your space requirement and tell us the cities in which you'd like a presence.

We'll get back with a detailed proposal.

INTER PLAZA

THE RETAILING REVOLUTION

CRUICKSHANK & COMPANY LIMITED

4, Bankshall Street, Calcutta-700 001.

It is hereby notified for the information of the public that Cruickshank & Company Limited proposes to make an application to Central Government in the Department of Company Affairs, New Delhi under sub-section (4) of Section 23 of the Monopolies and Restrictive Trade Practices Act, 1969 for approval to the take over of the whole or part of Shaw Wallace Aoki and Company Limited.

Brief particulars of the proposal are as under —

(i) Name and address of the applicant
Cruickshank & Company Limited
4, Bankshall Street
Calcutta-700 001.

(ii) Name and address of the undertaking the whole or part of which is proposed to be taken over and the manner of take over i.e. by acquisition of shares, acquisition of control or management, whether by the acquisition of the ownership of the undertaking or under any mortgage, lease or licence or under any agreement or other arrangement:
Shaw Wallace Aoki and Company Limited (SWACL)
154, Thambu Chetty Street,
Madras - 600 001.
The applicant proposes to acquire by subscription upto 60% of the Equity Capital of SWACL.

(iii) Management structure of the applicant:
Mr. K.R. Chhabria, Mr. T.S. Venkatesan, Mr. A.S. Malik, Mr. J. Bhargava and Mr. A. De.

(iv) Capital structure of
a) the applicant

Share Capital	
Authorised	Rs. '000
20,00,000 ordinary shares of Rs 10 each	2,00,00
Issued, Subscribed and Called Up	
16,00,000 ordinary shares of Rs 10 each fully paid up	1,60,00

b) the undertaking proposed to be taken over: The Capital structure of Shaw Wallace Aoki and Company Limited is as follows:

Share Capital	Rs. '000
Authorised:	
10,00,000 Equity Shares of Rs 10 each	1,00,00
	1,00,00
Issued, Subscribed and Called Up	
7 Equity Shares of Rs 10 each fully paid up	—

(v) Line(s) of business of the undertaking which will or is likely to emerge as a result of the proposed take over:
SWACL will commence manufacture of rubber components and allied products after the applicant and Aoki Rubber Industrial Co. Ltd., Tokyo, the foreign collaborator, invest in 60% and 40% respectively of the Equity capital of SWACL.

(vi) Consideration for the take over:
Subsequent to the investment to be made by the applicant Aoki Rubber Industrial Co. Ltd., Tokyo will invest in 40% of the Equity of SWACL as per terms of the Foreign Collaboration Agreement.

(vii) Scheme of finance indicating the source(s) of finance for the proposed take over:
The proposed investment will be financed by the Company's internal resources.

Any person interested in the matter may make a representation to Secretary, Department of Company Affairs, Government of India, Shastri Bhavan, Dr. Rajendra Prasad Road, New Delhi, within 14 days from the date of publication of this notice intimating his views on the proposal and indicating the nature of his interest therein.

6th October, 1988.

T.S. VENKATESAN
DIRECTOR

No questions asked

With it becoming increasingly clear that there will be a degree of liberalisation in the financial sector too, CRISIL (Credit Rating and Information Services of India Ltd) is likely to gather momentum. The Indian corporate sector has started giving India's first credit rating agency more than a passing look.

Reportedly several leasing and finance companies are amongst those that see a clear advantage in a good rating. But what happens if the rating is not quite what you expect? Certainly one major finance company recently faced this situtation.

Quite simply, one pays CRISIL's rating fee, and then withdraws gracefully, no questions asked.

One more NRI

If the NRI-merchant banking grapevine is to be believed, S.K. Birla, of Cimmco, Mysore Cements and more recently Chloride India, is on his way to acquiring the coveted label of "non-resident Indian". In that event, he would then be the third leading Indian businessman to do so in recent times — after Rasesh Mafatlal and Vijay Mallya.

Naturally, speculation is rife as to why SK has decided to turn NRI. One theory doing the rounds is that he wants to take formal charge of Chloride Eastern, Singapore — the company which holds 51 per cent equity of Chloride India. Birla had bought into Chloride Eastern last year (estimates of his stake vary from 10 to 49.99 per cent) through his overseas companies. Kent Price of Chloride plc, UK who is currently chairman of Chloride Eastern is expected to hand over the reins to S.K. after he becomes an NRI.

North prevails over south?

The Thapars are believed to be close to clinching a deal with the financial institutions for taking over the management of the Madras-based engineering company, Best & Crompton. For months, the institutions, which own 58 per cent of the equity, could not decide whom they should back to run this ailing company. This was despite the fact that the company was headless after the exit of M.K. Kumar and badly strapped for cash.

The other serious contender was M.V. Arunachalam of the TI group which is believed to have acquired 8 per cent of Best & Crompton's equity.

Apart from bringing management the new owner is also required to pump in Rs.5 crores in working capital. Apparently, the decision as to who should be given control of the company got delayed because of concerted lobbying in New Delhi. Virtually every major South Indian house put in a bid. So did the Chhabrias as usual. Finance secretary S. Venkitaramanan is said to have favoured a "sons of the soil" policy towards the takeover of the company.

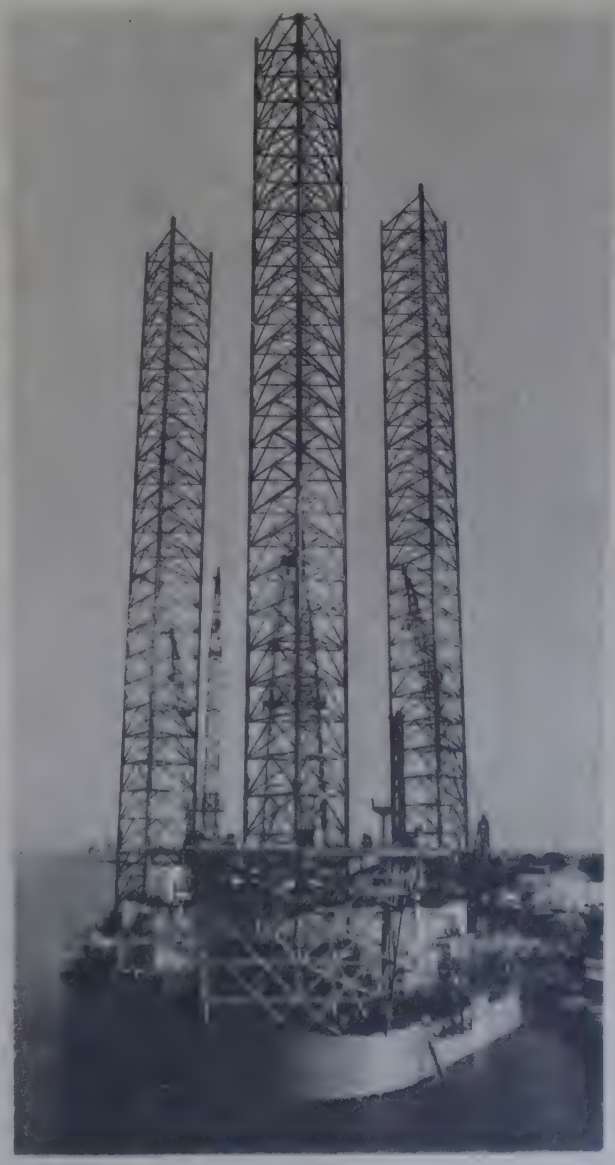
At any rate, Best & Crompton offers yet another example of the non-competitive, secretive manner in which New Delhi decides who should take over which company.

United we stand

What do you do if you have only one customer? And that too a rich and powerful one like ONGC.

Several Indian contract drilling companies have decided that from time to time have all been unfairly squeezed by ONGC. One complaint is that while rates for drilling are firming up overseas, here ONGC is pressing for lower rates. At a recent conclave in Bombay, apparently several leading contract drillers decided that the time has come to put up a united front in dealings with ONGC.

Will ONGC be able to resist this new consortium — even if it's the only customers around.



ONGC: unfair deals?

Market tussle

Even though the Ambanis have clearly won control of L&T (see *Business India* 17 October 88) there are still some steps that need to be taken to transfer the shares to their names.

Reportedly the three major financial institutions in Bombay have agreed to transfer a small percentage each to the Ambanis — but at the prevailing market price.

In the meantime shrewd market operators have been holding up the price of L&T.

At the slightest sign of a drop in price the speculators move in to buy, knowing that the institutions will then be committed to maintaining the market price.

Interesting, these tussles in the market.

Now greenfields too

Manu Chhabria has acquired a reputation for being an avid takeover artist.

Reportedly he is anxious to show that he can not only take over companies but also start greenfield projects from scratch. He is close to signing a deal with the Gujarat Industrial Investment Corporation to put up two projects, one of which will be a major project.

Corporate observers are watching closely how quickly he will succeed in these new ventures.

A man to watch

Even without MGR, the Madras based businessman, Udiyar, continues to make news. Earlier, his rise to prominence was ascribed to the full support and backing of MGR.

He is planning a series of new ventures which include a big glass bottle factory which will be a useful supplier of beer bottles to his brewery. His Binny Engineering is also planning to diversify into windmills and it is well known that he is planning a series of hotel and real estate ventures in the south.

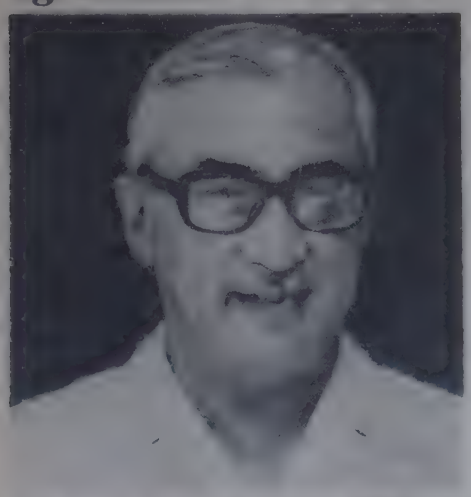
Clearly, he is a man to watch.

Growth rate for 8th plan highest

A consensus on the growth rate issue was arrived at at a full meeting of the Planning Commission presided over by the prime minister, Rajiv Gandhi. India's Eighth Plan is to have a growth rate of 6 per cent, the highest ever growth rate envisaged since planning commenced in 1950.

It is believed that the Commission has estimated an investment of Rs.6,49,926 crores for this level of growth. Regarding the need to raise savings for achieving the higher growth rate, it was felt that the government was moving in the wrong direction as expenditure is in excess of receipts on current revenues. By the end of the Eighth Plan, this gap is expected to be closed. In his remarks, Rajiv Gandhi said that in determining growth two things were important; one, ensuring social justice without which it was difficult to undertake elimination of poverty in a short time; two, he said, a higher growth rate is essential if India was to keep its stock high in the comity of nations.

FICCI-Assocham agreement on JBCs



Thapar: broadbasing JBCs

In a historic move, the two premier organisations representing industry and trade, announced an agreement on the organisation of various joint business councils (JBCs). L.M Thapar, president of Assocham, joined Raunaq Singh, FICCI vice president, in making the announcement. This move will help broadbase the JBCs, enlist the widest possible participation in international business meetings and thereby promote technology transfers, investment and trade. The immediate goals would be to achieve a balance in the country's external trade position and upgrade the level of technology of domestic industry. Each of the JBCs, in respect of which the co-operation agreement has been signed, will have a chairman and a co-chairman. The chairmanship will be for two years, alternating between FICCI and Assocham.

Export target hiked

The government has now realised that for industry to make a meaningful contribution to the balance of trade situation, it should realise Rs.22,100 crores. In view of the falling value of the rupee vis-a-vis the dollar, the new target is higher by Rs.1,424.5 crores than the earlier target fixed during August at Rs.18,785 crores.

The government is likely to announce a special package for the leading 100 export/trading houses to induce others to step up exports. The targets of export/trading houses are being revised. The number of such houses has gone up mainly because in the new exim policy, exporters of commodities like jute, tea, cotton, textiles, tobacco etc would also qualify as export/trading houses.

MoU to cover six more state units

From the next financial year, six enterprises (in addition to the earlier 11) will have to sign MoUs with their respective administrative ministries. These are Indian Petrochemicals Corporation Ltd (IPCL), Bharat Earth Movers Ltd (BEML), Bharat Yantra Nigam Ltd (BYNL), Coal India Ltd (CIL), Rashtriya Chemicals and Fertilizers (RCF) and Indian Oil Corporation (IOC). The objective is to try the MoU experiment in the public sector units operating in new areas. The concept of a Memorandum of Understanding (MoU) to be signed by public sector units and their concerned ministries was evolved a few years ago with a view to imparting greater autonomy in the functioning of the public sector units.

The government has also decided to evolve new performance evaluation criteria for each of the units brought under the purview of the MoU. The Bureau of Public Enterprises (BPE), which is the administrative department for MoUs, has already evolved model performance criteria.

Incentive package to boost software exports approved

The union government has approved a package of incentives to boost software exports. These include the import of computer systems at concessional duty rates for the development of software. Under the package, the government has decided to allow import of the computer systems at a concessional duty rate of 20 per cent under the loan/returnable scheme. The General Insurance Corporation (GIC) has been asked to provide cover to the user against professional lapses and malpractices.

The government has also decided to remove all restrictions on large houses if they want to come into the export sector. The government has also decided to grant visas for one year at a time to foreign nationals involved in the software industry. They are hopeful that the target of Rs.300 crores will be achieved by the terminal year of the Seventh Plan.

High level panel on electronics

A 29-member working group headed by the Secretary in the Department of Electronics (DoE), has been appointed by the government to recommend targets of capacity and production for the different sub-sectors of the industry year-wise up to 1994-95 with an indication of the perspective up to the year 2000, taking into account the domestic requirements and its export potential.

To make sure that the objectives are achieved, the group will work out year-wise foreign exchange requirements for import of capital goods components and raw materials for the industry during the plan period. It will also review the status of and estimate the investments required to be made in the public and private sectors in the context of the targets projected for the plan period.

Besides the DoE secretary as the chairman, the other members of the working group include N. Seshagiri, director general, National Information Centre (NIC), V. Rajaraman, Indian Institute of Science, Bangalore, and E.C. Subba Rao, Tata Research Company, Pune.

Rs.600 crores worth of cotton to be bought

The Cotton Corporation of India (CCI) has planned to buy more than 2 million bales of cotton valued at over Rs.600 crores under the price support operations. To protect the growers' interest for the current 1988-89 season when the cotton harvest is expected to be a bumper one (11 million bales) the CCI plans to open all the 227 purchase centres all over the country. "The glut in cotton production this year is likely to bring the market price of cotton at par with the support price, hence the massive procurement spree," M.B. Lal, chairman-cum-managing director of CCI revealed.

Unviable PSUs to be closed down

In a paper on the policy implications of a higher growth rate for the next plan, the Planning Commission has proposed that

loss making public sector units (PSUs) with no hope of revival be closed down.

The paper recommends gradual denial of budgetary support for enterprises in the non-core sector which are perpetually in the red. It also suggests rehabilitational efforts and merger of such units with profitable ventures. However, failing to achieve either, the commission feels, such units should be closed after taking care of the workers' interest. The significance of this policy measure is to attain a 6 per cent growth rate during the Eighth Plan.

Big spender ministries to be monitored

The government has constituted a high level group headed by a cabinet secretary to monitor the budgets of the five ministries incurring the heaviest expenditure. The group will include the expenditure, finance and planning secretaries. Intensive analysis of the four or five ministries would be undertaken by the group. The entire exercise will be completed before next year's budget.

Iron ore exports up

Iron ore exports have reached a new peak in the first six months of 1988-89. The Minerals and Metals Trading Corporation has exported 8.3 million tonnes of iron ore valued at Rs.180 crores in the first six months. This is the highest amount exported in the first half of a financial year. The total target for 1988-89 is 17 million tonnes valued at Rs.320 crores.

BEL-Keonics tie-up

Bharat Electronics Ltd has signed an agreement with Keonics for the transfer of technology for the assembly of discrete silicon semiconductor devices. Keonics plans to form a new joint sector company for the operation

Keonics has planned to set up an assembly plant to manufacture 35 million devices a year at a total investment of Rs.2.5 crores. BEL will, however, ensure the quality of production by their own inspection arrangement.

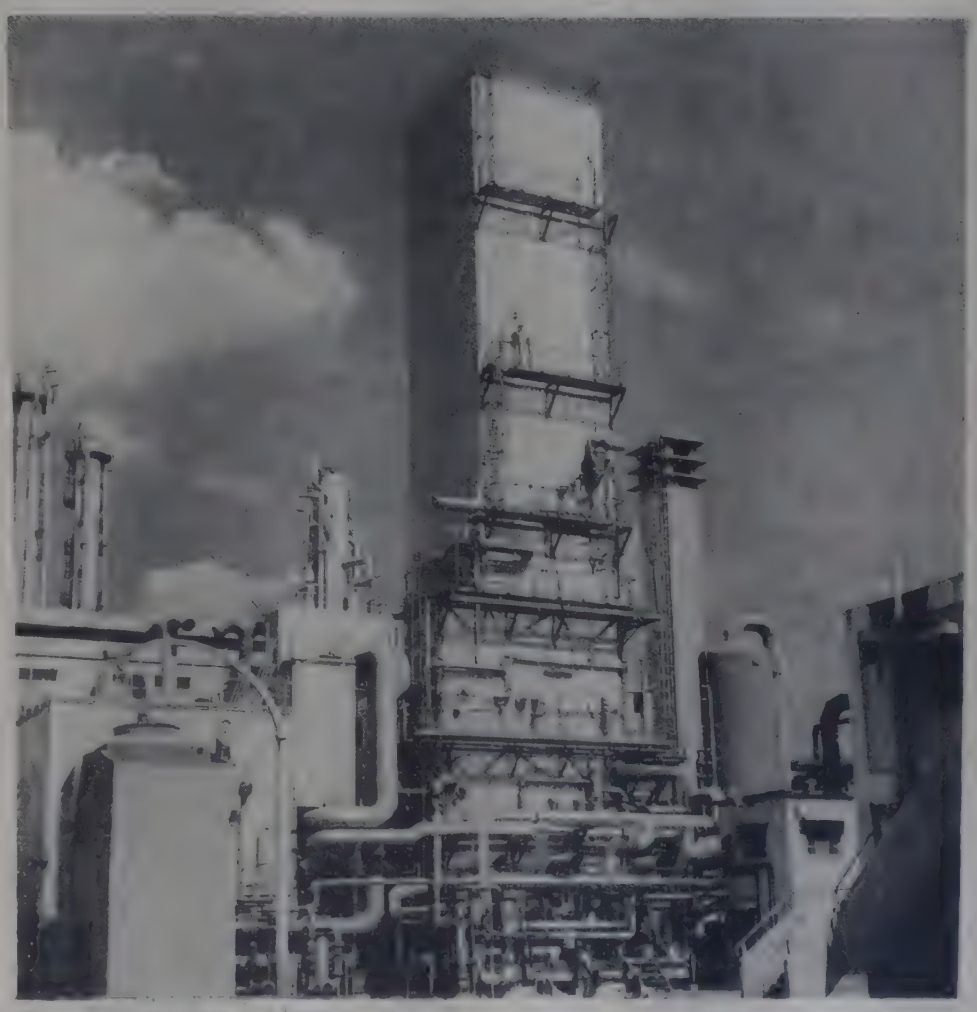
Centre allows import of four polymers

Four major polymers — low density polyethylene, high density polyethylene, PVC resin, and polystyrene — all of which were under open general licence (OGL) can now be imported under "stock and trade". The main objective of the government in allowing import of the polymers under "stock and trade" is to reduce raw material costs for the processing sector.

Many medium and large processing units, particularly those making PVC and HDPE products, can now import directly and thus save excise and sales tax. However, most of the units making LDPE, PVC and polystyrene products would still have to depend on large importers as most are small units.

UTI plans unit scheme for housing and construction

The government has approved a newly formulated fund of the Unit Trust of India, known as the Housing and Construction Unit Scheme, according to the Union finance minister, S.B. Chavan. The fund, the first of its kind in the country, will enable the small savers to participate in the housing and construction sectors. The Housing Development Finance Corporation will be advisers to the fund.



Chavan: cleared HCUS

The idea of the housing fund evolved from the mutual fund concept where savings are canalised into the capital market.

Global meet on jute promotion

Delegates from 25 countries will meet in India shortly to discuss a strategy to promote jute in the international market and renegotiate the international jute agreement.

The inter-government group on jute of the Food and Agriculture Organisation (FAO) will meet here from 2 to 4 November and the International Jute Council will meet from 6 to 8 November.

There will be discussions on research and development projects to discover more end uses for jute and manufacture new items to suit the requirements of consuming countries.

20 per cent rise in fertiliser offtake forecast

This year's good monsoon has made possible a 20 per cent increase in fertiliser consumption. The industry is looking forward to record sales of ten million tonnes during the year. Kharif fertilser sales have gone up to 4.6 million tonnes. Sales would have been much better but for the torrential non-stop rains which made application of the second dose of nitrogenous fertilizers to standing crops impossible in several areas. Fertiliser sales during the rabi season last year amounted to 4.8 million tonnes. This year sales are expected to be at least 5.7 million tonnes taking total sales to a record 10 million tonnes. The only jarring note is inadequate availability of improved and hybrid seeds for wheat, pulses and some other crops.

Despite this rosy scenario industry sources are sceptical about old fertiliser stocks being wiped out by the year-end. According to industry's calculations, even at the end of the year the excess stock will be about 2.5 million tonnes. The glut will disappear only by mid-1989, provided rains next year are good and imports cease.

Fiscal sops for food processing industries

To give a boost to food processing units the states have been asked to take a series of measures, including generation of reliable data on raw material availability, cropped areas and level of production. They have also been asked to reduce local

sales tax and octroi and simplify the multiplicity of laws. At a meeting of the parliamentary consultative committee on food processing, Jagdish Tytler said he was very keen to permit any project which would better utilise resources in a state and thereby contribute to its development.

The emphasis of the food processing ministry would be on the promotion of cottage and small-scale industries as well as rural co-operatives in a bid to augment rural incomes and employment. The agro food industry would be given incentives to encourage joint ventures abroad. These ventures could be in exporting Indian semi-processed food for further processing abroad. Permission would be granted to import state-of-the-art technology for capital equipment. An "open sky" policy would be followed to enable processed food exports to enjoy concessional freight structure.

Foreign companies keen on fisheries projects

Various foreign companies primarily from Yugoslavia, Malaysia and Mexico are keen on investing in integrated fisheries projects in India. Companies from these countries have conveyed their interest in participating in joint ventures in fishing and fish processing to the Shipping Credit and Investment Company of India (SCICI).

Apart from assisting in identifying the partners and providing term loans the SCICI will also contribute 20 per cent of the project cost as equity. It will also provide a maximum of Rs.25,000 as subsidy for carrying out project viability studies. According to N.C. Singhal, managing director of SCICI, Yugoslavian firms are willing to participate in joint ventures in India with 100 per cent buy-back arrangements.

SCICI has earmarked Rs.75 crores for the fishing sector during the current year. Of this Rs.20 crores have been disbursed so far to about 30 companies.

Alcohol-petrol mixture for cars

A high-level official committee has been constituted to examine the possibilities of mixing alcohol and petrol for use in cars. The committee includes representatives from the departments of food and civil supplies, petroleum and chemicals, and the sugar and distillery industries.

The committee which held its first meeting recently noted that an ad-mixture of alcohol in the range of 5 to 10 per cent did not require any changes in the engines of vehicles and has been successfully used in many foreign countries. In Brazil, many cars run exclusively on alcohol.

The petroleum ministry however, is understood to have emphasised the need for a steady supply of alcohol. The country will have to step up production by another 400 million litres.

Fisheries overseas support

All-India Tasty Bite launch soon

Tasty Bite Eatables Ltd has commenced production of ready-to-serve food and frozen vegetables. The company's ready-to-serve foods, first of their kind in India, have a 12 month shelf life without refrigeration.

The first commercial launch in Bombay received good response from consumers. Encouraged by this, the company has set a turnover target of about Rs.5.00 crores by March 1989. The product will soon be launched all over India, including in semi-urban areas.

Eighth Plan panel stresses expenditure cut

In a policy paper on strategies to improve efficiency in various sectors, the planning commission has called for a drastic curtailment of expenditure to meet the huge investment target.

It has also recommended that district level planning be made the focal point for co-ordination of all central and state governments.

The Commission has further suggested that Seventh Plan centrally-sponsored schemes should be subjected to zero-based analysis.

Tea gardens need mechanisation

With manual labour no longer freely available, the tea industry has begun to feel the need for mechanisation of certain operations to maximise yields in the peak season. Planters complain that they often have to skip sections of the estate while harvesting the leaf because of non-availability of seasonal labour. A tea garden can lose upto 200 kg of crop per hectare during the peak season. It is felt that if mechanical harvesters, stalk removers and pruning equipment can be used during the peak season, production can be maximised without affecting employment.

Superturf from Modi Carpets

Modi Carpets Ltd and Superturf I.P.T.A. Int have jointly announced the launching of Superturf sports surface in India. Superturf is a synthetic grass surface used for field hockey, soccer, tennis and golf.

The joint venture has a phased programme to manufacture range of Superturf surfaces to meet the various requirements of the sports community.

Mudra billings over Rs.40 crores

Mudra Communications announced the close of their eighth financial year (September 1987 to August 1988) with a capitalised billing of Rs.40.15 crores, a jump of approximately Rs.12 crores over the previous year.

New business gains include Cadbury's, Times of India, BPL, Deepak Fertilisers, Jagatjit Industries, All India Coated Steel Manufacturers Association, Hipolin, Lijjat Papad, J.L. Morrison and Optonica.

The agency has opened new offices in Calcutta, Cochin and Pune over the last year. Also, it has recently announced a partnership with DDB Needham Worldwide.

IF THIS IS HOW YOU FEEL AFTER LONG-HAUL FLYING,

A TRIP WITH AIR CANADA COULD COME AS A RELIEF.

Long-haul flying can be draining no matter how comfortable the seats or how good the in-flight entertainment. The fact is, the longer your flight, the more your biological clock gets out of time with local ones.

The key to flying is to take it easy. And there's no better airline to help you do just that than Air Canada. Relaxation is in our blood.

That's why, although our service is very attentive, you won't be fussed over unless you want to be.

When you want to eat, the food is always first-class.

But, as always, it's not what you do, it's the way that you do it.

And our way is the Canadian way. Relaxed and confident.

A BREATH OF FRESH AIR

AIR CANADA

AC 3/88

"High tech" has become the biggest cliche of the eighties. So where does that leave Hinditron? Once upon a time, 'high-tech' really meant something. But of late, people have been using the phrase rather loosely. Anyone with access to a little modern technology is now called high tech. So where does that leave Hinditron? We represent technologies so specialised, people haven't even heard of them: Image Processing,

Hinditron House, 42, Mahavir Kavan Road, Bombay 400 020. Tel: 220920, 223989 Tlx: 011 4632 HCPL IN Fax: 2871749

xpert Systems, Enterprise-Wide Networking and Artificial Intelligence.)ur core of technical resources is so rich that, besides setting up joint entures with Digital and Tektronix, we are at work in space research, digital telecommunications, CAD/CAM/CAE, factory automation... A company like Hinditron can no longer be described as just high tech. So we've invented a new word to spell out exactly where we stand.

Hinditron. Beyond high tech, there's supertech.

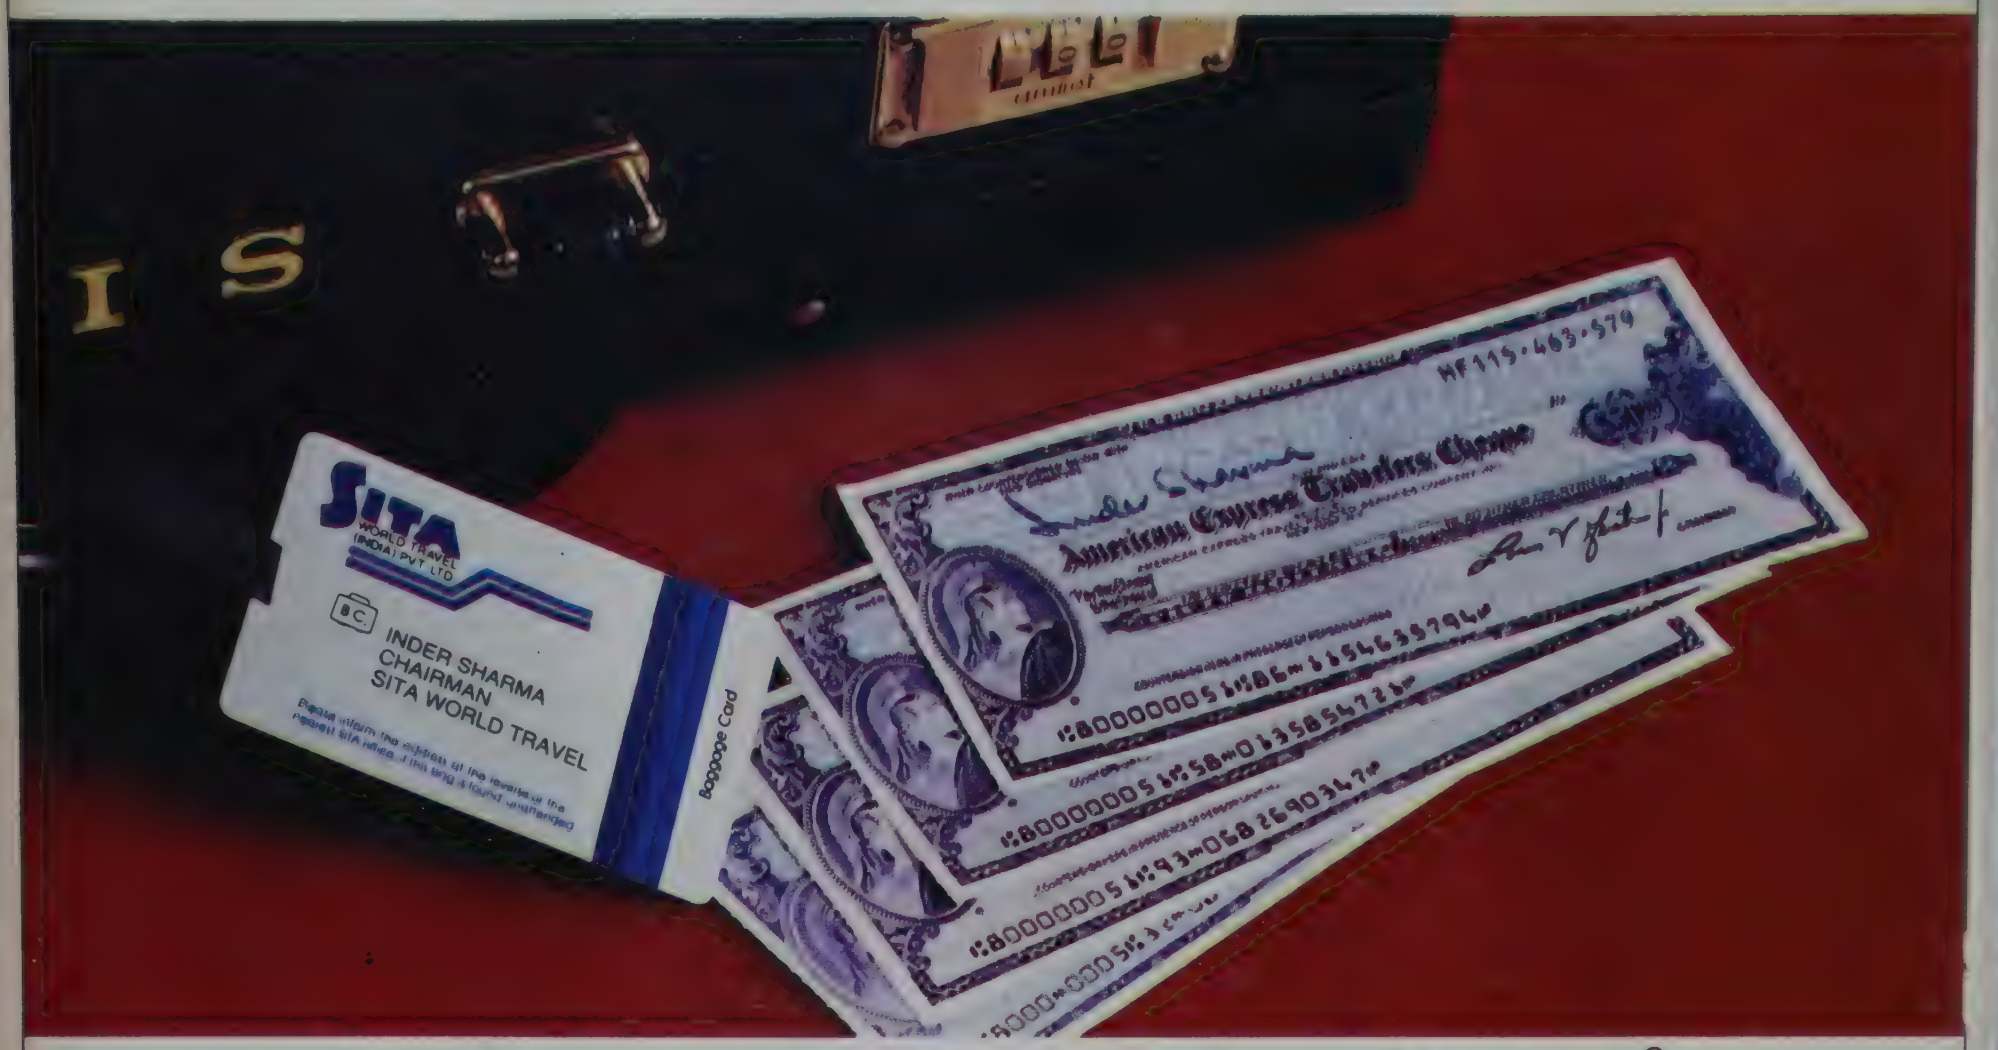
India's leading travel agencies exclusively recommend the world's leading travellers cheque



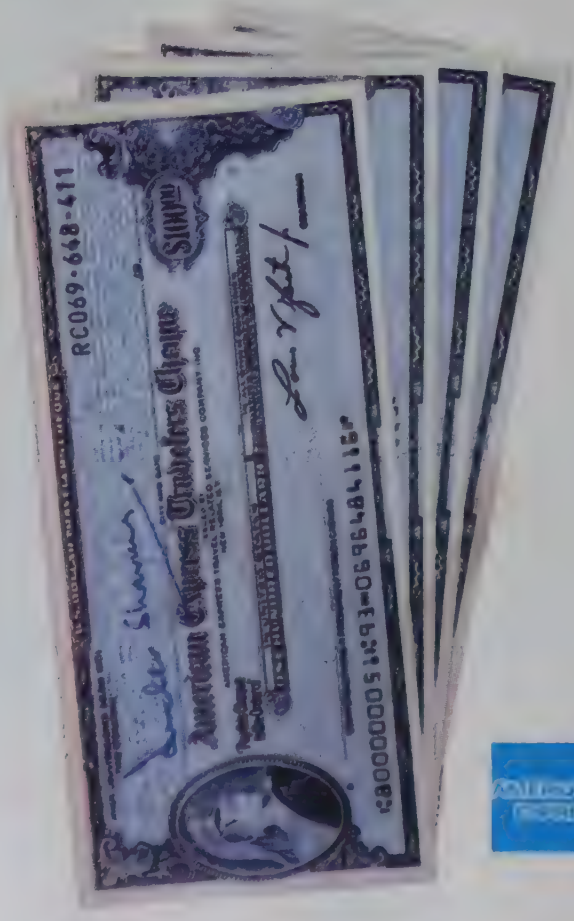
SITA recommends American Express®

Whether it's a business tour, conference or vacation group, SITA meticulously plans everything down to the last detail. Even when it comes to protecting your money. That's why we recommend only American Express Travelers Cheques.

No other travellers cheque offers as much protection. None.

If your American Express Travelers Cheques are lost or stolen you can :

- Get them replaced usually within 24 hours at over 1,20,000 refund locations and over 1400 American Express Travel Service and Representative Offices worldwide.



In addition you can also :

- Get help to alter hotel/airline bookings
- Cable your colleagues anywhere in the world, about your changed plans
- Obtain a temporary identification, if you also lose your passport and other travel documents.

All this at no extra cost.

So when you go abroad don't ask for trouble; ask for American Express Travelers Cheques.

Travelers Cheques

SITA WORLD TRAVEL (INDIA) PVT LTD

OBM/187

India's first PS/2

Zenith Computers Ltd has unveiled what could be India's first IBM-compatible PS/2 (Personal System/2) computer system.

The system, called the Zenith PS/2, is based on Model 30 of IBM and uses the Intel 8086 processor instead of the 8088 used in conventional PCs. The 8086 is as fast as the conventional PC-AT and will run the standard PC disk operating system and the new OS/2 (operating system/2). IBM itself announced the PS/2 on 2 April 1987. The other three makers of the PS/2 clones are Acer Corp, Dell Inc and Tandy Corp, all of the US.

According to Raj Saraf, Zenith's managing director, the system is primarily being targeted for large and medium sized undertakings. "It can be used in a networking environment with real multi-tasking features and will 'talk' to most of the standard mainframes made by IBM, Digital Equipment Corp, Hewlett-Packard, Wang Labs, Unisys and Control Data Corp," he says.

TCL granted approvals

The Madras based Thirumalai Chemicals Ltd (TCL) has received the necessary approvals to commence work on its new maleic anhydride project. The investment is expected to be about Rs.19 crores. The plant will generate power internally from waste heat and will use a high yield catalyst. The new plant is expected to go on stream by January 1990.

KCP awarded sugar plant order

KCP Ltd of Madras has been awarded a turnkey order for a sugar plant by Thiru Arooran Sugars Ltd, who are putting up a new 2,500 tcd sugar factory in Tamil Nadu. KCP will be introducing state-of-the-art technology in sugarcane milling — self setting mills developed by Fives Cail Babcock (FCB) of France. The plant will use high pressure boilers. The factory also proposes to go in for co-generation of power. It is expected that this 2,500 tcd plant will generate 5 MW of surplus power to be fed into the grid.

Awards

Tata Consultancy Services (TCS) has been awarded the "All India Top Exporters' Shield" for 1987-88 by the Engineering Export Promotion Council (EEPC) for top export performance in computer software consultancy. This is the eighth time that TCS has won this award.

Y.P. Sahni of TCS receiving the award from commerce minister Dinesh Singh

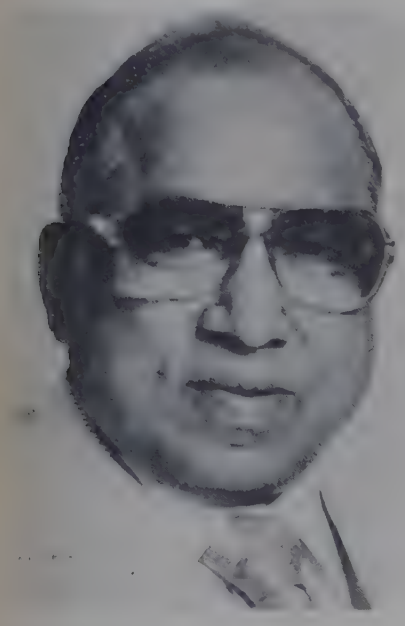
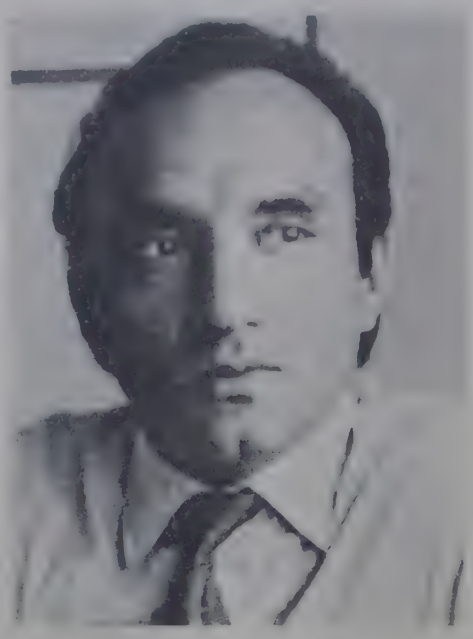
L.P. KRISHNAN NAIR

Leela Penta Hotel, the luxury hotel near Bombay airport owned by Hotel Leela Venture Ltd, will now have a new name — The Leela, Kempinski Bombay. "This came about after an agreement signed by our company with Penta Hotels and Kempinski Hotels," says C.P. Krishnan Nair, chairman of Hotel Leela Venture Ltd.



The hotel has been awarded 5-star deluxe status by the government's Department of Tourisim. "In pursuance of our expansion policy, we are planning a new luxury beach resort at Goa with 180 villas in the first phase," says Krishnan Nair. Located on an area of approximately 40 acres, Krishnan Nair estimates the cost of the Goa venture at Rs.25 crores. "This hotel will cater to the luxury international resort clientele segment and has a high potential for foreign exchange earnings," he says.



VIRENDRA SUD

The Kanthal group of Sweden, which set up Kanthal Hoganas a year ago to manufacture iron powder, is forging ahead with another project. This time it is a Rs.2.7-crore thermal-bimetal strips manufacturing unit at Hosur, Tamil Nadu. Like the iron powder project, the bimetals project is aimed at import substitution, says Virendra Sud, managing director of Kanthal Hoganas. It was Sud and his team who put up and commissioned the Hoganas iron powder plant in a short span of nine months.

According to Sud, Kanthal Bimetals will go for direct sales to the big end users. But the major market is in the small-scale sector. "We will need a very efficient distribution system to penetrate the small scale sector." he says. Bimetal strips are used by electrical equipment manufacturers, domestic appliance manufacturers, etc.

Currently, over Rs.6 crores worth of bimetal strips are imported every year. In the first year of production (ie, 1990), the company expects a sales turnover of Rs.2.2 crores, at 30 per cent capacity utilisation. In December 1988, the company expects to make a public issue of Rs.60 lakhs.

K. SONAWALA

The Hinditron group has decided to enter into technical and financial collaboration with Tektronix Inc of the US, a large electronics company with annual sales of over US $1.4 billion (about Rs.1,900 crores). K. Sonawala, director of the Hinditron group says, "We have been marketing Tek oscilloscopes (electronic measuring instruments) for about two years. Now they will be manufactured at the new facility at Bangalore."

Hinditron Tektronix Instruments Ltd (HTIL) will have 40 and 30 per cent of its Rs.3-crore equity capital from Tektronix and Hinditron respectively. The remaining 30 per cent will be raised through a public issue which the company hopes to make sometime in December this year.

The market for oscilloscopes in India is on the rise, according to Sonawala. HTIL hopes to capture about 35 per cent of the market in due course.

RAGHAVAN SRINIVASAN

"In India 90 per cent of market research consists of *ad hoc* studies which are either client-specific or brand-specific. Syndicated market studies or general research packages constitute a mere 10 per cent, against 70 per cent in the USA and UK," says Raghavan Srinivasan, executive director, Mode Services Private Ltd.

Some interesting studies are already under way. The first is a study whereby companies can find out how the trade evaluates individual companies or brands on trade-related parameters like credit product quality, media support etc. Another study will cover in-shop behaviour in general stores and chemists. It will extend to respondents in Agra, Baroda, Cochin and Jamshedpur in addition to the four metros and will cover 600 general stores and 300 chemists.

Mode is also reviewing its "Product purchase media exposure interlinked panel," which will begin to function again from 1989. Information on market and purchase behaviour will be sent to clients on a monthly, quarterly or annual basis. Also on the cards is a study on the job expectations of graduates from engineering and management institutions.

H. LAKSHMANAN

Harita Grammer Ltd is a joint venture set up to manufacture seats, seat support mechanisms, and related hardware for the automobile industry. The company's focus will be on better design with emphasis on ergonomics, orthopaedic comfort, reliability, safety and aesthetics, says director H. Lakshmanan.

Harita Grammer has already developed seat support mecha-

nisms for leading LCV manufacturers like Telco and Eicher and for two-wheeler manufacturers like TVS Suzuki and Bajaj Auto. It is also negotiating to supply tractor seats to Escorts, Escorts Ford and TAFE. Lakshmanan expects sales of around Rs.7 crores in the first year of full commercial production.

The promoters of the Rs.3.94-crore joint venture are the Harita group (promoted by the Sundaram Clayton branch of the TVS family) and Grammer Sitzsysteme GmbH of West Germany. Both promoters have put up Rs.41.5 lakhs each. There will be a public issue of 600,000 equity shares of Rs.10 each at par.

J.L. NANDA

It's not everyday that a banker gives up his secure job to take on the uncertainties of private enterprise. But J.L. Nanda, ex-

regional manager of New Bank of India, did give up his job to start a security press, of course, with the knowledge that he could "bank on his contacts".

Nanda's new company, United Druckgrapen Ltd, located in a backward area of Chandigarh, will print both MICR and non-MICR cheques, and specialised stationery for schools.

The total project cost for the press is estimated at Rs.2.4 crores. Nanda has managed to contribute, along with friends, Rs.37.50 lakhs. Rs.10 lakhs of seed capital has been contributed by IDBI, a like amount by IFCI and Rs.7.50 lakhs by PSIDC. Being located in a backward area, the project gets a Rs.15 lakh state subsidy, bringing the total equity to Rs.80 lakhs and the debt:equity ratio to 1:2.

Goebel of West Germany will be supplying both machines and knowhow. With the state governments of Punjab, Haryana and Chandigarh already having approved of the press and its products.

C.R. RATHI

Rathi Alloys and Steel Ltd, a mini steel plant in northern India is going in for diversification and modernisation. According to C.R. Rathi, chairman and managing director of the company, the total outlay is going to be over Rs.30 crores. Of this, about Rs.7 crores will come from internal generation and Rs.23 crores from financial institutions. For augmenting the steel capacity, the company has finalised a technical collaboration agreement with Leyhold AG for providing technical knowhow for a 'LD' converter and 'AOD'. The converter will be used for bulk production of stainless steel and hot rolled sheets and coils. Says Rathi, "The country imports hot rolled coils at present and therefore our production will lead to import substitution. Also, demand for such coils is growing." The company is also planning to set up a sponge iron plant. This should help the company to reduce its dependence on imported scrap.

G.C. LUDWIGSON

"We don't attempt to be all things to all people," says G.C. Ludwigson, president of Diners Club International. According to Ludwigson, Diners aims its cards at a relatively narrow segment, the frequent traveller, who needs his card to pay for both travelling and entertainment.

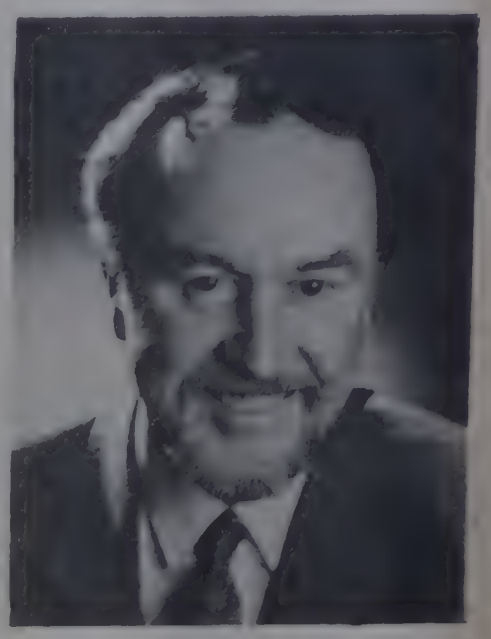
Ludwigson, who was in India to deliver a keynote address at a hotel convention in Delhi, visited the headquarters of Diners Club franchisee in India in Bombay. He refused to state Diners' worldwide turnover exactly — the company is a subsidiary of Citicorp — except that it was several billion dollars.

Commenting on Diners' operations in India, Ludwigson hoped that a relaxation in currency regulations would allow the Diners Card issued in India to be used outside India and Nepal.

ALAN JEFFERSON

"Although India accounts for only 1 per cent of Britain's tourism, it has the second largest number of tourists next to Japan. There are roughly 150,000 visitors from India every year and we would like see this increase," says Alan Jefferson, director (marketing) of the British Tourist Authority (BTA).

Tourism accounts for a quarter of Britain's invisible exports and 5 per cent of its total revenue. A total of 15.4 million visitors pour into the UK every year. According to Jefferson the BTA is "trying to emphasize three different aspects of our country



— the British people, the countryside and our heritage"

Says Jefferson, "We are trying to promote off-season travel because one-third of all tourists arrive during the months of July, August and September. To encourage businessmen, trade fairs and exhibitions are being planned. What we would like to have is counselling facilities for those who arrive in London.

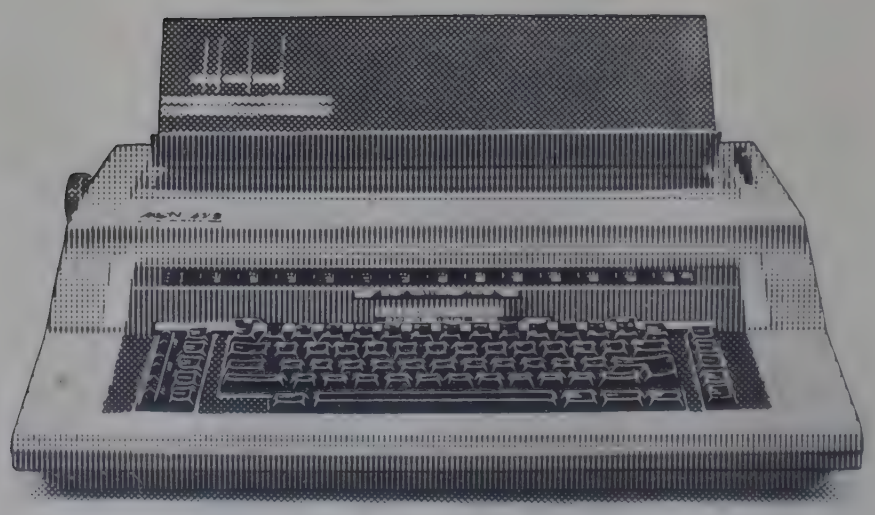
GEORGE PENNY

"I am very impressed with the performance of Indian students," says George Penny, director of National Computing Centre (NCC) UK. Penny was in Bombay recently to give away diplomas to students graduating from Apple Information Technology courses on Computer Studies. NCC and Apple Information Technology have a collaboration on some of Apple's courses, with Apple holding the classes and NCC conducting the exams.

The main function of the the Centre, established 22 years ago by the UK government, is training students. The Apple link was finalised around July 1986 with the first batch of students passing out in December 1987.

Says Penny, "I have found that psychometric (aptitude) tests are a very good indicator of success in these courses." The tests also bring out talents which might not be obvious from school examination results.

20TH CENTURY FOX, AMERICAN EXPRESS AND AIR FRANCE COULD HAVE BOUGHT THE WORLD'S BEST ELECTRONIC TYPEWRITER.



THEY DID.

Right here.

They chose the ACN Electronic Typewriter. Manufactured in India, in technical co-operation with Nakajima All, Japan. And Nakajima All, they well knew, is the largest manufacturer of electronic typewriters in the world. Possessing, undoubtedly, the most advanced technology. Technology behind the phenomenal success of the international best-sellers — Triumph Adler, Smith Corona, Olympia and Sears. The kind of typewriters they could have imported from anywhere in the world.

Quality and technology on par with the best in the world, something more clinched the deal. Professional guidance and service. Prompt, efficient and always at hand. Plus, the Ranutrol Group reassurance. Reassurance of over 18 years in high-technology, in India.

An ACN for all three. Certainly not by coincidence.

ACN
FROM
NAKAJIMA ALL, JAPAN.

RANUTROL GROUP

INTERNATIONALLY, THE BEST.

INDUSTRIAL INVESTMENT

Maharashtra lures NRIs

Maharashtra chief minister Sharad Pawar and his entourage of aides and private industrialists returned last week from what they say was a "successful" 13-day Europe-USA tour to woo non-resident Indians (NRIs). The result, according to Pawar, was proposals for NRI investments aggregating Rs.1,244 crores in projects in the State.

Among the proposals listed in a government press release were those for a Rs.120-crore alcohol-based petrochemicals project and a Rs.250-crore 250 MW thermal power generation unit. The smallest of the proposals listed were those for a Rs.10-crore amusement park and a food processing plant at the same cost.

Concrete proposals. When asked to name the NRIs who had made the proposals, the state's industries secretary, S.G. Kale, said that one Nandu Marketkar of Boston had offered to set up a project for manufacturing computer cards; Kedar Sant, Tushar Kale and Kiran Shah, all of New York, had proposed setting up manufacturing facilities for granite slabs, ticketing machines and personal computers, respectively. A proposal for manufacturing continuous copper rods was also received from the London-based A. Bagri, who is known in the metals industry.

The chief minister's secretary, P.R. Dasgupta, said that a letter of intent had already been issued to another NRI, Vinod Jhunjhunwala, by the Union government for a Rs.15-crore project to manufacture metallised film at Valunj. He also mentioned a casino-cum-floating restaurant to be set up by a London-based NRI at a cost of Rs.10 crores, and a beach resort to be set up by two others at a cost of Rs.50 crores.

The homework for the chief minister's campaign was done by the State Industrial and Investment Corporation of Maharashtra (SICOM), the state's nodal agency for industrial development. SICOM had prepared more than 50 project profiles for the NRIs' consideration. The trip was undertaken in co-ordination with the Indian Investment Centres and the consulate generals in the various countries.

The biggest of the project profiles prepared by SICOM involved the manufacture of offshore platforms for the Oil and Natural Gas Commission (ONGC) at a cost of Rs.34.85 crores, which would yield a turnover of Rs.25 crores a year. The other large project profiled was a Rs.30-crore polystyrene or high impact polystyrene manufacturing unit which would yield a yearly turnover of three and half times the investment. Among the medium-sized projects profiled was a Rs.4-crore rubber chemicals plant which would yield a yearly operating profit equivalent to the project cost.

Predecessor's blessings. On a recent visit to Bombay, former chief minister of Maharashtra S.B. Chavan said that he had refused to go on the foreign tour, as was originally planned by SICOM, because the state was then facing a severe drought. Besides, he said, he was aware that similar trips undertaken by the chief ministers of Andhra Pradesh and Karnataka, in the recent past, had drawn blanks. Chavan, however, hastily added that if Pawar succeeded, he would help out in whatever way he could since the NRIs' proposals would ultimately have to be cleared by the Centre.

"The trips made by the chief ministers serve as a good reminder to the NRIs of the investment opportunities in the country and appeal to ethnic groups from the various states," says C.P. Shah, president of Overseas Indian Jaambo Association, Bombay, and former chairman and managing director of Bank of India. He claims that most of the NRI schemes adopted by the Union government were suggested by his association (which was started in Bombay to help NRIs from East Africa after Idi Amin expelled expatriate Asians from Uganda).

Shah, however, feels that the trip would have been more effective if the delegation included officials from the Central government and the Reserve Bank of India (RBI), which have single window facilities for clearing NRI projects. "The chief ministers often make promises, unaware of the fact that certain NRI schemes may not fit in the overall national plan," says Shah, in an oblique reference to proposals for casinos and thermal power stations which, in the past, have created controversies. Also, he points out that a number of NRIs trying to come back after the Union government put forward its schemes have had to encounter great difficulties and delays.

Fresh enthusiasm. Officials who were part of the tour are very optimistic, though. "The chief minister has created a lot of enthusiasm among the NRIs on this trip," says Anand Bhadkamkar, development commissioner (industries) in the state government, who was part of the delegation. According to him, the presence of prominent industrialists from the state, including S.L. Kirloskar, Chandrakant Garware and Avinash Wardekar, was an advantage since they could give NRIs first hand information about the investment climate in the state.

"We went equipped with a list of plots available in the various MIDC areas and even allotted four of them. Besides, the schemes also envisage financial help for the projects from SICOM," says Bhadkamkar who, until 8 July, was the

Pawar pack: the C.M. flanked by Gopal Krishnan, M.D. of SICOM and Tushar Kothari, a major diamond importer to the USA

It took 4½ years, a team of 20 people and a billing of 4 crores in Delhi to move us.

To a much bigger office.

So weeks after Tara Sinha Associates walked out of their office, we walked in.

With 12 clients. And some very successful campaigns like Singer, Sohna Rice, Premier Vinyl.

And ten more people who'll be joining us soon. (Some of the top most agencies in Delhi will soon be announcing vacancies).

Right now we're busy settling down. But for the right advertisers, we have all the time in the world. Besides we'd like you to know we won't move again too soon. Just in case you want to call.

THE ENTIRE SPEER DELHI TEAM OF 20 PEOPLE WITH 12 CLIENTS AND 4 CRORE BILLINGS TAKE OVER THE TARA SINHA ASSOCIATES OFFICE.

corporation's chairman and managing director.

Bhadkamkar expects about 20 per cent of the Rs.1,244-crore worth of proposals to fructify. Of these, some like the amusement parks, are expected to be cleared very fast while larger projects could take three or four years.

■ ALOYSIUS FERNANDEZ

T-55 tank at Defex: for good measure

DEFEX 88

Wooing the private sector

Defex 88, an exhibition of defence equipment, was organised by the Army Ordnance Corps (AOC) at Pune from 5 to 14 October this month. The exhibition was held with the idea of wooing the private sector to manufacture defence items that were so far being imported. Spread across five sections inside the Central Armoured Fighting Vehicle Depot, more than 30,000 items relating to defence were on display. A few tanks, armoured vehicles and 155 mm shells for howitzers were added for good measure. The response from industry was encouraging; approximately 2,000 people attended each day.

Large imports. Some defence items are being produced indigenously by the Directorate General of Ordnance Factories (DGOF) and by some large companies — like Telco, Kirloskars and Bharat Forge — who have also been manufacturing certain specified defence goods. But, the bulk of defence items is still being imported, mainly from East European countries. The import of defence items exceeds Rs.3,000 crores a year, according to AOC officials.

Major General N.K. Agarwal explains, "While the import bill for complete vehicles and guns is considerable, that for spare parts and accessories also exceeds Rs 200 crores per year." The figures include only the army's requirements. The items on display at the exhibition for indigenisation were wide ranging: gloves, mountaineering gear, empty shell cases, optical goods, enamels, high-powered engines, hosepipes, screws, nuts, bolts and even hammers and nails.

Every item has been marked with the specifications and requirements of the army to "enable potential manufacturers to get an idea of the work involved," said Agarwal. An interested manufacturer is guided by the advisory cell to register the details with the concerned procurement agencies. "After the exhibition is over, the offers will be processed and orders will follow," explains the major-general. Plans are also afoot to publish a vendor's directory of all the participants in the exhibition. Copies of the directory will subsequently be made available to the different procurement agencies of the defence ministry. Presently, the onus of procuring goods for defence rests with many agencies controlled by the DGOF and the Directorate General of Quality Assurance (DGQA).

Procedural delays. Industrialists, however, are sceptical about the offer. Those who have had previous dealings with the ministry of defence are wary. At the open discussion seminars held every day at the venue, the industrialists spoke of the procedural delays they experienced while registering themselves with several agencies for the production of one item.

Rajendra Sah of Goodwill Iron Works complained, "It could easily take a year or two just to complete the registration formalities. While there is one registering authority for nuts and bolts there is a different authority for, say, iron pipes, and yet another one for electric parts. So, if a manufacturer is to supply equipment that would require all three parts, he would have to register with three different authorities. Each of these authorities would, in turn, hold quality tests and then register the products."

However, the need for high quality in defence items is understandable. "What is difficult to comprehend," says an entrepreneur," is the size of the orders placed by the army. How can they expect us to make five screws with stringent specifications when there is no assurance of repeat orders?" The non-viability of undertaking projects for defence was a commonly heard complaint at the exhibition.

The defence people, of course, were on the defensive. Admitting that many of the procedures in the army were outdated and redundant, the officers in charge of the exhibition assured the entrepreneurs that they would reduce red-tapism to a great extent. Stressing the need for stringent specifications for defence products, the organisers assured the industrialists of substantial orders as the displayed items belonged to only 18 basic types of equipment. They also promised to "make good" the burden of low orders.

The efforts at indigenisation of defence equipment are laudable. Industry on the other hand is capable of indigenising 60 per cent of the items displayed at the

Bonus to policyholders climbs a higher peak.

xhibition. That such attempts at import ubstitution were not made earlier is what angers the private sector.

Indeed, foreign exchange worth Rs 200 crores could have been saved each year. Sources in the defence ministry claim that if accessories and maintenance parts hitherto imported are made in this country, the ministry's expenditure could be cut down to Rs 80 crores. "Defex 88 in its nascent stages, may have rough edges," Luietenant-General A.K. Chatterjee, GOC-in-C, Southern Command, says, "but it can only be smoothened by an active interaction between the defence ministry and industry."

■ SHEKHAR GHOSH

FRUIT DRINKS

How fruity are they really?

How much fruit does Frooti, the mango drink manufactured by Parle Beverages, actually contain? This question is being currently debated before the Calcutta High Court, following the filing of a writ petition by the Consumer Unit and Trust Society (CUTS), seeking a direction to the municipal authorities to confiscate packets of Frooti and 'appy (another Parle product) on grounds that they are 'misbranded'.

Parle's pitch. The basic issue raised by CUTS is that both Frooti and 'appy contain very little fruit juice, and hence ought to be labelled and advertised as synthetic. On the contrary, according to CUTS, Parle's marketing pitch throughout has been the emphasis on Frooti and 'appy being a natural substitute for fresh fruit juice. To support its contention, CUTS has cited ruled 11 of the Fruit Products Order (FPO) of 1955 which states that any beverage which does not contain at least 25 per cent of fruit juice in its composition shall not be described as fruit syrup, fruit juice, squash or cordial and shall be described as synthetic syrup. The rule further stipulates that in such a case the drink must contain the word 'synthetic' on the label preceding the name of the product, and should also be of the same size (in lettering). Moreover, in accordance with section (2) of the same rule, there can be no picture of any fruit nor may the term 'fruit' be used on the packet. However, according to Bhanu Vakil, chief executive of Parle, "We are following the FPO specifications for ready to serve fruit beverages. A minimum 10 per cent fruit juice is required in the final product and all our drinks contain substantially more."

Despite allegations being traded freely and charges of 'motivation' allegedly being levelled by Parle (which feels that a rival company is behind the case to sabotage their newly launched orange fruit drink) against CUTS, Pradeep Mehta, general secretary of CUTS, remains undeterred. "There is no question of motivation or being 'paid' by a rival company," says an indignant Mehta, who takes his role as a watchdog of public interest very seriously. "If a particular company is perpetrating what amounts to a fraud on an unsuspecting public by misbranding or mislabelling their product, it is our duty to expose it in the public interest. Levelling allegations only tends to confuse the issue, and right now we want to keep the issue in focus."

Accepted principle. But why single out Parle? What about Lipton and Voltas — the other two manufacturers of tetrapack fruit drinks? Mehta replies, "What is important is that Parle is the market leader, which is why we are focussing on them. If you can nail down the number one company in the field, the others will automatically fall in line. This is an accepted principle everywhere by consumer groups." Besides, he adds, "None of the three leading tetrapack products (Parle's Frooti or 'appy, Lipton's Tree Top or Voltas's Volfruit) really comply with FPO's specifications, and we intend to initiate action against them too." CUTS, has been pursuing this matter since June, when its representatives had written to the commissioner of the Calcutta Municipal Corporation, on the basis of an individual complaint, asking the organisation to investigate whether various tetrapack manufacturers — namely Parle, Lipton and Voltas — were following the provisions of the FPO, and also the Prevention of the Food Adulteration Act of 1955. However, this failed to evoke any response from the concerned authorities, says Mehta.

At the heart of the controversy

Later in July, CUTS requested the Superintendence Company of India (Pvt) Ltd to 'test' the fruit drinks products. The test results showed that Frooti had a pulp/concentrate of only 2.53 per cent and 'appy 3.4 per cent, whereas Tree Top had a pulp/concentrate of over 15 per cent for their mango drink, and Volfruits' Guava showed a pulp content of over 7.5 per cent. Following this, CUTS, had written to Parle asking for a breakup of their composition. Letters, says Mehta, have also subsequently been written to Lipton and Voltas asking for a detailed composition of their fruit drinks. While there has been no reply from Voltas, Lipton has written to CUTS saying they will shortly be furnishing the details. According to Vakil, Parle responded to Mehta's letter clarifying that the company was complying with FPO specifications. However on 5 September, CUTS filed a writ petition in the Calcutta High Court. "They should have clarified the position with the concerned authorities before going to court and wasting everyone's time," says Vakil.

FPO's affidavit. So far Parle's stand has been that the concerned fruit drinks are "ready-to-serve beverages, requiring a minimum of 10 per cent fruit juice". In their letter to CUTS, Parle is said to have stated that "for any drink to be called a fruit drink it must contain a minimum of 10 per cent juice and as far as Frooti and 'appy are concerned, both of them contain substantially higher contents of fruit juice than what is required under the FPO rules". Even FPO has filed an affidavit in the high court listing out the various specifications for fruit drinks and Vakil emphasises that Parle is "well within the law".

CUTS, however, contends that Frooti is using pulp and not fruit juice as claimed, since nowhere on the packet does Frooti

mention the juice content. And the same goes for 'appy and Tree Top. Mehta feels that FPO norms have curiously changed over the years. "Till the early seventies the minimum stipulated juice content in ready-to-serve beverages was as high as 85 per cent. Suddenly we find that there has been an amendment bringing it down from 85 per cent to 10 per cent — an astonishing decrease indeed," he says.

Mehta also questions how Frooti or 'appy could possibly be sold as 'fresh' fruit drinks, when any tetrapack could easily have a shelf life of three to four months. In fact, it was the 'fresh' and 'natural' connotations in the Frooti and 'appy advertisements depicting pictures of fresh mangoes and apples which is 'misleading' the consumer, contends Mehta.

While the Calcutta High Court had initially restrained Parle beverages from advertising their products, an appellate bench later allowed Parle to continue with their advertising. The final outcome of whether Frooti and 'appy will continue to be marketed will be seen after the final hearing, in December.

■ MADHUMITA BOSE.

IAF CONGRESS

Recognising the Third World's role

The 39th International Astronautical Federation (IAF) Congress, held at Bangalore from 10 to 14 October 1988, opened the eyes of international space scientists to the progress made by developing countries in space research. For instance, the advances made by the Indian Space Research Organisation (ISRO) in the sphere of remote sensing were given commendable mention by some delegates from developed countries. In fact, William F. Ballhaus, Jr, a senior NASA official and leader of the American contingent, said, "I think India has made tremendous progress, especially in the area of remote sensing. What is laudable is that remote sensing activities are benefiting society."

More members. Achievements such as this have led the congress to decide to rope in more members from the developing countries; "These will initially be asso ciate members, after which they will be taken in as voting members," said the new IAF president, George Van Reeth. Van

Van Reeth: "always pushed co-operation"

Reeth, who is also director of the European Space Agency, was elected to his current office on 14 October and will hold the office for one year. He was also of the opinion that ISRO had made enormous progress in some areas.

The congress was sponsored by the Department of Space, government of India, and co-sponsored by CSIR, DRDO, ITI, L&T, the National Aeronautical Laboratory, Bangalore, UGC and Walchandnagar Industries. This was the first time it was held in India and coincided with the 25th year of India's space programme. It attracted 875 delegates from 38 member countries, including nearly 200 from India.

While highlighting activities in the fields of space transportation, microgravity, future launchers,the space-plane, commercialisation of space, disposal of space debris, etc, the congress dwelt extensively on the question of international co-operation. Said Van Reeth, "We (IAF) have always tried to push the idea of international co-operation in space programmes. But the problem is that the bigger countries are eternally interested in areas of their own choice; and IAF cannot force them not to do so."

When asked whether developing countries could share the technologies of the developed countries, Van Reeth said, "Technology itself is a different issue, and it has been found difficult to transfer technologies. But it becomes easier if the respective governments initiate efforts in this direction."

Calamity management. Of special interest to India, were the discussions regarding drought and flood management, through developments in the space programme. Van Reeth said the federation had taken a conscious decision to link up the two areas. "However," he said, "we can only give you the information about natural calamities. Implementation is the responsibility of individual governments." The next congress, to be held in Beijing, will have a session on flood management.

Another topic discussed was the proposal made sometime ago by the USSR to help India in building an international space station. Referring to this, Dr Dunayev, chairman of Glavkosmos, the Russian space agency, said, "Initially, we wanted other developed countries to cooperate with us in this programme. But this idea did not work out; and other developing countries have financial problems. So we are face to face with India now. It will not come through in a short period. At the moment, we are examining how much has to be spent and when it will be beneficial."

The congress noted that commercial space activities were "emerging as a potentially important segment of the economy in the western world. However, the high entry costs and the high technological risks are significant impediments to private sector investments in major commercial space segments, such as transportation, microgravity, materials processing and remote sensing." Also, it added, "they need increased access to space, increased time to conduct research in space and increased time to prove concepts and technology."

Spinoffs from space research have provided new technologies and materials for a wide spectrum of industries. NASA, for instance, has developed technologies, or secondary applications as they are known, for areas as varied as health and medicine, public safety, consumer and household goods, recreation, environment and resources management, food and agriculture, energy, construction and transportation, computer programmes, etc.

In his message to the congress, prime minister Rajiv Gandhi said, "Space science and technology have the potentials of providing a new perspective of our own planet, that of a single global village." The 39th Congress of the IAF was a step towards that goal.

■ DEVAPRASAD PUROKAYASTHA

The Gold Standard for Quality

In the 1950's and 1960's when the label "Made in U.S.A." was the gold standard for quality and reliability, an American in his fifties was priming Japan for her quantum jump to quality leadership that was to take place about two decades later.

Japan made that jump.

The gold standard is now made in Japan.

The Quality Pioneer

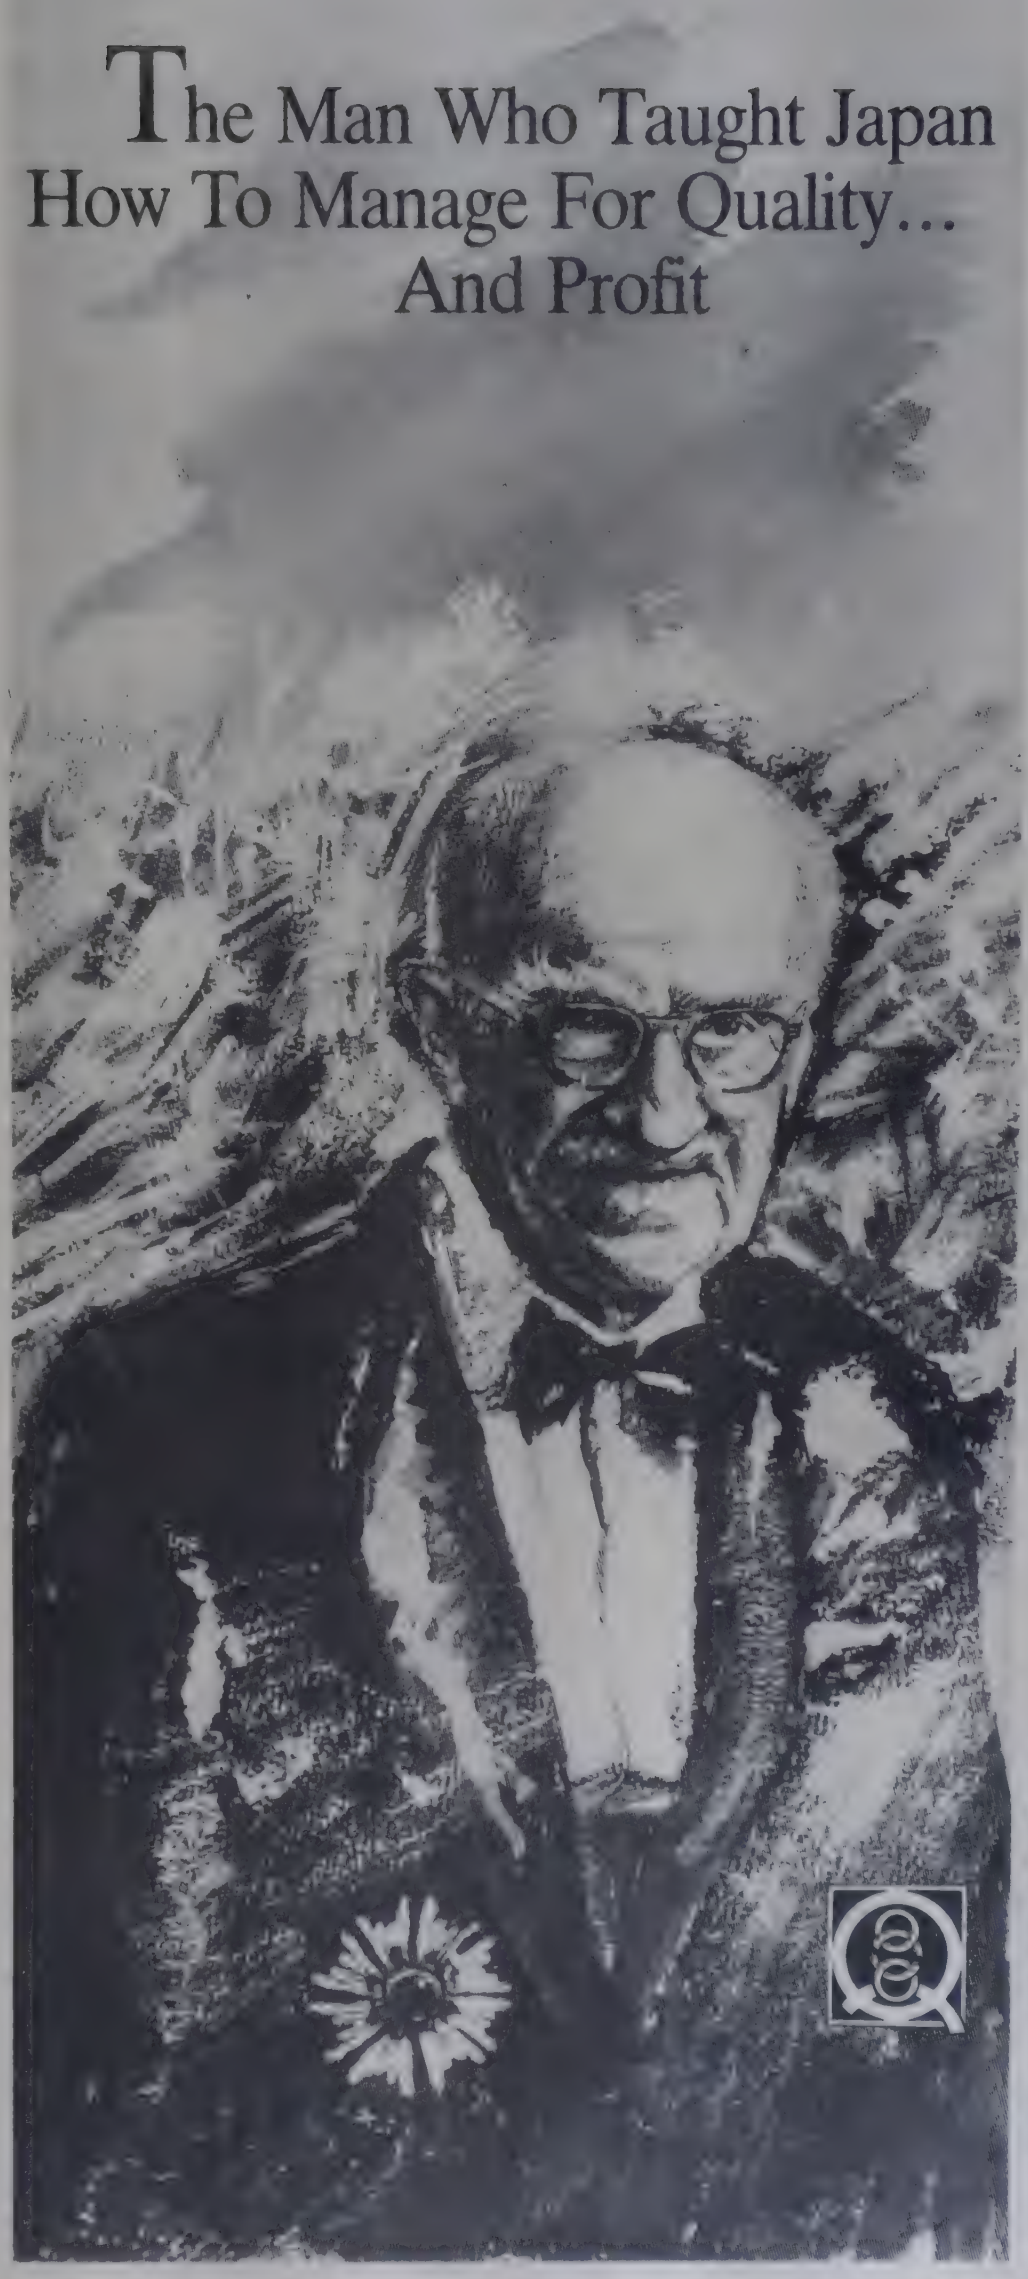
Dr. J. M. JURAN.
The catalyst who brought about a revolutionary rate of quality improvement in Japan's industrial output. Chairman Emeritus, the Juran Institute, Inc. Recepient of the Order of the Sacred Treasure, awarded by the Emperor of Japan for "...the development of Quality Control in Japan...".

Even today, the only quality consultant with a *structured* and proven process which focuses on not only *what* and *who,* but also *how* to manage for quality. When Dr. Juran speaks on Quality Improvement he leaves no room for ambiguity. He views quality as a process of management in perpetual motion. There's an urgency in his message which communicates that while quality costs, poor quality costs more.

His decades of experience now find expression in a range of management-oriented products and services, based on the principle of the JURAN TRILOGY®:
* *Quality Planning*
* *Quality Control*
* *Quality Improvement*

JURAN.

The Man Who Taught Japan How To Manage For Quality... And Profit



Juran on Quality Improvement

Juran on Quality Improvement assures immediate and continuing results that impact favourably on the bottom-line. It has been successfully implemented. By Du Pont, AT&T, IBM, Tata Steel, Volvo, Hindustan Motors and Boeing, to name some.

David Brown's 'H' Series.
A wide range of fully metric helical gearboxes.
Engineered for efficiency, economy and versatility.

'H' Series – your industry's power-savers

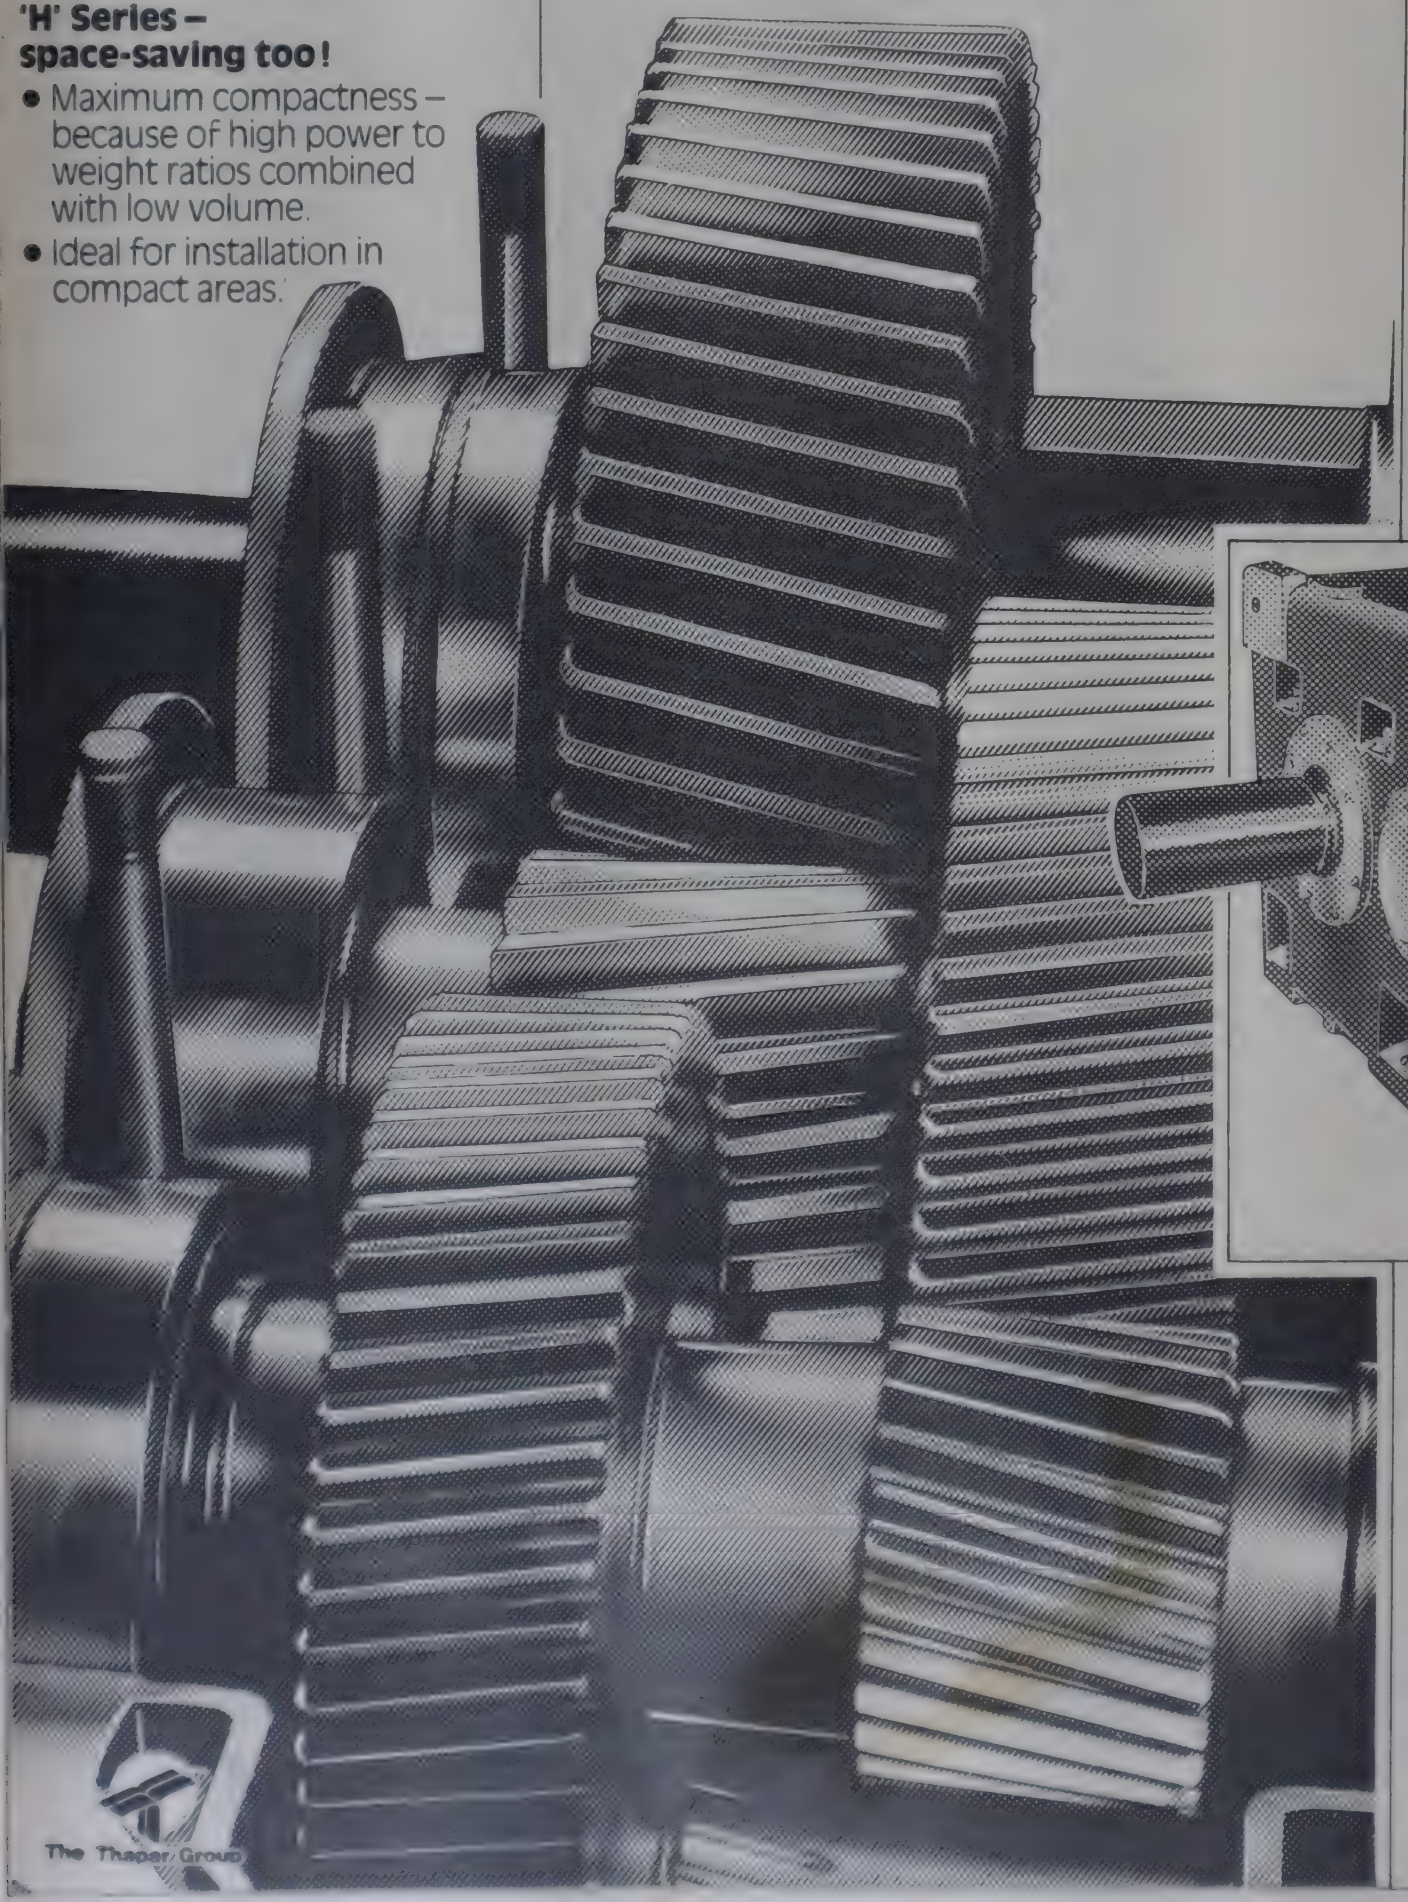
- Very high efficiencies (97-98.5%) – because of perfectly matched and aligned components.
- Greater load-carrying capacity – due to highly optimised gear geometry.
- Long life and operational reliability – because of high quality materials.

'H' Series – space-saving too!

- Maximum compactness – because of high power to weight ratios combined with low volume.
- Ideal for installation in compact areas.

David Brown 'H' Series Helical Gearboxes.

Helping you save energy and space.. in many more ways than one.



The Thapar Group

'H' Series – amazingly versatile

- Highly interchangeable parts and sub-assemblies – because of modular design and construction.
- Suitable for both horizontal and vertical drives – with right angled (Spiral Bevel) and parallel shafts.
- Choice of foot/shaft mounting with optional right/left hand shaft arrangements.
- Answers every need – available in extensive close ratio ranges (AGMA) with additional half-ratio steps.

Nationwide sales and service

David Brown 'H' Series Helical Gearboxes are manufactured, sold and serviced by Greaves Cotton, leaders in power transmission equipment.

Greaves' countrywide network of 21 Sales and Service Centres, manned by qualified and experienced engineers, can help you select the right helical gearbox.

SAIL sets its sights high

The Steel Authority of India (SAIL) has set for itself a target of 15 million tonnes (MT) finished steel production by the year 2000 AD. This grandiose plan envisaging an investment of about Rs.15,000 crores spread over 12 years is to be attempted in three stages: around 9.1 MT by 1989-90, 12.3 MT by 1994-95 and 15.2 MT by the turn of the century. This according to the Corporate Plan — upto 2000 AD prepared by SAIL will be achieved by changing the product mix, improving the techno-economic parameters close to international standards and bettering customer service among other things. Considering that the total investment in all the steel plants of SAIL upto 1986 was Rs.8,700 crores, the additional investment to fine tune production and increase capacity in the different steel plants is by any standards extravagant.

But the steel sector has been a gas-guzzler in terms of appropriating large amounts of money during plan periods. For instance, the steel sector accounted for 0.88 per cent of total plan outlay in the first plan, which increased to 5.29 per cent during the third plan, but has declined steadily since then to reach a nadir of 1.8 per cent in the seventh plan. Also internal generation of funds till recently was not encouraged because of the policy of 'cheap-steel' followed by the Administrative Pricing Policy. But even after this massive investment of public funds SAIL was only able to produce 7.5 million tonnes of crude steel in 1987-88, down from 8.6 million tonnes in 1986-87.

However, the bane of SAIL has always been low capacity utilisation. The average capacity utilisation of steel ingots for SAIL as a whole in 1986-87 was 63 per cent, down from 74.1 per cent in the previous year. Within the different steel plants Burnpur used only 53 per cent of its capacity followed by Durgapur (58 per cent), Rourkela (61 per cent) and Bokaro and Bhilai (66 per cent each). In fact, capacity utilisation has been declining in most of the integrated steel plants since 1976-77. This is in spite of the fact that an investment of about Rs.2,200 crores was made after 1986 in the Bhilai Steel plant.

However, this constraint of low capacity utilisation, according to SAIL's own projections will soon be overcome. Bhilai and Bokaro are expected to achieve full rated capacity in respect of hot metal, crude steel and saleable steel by 1989-90. The other steel plants should also make significant improvements in capacity utilisation. This will be achieved through a phased modernisation plan.

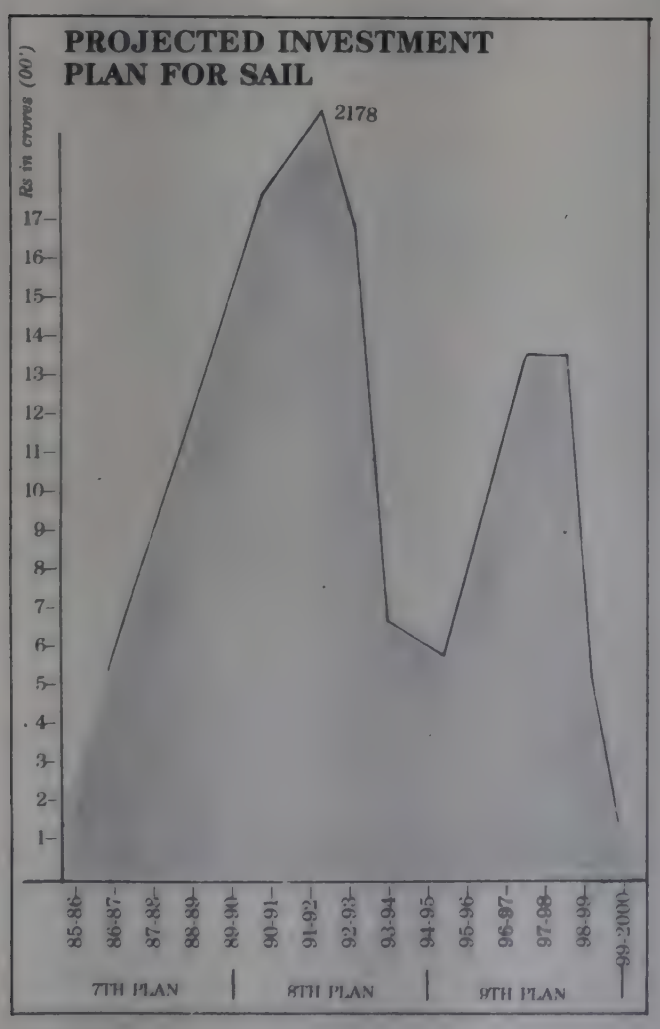
But till SAIL gets its act together the country will be importing steel, utilising valuable foreign exchange. Currently about 1.6 million tonnes of steel is being imported and the projection for next year is a little over a million tonnes.

Even though currently the export prices of steel in Japan, the EEC and the USA are less than that prevailing in the domestic market, it still does not make sense to have imports as a plausible option to increasing domestic production as has been reported. This is because there is no guarantee that export prices in the countries mentioned above will remain static and there is the larger question of a burgeoning current account deficit and an impending foreign exchange crunch.

In theory, given the requisite finance for modernisation, adequate power and good quality coal there is no reason why domestic steel prices should not be internationally competitive.

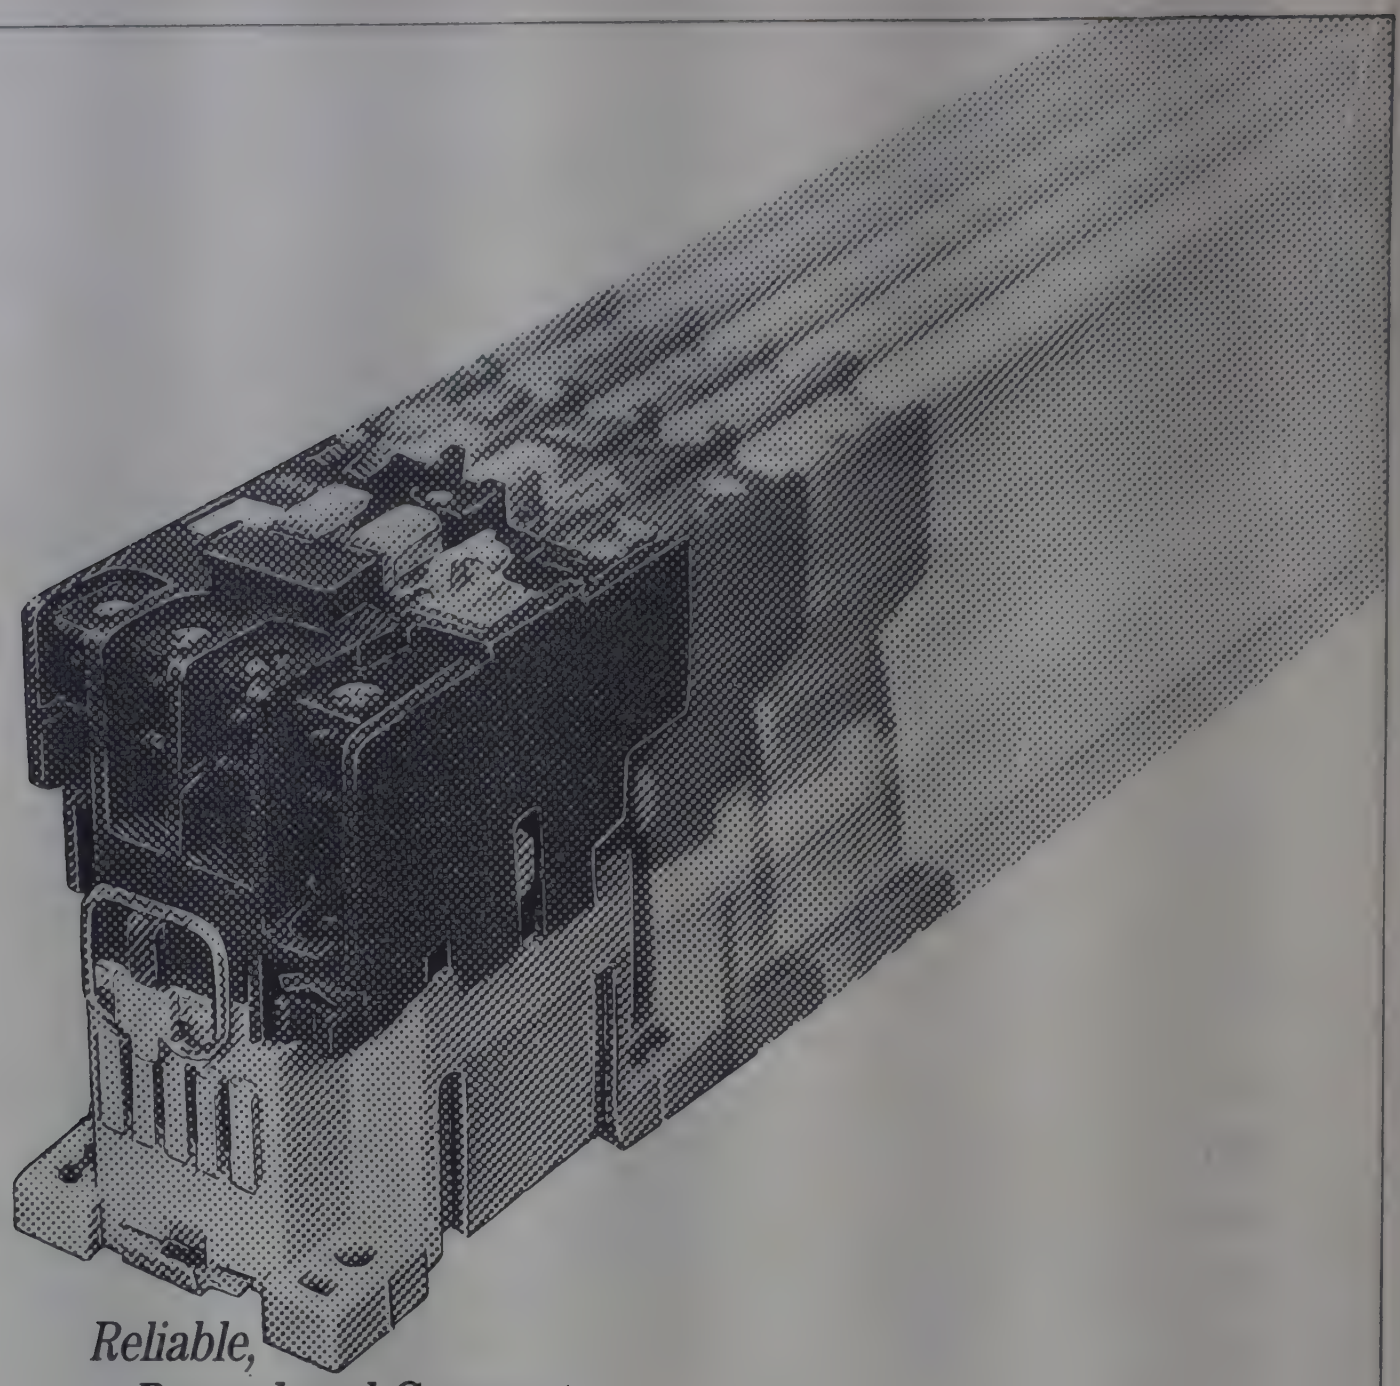
Be that as it may, this massive investment plan by SAIL has been criticised by industry observers. It is felt that greater optimisation in production can be achieved by proper utilisation of the existing 146 mini-steel plants, languishing for want of power and sponge iron. These plants are at present operating at only 40 per cent of their rated capacity of about 6.5 million tonnes.

However, the current mood of the government to allow the private sector into steel production, albeit slowly is encouraging. Surely but slowly the steel scenario in the country is changing for the better.



■

ASPI CONTRACTOR



Reliable,
Rugged and Compact

Discover the three-in-one advantage of contactors from Batliboi

Lakshmi contactors from Batliboi. Their advantages to original equipment manufacturers and actual users, are threefold:

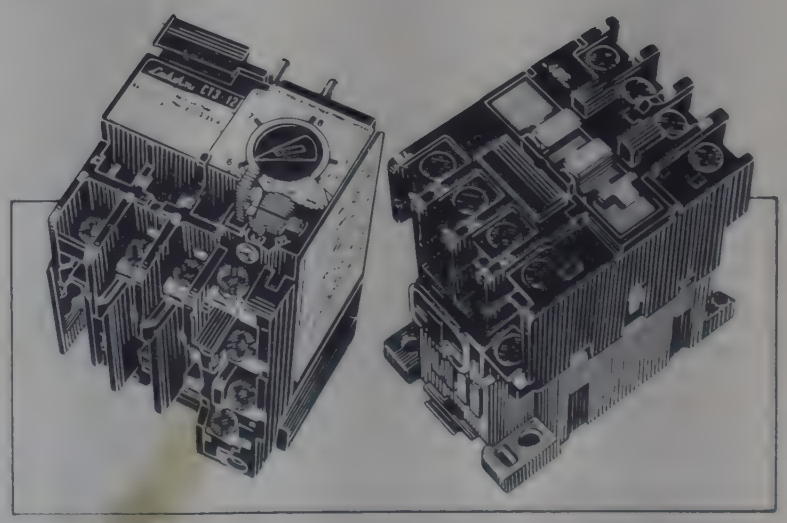
Superior Electrical and Mechanical Properties: High AC3/AC4 ratings. Eliminate contact failure and down-time. Add-on blocks, mechanical latches, mechanical interlocks and surge suppressors, common to all contactors in the range. Common coil for auxiliary and power contactors upto 16A rating.

Higher resistance to damage in transit: The contactors are made from high-grade plastic, not bakelite.

Compact design: Occupy minimum space in the panel. Have higher thermal ratings, to enable mounting contactors in close proximity to each other.

The thermal overload relays have built-in safeguards against single phasing. Auto/manual reset facilities along with two independent trip contacts are available as standard features.

All backed by Batliboi's prompt after-sales service.



OBM/2813

BATLIBOI

For a century, the engineers' engineers

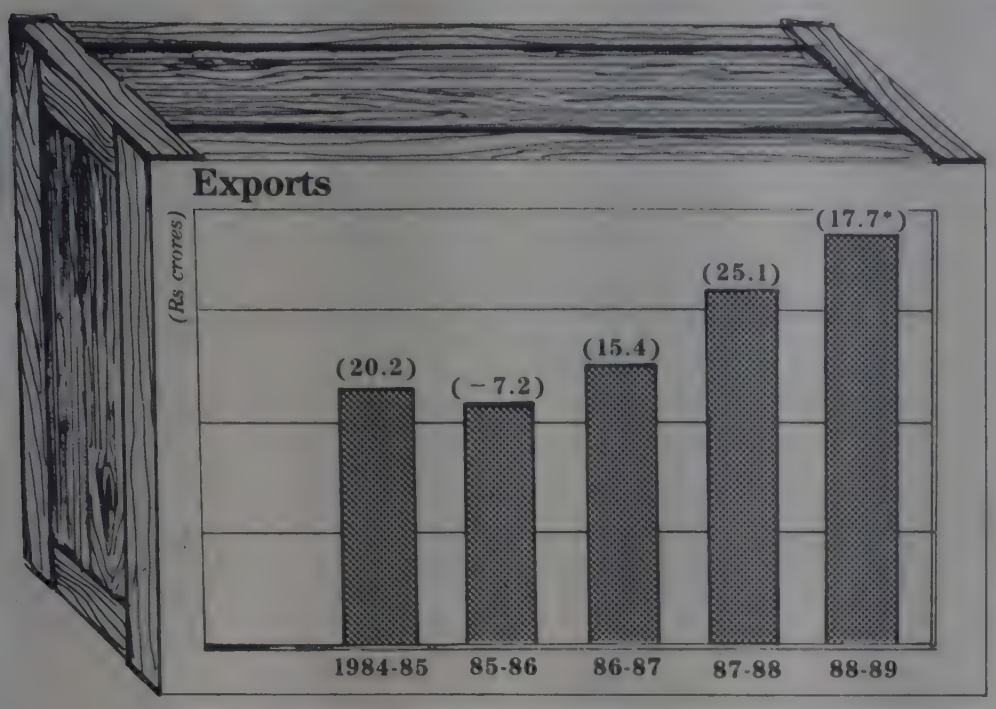
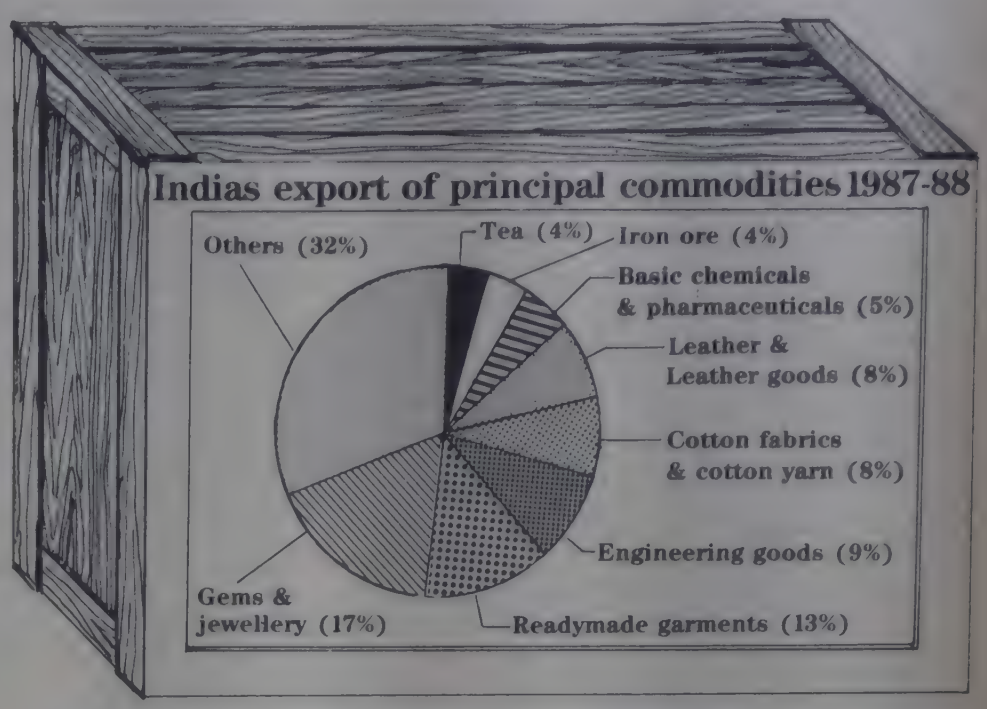
Manufactured by
Lakshmi Electrical Control Systems Ltd.



Exports have risen significantly in 1986-87 both in terms of value and volume. In fact, it is expected to cross Rs.18,000 crores in 1988-89. But with the growth in imports, the trade deficit is expected to be around Rs.7,000 crores, up Rs.400 crores on last year.

Figures in brackets indicate percentage change ** CMIE projections*

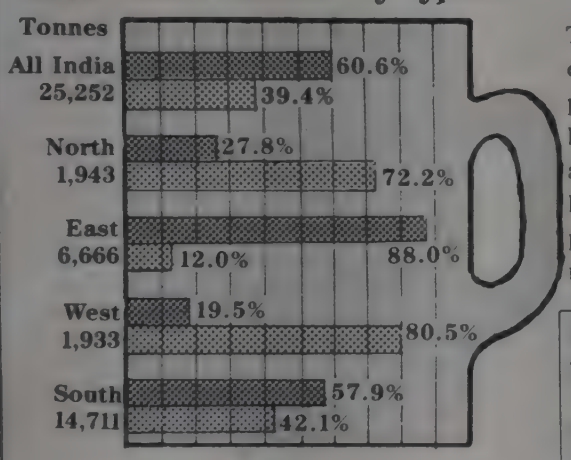


In 1987-88 gem and jewellery exports accounted for 17 per cent of total exports. In recent years readymade garments and leather products have done exceedingly well. In fact, eight major items account for nearly 70 per cent of total exports.

Milk food drinks market: Jan-Dec 1987

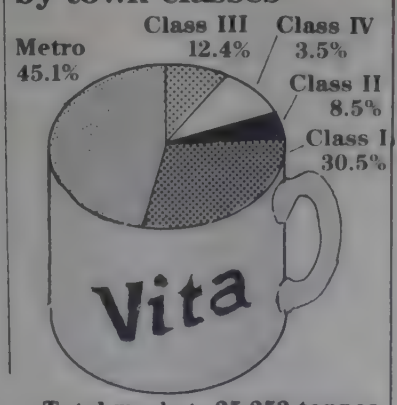
The milk food markets is over 25,250 tonnes equivalent to Rs.137 crores. In the past three years the coverage price per kg has increased by 12 per cent (from Rs.48 to Rs.54)

Milk foods market by types



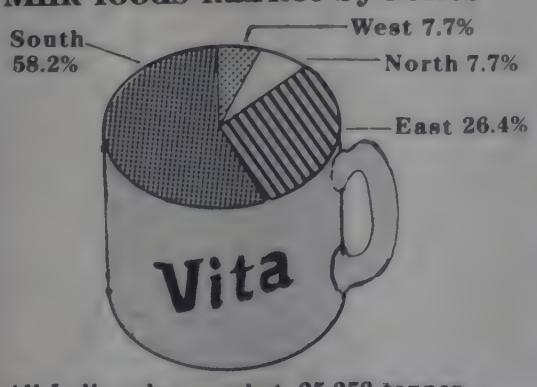
The milk foods market can be classified into white and brown powders whose individual markets are in a 60:40 ratio. South and East are white powder markets while North and West are predominantly brown powder markets.

Milk foods market by town classes



Total market: 25,252 tonnes

Milk foods market by zones



All India urban market: 25,252 tonnes

Milk foods is a highly urbanised product. This is evident from the large contribution coming from metros and Class I towns. (Towns with population above 1 lakh). Also, zone wise the south dominates with a share of 58 per cent, followed by the east 26 per cent.

Courtesy: Operations Research Group

Wholesale price index: The wholesale price index of all commodities has declined by 0.04 per cent in the month to 24 September 1988. In primary articles, cereals and oilseeds have declined by 1 per cent, and pulses have increased by 1.5 per cent. In manufactured products sugar, khandsari and gur have increased by 2.2 per cent and the price of cement has fallen by 1 per cent for the period under review.

(1970-71=100)

	24 Sept 1988	27 Aug 1988	26 Sept 1987	% change on month	% change on year
All commodities	435.2	435.4	408.0	−0.04	6.6
Primary articles	405.3	411.5	416.7	−1.50	−2.7
Mfg products	420.1	415.5	498.7	1.10	−15.7

Bullion prices and stock market index: The price of gold and silver in Bombay has hardened because of increased demand. On the other hand the international prices have been rather steady. The Bombay stock exchange index has risen by about 10 per cent in the month to 21 October due to a steady appreciation of blue chips.

	21 Oct 1988	21 Sept 1988	21 Oct 1987	% change on month	% change on year
Gold (Bombay)	3,165	3,125	3,205	1.3	−1.2

5 GOOD REASONS WHY YOU SHOULD TAKE THE MACHINERY BREAKDOWN INSURANCE POLICY FROM UNITED INDIA

1 The Production Reason

"One important machine down and the whole assembly line comes to a standstill. Production schedules go awry. Targets can't be met. Downtime goes up. Everything goes haywire."

2 The Finance Reason

"Cash flow disruption. Short-term financing. Locked-up working capital. All this can make a big difference to profits."

3 The Personnel Reason

"Deployment of labour becomes a problem. Overtime later to make up for production loss. Employee morale goes down. If we can't manage machines, we can't manage men!"

4 The Marketing Reason

"Availability and flow of products into the market can make or break a company. Loss of credibility among distributors and customers will allow competitors to get their foot in. It'll be marketing suicide!"

5 The Maintenance Reason

"Turbines,compressors, pumps, generators, transformers — all costly equipment. I can control routine repairs, but not unforeseen breakdowns or losses. I'm not God, I'm only a man. I'm not even a machine!"

Avoid management by crisis. Make insurance a part of your policy.

Any kind of mechanical and electrical machinery — at work; at rest; or being cleaned, inspected, overhauled, removed or re-erected within the insured premises... UI covers them against any unforeseen loss or damage. This policy can also be extended to cover loss of profits following breakdown.

So whether you are the manager of a big factory or a small scale industrialist, make sure sudden loss of machinery and lack of re-financing doesn't bring your operations to a standstill.

The farmers are coming

Devastated by the drought and mauled by floods, the nation's agriculturists have had it rough for the past few years. The munificence of this year's steady monsoon has, however, done its bit to alleviate their misery. Now, by all reports the farmers, who took a little while to recover, are on the move again.

Last fortnight saw a giant Bharatiya Kisan Union (BKU) sponsored rally in Delhi once again. Mahendra Singh Tikait's rally in Meerut earlier this year is now snowballing into a more widespread agitation. The farmer's movements that are now gaining strength in the north have a peculiar twist to them. They are attempting to stay militantly a-political. Organisers of the Delhi rally, for example, stuck to the earlier resolution — effectively enforced in Meerut — to keep politicians away from the rostrum and generally at bay. So stalwarts like V.P. Singh and Devi Lal, who have portrayed themselves as natural allies of the farmers, were not invited. Only they must have missed the occasion. The farmers did not seem to mind.

Today the demands that the farmers are making are relatively simple. They are also rather long-standing. What they are asking for is more remunerative prices for their output, lower prices for their inputs and facilities that are currently accorded to industry and commerce — like the free movement of goods. They have now reached the state of militancy where they believe they can demand these "rights" and have threatened to squat in Delhi till they are heard.

The likeliest reason why this particular type of agitation may work is that the central leadership will be sensitive to a display of rural power in the capital. Meerut seemed very far away and the roar of protest, loud as it may have been, got lost in the badlands of Uttar Pradesh. More urgently now, the farmers rally attracted attention because government is apprehensive that their own rally in memory of Indira Gandhi could be disrupted if the farmers opted to stay on. The fact that the capital is particularly vulnerable to the BKU storm-troopers from neighbouring Uttar Pradesh, Haryana, Punjab and Rajasthan means that government cannot take it easy as long as the farmers remain on the warpath.

While local wars and war-lords have threatened the centre, the months of November and December are likely to see intense farmer activity in another part of the country. Sharad Joshi intends to spend November keeping Maharashtra chief minister Sharad Pawar away from sugar-producing villages. While Pawar's plight may be pitiable, Joshi's plans to gherao Reliance's Patalganga plant could well be more serious. According to Joshi, "Reliance is the citadel of the Rajiv government", and surrounding it will put the squeeze on the Centre. Whatever the end result, Joshi's farmers will extend the current confrontationist, situation to the western region.

Joshi: thwarting Pawar and gunning for Reliance

All of which probably explains why the Rajiv government is casting around for fresh ideas on how to placate the agricultural sector.

Straws in the wind

Many in the capital are currently spending their time worrying about when the elections are likely to be held. Every day some observer scanning the political horizon spots a fresh straw in the wind. Each straw is analysed to shreds and "final" opinion is often based on more wisps of fact generously garnished with the analyst's own biases and predilections.

The most recent event considered to be of some significance in analysing the likelihood of a poll is the tinkering around with the party officialdom that Rajiv Gandhi began last fortnight. The current moves to delink union ministers from state party posts is a relatively simple exercise. Expectations within the party fold of a more substantive restructuring are however high. Yet, insiders suggest that any dramatic move will be viewed with reluctance by Gandhi. In a sense, Gandhi has lost the opportunity to perform surgery. That moment was a long while ago when in the much criticised centenary speech at Bombay, Gandhi had flayed power brokers within the party.

Today the party that Gandhi heads cannot possibly be the same one that he had visions of creating when he gave the Bombay call. Now with the likes of A.R. Antulay and Pranab Mukherjee back in the folds of the party, the power brokers are clearly back in the saddle. As a consequence, the new party structure that Gandhi hopes to put into place will be very different from what was originally expected.

The fact that the old guard is back implies that the days of youth power are over. Talk in state capitals and in New Delhi also suggests that the old guard is disgruntled and dissatisfied — but not yet ready to defect. And by all indications, before Rajiv can contemplate a poll a major party revamp — for what it is worth — is expected.

In the absence of a party revamp, and because Gandhi's denials of a snap poll are conventionally disregarded, most observers believe that developments in Tamil Nadu alone will give a better indication of poll dates. Currently, the prime minister seems to be spending an inordinate amount of time in what can only be described as pre-election tours, in Tamil Nadu. When elections are finally held there, it is believed that the party high command will take a final decision on the timing of a nationwide poll. In the meantime, the pending bye-elections show no signs of being announced.

All of which merely means once more that everybody will continue to be in a state of suspense. So, folks, keep your eyes peeled and look sharp for the next straw.

Liberty

Each of these three incidents: the appalling saga of the short-lived Defamation Bill; this recent peremptory changing of the Director-General of Doordarshan, and now the banning of Salman Rushdie's book *Satanic Verses* is a comment both on the total state of freedom in our country, as also in these respective spheres: the press, in broadcasting, and in publishing.

Whatever be the other exigencies, singly and collectively, these incidents amount to a severe curtailment of our already limited right to know; an unacceptable interference with our liberty. In each of these cases we were required to make a sacrifice of our freedom for some other supposed advantage — "responsible reporting", or moral and religious sensibilities, or simply the convenience and betterment of the ruling coterie; leading us then to just one conclusion: "Liberty is seriously ill in India".

A sad admission, yet true because perhaps the very concept of liberty, "that universally seamless idea", is not really cherished by us. We are informed, somewhat smugly, that India remains amongst that group of countries in the world where the press is free; "indeed more free than it ought it to be", says Rajiv Gandhi with unctuous bias; or that "Indians are not mature enough yet for a free television", as he said insultingly, on another. The apologists inform us that all this has really got nothing to do with 'totalitarian despotism', or with 'fascism', that it is just the 'security of the state' (for which read ruling coterie), and the welfare of the people, that motivates our government. Maybe. We also accept that the "process of balancing", in society "requires constraints to be imposed", but what our government is doing is not that, it is demonstrating, in Ronald Dworkin's words, a "corrupting insensitivity to the very concept of liberty, a failure to grasp its force and place in modern democratic" societies: an inability to comprehend the very 'culture of liberty'.

To my mind, there are two absolute irreducibles for all civilised governments; that the concepts of liberty of speech, faith, conviction, and right to know (information) are amongst fundamental human rights, and that this is possible only when there is acceptance of a set of working assumptions about how these rights are to be protected; assumptions which we might term as the very basis for the creation of a 'culture of liberty'. In our case, because the government denies the original principle, therefore when the working assumptions are also taken away from us, alarm bells do not immediately ring.

The Defamation Bill, and its demise, is by now part of the current history of our times. Not so, the sacking of the Director-General of Doordarshan, or the banning of Salman Rushdie's book. It is impossible to tell why the DG of DD was sacked. Personally, accounts of shabby court intrigues accompanying this sordid tale are not of any interst to me. No so the aspect of an undeniable principle, a question that will just not go away. Is broadcasting over radio and TV to be a controlled activity? Or ought it to be governed by self-restraint? The only, and true litmus test of civilised societies. And if we are not this last, ought not we to at least aspire and work for attaining that status?

My dismay is at our near supine acceptance of a total contravention of the principles of liberty, the fundamental right to know, and all because of the "interfering bossism" of our government which does not show the slightest concern for the loss that our nation suffers in consequence. The harm that our government causes to the intellectual integrity of our country is then the other great loss; yet, all along propaganda is let loose that all this actually amounts to an improvement in the 'moral health' of our country. Under the maladministration of this corrupt and puerile government?

As for Salman Rushdie's 'Satanic Verses', I possess a copy of it and am in the process of reading it. I am an admirer of his writings. I delight in the acclaim that he has won for himself in the world of English literature because I consider him an ambassador of Indo-English creativity. Of course, our government must balance competing interests, sensibilities, and the demands of different sections of our public, and only then choose such policies as would best subserve the collective. But, there are two aspects of the banning of this book which are profoundly disturbing: the first, that it was banned, without having been officially examined, or without having even been read by the 'banners'. (I cannot imagine Sardar Buta Singh burning the midnight oil in such a pursuit.) It is beyond belief, how any civilised government can ban a publication merely on hearsay, for that is what it amounted to, without even going through the motions of establishing the rights or wrongs of 'public good' in this regard. What would, (or ought), our reaction be if instead of banning, a command had suddenly descended from above, that 'Satanic Verses' (without having been read or examined) was henceforth to be compulsory reading for all BA students, all over the country? Outrage, and justifiably so. That is precisely why its arbitrary banning is also so unacceptable. The other, gravely disturbing indicator, is the prompt electoral reduction of an issue that involves liberty, and reverence for creativity, indeed for literature. Comments are now offered that the unusual alacrity with which our government acted in this regard was motivated only by shallow considerations of the arithmetic of the ballot box: patently yet another example of how politics, and the manner in which we currently practise it, is likely to destroy us as a nation. There is a moral here somewhere — not just that liberty is seriously ill in India, but that the virus of this dengue is being spread by our own politicians: of the ruling party's kind, and of the oppositional variety.

I am reminded here of what Ronald Mutch says in a recent issue of the Listener, while commenting on the state of Saudi Arabian Television. He recounts that there was a major furore caused in that kingdom when a religious leader, Sheikh Abdulaziz bin Baz, denounced a female newsreader of Saudi TV as "inflammatory in appearance". She was moved, though I would desist from going into what Ronald Mutch thinks about the TV looks of this poor lady. Subsequently, however, chancing upon Sheikh Abdulaziz's own religious programme on Saudi TV, Mutch suddenly discovered that the complaining Sheikh was actually blind. Is there not something about the blind leading the blind?

Bangla floods: nightmare continues

The international impact of this year's Bangladesh floods was far greater than their reverberations next door in India. While it was a front page story in Europe, the subcontinent rarely gave it more than a few inches on one of the inside pages and it was rarely accompanied by any serious background or analysis. Perhaps it is more difficult to rouse people's interest in the misery of their neighbours — after all, it is pretty difficult even when it comes to fellow Indians.

At the more exalted levels of South Block, there is also exasperation at the antics of General Ershad, not to mention the equally troublesome opposition ladies who insist on playing the anti-Indian card whenever convenient. The Farakka barrage obviously affects the flow of the Ganga in the dry season but all parties in Bangladesh persist in the myth that it somehow makes things worse in the rainy season. The latest embarassment to India is the attempt by Bangladesh to regionalise the issue at the United Nations rather than simply keep it as a cosy local affair. There is a vast and growing gulf between the two neighbours because it has not sunk in here how parlous the situation is for Bangladesh. No one has any notion of the difference in scale of this year's floods. More than three quarters of the country was submerged and from a helicopter it resembled nothing more than a muddy inland sea. It may make it easier to comprehend if one imagines all of India under water save for odd peaks in the north and north-east and part of Madhya Pradesh.

The construction of a canal linking the Brahmaputra to the Ganga may make sense from an agricultural point of view but as a solution to the flood problem, it is meaningless. During its annual peak, six million cubic metres of water cascade into the Brahmaputra every minute, which is enough to swamp three square miles in three feet of water. It is virtually beyond the capability of man to control, let alone channel, such huge torrents of water. The World Bank is currently working on the construction of a large bridge across the Brahmaputra which requires dredging of thirty million cubic metres of silt for one and a half miles upstream simply to keep the river within its banks. Even if you forget about the cost of the bridge, this dredging operation alone will cost us $80 million (approximately Rs.112 crores). There are no dams on the Brahmaputra because it is doubtful if it would be economically or environmentally feasible to erect such a huge structure. To give you some notion of the formidable problems facing Bangladesh, remember that the Brahmaputra is only one of the three river systems that drain into it.

International experts have identified at least seven sites in Nepal where significant amounts of water could be held rather than being dumped into the Ganga. However, the cost of these dams would run into tens of billions of dollars and this too in one of the most seismically unstable regions of the world. Then of course there is deforestation which not only allows more water to drain down the hillsides but adds to the estimated 1.2 billion tonnes of sand and silt that passes through Bangladesh.

INTERNAL PROBLEMS

These are only the external factors affecting the floods in Bangladesh. There are also significant internal problems caused by poor dike construction and the unplanned erection of roadways and levee banks which obstruct the free flow of water. One simple solution is to incorporate floodways into new road projects to enable water to escape rather than bank up and burst through at a later stage. However, these practices are highly unpopular because they result in the road being cut to traffic for a long period of time. Then there is the large "food for work" programme in Bangladesh, which provides useful extra funds to corrupt local officials but also wreaks havoc on the orderly flow of flood waters.

So what can be done? Probably nothing. No one seriously imagines that hundreds of millions of trees are suddenly going to be planted in Nepal and India or that a dozen mega-dams will miraculously get the green light because of concern about Dhaka's flood problems. No, Bangladesh cannot expect any regional approach to its problems because India will stop at nothing to avoid the nightmare of its neighbours ganging up and collectively challenging its power. If you don't believe me, look at the ineffectualness of SAARC. There is simply no feasible solution short of removing one third of its population from the worst affected areas.

Last year, Bangladesh suffered negative growth and this year it will be the same. There is no sign of any decrease in the population which expands by nearly three million annually.

Some water experts in Bangladesh believe the only solution is to more or less ignore the areas of the country where flood waters exceed ten feet annually and simply concentrate on those areas where it is less than five feet. The determining factor about whether or not this drastic approach is applied to Bangladesh will be how critical next year's floods are.

Bangladesh is already in danger of becoming an aid junkie but if the floods continue to worsen, the rest of the world will simply lose interest and thus force the region to cope with catastrophe.

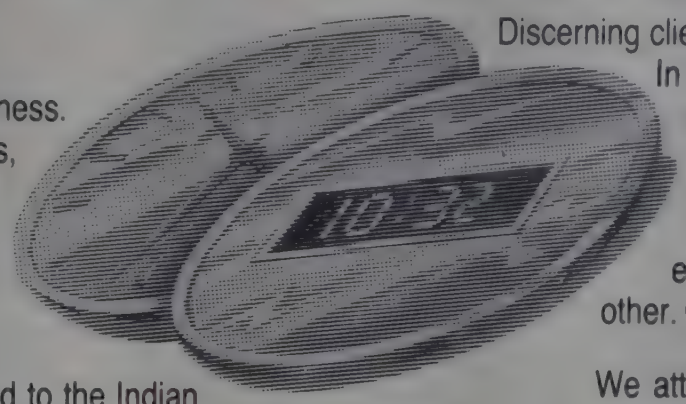
At BPL, we strongly believe that what you need in telecommunications and what you get should be one and the same. No compromise. So when you buy an EPABX, we make sure you get just the one you need. In Analog or Digital. We make both. Customized to suit your needs and budget. We also offer you over a dozen models. Plus, special packages for hotels and banks. And networking solutions for private business communications over leased P&T channels.

We can. Because our experience in telecommunications goes back a long, long way. More than 16 rich years. Manufacturing, installing and maintaining. Shining with many an enviable precedent. From Power Line Carrier Communication to PAXs and EPAXs to EPABXs to Networking. Each one a telling proof of our ability to understand user needs and come through with cost-effective solutions.

Electronics: Our Only Business

We could. Because electronics is our business. Our only business. Since 1963. And in 25 years, we have covered quite a wide territory in it. From professional to consumer electronics. Computers to telecommunications. And equipped to excel in all.



Like a mature R&D to identify and respond to the Indian needs, especially in telecommunications. Coupled with integrated manufacturing facilities that make all the critical components in-house. So exceptional quality is ensured all the way. And a large, modern plant that guarantees excellence through an incomparable range of the best in hi-tech machinery.

Like a Multi-layer Professional Grade PCB plant with Through-hole Plating facilities. Plastic Injection Moulding. Genrad In-circuit Component Tester. Ageing Chambers. And many more.

The Best Prefer The Best

So at BPL, we manufacture the best communication equipmer From 4 to 4000-line EPABXs to Push Button Telephones. **The bes in the Indian business have settled for our range. American Express, Bank of Tokyo, Berger Paints, BHPV, Blue Dart, Canara Bank, CMC, Colgate Palmolive, Deccan Herald, FICCI, FSL, Grindlays Bank, HAL, Hindustan Cocoa, Hindustan Lever, Hongkong Bank, Indian Bank, Ion Exchange, Johnson & Johnson, Lipton, Madura Coats, SAIL, The Hindu... just to name a few.**

Discerning clients satisfied enough to place repeat orders. In fact, **1 in every 3 orders is a repeat order.** All relying only on BPL when the market place is awash with innumerable brands.

Naturally, today we have more electronic exchange installations countrywide than any other. **Over 650. With over 28,500 lines.**

We attribute our growing goodwill in the EPABX market to our comprehensive approach. R&D, in-house manufacturing, extensive product range and countrywide maintenance. An approach time-tested and refined by our long years in telecommunications. So, to all your questions in telecommunications, there can be just one reliable answer: The BPL Answer.

OFFERING A COMPUTER PROGRAMMER FOR Rs. 2600/- ~~PER MONTH~~ LIFE LONG.

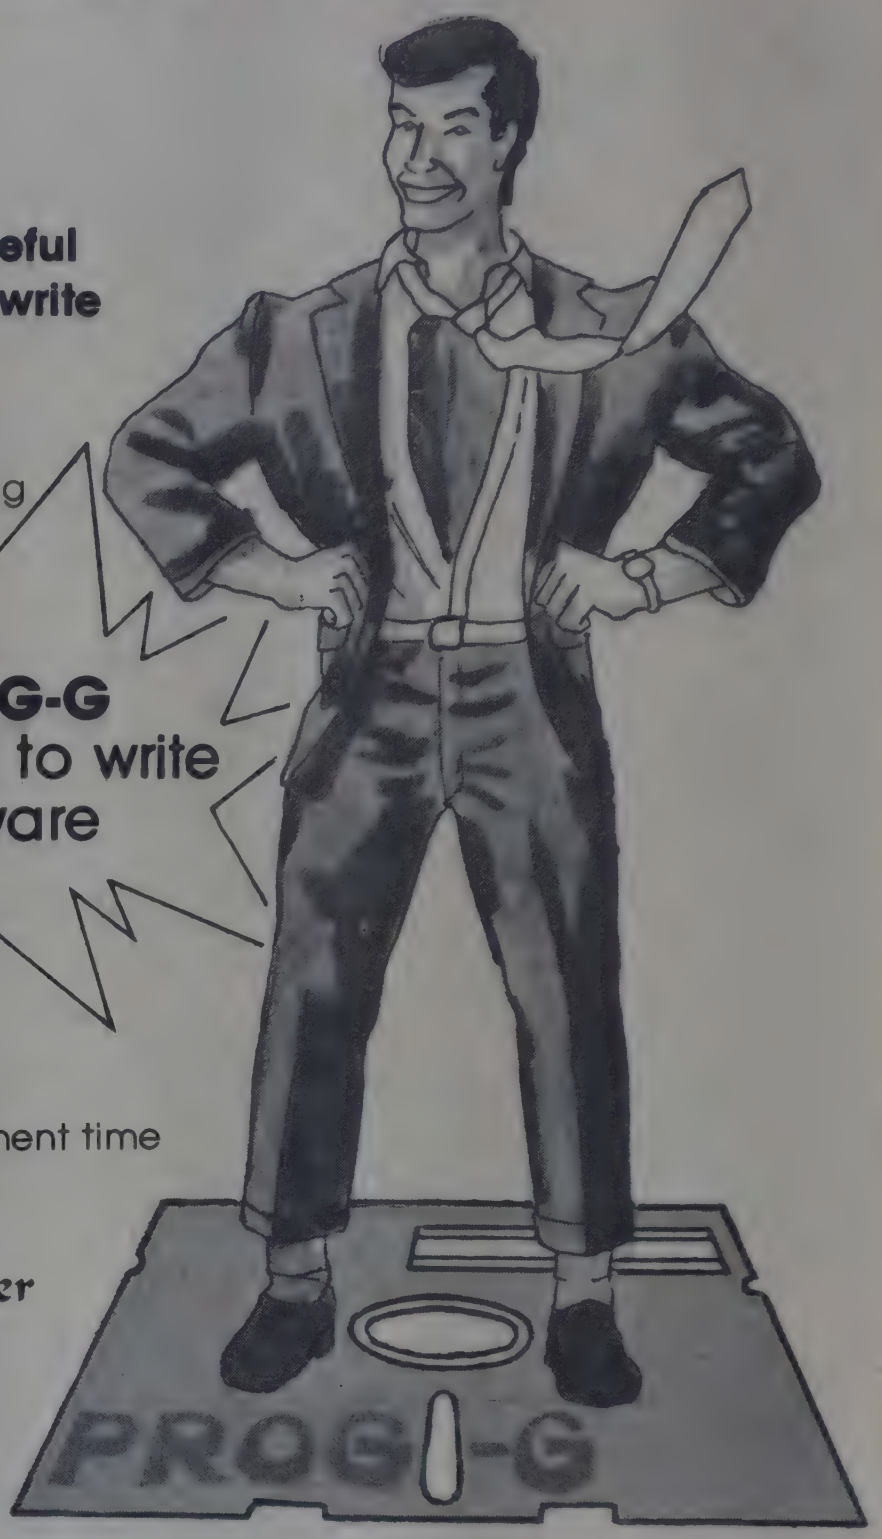
ANNOUNCING PROG-G

An unprecedented highly specialized and useful electronic computer programmer, which can write computer programs for you.

Now with PROG-G your dependence on undependable Computer Programmers is reduced to zero. If you are using a PC, PC/XT, PC/AT computer you can utilize PROG-G

PROG-G is capable of generating the programs in dBASE III, dBASE III+, Clipper and Fox Base. The range of programs which can be generated by PROG—G includes
menu programs,
data entry programs,
report generation programs,
file matching programs

PROG-G
Software to write software



- Generates bug free programs in seconds.
- You don't have to be a programmer to use it.
- Enhances the productivity and reduces the development time and cost.

The world of computer programming will never be the same again.

ANAND MAHINDRA

From India with love

The officer at the immigration counter stares hard at your face and then at the photograph on your passport, looking suspiciously for telltale signs of artifice. His unwelcoming face repeats this up and down motion almost endlessly, betraying little concern for the lengthening queue of frustrated disembarkees. The time spent at immigration is eventually irrelevant since it is more than two hours before the conveyor disgorges the passengers' luggage. Noncommittal officials shrug off the delay as a consequence of a shift-change. Downtown at the hotel, the bored reception clerk flings the keys at you with the admonition that if you wait for a bellboy to take your luggage to the room, you will miss dinner at the restaurant which closes in five minutes. It turns out that dinner was well worth missing anyway. Back in the room, all attempts to put through a long-distance call without a one hour delay are rebuffed by the operator's hostile silence.

The next day, the manager of a state-owned electronics factory takes you on a desultory tour of his plant. The dinginess of the building and the obsolete equipment make the experience reminiscent of a visit to a museum. The lunch-break at this factory probably spills into tea-break, because very few people are visible. Yet hordes of enthusiastic workers emerge noisily the moment it's time to punch out.

Undaunted, the manager proudly announces that his factory has doubled its production every five years and will continue to do so. He is convinced of the reliability of his projections because his main customer is another state-owned unit which guarantees the offtake of his output. The possibility of product obsolescence within his five year horizon does not seem to cause him much concern. Only output is crucial, and workers must be motivated to give of their best. Errant workers are given a warning to improve their performance. And what then? Well — a second warning and naturally a third and then a fourth and so on *ad infinitum*.

At the ministry, government officials seem even more fuzzy about their plan targets or the existence of any overall strategy. The most commonly employed phrase is, "the policy is yet to be given finishing touches." And while they fiddle, production shortages are threatening the supply of vital industrial raw materials. But this only implies that a foreign trip (via Paris, of course) will be necessary to arrange for the import of the missing inputs.

So what else is new? Nothing, if this were simply another collection of anecdotes about the functioning of the Indian political economy. The difference is that these happen to be snapshots from a recent trip through the Soviet Union. (As they say in the movies, any resemblance to situations or characters in India is unintended and purely coincidental.) The Russia in these snapshots is not the one projected by that country's mighty propaganda machine, in which beaming workers toil and sweat productively for the good of the proletariat. Neither is it the Russia which is the current darling of the Indian media — with images of dedicated, victorious olympians and an enthusiastic population marching to the visionary drumbeat of Mikhail Gorbachev. It is the good old Russian bear, intimidatingly large, yet phlegmatic and inefficient, suspicious by nature and resistant to change.

Gorbachev intends to make the bear more fleet of foot, but his program of *perestroika* has been insidiously slowed down by the hordes of bureaucrats and managers who actually operate the country's creaking administrative machinery. In Moscow, Russian language copies of Gorbachev's manifesto titled *Perestroika* are unavailable; people whisper that the conservative opposition has cornered all available copies so as to prevent the book's wider dissemination.

A friendly translator who described herself as an "intellectual", helpfully offered an explanation for this deep-rooted resistance. According to her, senior bureaucrats and managers had hitherto been leading a fairly contented existence. Corruption had padded their pockets and their lifestyles and even the much-coveted foreign tour was within their occasional reach. And all these rewards were received without any accompanying pressure on them to demonstrate some standard of performance at work. The performance of a company, for example, was confined within the boundaries set by controlled input, resource, and output prices which naturally resulted in the diffusion of the concept of accountability.

In a rigidly socialist environment there may be no room for job-hopping, ladder-climbing yuppies, but there is also little chance of losing a job once you have it. Now, Comrade Gorbachev would have these lethargic officials show improved performance and answer for their sins of omission. As would be expected, ulcer and hypertension remedies are rapidly disappearing from pharmacists' shelves. Those were the days my friend, lament these reactionaries, as they wait breathlessly for their president to stumble. Gorbachev, however, is battling not just these shadow opponents but the entire ideological system that he's in charge of.

The moral objectives of the socialist state are virtually unimpeachable. Who can argue against the desirability of abolishing class exploitation, imperialism and neo-colonialism? Who can dare

Kiron /VB/Corp 882

to debate the merits of egalitarianism or the eradication of poverty and a more equitable distribution of wealth? Essentially, socialism sees itself as a humane ideology in which the state has a direct obligation to look after its citizens.

But any amateur gardener or child psychologist will tell you that sometimes you can have too much of a good thing. A plant with excessive shade or an overprotected child are both ultimately incapable of developing their own resources for coping with the external environment. Every parent deploys a subtle system of incentives and disincentives in order to direct a child's growth in the appropriate direction. After framing a response to these signals, the child develops his own judgemental faculties only when he suffers the consequences, or enjoys the rewards of his actions. Without this accountability, there is no earthly reason for a child to prevent the atrophy of his individual capacities.

Transporting this analogy to the workplace, it can be seen that whenever performance is immaterial, wherever an individual's desire to distinguish himself goes unappreciated and his abilities remain unstretched, the inevitable result is complacency, incompetence and suffocating mediocrity. Unfortunately, complacency is addictive; especially for those who enjoy the rewards of success despite their ineligibility.

It is not only president Gorbachev who has these foes to deal with. Post-independence India was infatuated with the notion of centralised planning, infrastructural development and the promotion of heavy industry *a la* the USSR. But along with this salad came Russian dressing in the form of an exaggerated *avatar* of the welfare state. Even if one's doctrine requires the public sector to occupy the "commanding heights", and even if one concedes that only the exchequer could have afforded the cost of establishing an industrial infrastructure at that point in time where, oh, where did accountability go? Why was there such a proliferation of laws that destroyed the mobility of labour and fuelled its cost without improving its productiveness?

The universal application of such legislation ensured that the malaise spread beyond the public sector into what is called the organised private sector. Indexed wages, mandatory "bonuses", and overprotective labour rules have contributed in no small measure to the high cost and lack of competitiveness of large Indian companies. Volumes have been written by management gurus about modern techniques such as counselling, quality circles, T-groups and their ability to motivate without intimidation. However, there is still nothing better to get a man to produce his best than the old-fashioned desire to retain his job. After all, what could be more inspiring than asking socialist workers to sweat and produce wealth that will be owned by all citizens, not just by a private proprietor? Yet the USSR hardly presents a model for emulation insofar as worker productivity is concerned.

In India, with spiralling manpower costs and proportionately lower productivity, the point will inevitably be reached when the system cannot support itself and what will follow is a cruel period of adjustment involving layoffs and even extended closure — as in the case of Bombay's textile industry. The irony is that such circumstances involve a colossal waste of resources which is what centralised planning was supposed to prevent in the first place.

Although the ideological roots of these problems can, to some extent, be traced to our Soviet neighbours, today's Russia enjoys two significant advantages over us. In the first place, its full-fledged commitment to socialism has enabled it to ensure a basic standard of living to the bulk of its populace. Human deprivation and poverty of the kind visible in India is virtually nonexistent. Obviously a tremendous price has been paid in terms of personal liberties and the freedom of expression. But, if the political and economic system is liberalised from this point on, the relatively even distribution of wealth will facilitate the rapid expansion of consumerism and an accelerated rate of economic growth.

In India, half-baked socialism has led to the notorious Hindu rate of growth. Instead of a "mixed economy", we have a mixed-up economy where special pockets of privilege have been nurtured. While government, public sector and organised private sector employees flourish, the bulk of the workforce is employed in the so-called unorganised sector where scant attention is paid to welfare provisions. The slighting of market mechanism has made us fall far behind in the race with other Asian developing countries.

Second, and more important, is the fact that *perestroika* in Russia is accompanied by *glasnost*, or openness, which encourages the exposure of old thought systems that have outlived their usefulness. This more than anything else augurs well for change and renewal. Unfortunately in India, democracy and consensus based politics is being blamed for the inability to proceed more rapidly with liberalisation, lest it be seen as an abandonment of people-oriented policies. For too long has democracy been made the scapegoat for an absence of political will.

There must be the courage, as in Russia, to forswear old roads that may not be taking us where we want, and as fast as we want. Before the Russians change so much through *perestroika* that they cannot recognise all the ideological baggage they loaded us with, lets wrap it all up and send it back to them — with love.

What does a Bombay multinational consumer product manager have in common with a Guntur spare parts dealer?

JAMNALAL BAJAJ CENTENARY

A legacy of honesty

The founder of the Bajaj group of companies was closely associated with Mahatma Gandhi and the freedom struggle of the country. From 4 November onwards, the Bajaj group is celebrating the birth centenary of this 'Gandhian capitalist', whose fair business practices have become the motto of the Rs.1,200-crore Bajaj group

Starting 4 November, with the inauguration of the Jamnalal Bajaj centenary celebrations in Bombay, the Jamnalal Bajaj Foundation commences a year-long series of commemorative functions. During this time, awards will be distributed, debates, seminars and lectures held, and books, stamps and documentaries released all over the country. On 5 November, the vice- president will unveil a statue of Jamnalal Bajaj at Pune. On 13 December, the Jamnalal Bajaj Foundation Awards for various social activities will be given away by the prime minister. There will be two new awards this year: the Jamnalal Bajaj International Award for promoting Gandhian values outside India, and the Jamnalal Bajaj Award for Fair Business Practices instituted by the Council for Fair Business Practices (CFBP).

Possibly, no other award would be more representative of the man than the fair business award, for the doyen of the Bajaj group of companies had established a legendary reputation for fair business practices during his time. In the early days, when he was running the family business of cotton ginning and pressing, depression in the cotton business had led to the practice of wetting the cotton bales in order to increase their weight. Despite the recommendations of his own munims, it is said, Jamnalal refused to resort to the practice. Instances of such principled stands in the business community were — and still are — rare.The BJ (Bachharaj-Jamnalal, initials of his firm's name) brand of cotton became synonymous with pure, dry cotton. The firm, after substantial initial losses, showed good profits in the long run.

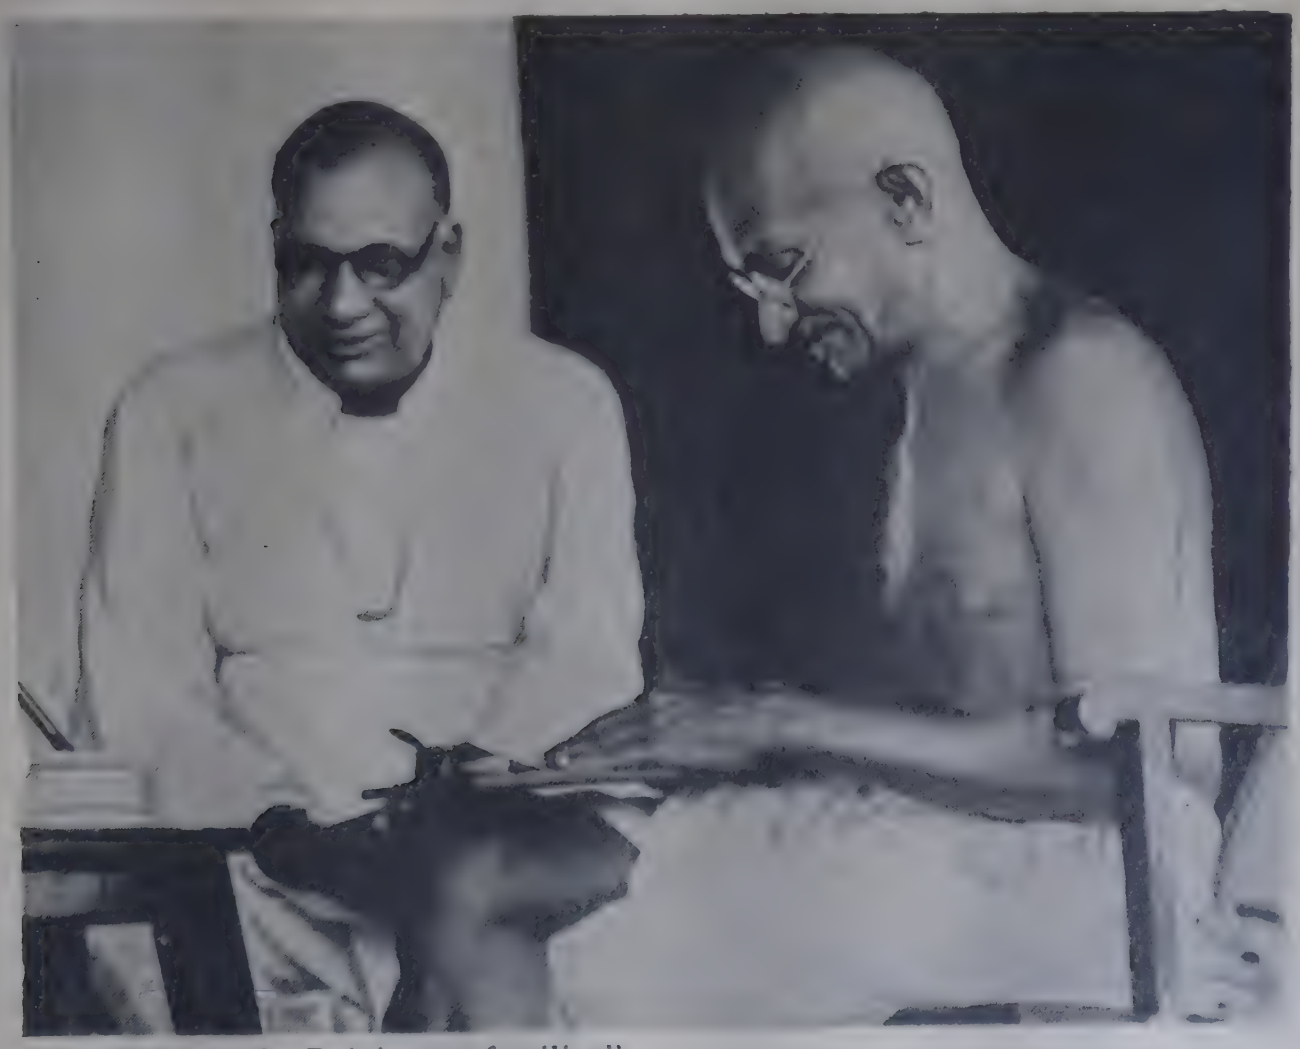
Brought up by his grandfather, Seth Bachharaj, Jamnalal had no formal education. But he started looking after the family business in 1907 when he was 18. When Seth Bachharaj died, Jamnalal inherited his business. Centered around cotton ginning and pressing, the value of the business was about Rs.5 or 6 lakhs.

Jamnalal's philantrophy is now legend. When Lokmanya Tilak wanted to start his *Kesari* newspaper in Hindi, Jamnalal Bajaj came to his help even without being asked. It was this desire to support causes he believed in that later on came to be recognised as the hallmark of the young entrepreneur.

His philanthropy, however, did not come in the way of his business profits. Nor did his strict adherence to fair business practices, as was proved in the long run. "In fact," says Ramkrishna Bajaj, his only surviving son today, "his integrity added a credibility to his business ventures that was unquestionable and unparalleled." And as subsequent events proved, the Bachharaj Jamnalal group of companies never floundered, despite "the extra-curricular activities of its proprietor".

As head of the BJ group, Jamnalal received the title of Rai Bahadur from the British, which he denounced soon after in 1920. This was consequent on Mahatma Gandhi's arrival in India; his activities in South Africa had impressed Jamnalal. He started taking a great deal of interest in Bapu's movements across the country. Soon after, Jamnalal cast his lot firmly with the freedom movement and was an active participant in Congress nationalist activity. In the process he built strong personal relationships with many of the leaders, both political and spiritual.

Jamnalal took up and even launched some constructive activities. One of the first was to actively campaign for girls' education; he started a women's home wherein the women folk of the jailed nationalists could learn and help the movement. He also advocated untouchables' entry into temples and Hindu-Muslim solidarity. All this, of course, was apart from his frequent and sizeable contributions to various causes spawned by the Independence movement. According to



"Gandhiji was the Bajaj pater familias"

biographer Shriman Narayan, Jamnalal Bajaj donated more than Rs.25 lakhs to various charitable institutions during his lifetime.

In the meanwhile, he continued to concentrate on his business activities. These included the cotton ginning, pressing and trading firms, beside a small agency that purchased and sold other goods of firms. In 1919, Jamnalal floated the New India Assurance Company with the Tatas in a bid to indigenise the insurance industry. However, later on he withdrew his participation following some differences in opinion.

The businesses were being run by trusted managers who were Jamnalal's compatriots in the freedom struggle or by relatives who were equally influenced by his philosophy. Under his supervision, the managers expanded business substantially. Hindustan Sugar Mills was acquired in 1931 and the BJ Company also took over Mukand Iron and Steel at Lahore in 1937. Yet, following Gandhi's promotion of *khadi* at the time, the company refrained from venturing into the lucrative textile industry. It also refused to take up the production of potable alcohol, a popular business among mills. "Both the policies espoused by my father are still maintained by the group," Ramkrishna Bajaj says.

Talking about the deep influence of Kakaji, as he called his father, on the entire Bajaj clan, Ramkrishna says, "The influence must have been very subtle, but strong enough to leave an indelible impression on the subconscious. The entire family was deeply involved in the freedom struggle. Our house at Wardha used to be constantly visited by great national leaders. Gandhiji, of course, was our pater familias."

Successive prison sentences and the increasing activities finally took their toll on Jamnalal Bajaj. On 11 February 1942, the patriarch of the Bajaj family succumbed to cerebral haemorrhage at the age of 53. Apart from the three main companies — BJ Cotton Ginning and Pressing Mills, Hindustan Sugar Mills and Mukand Iron and Steel at Lahore — the net worth of assets left by Jamnalal amounted to Rs.13 lakhs in cash. Out of this Rs.5 lakhs was used by Gandhiji in establishing the Jamnalal Bajaj Seva Trust.

The reins of the Bajaj group fell into the hands of Kamalnayan Bajaj who, with the help of the group's trusted managers, began to expand the family business. Del

An active participant in Congress nationalist activity

egating the running of the existing companies to managers and relatives — all of whom had shown their mettle in adhering to the group's philosophies — Kamalnayan, in persuance of Nehru's policy of industrial self reliance, entered into joint ventures or technical collaborations with leading firms like Philips of Holland for electricals and Piaggio & Company of Italy for the manufacture of scooters. Mukand Iron and Steel plant, which was lost during the partition, was restarted at Kurla, Bombay, in 1950.

Kamalnayan's acumen, foresightedness and a resolute faith in his actions soon started bearing fruit. In the sixties, despite a strong domestic market for steel, he steered Mukand Iron and Steel into the export market. When recession hit steel in the late sixties, Mukand's annual export earnings of US $ 12 million helped the company tide over the difficult period. Yet, he never lost sight of the business principles espoused by Jamnalal Bajaj. Like his father, national interests, even at the cost of business profits, remained uppermost in his mind.

The same principle still governs the Bajaj group of companies, that has grown into a massive conglomerate of 21 companies with a turnover of Rs.1,200 crores, employing more than 22,500 people. After Kamalnayan Bajaj's sudden death in May 1972 at the age of 57, his younger brother, Ramkrishna, took over as the group's head. Meanwhile, the younger generations of the Bajaj family carried on the work of expanding the companies to greater heights. Mukand Iron & Steel, run by Viren Shah, a close associate of the family, touched sales of Rs.110 crores in 1986-87. Hindustan Sugar Mills, with Shishir Bajaj (Kamalnayan's son) as its executive director, which began with Rs.4.8 lakhs in capital, showed sales of Rs.6 crores in 1985. Bajaj Electricals, managed by Ramkrishna's son Shekhar, has also shown a steady growth; sales in 1986-87 amounted to Rs.21.9 crores.

The growth of Bajaj Auto has been phenomenal under the chairmanship of Rahul Bajaj, Kamalnayan's eldest son. In the 1987 ranking of India's top private sector companies, Bajaj Auto was placed seventh in turnover, fourth in market capitalisation and second in profits. According to Rahul Bajaj, the present turnover of Rs 607 crores is expected to reach Rs 1,000 crores by 1990.

Speaking of his grandfather's principles, Rahul says: "Let me make it clear that we are not Jamnalalji. He was a saint, we are not. But in the given circumstances and the constraints that the Indian industry has to work under today, we have more or less been following his philosophy." The group that Kamalnayan Bajaj consolidated from Jamnalal's legacy adds Rs.2.4 crore to India's GNP each day.

Jamnalal Bajaj's contribution to the nation during his time and after is not easily quantified. Nor his legacy, passed on to an entire group which has grown into a huge financial empire. In a nation where post-Independence business is not exactly known for its honest practices, the centenary celebrations of Jamnalal Bajaj should make many a big business house take a fresh look at itself.

■ SHEKHAR GHOSH

Your executives can now fly to work. At ground level.

Presenting the luxury of the new Tempo-Traveller

Tempo-Traveller is the new executive perk

It offers senior personnel the comfort and status that ordinary company buses can never match – and a car-pool could never give.

A spacious interior offers the luxury of upto 15 ergonomically designed seats and large, airy windows.

There's ample room for baggage. And a high curved roof allows for greater freedom of movement.

And it has been specially built for Indian roads by Bajaj Tempo – in collaboration with Daimler-Benz, the creators of the classic Mercedes range.

As cost-conscious as it is status-conscious

The new Tempo-Traveller is equipped with the advanced 72 BHP Mercedes OM 616 diesel engine, which functions like a built-in accountant. It stretches your company's every rupee – delivering the highest level of fuel economy with the lowest level of noise.

The Tempo-Traveller even minimises other maintenance costs. Spares are cheaper and more readily available. And regular service is close at hand. Because you are backed by the 150 experienced dealers established by Bajaj Tempo over a period of 25 years.

So before you stake business capital on company buses or corporate cars, give the new Tempo-Traveller serious thought.

And let your executives 'arrive in better shape'.

BAJAJ Tempo LTD.

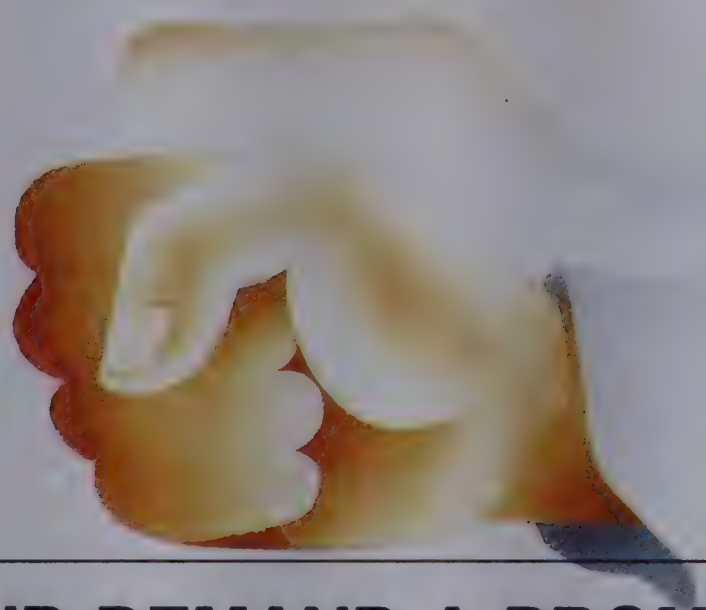
The new Tempo-Traveller.
Anywhere else, they'd call it a Mercedes Transporter.

YOU'LL RIDE A MILE FOR A PROMPT...

The PROMPT hardware is what keeps some of the top manufacturers of sophisticated equipment up front. Their OEM choice comes to you as PC, PC-XT, PC-AT, AT-386 micro computers, VME 32 minicomputers. Adding teeth to the bytes are digitisers, plotters and mouse. Clean enhancement of computing potential with no traps.

On second thoughts, you don't have to take a back-breaking ride. Just lift your phone off the hook for a more personal, user friendly contact. The numbers are 511 3377/511 3770/511 4570/512 0420. Our response will be quite PROMPT.

PROMPT + PROMPT customised software.
More to think about, less to worry.



AND DEMAND A PROMPT CUSTOMISED SOFTWARE PACKAGE

All shoes don't fit all feet. Same with computer software packages. To give you customised software packages, we've gone about it the PROMPT way. A tie-up with Mastek, one of India's leading software company, give you software that is customised to fit your requirements. Leaving generous toe-wriggling space to take care of future development.

To demand PROMPT customised software is like putting the horse in its right place. Before the cart.

Before you reach for the whip, reach for your phone for a more personal, user friendly contact. The numbers are 511 3377/511 3770/511 4570/512 0420.

Our response will be quite PROMPT.

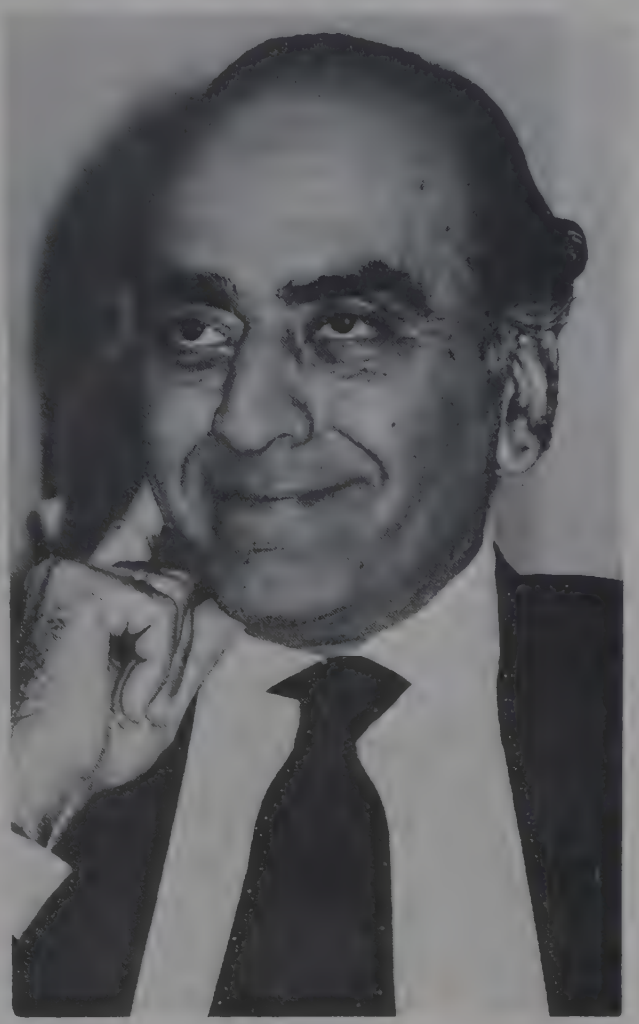
"The Indian economy can grow much more rapidly"

Moeen A. Qureshi, *senior vice president, operations, of the World Bank recently spent a week in India travelling to different parts of the country. He spoke to* Business India *on a wide range of subjects. Excerpts from the interview.*



With the recent capital increase, how do you see the World Bank's role expanding?

I think the Bank's role is likely to expand in terms of the volume of its lending operations as well as in terms of the quality and contribution of the lending operations. In terms of the volume of lending operations, the Bank will probably be lending around $27 billion or so if you include IDA operations as well. I think loans by the IBRD which are now $ 15 billion or so should be lending about $ 21 billion-22 billion in a five-year period. That's a substantial increase in IBRD's operations.

I believe that the bank is likely to do considerably more in certain areas. I think it is known that the bank has a new focus in the area of poverty alleviation; that is going to be a major thrust of the bank in the next few years. Also, I believe that the bank is going to do considerably more in the area of environment and trying to preserve and protect the environment in the developing world. My feeling though is that a substantial part of the bank's operations are going to continue to focus on traditional operations of infrastructure development, of providing resources to support the financial system which contributes to development.

In insisting on policy-based reforms and adjustment programmes, isn't the distinction between the Bank and the International Monetary Fund getting blurred?

The World Bank is interested primarily in development and in supporting development. The issue therefore for the World Bank is to determine whether the macro-policy environment is conducive to development or not. In certain countries, such as those for example that are very heavily indebted, the macro-policy environment has become very deficient in terms of the environment for sustained economic development. In those cases we believe that it is important to make some basic adjustments in macro policies in order to try to create the environment in which sound and productive investments can take place. But I do not believe that there is any conflict between the operations of the World Bank and those of the Fund.

We were suggesting not conflict but an overlap in terms of each other's functions.

There can conceptually be some overlap in those cases where the Fund is also trying to advise governments on issues of fiscal policy and on issues of adjustment policy. My experience in practice, however, has been that this overlap does not really result in any kind of conflict or in any kind of duplication of the activities of the two institutions because there is a tendency for the staff of the two institutions to be in touch with each other. In fact there is a great deal of collaboration in the form of joint missions in several countries and in discussion of areas where there could potentially be some overlap. In fact I see the two institutions reinforcing each other.

Surely one of the real problems of most developing countries is that they don't have the institutions — financial and social — to undertake development activities.

For example, you can't have a massive housing programme if you don't have the equivalent of building societies. You can't have one Housing Development Finance Corporation for the whole of India.

I agree with you, I think that there is a lack of an adequate financial infrastructure for development in the developing countries. One of the priorities that we have set for ourselves is to try to assist developing countries in putting together and building this kind of infrastructure. In fact I expect financial sector development to be a very important part of our priorities. I don't remember exactly but I believe that as much as 10-15 per cent of our total lending operations will be dedicated to this.

In the past we have essentially used development banks in these countries to channel resources for industry and for the private sector. In the future our focus is going to be on institutional development, on trying to see that there is a sector that intermediates effectively and efficiently between savings and investments.

But surely, to build a network of roadways, for instance, you must have some authority or institution or mechanism, which can raise monies from capital markets and charge tolls.

Let me make a distinction. It's true that institution building has always been an important part of the Bank's activities in the past, irrespective of the sector. The distinction now is that we are looking not only at an institution in isolation but also at the general environment in which that institution is operating. So when I talk of financial sector development we are likely to look at the whole range of policies, inter-state policies, trade policies, regulatory policies that affect the functioning of these institutions. So we will be concentrating in other words, on the whole range of policies plus the specific institutional aspects that are required for healthy development of these institutions.

You gave a good example. I think in the area of highways and roads, the Bank's

role in institutional development has been very important. However, we have not tried to push particular approaches that are not particularly acceptable to individual governments for one reason or the other. For example, we are beginning to urge governments which do not have enough resources to develop transportation channels and facilities in the public sector to try to bring the private sector in. One of the ways you do that is by toll roads and by developing the kind of institutions which in fact can operate on a profitable basis by taxing directly or indirectly through various types of instruments, the use of those services.

Do you see governments, whether it is the Indian government or other third world governments, accepting these new paradigms and methods of regulation? Will they cut back direct day-to-day interventions and concentrate on policy and regulatory issues?
Yes. I do notice a major change in the attitude of developing country governments towards the role of the private sector and towards greater reliance on the private sector in undertaking the task of development. Previously it was felt that since the private sector was in an early stage of development, the government should take an interventionist attitude, try to do everything and that in time the private sector would develop. This has in fact stifled the private sector. Now many governments are beginning to realise that the public sector has expanded excessively and that it is important to allow the private sector to unleash its own energies and try to undertake some of these tasks.

China with a completely different social and political system has emerged as probably one of the biggest borrowers from the bank. How do you see the Chinese dealing with these issues that you have just raised?
China has experienced a decade of very rapid and impressive economic and social development. It has achieved a growth rate of about 10 per cent over the last decade with a growth rate of about 8 per cent in agriculture. I do not recall in the history of economic development any other country that has had such an upsurge in development over so short a period. I believe that a very important reason for this accelerated growth in China has been the government's policy of liberalising its economy and opening it up to trade as well as to a flow of investment.

The most important aspects of deregulation and liberalisation have been within the domestic economy. In agriculture, for example, a new system of incentives , has stimulated agricultural production and also accelerated the growth of rural industry. Similarly in the industrial sector they have tried to provide incentives for more efficient management of resources. All of this is beginning to work. Let me not say, however, that the Chinese are not facing problems. In fact, recently their economy has got somewhat overheated and they are experiencing a high rate of inflation. They have decided now to slow down some of their reforms in order to gain time for consolidation.

Do you believe that the government of India has some lessons to learn from the Chinese in the last ten years?
I think everyone has lessons to learn from the Chinese experience. It is not possible to merely translate the experience of China to Indian conditions. But no doubt the one lesson that everyone can learn from China is that it is important to provide incentives and that providing those incentives will yield results.

But in your view, is the Indian economy also capable of achieving a rapid, sustained growth over the next ten years in a similar manner?
It is my firm conviction that the Indian economy can grow much more rapidly than it has grown in the past. Indeed, over the last four to five years it has grown at a higher rate than in the previous 25 years. That in itself has been an impressive achievement and I believe that an important element in that more accelerated growth has been the process of deregulation and the process of debureaucratisation if I may call it that, that has taken place during this period. There have been more incentives for industry and for business to try to make more efficient use of resources. And if this trend can be accelerated I am sure that the growth rate also can be speeded up.

Currently thousands of farmers are camping in Delhi asking precisely to be allowed to move their wheat all over the country without any restrictions. Apart from industry, has not agriculture suffered by excessive regulation?
I would not say that agriculture has suffered the most by regulation. Yes, there are regulations in agriculture but don't forget that it is in agriculture that the most spectacular achievements have been made in India. There is room, of course, for further deregulation in agriculture as in other parts of the economy.

Do you think most third world countries are heading towards a debt trap in the process of liberalisation?
There are many countries where the debt service today, despite debt restructuring, still accounts for 5-6 per cent of the gross domestic product. This places a very heavy burden on their resources and on their foreign exchange prospects. I do not believe that the developing countries are headed for a debt trap. I believe there is need to devise new instruments and new arrangements which will enable the developing countries to do a number of things including first, adjustment programmes, and strengthen their own financial positions. Two, to try to restructure their debts on lines that will not put an excessive burden on their foreign exchange availabilities and three, provide incentives for capital flows to enable them to undertake their own development. But unless and until the developing countries can grow, no solution to the debt problem can be found. In many parts of the world there is very little growth and therefore it is very important to create those conditions of economic growth in order to solve the problem.

You mentioned environment earlier, but historically has not the World Bank had "a reputation" for supporting environmentally damaging projects, large dams, gigantic petrochemical projects etc? How can we maintain environmental quality in the developing world?
I think this reputation, if such a reputation exists, is ill-founded, not founded on fact. The World Bank, in my view, has pursued generally sound environmental policies. In many cases, at least those that I have looked into, the fault has not been of World Bank policies but of inadequate adherence to those policies by governments. In any event there is a much greater consciousness of environmental requirements now on the part of the developing world. On our own part we have learnt many lessons in the environmental field over the last decade. We know a lot more about what can be done to alleviate some of the environmental concerns, and we are now devoting a great deal of analysis and attention to this.

An International Hotel that values guests as individuals.

Ramada Inn Palm Grove, Bombay

Hello Ericson.
I'm at the Palm Tavern. No hurry.
I'm being well looked after. And
besides, I'm early.

Dinner at the Brass Grille, is it?
That's great! The food is superb. And
there's live music too. Fantastic, the
right place to celebrate our successful
negotiations over champagne.

I agree with you. This is a really
good 5-star hotel at most affordable
tariffs. Yes — it's got every facility.
I'm shifting here myself tomorrow.

AVIATION SAFETY

Let's face the truth

The crash of Indian Airlines flight 113 at Ahmedabad, was only waiting to happen. It comes after a series of near misses in the last two years and is a consequence of the airline overutilising its fleet on the one hand and failing to upgrade its maintenance facilities on the other

One of the tragic sidelights to the crash of Indian Airlines flight IC 113 at Ahmedabad on the foggy morning of 19 October is that dependents of 22 of those who perished in the disaster will not receive the Rs.2 lakhs compensation due to them. They were travelling on tickets bought in the name of others. Most of them were business travellers who did the Bombay-Ahmedabad shuttle frequently and an eventuality like this one would have hardly ever crossed their minds. They were used to frequent delays and cancellations, but as far as safety went, Indian Airlines had at least an impeccable outwardly image — the last crash with fatalities occurred more than ten years ago.

But then nobody had ever told them that:

- Despite Ahmedabad airport being one of the busiest in western India, with more than 17 landings a day, it still lacks a proper instrument landing system which would have helped the pilot on a foggy morning as on the day of the crash. The ILS usually comprises two parts — the localiser transmitter to determine an aircraft's horizontal alignment, and the glide slope transmitter to determine its vertical alignment. However, at Ahmedabad, only the localiser was in position.
- Flight 113 was commanded by Capt O.M. Dalaya, who had nearly 500 hours of flying experience on Boeing 737s. But his co-pilot Deepak Nagpal was a virtual greenhorn. He was one of a batch of pilots that Indian Airlines inducted straight from the Flying Club. More importantly, he and his batchmates did not go through the old fashioned and time-tested procedure of flying on smaller planes like Turboprop Avros and Dakotas before being put on to the jets. They went directly to the Boeing 737s. Nagpal had 250 flying hours of experience on Cessnas and Pushpaks. He joined Indian Airlines as an apprentice pilot last year, trained on the simulator for six months, became second officer on a Boeing 737, and was appointed as first officer two days later. He had a total of 211 hours of experience on the 737.

The Ahmedabad crash: it was only a question of when it would happen

● The 737 they were flying was the oldest in the Indian Airlines fleet, had logged 43,000 flying hours, and made 47,000 landings in the last 18 years. In recent times, it had been flying more than 3,000 hours every year. According to a Public Undertakings Committee (PUC) report in May this year, the annual utilisation of a Boeing 737 under current conditions should not be more than 2,700 hours. Just four days before the crash, on a Bombay-Rajkot flight, this plane had developed a hydraulic leak. Two days later, on a flight from Coimbatore to Bombay, it developed starboard engine trouble and had to be grounded for a day.

Poor landing facilities, novice pilots, overused aircraft flying on tight schedules and maintenance problems all point towards one fact. A disaster of this kind was only waiting to happen. "It is only luck and god that prevented this from happening before," says a top aviation specialist. A study of Indian Airlines' flight records in the last two years provides a good idea of where this national domestic carrier was headed:

● A day after the Ahmedabad crash, an Indian Airlines airbus on the Madras-Singapore flight had to make an emergency landing at Madras after its hydraulic systems — both the main and the back-up — failed.

● Between 1 September and 20 October this year, there were as many as 52 groundings of Indian Airlines aircraft all over the country.

● On 19 June this year, a Boeing 737 landed on its belly at Delhi's Indira Gandhi airport after the pilot forgot to open the undercarriage. The plane had to be junked.

● On 1 November last year, 53 passengers on a Madras-Bangalore flight had a miraculous escape when their plane landed on its rear wheels after its nose wheel failed to open up.

● On 6 September last year, a Vishakapatnam bound 737 with 123 passengers on board, including the AP chief minister N.T. Rama Rao, had to make an emergency landing after its wings got jammed.

● On 20 May last year, an Airbus on its way to Hyderabad from Calcutta had to be abandoned after its undercarriage caught fire on the runway.

● On 15 February last year, a Boeing 737 on flight from Hyderabad to Vishakapatnam had to land under emergency conditions after one of its wheels fell off.

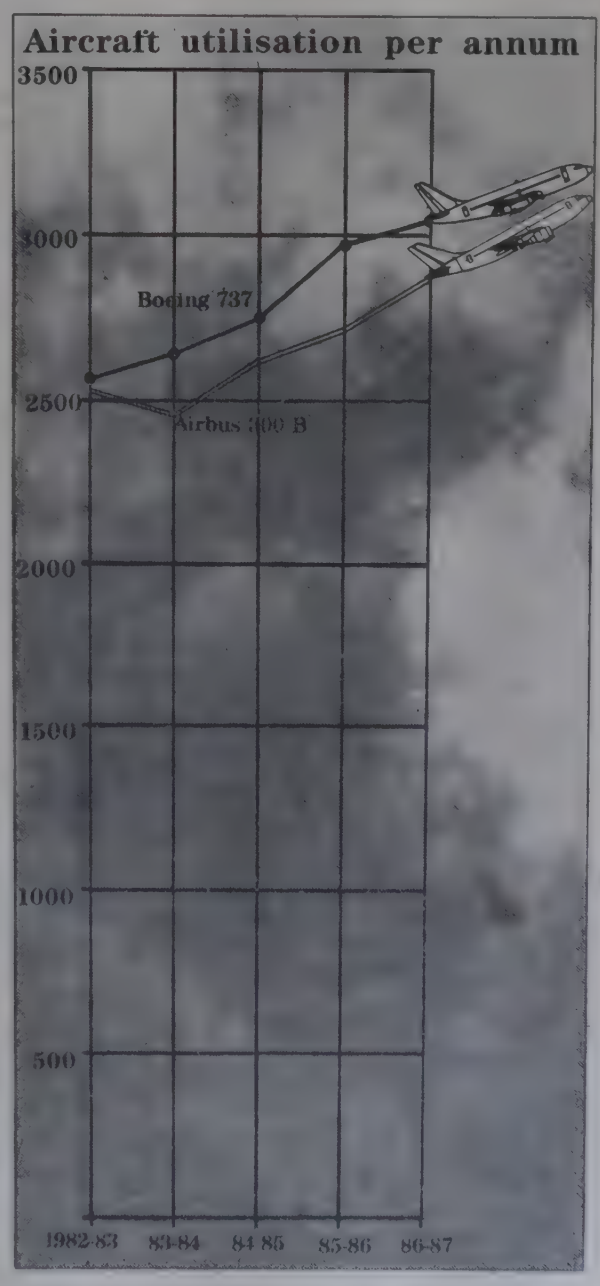
The list is a long one, but has never been officially released by Indian Airlines. The corporation has stuck to its policy of completely ignoring these news reports. In fact, managing director Gerry Pais and minister of civil aviation Shivraj Patil refused to be interviewed on the subject of the Ahmedabad crash. In contrast, when a Boeing 747 belonging to the state-owned Japanese airline crashed killing 520 people near Tokyo three years ago, its president, Yasumoto Takagi, resigned immediately, owning moral responsibility, whatever the cause. An enquiry later proved that the crash occurred on account of a carelessly riveted bulkhead, a responsibility of the plane manufacturer.

GROWING COMPLACENCE

Unlike Air-India, which is being forced into overhauling its planes in the face of stiff competition, Indian Airlines has been complacent because it has no competition. The airline doesn't have to really market its service; passenger traffic in the country is growing at the rate of 12 to 15 per cent a year. Its fleet size has remained virtually constant for many years; as a result the corporation's revenue has shot up from a mere Rs.210 crores in 1980 to Rs.828 crores last year. It carried 10.3 million passengers this year, and made a record profit of Rs.75.15 crores. Every day, as many as 31,000 people fly Indian Airlines on the 160 domestic flights.

But this year, the airline also recorded one of its poorest performances on the passenger service front. Apart from the Ahmedabad crash and many near misses, in July it achieved its lowest on-time performance in many years in the western region which accounts for 40 per cent of its total revenue. Statistics show that out of 1,240 flights out of Bombay that month, 808 were delayed. Only 35 per cent of the flights left on time. Of the 808 delays, 450 were behind schedule by 1 to 11 hours; apart from this, one flight was cancelled on an average every day. It was found that 55 per cent of the delays were due to engineering snags. On the whole, flight delays and cancellations increased from 20 per cent in 1981-82 to 46 per cent in June-July 1988.

"All this is nothing but the cumulative effect of years of poor management, the direct consequence of a monopoly service," says an aviation expert in Bombay. Adds a former director of Air- India, "While aviation in India has matured and more and more people are taking to air travel, the airlines unfortunately have remained totally immature."



SUCCUMBING TO PRESSURES

The management failure in Indian Airlines, observers say, is of two kinds. One, the lack of planning within the organisation and the other, succumbing to large scale political interference in its day-to-day affairs. These two factors have combined over the years with some dangerous consequences.

Take for example the capacity utilisation of the airline's 47 aircraft, which has a direct bearing on their maintenance and passenger safety. The airline keeps on adding more and more short haul flights to its schedule every year, many of them on the same routes on which existing flights make losses. This is done largely on account of pressures from politicians who wish to have their constituencies well-connected by air. Last year, ten new routes were added to the Indian Airlines schedule and the year before that, seven. While these routes may be large in number it is also well known that Indian Airlines has the bulk of its sales in connecting the metros.

These route additions are generally

There's more to Spartek Floors than just good looks...

SPARTEK

52 CHAMIERS ROAD, MADRAS-600 028.

India's largest selling ceramic floor tiles

They are stain-proof too!

Take a second look and you'll discover that Spartek Floors are also...

• Absolutely scratch-resistant • Safe and anti-slip • Fire and heat resistant • Easy to maintain and clean • Simple to lay even on existing floors and ready for live-in use within 48 hours

• Various size options — 305 × 305mm, 305 × 203mm, 203 × 203mm, 203 × 101.5mm, in a range of dream shades.

All this plus the breathtaking beauty that's simply incomparable.

Spartek Floors — Good-looking, hard-working and a lot of good sense.

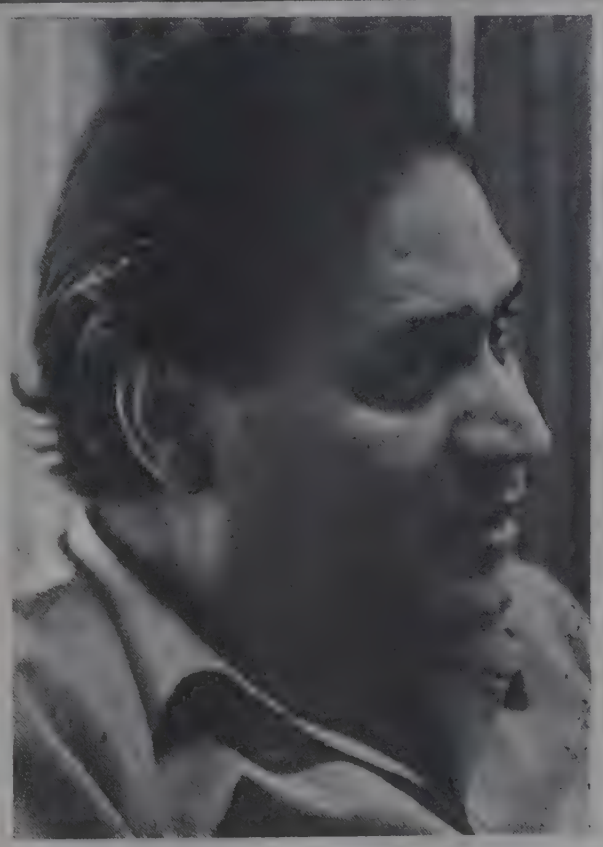
short-term decisions which are not part of an overall flight plan. And there is rarely an increase in the number of aircraft to take care of the new schedules. As a result, aircraft tend to be over- utilised. The Airbus utilisation per year, for example, jumped from 2,477 hours in 1983 to 2,887 hours last year. Even worse, the Boeing 737 utilisation shot up from 2,652 hours in 1983-84 to 3,173 hours in 1987-88, one of the highest in the world. This leads to a very tight scheduling of the flights in the existing system and leaves very little leeway to take care of unexpected snags. Thus if a flight is delayed in one sector, it has a cascading effect on the punctuality in other sectors. This has become a widespread phenomenon of late and very often throws the entire flight plan into disarray.

More importantly, the high utilisation of the aircraft has a telling effect on the airline's maintenance system at airports all over the country. More than half the 24 737s that now operate on Indian Airlines routes are over ten years old, making them even more prone to snags. Besides which, the current maintenance system has been for a number of years operating for aircraft that fly between 2,600 hours and 2,800 hours annually. Suddenly, in the last two years this figure has been pushed to beyond 3,000 hours.

Unquestionably, the maintenance infrastructure should also have been upgraded to accept this kind of utilisation,

"Like anywhere else, there is scope for improvement"

Rahul Bajaj *has been the chairman of Indian Airlines since 1986. He spoke to* Business India *over the telephone from his Bajaj Auto office in Pune*



On possible reasons for the crash:
That will be clear after the report by the commission of inquiry. On the day of the crash I flew into Ahmedabad from Pune. Senior IA officials from Delhi and the minister joined me. Currently the reasons for the crash are unknown. It would be premature to comment at this stage.

It is obvious that visibility at Ahmedabad airport (and its vicinity) on that fateful day was very poor. Cars which left for the crash site around 7.30 am found it difficult to reach the place. We are also looking into the adequacy of landing facilities at Ahmedabad airport. One does not know anything at this stage but steps should be taken to upgrade the facilities if they are found inadequate.

On the US (FAA) warning that old Boeing 737s should be checked thoroughly:
After the crash of an Aloha Air Boeing 737 the FAA sent out a report that old (737) aircraft which had made over 55,000 landings should be checked. At Indian Airlines we have five 737 aircraft with about 45,000 landings each behind them. This is well below the FAA limit. In any case we have carried out checks and all the aircraft were found airworthy. The age of an aircraft could be ten years or 40 years but if it is properly maintained it can still earn revenues.

On reports that Indian Airline's maintenance record is shoddy:
This is a touchy issue. Everybody has the right to point out flaws in our maintenance procedures — if this is done with the objective of assisting us. The safety aspect is the prime consideration for any maintenance staff. No corners are cut. But as I keep telling my executives at Bajaj Auto, there is always tremendous scope for improvement. I am not a technical person and as part-time chairman of IA there is only so much I can do.

On reports that Indian Airlines is cutting corners and compromising on safety:
There are always disgruntled elements in any organisation. Hence reports have appeared in the press. But nothing should be done to frighten passengers or demoralise the staff at Indian Airlines (and believe me, at the moment we are all demoralised). Let's look at a simple maintenance procedure. Before any aircraft leaves the ground a minimum equipment list (MEL) has to be okayed. Otherwise the aircraft cannot fly. In the US, FAA regulations are stringent. We have to see whether Indian Airlines' procedures (and some of them can even be mere formalities) are adequate. I am not talking about this particular crash but irrespective of its causes we should change.

On whether the airline (facing a shortage of pilots) is hiring greenhorns for the job:
We faced an acute shortage of pilots two years ago, not anymore. But with the induction of 19 A-320 aircraft starting from May 1989 we will be needing a large number of pilots — at least 250 of them. There are three sources of hiring pilots — the flying clubs, the Indira Gandhi Rashtriya Uran Academy (IGRUA), and the IAF. Recruitment from the IAF is not working out because IAF pilots want to come in at a certain level of seniority. But the pilots' association is against this. Flying clubs and IGRUA are the only alternatives. Our selection procedures for pilots from both these should be uniform — we should not favour either. I believe the training of pilots at IGRUA is very good — there is no better place.

What we should do is pick up trainees from both the places and extensively teach them at our training establishments. But I would like to emphasise that IA's selection procedures are rigorous.

On Indian Airlines' poor public image:
We welcome criticism in the press. It brings several things to our attention. We recognise that as in any organisation there is scope for improvement in IA too. But nothing should be done to create an atmosphere of fear among flying passengers.

5TH CHORAFAS SEMINAR

ON

USING EXPERT SYSTEMS IN BUSINESS
STRATEGIC PLANNING FOR COMPUTER IMPLEMENTATION
STRATEGIES FOR DATA COMMUNICATION IMPLEMENTATION

Dr. Dimitris N. Chorafas
Scholar, International Consultant,
Professor, Author.

Apart from providing consultancy services to leading international banks and multinational giants like IBM, General Electric, Nestlé and Olivetti, Dr. Chorafas has conducted seminars in United States, Europe, Asia and South America. He is the author of 64 books on various subjects of his specialisation, in many European languages.

SEMINAR SCHEDULE

	Delhi	Bombay
• Using Expert Systems in Business (programme 1)	23rd-24th Nov	28th-29th Nov
• Strategic Planning for Computer Implementation (programme 2)	25th-26th Nov	30th Nov-1st Dec
• Strategies for Data Communication Implementation (programme 3)		2nd Dec

Venue: Delhi: The Oberoi
Bombay: Oberoi Towers
Fee: Programme 1 & 2 — Rs. 3000, each, per participant.
Programme 3 — Rs. 1500 per participant.

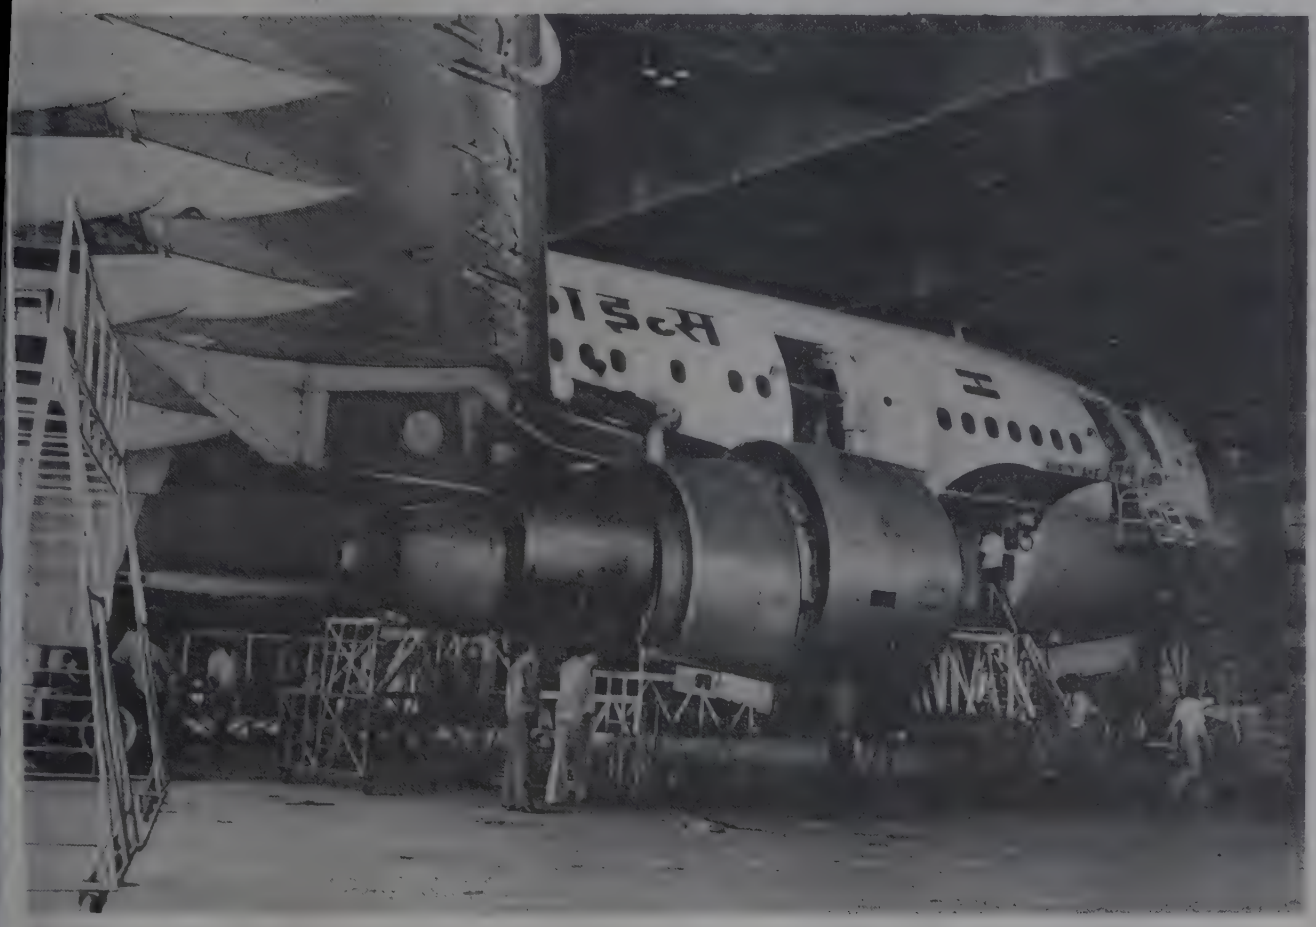
CALL TO PROJECT CONSULTANCY FIRMS OR ACTUAL MANUFACTURERS

A highly profitable professionally managed top notch Public Limited Company in Baroda with an excellent track record and exciting growth plans is on the lookout for expansion and diversification opportunities. The Company is financially well placed and enjoys the confidence of Banks, Institutions and the investing public at large.

The Company is keenly interested in acquiring and absorbing latest technologies in developing and growth oriented fields. The Company is willing to enter into collaboration/tie-up for manufacturing of high demand and import substitution products.

Reputed Consultancy Firms with proven Track Record and Rich Repertoire of promising proposals and projects are invited to contact Box No. DA/278/LD/1, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, for a long term mutually beneficial association.



Airbus engine under inspection: very little time for all the checks

which however has not happened. Says a Delhi-based airline specialist, "You can push your capacity utilisation to 4,000 hours if you want to, but you have to align your engineering infrastructure accordingly. But here what is happening is that only aircrafts are being pushed harder."

He goes on to explain the consequences of this action: the capacity utilisation of an aeroplane is determined by two factors — the operating day and the time one needs to carry out statutory maintenance checks. A Boeing 737 needs about five and a half hours for these checks every day. An hour is generally taken up in getting it into the hangar in the night when all maintenance on Indian Airlines planes is carried out. Another hour and a half is required to get it ready for the morning flight next day. That leaves the aircraft a day length of 16 hours. Currently, the Boeing 737's average day length is more than 17 hours. "This means that you are starting to cut into your maintenance schedules," the aviation specialist quoted earlier says.

The directorate general of civil aviation, which is supposed to monitor such maintenance deficiencies, is by all accounts itself working in the most primitive of conditions. It has not changed its style of working substantially since the thirties and forties when the civil aviation regulatory rules were first formulated in the country. It issues certificates to aircraft engineers, is supposed to conduct spot checks on maintenance facilities, etc.

But on many occasions according to Indian Airlines engineering department sources, it is so ill-equipped in terms of technological knowhow that the DGCA officials have to refer back for information to the same airlines which it is supposed to be regulating! Says one source, "As far as any major or sophisticated engineering checks go, the DGCA is as good as non-existent."

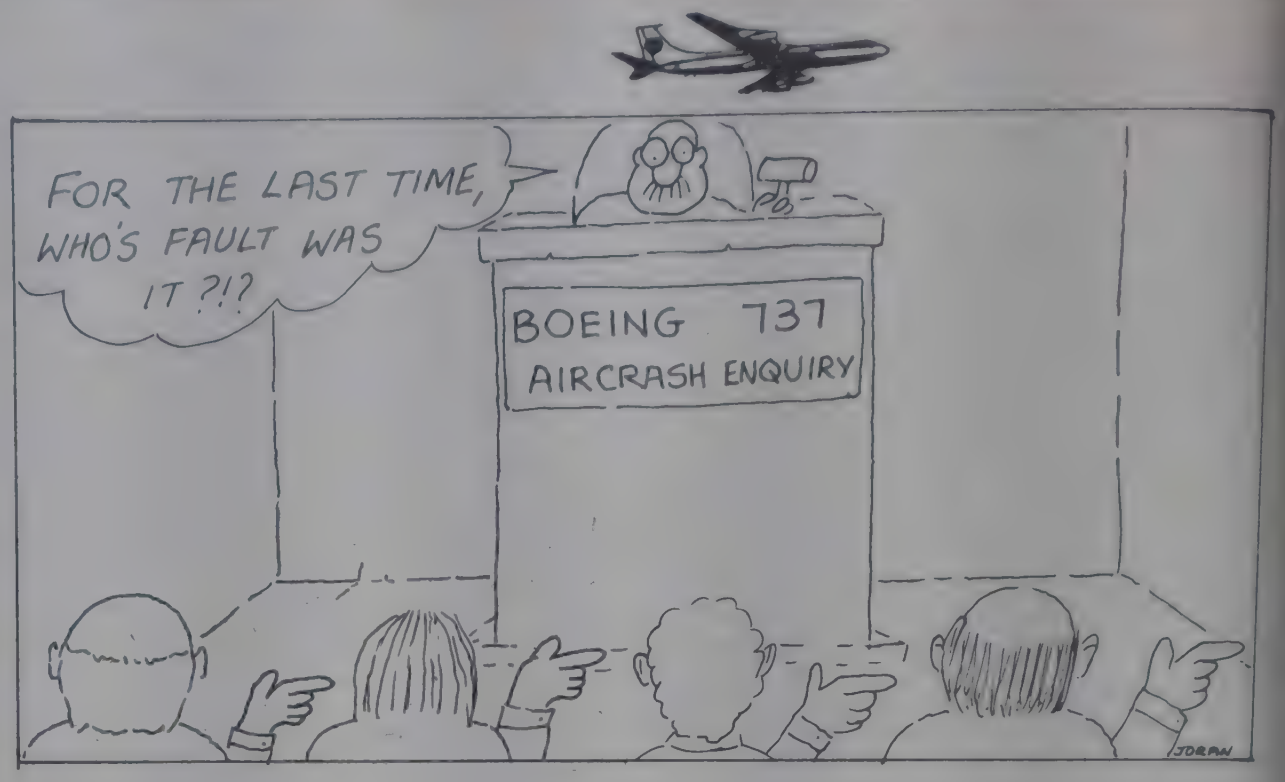
NO FORMS OR MONITORING

Neither has the Indian Airlines management made much effort to upgrade maintenance facilities. An audit by the office of the Comptroller and Auditor General sometime back revealed that there were neither norms nor proper monitoring of aircraft workshops. Leave and absenteeism as a percentage of normal accountable hours in workshops went up from 15.65 in 1981-82 to 20.36 in 1985-86. Premature and unplanned removal of aircraft engines due to failure (excluding bird hits) increased from 13.4 per cent in 1984-85 to 21.69 per cent the next year. Till about the mid-seventies, due to the excellent development of engineering facilities, only about 20 to 30 per cent of the aircraft engine work was done abroad; now the figure is over 50 per cent. And most importantly Indian Airlines still follows an age old system of recruiting aircraft engineers. A mechanic straight out of school and a fresh engineering graduate are treated on a par. Both have to go through the same rigorous procedures to get an aircraft engineer's licence, which could take as much as five years.

All this puts a tremendous strain on the existing maintenance facilities and as a result there is a perennial conflict now between the maintenance engineers who certify an aircraft's airworthiness and the pilots who fly. "More and more engineers are asking us to fly with just the minimum equipments list," says a senior pilot, "which is an indication of the fact that they don't have time for the full maintenance. If we refuse to take the plane then we are asked for an explanation by the management."

Enormous safety margins are built into aircraft, but Indian Airlines is stretching them to the full. Says the government advisor, "All you have managed to do is to put both the engineers and pilots under tension. I am certain that when Indian Airlines despatches an aircraft it is a safe piece of equipment to fly. But in making it safe you have put so much pressure on both the engineers and pilots that things are going to be overlooked and may go wrong. One consequence is that engineering people in Indian Airlines seem to suffer from more heart problems while in service. This is what the management has done by accepting the political pressure on the infrastructure."

The PUC in its report in May this year has also commented upon Indian Airlines' over-utilisation of its fleet. According to norms specified, they say, the annual utilisation of an Airbus and a Boeing should not be more than 2,820



and 2,700 flying hours per aircraft respectively. The report goes on to add: "The committee is not willing to accept the claim by Indian Airlines and the ministry of civil aviation that such excessive utilisation of the aircraft does not affect its safety and feels the matter should be examined from the safety angle in consultation with aeronautics experts and aircraft manufacturers and its outcome reported to the committee."

And if Vayudoot, the nation's feeder airline, does not watch out, it is going to end up making the same mistake that Indian Airlines made. It is desperate to enter the Guinness Book of World Records as the fastest growing airline in the world, regardless of what this exercise is doing to it financially.

BIG LOSSES

Vayudoot was set up in 1981 to bring the country's smaller towns and cities within the purview of air links. It suffered an estimated loss of Rs.12 crores in 1987-88 and now owes Rs.45 crores to HAL for the spares the latter has been supplying for its 18-aircraft fleet. In fact, both HAL and Garret which supplied the engines for Vayudoot's 10 Dorniers don't supply spares to the airline now unless paid immediately in cash.

Despite being in such dire straits, the airline has not stopped expanding its services. It now flies to 93 destinations. And if Shivraj Patil is to be believed, he plans to put every single district headquarters on the Vayudoot link; that is, more than 400 scheduled stops. With such ambitious politicians goading it along, only God can save Vayudoot.

The over-utilisation of the Indian Airlines aircraft capacity, sources say, started around the time Captain K. Chadha took over as managing director of the airline in the early eithties. And it has been carried forward to its peak by the current MD, Gerry Pais. But the reliability of flight schedules coming down from as high a figure as 70 per cent a few years ago to below 50 per cent now, has apparently got Pais worried. He has in the recent past expressed his desire to bring down the utilisation figure. Chadha and Pais are also responsible for setting up of one of Indian Airlines' most uneconomical routes — to Bangkok and Singapore in the last three years. Air-India itself is flying these destinations with half a plane load, and Indian Airlines of late has had to resort to drastic rate rebates to get passengers on the flight. Says a leading travel agency director in Bombay, "The only visible benefit I see from these routes to Indian Airlines is that their crew members get to go abroad and earn some foreign exchange as outstation allowance. I am sure the aircraft used on the services could be utilised to provide some kind of relief to the rigidly tight schedules the airline follows on its domestic routes."

Chadha and Pais, observers say, are part of a long line of weak managers who have been at the helm of the airline ever since Air Marshal P.C. Lal was forced to resign by Indira Gandhi during the emergency when he refused to brook political interference in the day-to-day affairs. All important appointments these days are known to be done under political influence. Indian Airlines' headquarters in Delhi employs as many as half a dozen people whose only job is to deal with papers and orders received from various ministries.

Pais: capacity over-utilisation reached a peak under him

The corporation hasn't had a commercial director, an operations director and a director for training for more than a year now. A sad state of affairs for a corporation whose annual revenue would shortly touch the Rs.1,000 crore mark. And by the end of next year, things would be even worse as far as the top management goes. Except Krishen Dev, director of personnel, everyone else would have retired. Pais retires in March 1989, deputy managing director R. Prasad in July 1989, deputy managing director P.N. Kumar in February 1989, director of finance R. Pasupathy in November this year, director of engineering I.M. Das Gupta at the end of next year and third deputy managing director N.S. Ramachandran in February 1989. Despite this anticipated depletion, the airline very typically does not have any succession plans. This, when it will be receiving as many as 31 new aircraft to augment the fleet by 1991, the airline's single largest ever acquisition.

MISCALCULATIONS

One of the more direct consequences of the weak management at the top has been the poor planning of fleet strength. Since 1982, though the passenger traffic has nearly doubled, the airline did not make a single new aircraft purchase. It nearly bought some Boeing 757s that were available off the rack in 1986, but suddenly change its mind and decided to go in for the Airbus A320, then a new generation of planes being developed by Airbus Industrie in France. Orders were placed for 19 and options have been exercised for 12 more. Delivery is to start in May next year.

When the orders for the A320s were placed in 1985, as part of the deal, Airbus

THE ORIGINAL AMERICAN JEANS. NOW IN INDIA.

Slip into your Wrangler jeans. Feel it snuggle against your skin. Mould itself into your body shape. As only Wrangler can.

Simply because it's made so painstakingly. Thread by thread. So the special polyester core of the thread makes sure it doesn't shred for the entire life of the jeans. The button, the zipper, the rivets, the label are all pure, original Wrangler. Even the material is the same. As many as 70 cruel and minute checks precede any pair of jeans being branded Wrangler. At the Indian Airlines counter: passengers have matured but the airlines hasn't

Industrie was to supply a total of 12 A300s and 737s on lease at their expense to Indian Airlines to help it tide over the capacity shortfall that was expected till the new A320s joined the fleet. However, so far — two years later — only two 737s and one A300 have arrived two years later. And despite repeated requests Airbus has not yet been able to fulfil its obligation.

Will the addition of the new A320s have a significant impact on the working of the airline and will it improve passenger safety in the next few years? From the looks of it, things don't look too bright. First, the airline is yet to tie up a financial package for the Rs.1,200 crores it will have to cough up for the initial delivery of 19 A320s. It wanted to appoint a foreign consultant to look for the money at this late juncture, but the government rejected this proposal. Secondly, its training programme for pilots and engineers is yet to take off.

UNHAPPY PILOTS

This highly computerised aircraft is a quantum jump, technologically speaking, from anything Indian Airlines has been operating so far. And as many as 233 engineers and 152 pilots are to be trained in France. But already pilots are refusing to go. Their wage revision which was to be done in 1985 is still pending and they are insisting that unless some kind of compromise is arrived at, they won't train on the new aircraft

Indian Airlines pilots are generally an unhappy lot. Of the 530 pilots in the corporation, 152 applied for some recent openings in Gulf Air. They are among the poorest paid of all large airlines' pilots worldover. Pilots everywhere are among the highest paid of all airline employees on account of the stress involved in the job. But as yet Indian Airlines pilots still get paid only about Rs.50 for an hour of overtime they do, which is the same as what a junior clerk in the airline would make. Unlike the Air-India pilots, who make a packet out of foreign postings, since they get paid for the time they are not flying as well, an Indian Airlines pilot gets paid only for his flying hours.

"There is general disgruntlement among the pilots," says an insider. "They have never been a very happy lot and if stretched beyond the limit it might reflect in their work. And Indian Airlines management is also being unnecessarily bullheaded. When they are buying more than Rs.1,000 crores worth of aircraft it beats me as to why they can't spend a few crores to keep the men who handle these expensive planes happy."

Indian Airlines in fact has never had a very consistent policy for its pilots — neither for its existing ones nor for new recruitments. Its lackadaisical policy towards pilot recruitment in the seventies and eighties is beginning to have its effect now. With the expected arrival of the new aircraft the airline finds itself short of good pilots and has been scurrying around in the last year or so trying to recruit new ones

Last year it broke one of its own rules that had in the past ensured proper and systematic training of new pilots. Earlier a pilot, once he joined as an apprentice from a flying club, had to train on smaller aircraft like the Dakotas and Avros before being put on jets like 737s. Since last year however, anyone with 250 hours of experience on a Cessna can fly the Indian Airlines 737s. The first batch of 20 pilots under the new dispensation were recruited in June last year. Two more batches have since then joined up. So 60 such greenhorns are at the controls of 737s all over the country currently. A case filed against this form of recruitment by the Airlines' own pilots association, Indian Commercial Pilots Association, is now pending before the Bombay High Court.

But most important, starting next year, for the first time since the early seventies, the Indian Airlines management will have to grapple with the prospect of a severe dent in profits or may even a loss, despite the ever increasing passenger revenue. Having committed Rs.1,200 crores starting next year towards new planes, the corporation will have to shell out up to Rs.150 crores annually for the next few years as interest and repayment burden.

The situation could get even worse when the next lot of 12 planes start joining the fleet in 1991. The decision to buy all the new planes at the same time is indicative of poor planning at the top level. The fear is that when in these days of good profits the airline is skimping on its maintenance services, what will happen to passenger safety when as a result of losses on account of the investments, it is forced into cutting costs. Won't the Indian skies be less safe to fly in then?

■ N. RADHAKRISHNAN

THE PERFECT BUSINESS GIFT

for your important clients, colleagues, staff, friends and family.

THE BUSINESS INDIA PLANNER 1·9·8·9

Finally a business gift that is unique, useful, and elegant.

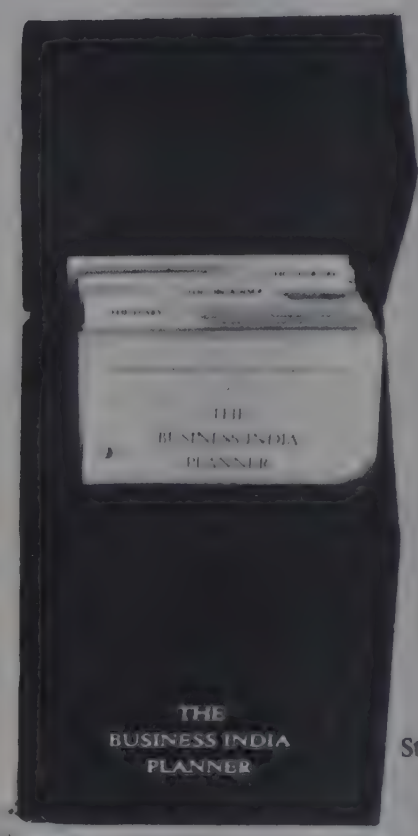
Meticulously designed to suit varied lifestyles, The Business India Planner is a gift that will be appreciated by anyone who receives it.

Leather bound in black, grey or burgundy,with its easy to use design format, The Business India Planner 1989 has a new expanded Information Section, a versatile Diary Section, a handy Network Section, and an indispensable Organiser Section.

Select between the two versions of the Planner: the Day Plan and the Week-at-a-glance. The diary section of the Day Plan devotes a page a day whilst that of the Week-at-a glance views a week on a spread.

With its unique trigger operated ring binder system, The Business India Planner can be organised to suit individual requirements and style. Add, subtract and relocate pages from numerous features and options available, including an optional storage box,which is ideal to store alternative or spare pages. And next year, all that needs replacing is the diary section.

Planners will be available for delivery by mid November.



Storage Box
Rs. 40/-
optional

FLEXIBLE PRACTICAL RELIABLE
much more than just a diary,
a whole new approach to organise your life.

Actual size (closed) 19.5 cms × 14 cms.

To: **Business India Services,** Nirmal, 18th Floor, Nariman Point, Bombay 400 021.
Phone: 2041974, 2042253. Tlx: 11 3557 BZIN IN
Branch offices: Delhi 350135, Madras 474964, Calcutta 448455, Bangalore 74149.

RATE PER PLANNER

Quantity ordered	Week-at-a-glance Planner	Day Plan Planner
1 – 9 Planners ⋆	Rs. 395 ⋆	Rs. 425 ⋆
10 – 25 Planners	Rs. 370	Rs. 400
26 – 50 Planners	Rs. 360	Rs. 390
51 – 150 Planners	Rs. 350	Rs. 380
151 – 200 Planners	Rs. 340	Rs. 370

⋆ an additional special discount of Rs. 25/- is available for Business India Subscribers.

+ Rs. 20/- for postage and handling charges for each Planner.

For a modest additional cost of Rs. 5/- per Planner, your Company's name can be embossed, in a standard typeface, on the leather Folder.

The timeless value of gold and the unyielding firmness of rock...

GOLDENROCK

COMPLEX

A sound investment in the heart of Coimbatore.

In the heart of Coimbatore, amidst the fast developing business district at D B Road, R S Puram, takes shape the ideal office/shopping complex for you... GOLDEN ROCK Complex. Overlooking the lush greenery of the Forest College.

It is an investment hard to come by.

- Ownership offices/shops in easy instalments
- Construction well under way — early possession
- Total office space — 9,500 sq.ft. Ideal for organisations seeking whole/part floors
- Adequate car parking area
- Ample water supply
- 2 high speed state-of-the-art lifts by OTIS
- Stand by generator
- Built-in fire protection system
- Entrances, lobbies and corridors in marble
- Superbly finished exterior requiring minimum maintenance

GOLDENROCK COMPLEX **An investment that lives up to its name.**

HMT

New sparkle for a waning star

In the last two years HMT has made a go at regaining lost ground in machine tools, consolidating its position in watches, and rectifying some mistakes in diversification and personnel policies. The results are showing; HMT is confident of a Rs.505-crore turnover by the end of next year

One of the brightest stars of the public sector for over 25 years, HMT's profits have been falling since 1982-83. There are many reasons for HMT's problems. Some of these have existed for a long time, but were swept under the carpet as long as HMT continued to make profits. The time has now come for HMT to take a realistic look at itself.

The slump in the machine tools industry, unwise diversifications (especially the lamps division in Hyderabad which has been a constant drain), expansions in remote areas to fulfil social obligations and excess labour have all taken their toll. During 1986-87, gross profit on a turnover of Rs.438 crores was Rs.39.80 crores and the net profit only Rs.5.30 crores (see chart). Performance figures for 1987-88 are not yet available.

The person given the task of putting HMT back on its feet is M.R. Naidu, the first "outsider" to head the organisation. Naidu, who took over as chief executive of HMT in October 1986, started his career with BHEL. He turned around the Hyderabad unit of BHEL, and subsequently the Vizag based public sector unit, Bharat Heavy Vehicles and Plates. Naidu has spent over a year studying HMT's problems and has drawn up a turnaround plan. "Our immediate objective is to prevent the decline in profitability," he says.

HIT BY THE SLUMP

The drop in HMT's profits coincided with the slump in the machine tools industry in the country. The demand for CNC machines shot up and indigenous machine tool manufacturers (including HMT) had to contend with liberalised imports. Many in the industry feel that HMT missed the bus somewhere in the late seventies by getting too complacent. That was the time to have aggressively gone in for technological upgradation. T.V. Mansukhani, who was the chairman and managing director in 1982, did commit around Rs.150 crores for expansion and modernisation. But when the new generation automobiles with Japanese technology came, HMT was not ready to adapt itself. The company was just not equipped to manufacture composite machine lines which were required for large scale automobile manufacturing.

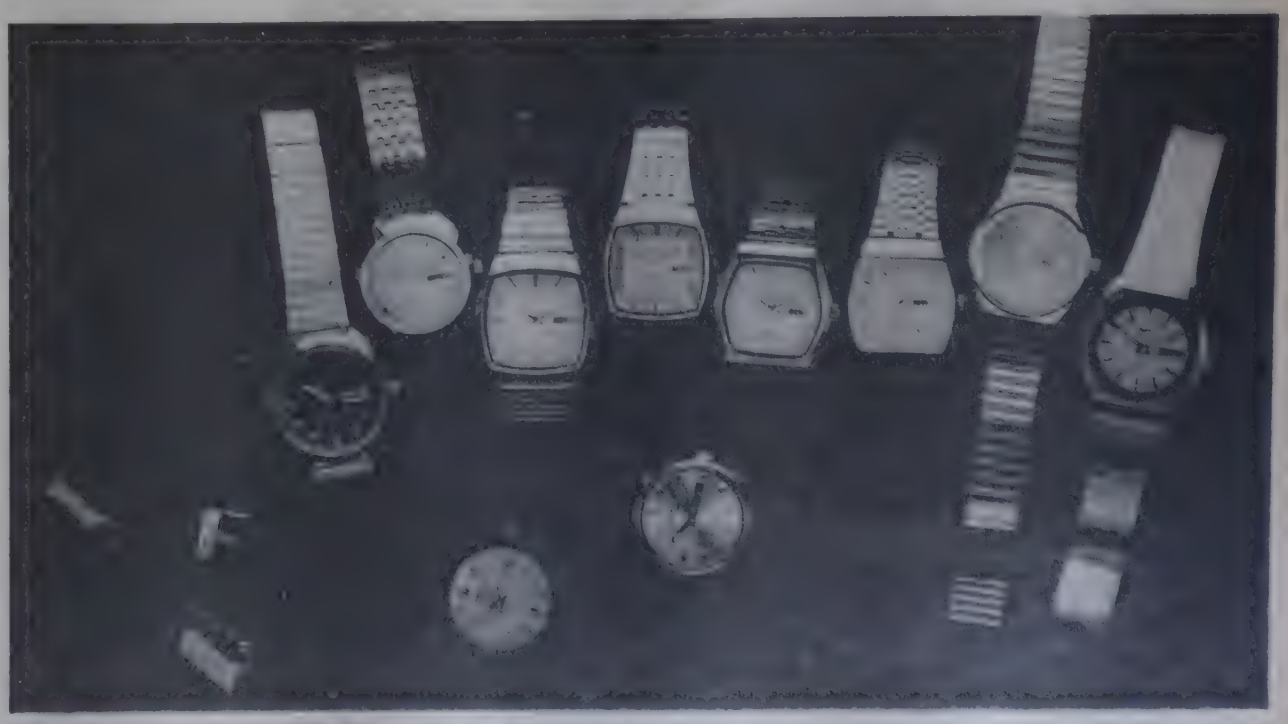
HMT's limitations really surfaced with the entry of Maruti. Says V. Krishnamurthy, the then chairman of Maruti, "With the modern range of automobiles, the need was different. We faced a dilemma. Do we make do with what we have in the country, or do we go in for contemporary machine tools and carry HMT with us?" Maruti opted for the latter. Krishnamurthy was willing to let HMT nominate a senior manager for machinery procurement who could specify what was required in association with the Japanese. This would have given HMT the necessary exposure and experience. But the HMT management was not willing to consider this offer, and insisted through Udyog Bhavan that Maruti use what was then available.

According to Naidu, HMT will now be looking for more new products and sophisticated machine tools. The emphasis

Naidu: the results will start showing by next year

will be on hi-tech CNC machines, robotics and special purpose machines using computers. "There are a lot of products required by the market which are not indigenously manufactured and are therefore imported. We have identified those areas. But we are not necessarily entering into collaborations; we are getting into joint working arrangements with foreign manufacturers. We will be getting good technology backing, work with them jointly, and submit quotations. Forty per cent of the manufacturing will be done in the HMT factories in India," says Naidu. This process is already underway and HMT recently secured two orders for Rs.25 crores on this basis.

The company lost a lot of business because of its inordinate delays in deliv-



Watches have been HMT's money spinners

ery. A case in point is what happened with HMT's special purpose machine (SPM) unit, the first of its kind in the country in Hyderabad. This is not technologically an easy product to manufacture. SPMs are designed around the customer's needs. When HMT went into the manufacture of these, it was flooded with orders from users like the automobile industry. It actually started turning some orders away. But when it began to slip up on delivery schedules, users started looking for alternative sources. Giants like Telco and Mico went into in-house manufacturing. A whole host of small units set up by technocrat entrepreneurs sprang up. Today, HMT's Hyderabad factory is working far below capacity and is yet another drain on the company's profitability.

Says Naidu, "We have to have a comfortable order book position and still be able to deliver the goods. To do this we have to improve our cycle time." He has set up exclusive technology development groups who are making an operation by operation study to reduce the cycle time. Naidu has gone all out for orders. He pushed up the order book position to Rs.130 crores worth during 1987-88. He hopes to increase this to Rs.190 crores worth in 1988-89.

The HMT tractor: highly successful diversification

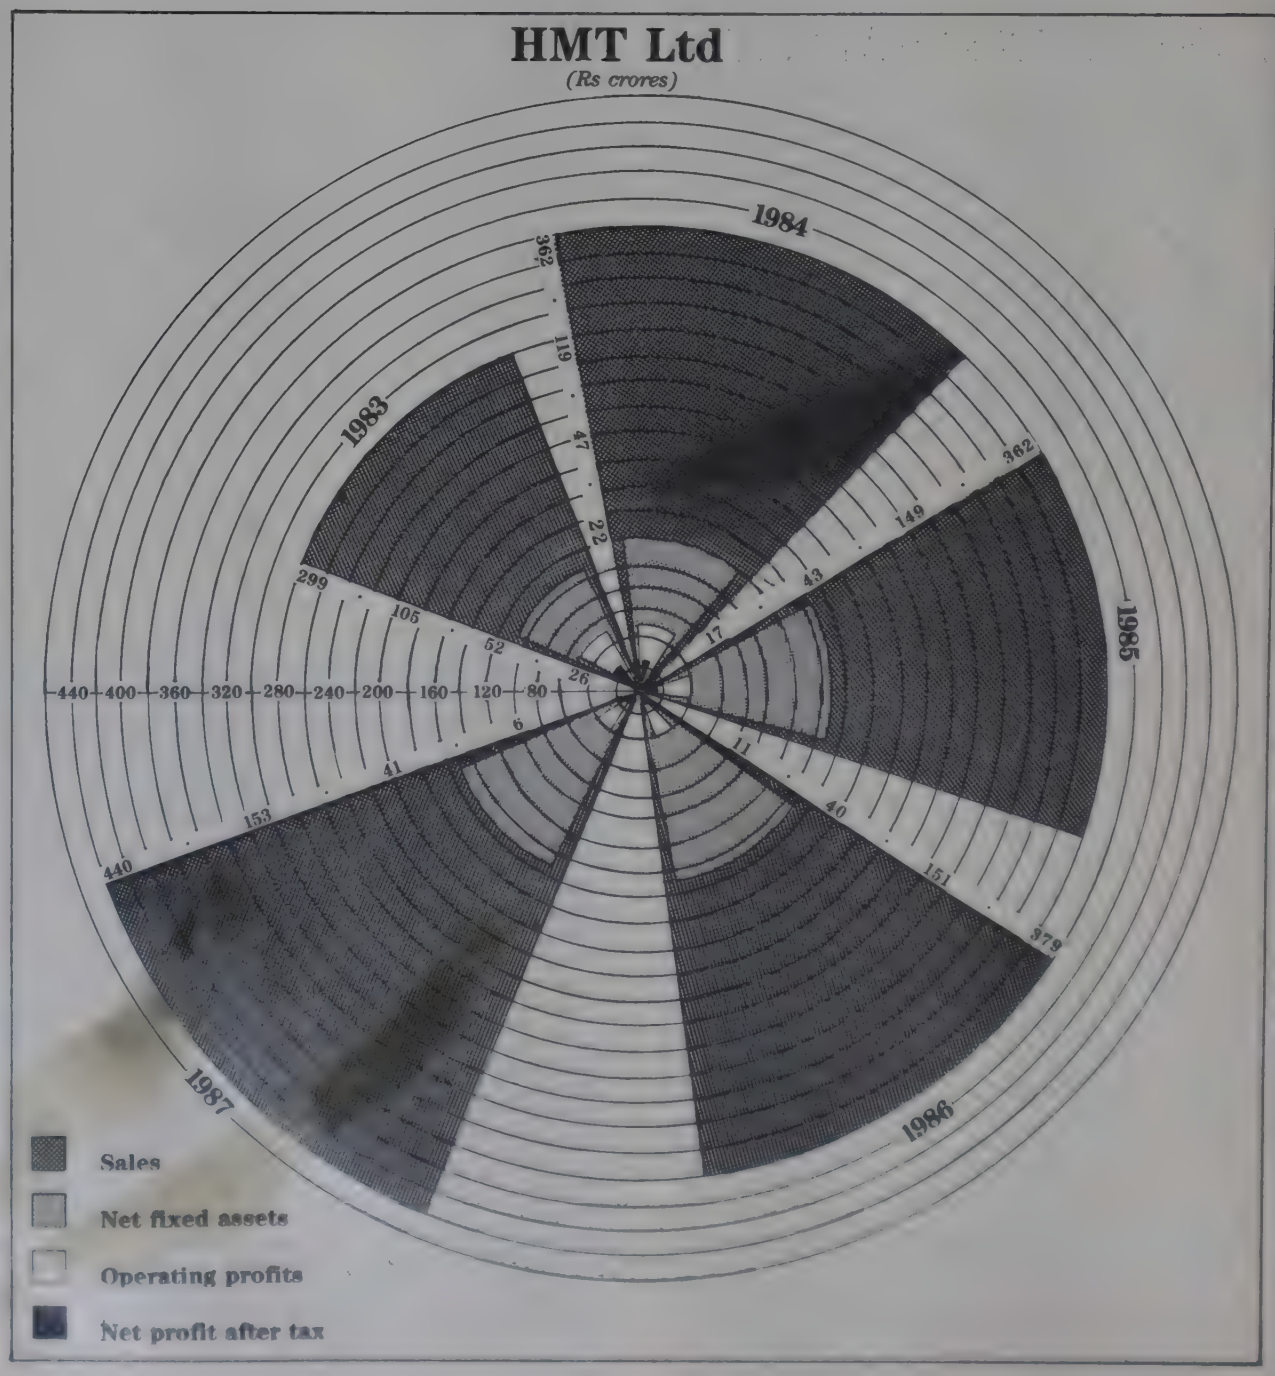
THRUST AREAS

Another thrust area is going to be marketing. After being considered a top rate marketing organisation, HMT's marketing efforts visibly slackened in the early eighties. In the last few years, interaction with customers has not been very good.

The task of revving up HMT's marketing efforts now lies with G. Lakshmana Pai, the newly-appointed executive director, machine tools marketing (another recruit from BHEL). "We are going to strengthen our team work and profit orientation. This has to permeate down the line. With the kind of technical strengths HMT possesses we can become second to none," he says enthusiastically.

One area which requires urgent action is HMT's lamp manufacturing unit, which was set up to make bulbs and bulb-making machinery. This diversification has spelt disaster for HMT since the time it went into production in 1974. The accumulated losses of the unit are reportedly around Rs.32 crores.

Lamp industry sources point out that this diversification might have seemed a good idea in the early seventies, when there was a shortage of bulbs. As it happened, HMT did not get any of the best



THE WORLD AT YOUR DOORSTEP

MADRAS

Starting November 4, 1988. Take off to London directly from Madras.

Bombay, Delhi... and now Madras. British Airways offers the international traveller yet another gateway to the West. Now you can enjoy the British Airways experience to London and beyond—direct from Madras.

On our new flights you take off from Madras on Fridays and Sundays at 9.00 pm. And arrive at London Heathrow at 6.05 the next morning.

Madras to London direct. It's just one more expression of our desire to offer world class service to you. At your doorstep.

Ups and downs

In 1953, the government of India set up Hindustan Machine Tools Ltd in Bangalore to manufacture machine tools. The organisation's name was changed to HMT Ltd many years later, when it became a multiproduct multidivision company. Today it has 16 manufacturing units located in 10 differnt states.

HMT holds the premier position in the machine tool industry. It has a 35-40 per cent market share in machine tools, of which it manufactures a very wide range. It is also the number one watch manufacturer, with a 65 per cent market share. In tractors, it has a 15 per cent market share. The organisation employs rearly 30,000 people and has built up a highly rated technical manpower.

Architect of growth. M.K. Mathulla, who took over as managing director in 1956, became the architect of HMT's growth into the big league. He was from Tatas and gave HMT a strong commercial orientation. As he had direct access to the then prime minister Jawaharlal Nehru, he did not have to contend with bureaucratic hurdles.

Those were also the heady days of early industrialisation with BHEL and a host of other heavy industries being set up. All these required machine tools, and business flourished. With its own profits, HMT in 1961 set up its second machine tool plant in Bangalore, and its first watch factory collaboration with Citizen Watch Company of Japan, also in Bangalore, and a third HMT unit in Pinjore, Haryana. It was during the inauguration of the Pinjore factory in 1963 that Mathulla made the exuberant announcement that HMT would set up a factory every year. Later chief executives were to regret this promise very much.

Mathulla stepped down in 1963, and S.M. Patil took over as managing director. One of the most successful chief executives of HMT, he became a father figure not only for his own employees, but for the entire machine tool industry. Business continued to boom till 1966.

The crash came in 1967. During 1967-68, HMT recorded a loss for the first time. "These were terrible years," recalls Patil, "There was the drought which resulted in one of the worst economic recessions. This led to the plan holiday and suddenly there were no orders. I had five factories on my hands and no money for the workers." According to Patil, HMT's surpluses had been used up for putting up two more factories. And the organisation was paying the price for not having given enough attention to marketing and R&D during Mathulla's days when the order books were overflowing.

Disaster averted. Ultimately what saved HMT from total disaster was the watch division. The profits of this division helped the organisation scrape through. From 1971 onwards, things started looking up again. Patil also took steps to shore up HMT's marketing and R&D divisions. The turnover zoomed from Rs.10 crores in 1963 to Rs.150 crores in 1978. The company made its mark in exports as well. HMT (International) was created in 1974 for the sale of product and consultancy and turnkey project services. During 1987, HMT (International)'s turnover was Rs.42 crores. The organisation also made tentative attempts at making computerised machine tools (CNC machines) in the seventies, which were progressively replacing conventional machines in the developed countries.

When the Janata government came into power in 1978, Patil decided to leave the organisation as he could not see eye to eye with the new regime. His successor in 1979 was B. Ramachandra, whose style was totally different from Patil's. Machine tool industry sources say that during his tenure CNC machine manufacture was halted as they were not profitable at that point in time. The Indian engineering industry was not quite ready for these machines yet. Ramachandra retired in 1981 and T.V. Mansukhani, an HMT man, who was a production engineer and who had an outstanding career in the organisation, was appointed chairman and managing director. In the next two years HMT made the best profits in its history. The decline began in earnest in 1983-84.

Although Mansukhani is considered an authority on machine tools, he was not given an extension when his term came to an end in 1986. According to the machine tool industry grapevine, his conflict with Maruti (which he felt should use indigenously manufactured machine tools) and his own rather stubborn attitude led to his fall from grace.

■ SR

collaborations in the field. The company signed a licence agreement with Tungsram of Hungary, which was certainly not in the same league as Philips, IGE or GEC. The original intention was that the factory would primarily manufacture lamp-making machinery and bulbs would be the second line of manufacture. Somewhere along the line, with very few takers for lamp-making machinery, the unit became a bulb manufacturer. The unit has not been able to break even.

Naidu concedes that it is going to be an uphill task in the lamp division. "In the next two years, we plan to invest in the upgradation of the existing technology and put more emphasis on marketing," he says. Experts have been called in from Hitachi, Japan; they have conducted a study to recommend suitable technolgical inputs.

The watch division, since its inception, has been a money spinner. During 1980-81, which was also a bad year for the machine tool industry, the watch division was reported to have earned over 95 per cent of HMT's pre-tax profit of Rs.19.61 crores. However, in recent times the watch division's margins have been under pressure. The Rs.45-crore investment in Ranibaugh, UP, is yet to pay off. It is a mystery why as late as 1985 HMT should have thought of a unit to manufacture mechanical watches and not electronic ones. There are also difficult areas of operations like Srinagar and Shillong where communication and co-ordination present problems.

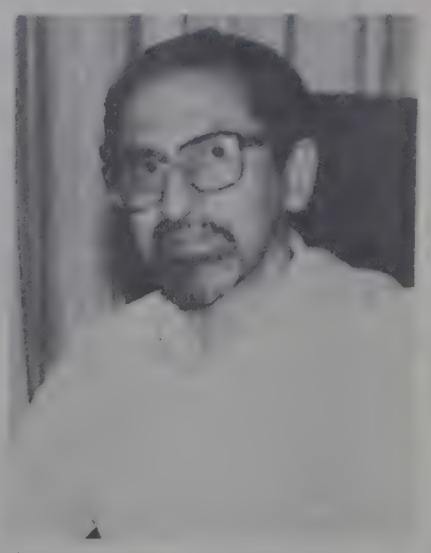
HMT faces stiff competition from Hyderabad Allwyn and Titan. The new entrants are manufacturing quartz watches, while HMT has concentrated on mechanical hand-wound watches. But HMT is not overly bothered about this. "We have tremendous manufacturing strengths. Even the recent exit of 56 employees to join a new watch manufacturer has not made any dent in our working," declares K.S. Gergan, executive director, watch division.

Although HMT manufactured a little over 5 million watches during 1987-88, there was still a shortage of HMT watches in April this year. Naidu points out that

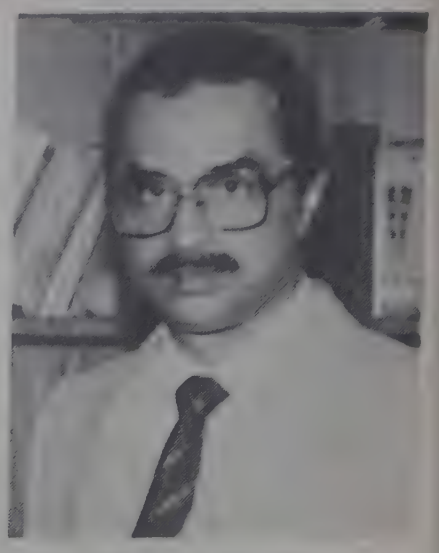
the total market demand today is about 12 to 13 million watches. Allwyn and Titan together make only 4 million watches. HMT is planning to increase its production to 6 million watches this year. "We face no problems from indigenous manufacturers," emphasises Gergan.

The division now plans to increase production of quartz watches. The Tumkur factory will be manufacturing 2 million quartz analog watches, and increasing production of ladies watches (which are in great demand) to 5 million; it also plans to make digital watches.

Gergan: "tremendous manufacturing strengths"



Chakraborty heads the tractor division



Alva: shaking up the organisation

RICH DIVIDENDS

A diversification which has paid rich dividends in recent years is the agricultural machinery division. HMT went into tractor manufacture in 1971 with Czech collaboration. This division has picked up from 1983. The production for the current year has crossed the installed capacity of 15,000. Capacity is being increased to 17,500 this year. Says D.K. Chakraborty, executive director, tractor division, "We came into the picture much later than the others like Eicher and Mahindra and Escorts. But we achieved the number one place in tractor sales (14,659) in the country in 1986. In 1987, we were number two only because of our lower capacity." Chakraborty attributes the success of the tractor division to the highly fuel efficient engine with the largest variant among tractors (suitable for a variety of crops) and efficient marketing and after sales services.

It is obvious that there are wide differences between the various units of HMT. One of the most important tasks ahead of Naidu is to motivate the people at HMT to bridge these gaps. In spite of its undeniable technological strengths, which even competitors admit are top class, not much attention has been paid to developing managerial skills.

The organisation did not have a proper policy of promotions till recently. HMT went into the business group concept and people got compartmentalised into four different groups. There was no rotation of people from one group to another. This resulted in better growth opportunities for employees of some divisions and not so much for others. This has given rise to much dissatisfaction.

Not only is the chief executive an outsider, but some of the recently joined executive directors are newcomers. At the general managers level as well, HMT has had to look for people from outside, this has meant a loss of morale. However, some observers feel that the new blood will help the organisation.

A sophisticated machine tool: catching up

H.R. Alva, director, personnel, who left Indian Telephone Industries to joint HMT less than a year ago, is quite aware of these problems. Alva has identified a need based HRD programme. It has been decided to rotate personnel wherever it is necessary. The new policies have been put into practise; there have been a lot of transfers.

BUILDING TEAM SPIRIT

The turnaround plan also takes into account the fact that it is necessary to build a team spirit in the organisation, which seems to have disappeared after S.M. Patil's days (see box). Naidu emphasises that team development is going to be given a lot of importance. The newcomers to the top management posts feel that by and large they have been accepted by the existing personnel and the changes which are being implemented are being understood down the line. Some doubts persist at the middle management levels, though. Naidu has also set himself the task of establishing better lines of communication with the staff. Most people who have been associated with HMT believe that the organisation's problems are not intractable. But they point out that in its most successful days HMT had a very strong lobby at the centre. Naidu is supposed to get along well with the industry minister, Vengal Rao. Naidu on his part feels that the results of all these plans will start showing by next year. With this confidence, HMT has signed a memorandum of understanding with the government that the organisation will achieve a record turnover of Rs.505 crores at the end of the current financial year.

Will Naidu be able to repeat his past success and put the shine back into HMT?

■ SUSHILA RAVINDRANATH

A THRILLER

Last October our targets were referred to as "tall claims". This January the sniggers had subsided. Midway through June as the rains lashed down, we received a few respectful glances. On the last lap in September, they were actually cheering us on.

Now at last it's all over. And the doubting Thomases stand silenced.

In the last one year, Excel's sales have zoomed up by a phenomenal 51% to an astounding figure of Rs. 670 million! An all-time high for Excel.

More thrills from exports. After a massive 83% increase in exports last year, we thought bigger still. And exports really soared! Another 76% jump to Rs. 105 million. The highest for any agrochemical company in India. Better still, honours for these exports are shared by both agro as well as industrial chemicals.

Living upto our reputation too provided its fair share of excitement. In true pioneering tradition, Excel this year entered into the burgeoning field of fire retardant chemicals — a lucrative field for the 1990s.

Yes. 1988 is indeed a year of thrills. But amidst all the cheers, we haven't forgotten our commitment. A commitment towards quality, innovation and service.

That's why you won't be wrong when you predict a future for Excel that's bigger, brighter and better.

Excel Industries Ltd,

KAMANI TUBES

Tightrope walk ahead for workers

Having emerged as victors in a three-year battle for control of the sick Kamani Tubes Ltd, the company's 700-odd workers are now readying to restart production. The task ahead is onerous, and they are preparing to give their all to prove a point

Cobwebs at the KTL plant: a lesson in persistence

The cobwebs that gathered during three years of drmancy at the plants of Kamani Tubes Ltd (KTL) in suburban Bombay must have reminded the company's 700-odd workers of the lessons in persistence learnt by King Bruce of legend from the never-say-die spider. After a two-year chase, they are now armed with a Supreme Court order that allows them to take over the company's equity from the Kamani family, and restart production.

Doubts continue to persist about KTL's chances of survival in the fiercely competitive market it operates in. But, the Kamani Employees Union (KEU), which drafted the revival scheme, is aware of the trendsetting nature of the task ahead. "Tens of thousands of similarly-situated workers would be watching with anxious eyes the outcome of this bold experiment undertaken by workers of KTL," said the Supreme Court (SC) in an emotion-charged judgement delivered on 19 September this year.

"EXPEDITE IMPLEMENTATION"

The SC mandate to the workers climaxes a series of legal battles with the Kamani family (see *Business India* 27 June 1988) over the past couple of years. Now, the SC has made it clear that it will not brook any further delays. "The implementation of the scheme with expedition is of the essence," it said in its order. "We, therefore, make it clear that notwithstanding any order that may be secured by any party from any other forum, the scheme shall be implemented ... in case there is any problem, it may be brought to this court for seeking appropriate directions instead of resorting to other forums to impede the implementation of this socially and economically wholesome scheme."

KTL's plants have already started humming with activity — cleaning operations have begun with temporary power connections from the neighbouring KMA International Ltd. The total start-up costs are expected to be around Rs. 30 lakhs, while another Rs. 30 lakhs will be losses incurred during the period upto December 1988, when trial runs are slated to begin. These initial costs will be met from the workers' contribution to the company's share capital.

Under the scheme approved by the Board for Industrial and Financial Reconstruction (BIFR), the workers' cooperative — the Kamani Tubes Ltd Kamgar Audyogik Utpadak Sahakari Society Ltd — will take over the existing share capital of KTL (Rs. 96 lakhs) at a price of Re. 1 per share. While this will bring down the share capital to Rs. 9.6 lakhs, the equity base will be increased by another Rs. 1.4 crores, with the workers and the state government contributing Rs. 70 lakhs each. The workers will meet their contribution by drawing Rs. 2,000 each from their provident fund accounts and another Rs. 10,000 each raised as personal loans from urban co-operative banks — in principle, five banks have already agreed to fund the workers.

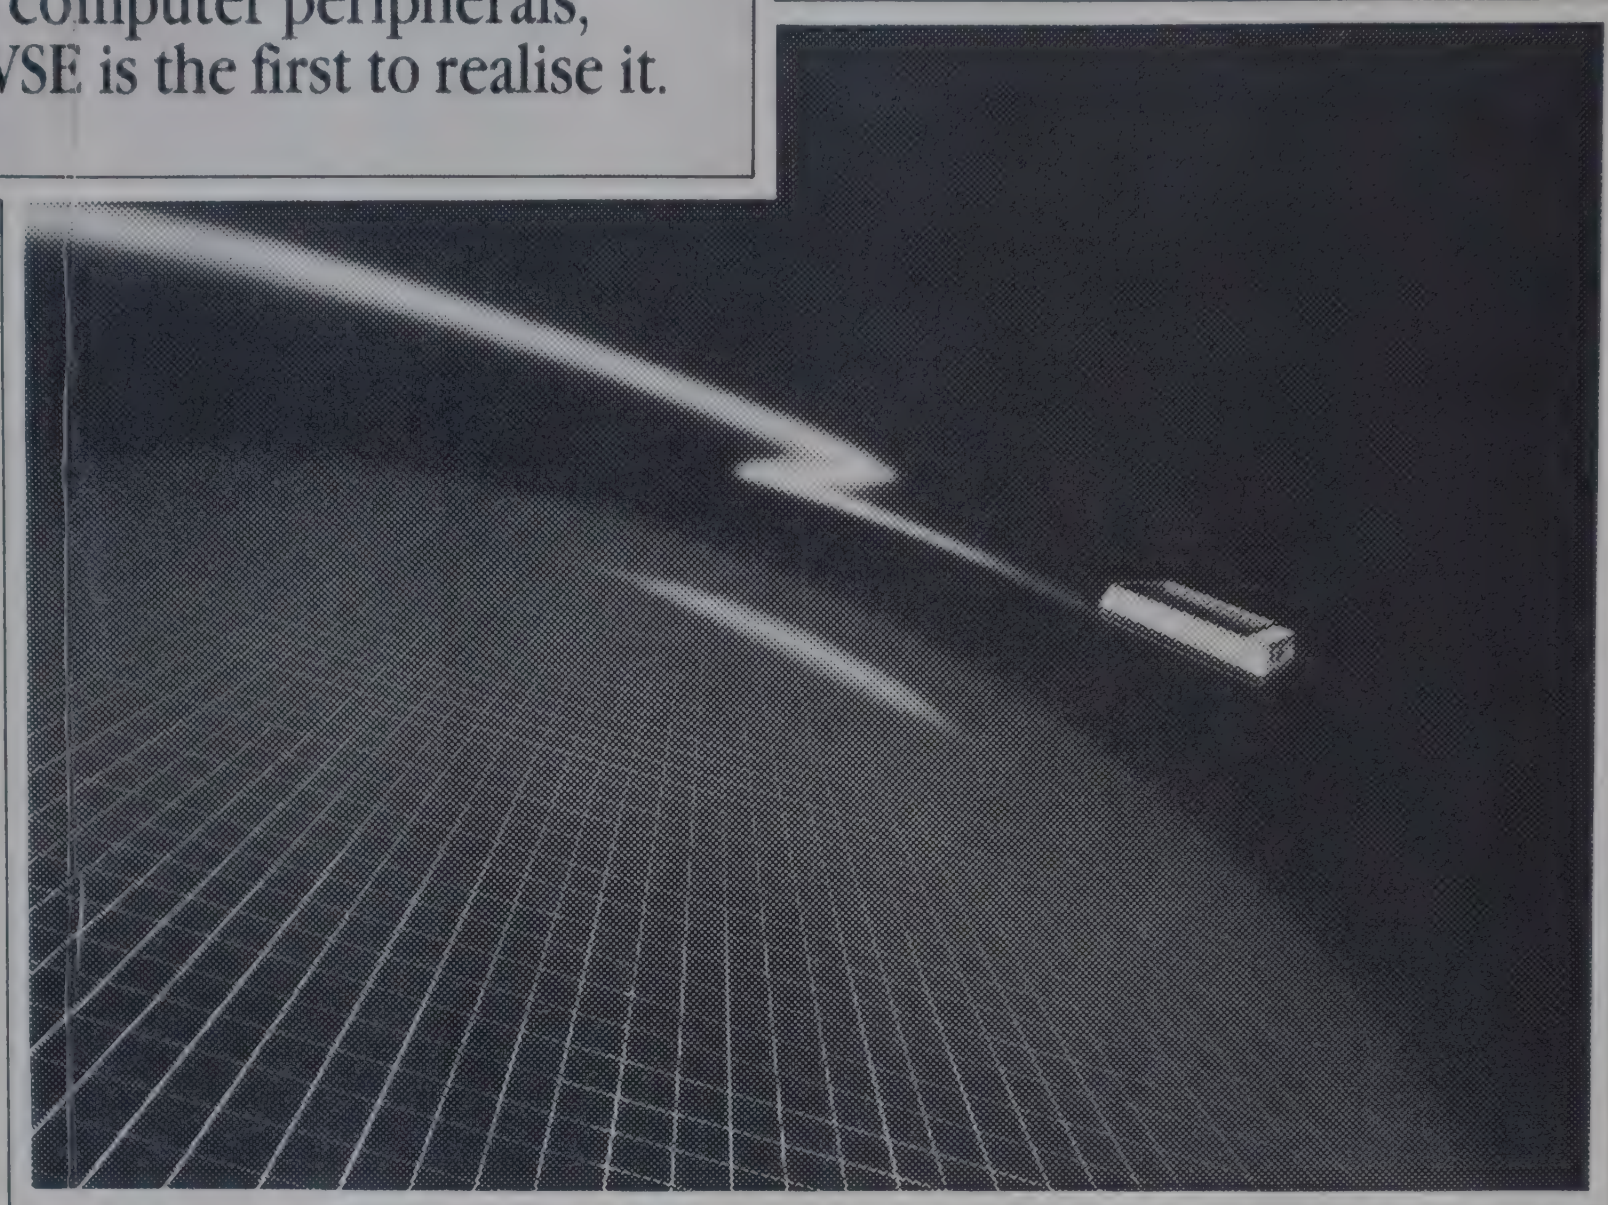
With working capital requirements estimated at Rs. 4.65 crores in the first year, the KEU scheme envisages production of 1,200 tonnes of rods and 960 tonnes of tubes, bringing in sales realisations of over Rs. 17.5 crores. By the third year, production of rods is expected to go up to 1,350 tonnes, while that of tubes will be in the region of 1,200 tonnes. A Rs.1.5-crore tube extrusion press that is proposed to be installed either in the fourth or sixth year will enable the company to manufacture sophisticated cupro-nickel tubes.

SCHEMES REJECTION

The Kamani family, as expected is not willing to let go of the company without a fight, even though the Supreme Court and the BIFR have both rejected the various revival schemes submitted by them. "We are going to challenge the Supreme Court order," says Sangeeta Kamani, wife of Chandravadan Kamani, who submitted a revival scheme to the BIFR sometime ago.

D. Thankappan, working president of the KEU, dismisses Sangeeta Kamani's threats. But some of the reservations expressed by the Industrial Development Bank of India (IDBI), the BIFR's operating agency, have forced the KEU to scale down its projections. The IDBI found the market for rods highly competitive, and that for tubes stagnating, with many users switching over to cheaper substitute materials — what with copper prices

When the potential is as vast as computer peripherals, TVSE is the first to realise it.



The world of computer peripherals holds the biggest challenge today, far greater than that of computers themselves.

The fastest-growing business

Computer peripherals are growing at 230% yearly, as compared to 115% for computers. This is because of an interesting fact. The major portion of a computer system is made up of computer peripherals, i.e. the printer, the monitor, the keyboard, the power supply, in short everything apart from the CPU (central processing unit). Therefore, 65% of the cost of a computer system goes towards the cost of computer peripherals.

Consider next the phenomenal demand for computers (today there are 50,000 computers, by the end of 1991 there will be 1,10,000 computers at a conservative estimate). Now imagine the concommitant demand for computer peripherals!

TVSE – ready to face the challenge

TVSE is geared to face this challenge. With a large investment of Rs. 30 crore in the business, with technology acquired through the best international collaborations, through a team of the finest specialist engineers.

TVSE

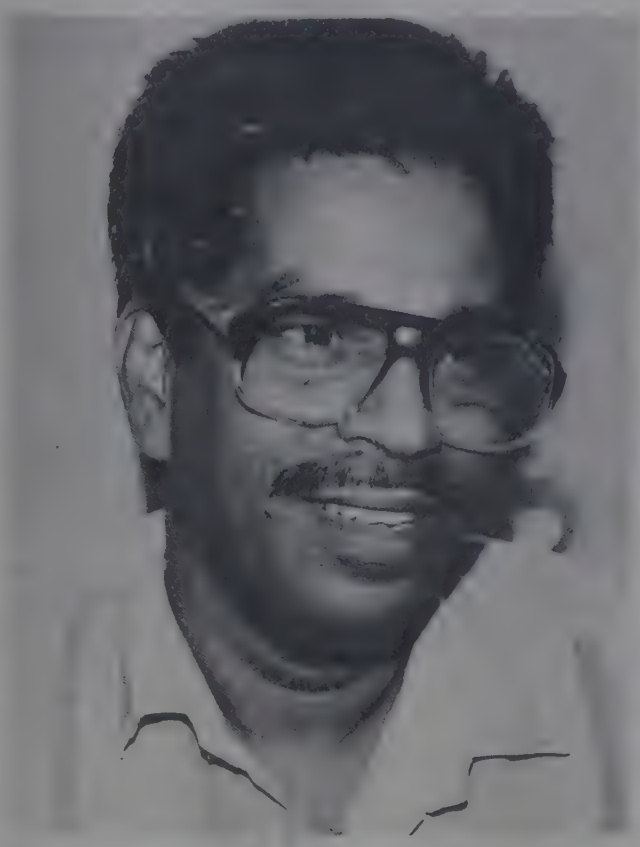
TVS ELECTRONICS

YOUR SHARE OF THE FUTURE

having steadily increased for over two years now.

Senior officials at Multimetals Ltd, a leading KTL competitor, scoff at KTL's plans. "We have been in this business for 25 years and have not been able to relax," says a senior manager at the company. "We have been incurring losses because of low capacity utilisation — there simply isn't enough demand for another large manufacturer. "He points out that both Multimetals and Alcobex Pvt Ltd, another leading manufacturer of copper rods and tubes, face stiff competition from small scale units in several product categories, while major users such as power plants, refineries and sugar mills are switching over to stainless steel tubes. "Kamani Tubes will only be of nuisance value," he says. "Their scheme is just a political gimmick, not a business proposition."

Thankappan and the KEU, however, are banking on the Kamani brand name to a large extent. He says that KTL cannot be equated with the small scale industry which, according to him, does not have proper manufacturing or quality control facilities. Basing its demand forecasts on the installed capacity and the envisaged growth in major user industries such as power generation, sugar, petrochemicals, refineries, shipbuilding, airconditioning and refrigeration, the KEU feels that the company will be able to regain its market leader status in time to come. The KEU is also confident of manufacturing refrigeration and airconditioning tubes, which are currently being imported by the country.



Thankappan: long and winding road ahead

SKEPTICISM

Even so, industry watchers are skeptical about the chances of workers in a market that is not only competitive, but also notoriously corruption ridden. Thankappan admits that the new management at KTL cannot "change the market overnight", but hopes to develop strategies to overcome such problems. "We will have to innovate," he says. With 40 per cent of the produce expected to be lifted by the public sector, Thankappan does not foresee any problems in marketing to this segment — the KEU expects active government support by way of orders.

Under the scheme approved by the BIFR, the running of the company will be overseen by an implementation committee with nominees from the IDBI, the BIFR, the state government, banks and Kamani Tubes. This committee will work in close co-ordination with the board of directors of KTL.

While J.C. Marwah, former chairman of Hindustan Copper Ltd has been named as the BIFR nominee, the state government will be represented by the joint director (industries) and joint registrar of co-operatives, Maharashtra. A.M. Nerkar, a deputy general manager at the Bank of India will represent the banks, while the three professionals, in all likelihood, will be S. R. Gokhale, a former chief executive of the Kamani Metals Group, Manish Shrikant, a management consultant and J. K. Aravind, a former executive in charge of technical services at KTL. Thankappan and KEU's president Y.V. Chavan, are expected to be the workers' representatives on the board.

Even as all seems set for restarting production at the company's plants, the Reserve Bank of India has taken an unsettling step. A recent circular to the five co-operative banks that have committed loans to the workers, asks them not to disburse any monies until the RBI gives the green signal. "We have asked the banks to furnish us some information, and details of the KEU scheme," says a senior official at the RBI, refusing to comment on the bank's need for information at such a late stage.

BANKS CONVINCED

"We are keen to advance the money to the workers so that work at the plant can start," says John D'Silva, managing director of the Abhyudya Co-operative Bank. "We are convinced that the workers will be able to repay the loans." Under the plan drawn up by the banks, workers will have to bear repayment liability of about Rs. 250 a month in the first year, with a six-month moratorium, which will go up to about Rs. 350 in the second year. A substantial part of the loans' repayment is proposed to be linked to the productivity bonus that will be paid to workers every year. The loans, carrying 15 per cent interest, will be repaid over a 60-month period.

The KEU is confident that their plans will not get stuck because of the RBI's last minute decision to take a look into the matter. In any case, the SC has made it clear that its order is binding on the banks and other agencies involved in the revival of KTL. "The workers' involvement in this scheme has weighed on our minds more than anything else," says H.J. Mehta, additional general manager (rehabilitation and recovery department) at the Bank of India.

The KEU exercise is inspiring similar proposals from workers at other sick companies. In fact, the KEU is currently counselling unions such as Vallabh Glass Works Employees Union, the Agro Industries Employees Union, the union at Raj Bahadur Motilal Mills Poona Ltd, Homech Employees Union of Hoist-O-Mech Ltd and the union of Ramon & Demm Ltd. While the proposal of the Raj Bahadur Mills is already before the Bank of India and the BIFR for their perusal, the workers of Alembic Glass Works and a non-ferrous redrawing unit are also considering a KEU-style takeover.

CATCHING ON

The concept of workers' takeovers of sick units as a remedy for industrial sickness is also being considered seriously by the Andhra Pradesh government. Venugopal Reddy, director general, Public Enterprises Management Board, and managing director of the Andhra Pradesh Industrial Development Corporation (APIDC) says that the KTL case has the "potential to stop a manipulative tendency towards sickness by vested interests".

The APIDC and the seven other sick units are among the first few to take note of the KTL case and try to emulate it. The strongest impact of the Kamani Tubes experiment will probably be felt in a few years time, by which time, hopefully, the workers will have proved their point by turning the company back into the black.

NIVERSAL LUGGAGE

In the Piramal fold

The takeover of Universal Luggage last fortnight by Dilip Piramal of Blow Plast along with the Jatia group should end the fierce rate wars in the Rs.200-crore a year moulded luggage market. But in the process, Piramal will now control over 80 per cent of the market

The latest joke in corporate circles is that Jal Engineer sets up companies for Dilip Piramal to take over. Blow Plast Ltd, a Jal Engineer creation that introduced moulded luggage into the country in 1971, was sold two years later to Piramal, when it ran into financial problems. And last fortnight, Universal Luggage — the company that Jal Engineer set up on the rebound in 1974, went into the hands of Piramal again, who had textile industrialist Mohanlal Jatia in tow.

Immediately, this takeover is expected to ease the fierce rate wars in the moulded luggage industry. For over two years now, the big two, Blow Plast's VIP brand and Universal's Aristocrat brand have been engaging in discount wars that have now become commonplace in the industry. The discounts, which initially ranged between 15 per cent and 45 per cent, reached ridiculous levels of 60 per cent in April this year. "Even though the competition between the two companies will continue as before, the attrition and the acrimony will go out," says Piramal, who has taken over as chairman of Universal's newly-constituted board.

CONTROL OF MARKET

Even as the takeover gives Piramal virtual control of the 80 per cent-plus market share that the two companies today command, he allays fears of a monopoly by pointing out the nature of the deal. Kiddyplast Pvt Ltd, an investment company in the Piramal group, and the M. L. Jatia family have chipped in Rs.3.5 crores, shared equally, to buy Quality Plastics Pvt Ltd, a shell company belonging to the Engineer family that holds 45 per cent of Universal's Rs.4.05-crore equity capital. (The Bombay-based Jatia family owns three textile units, including Ramgopal Synthetics Ltd.)

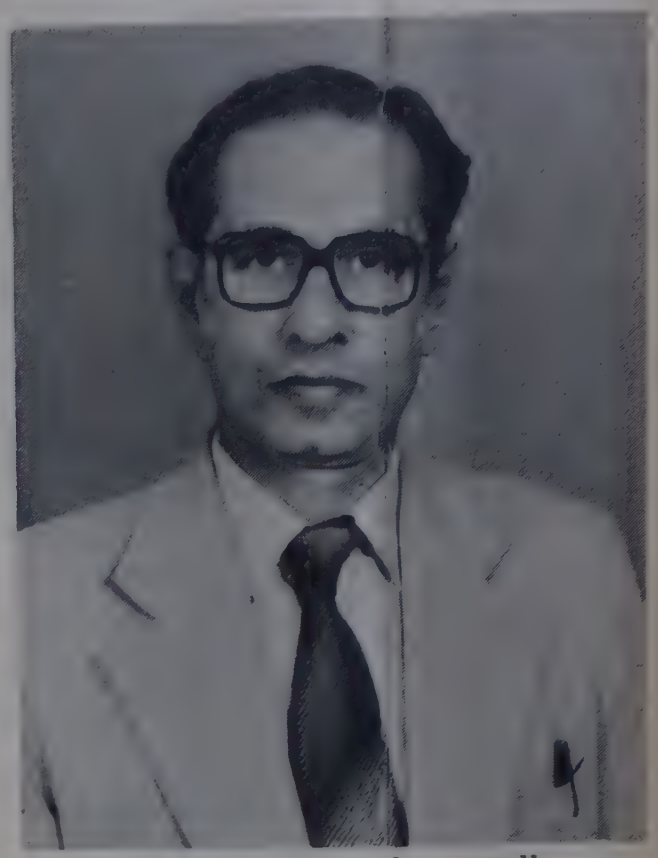
They have also bought three satellite companies from the Engineer family that supply plastic shells and other components to Universal, for an additional Rs.67 lakhs. "It is not VIP Industries or Blow Plast that has taken over Universal," says Piramal. "Both Universal and Blow Plast will continue to be run independently ... they are not interconnected.

Many in the industry believe that the "independent" nature of Universal and Blow Plast is only a technicality. To be sure, Piramal will try and evolve an integrated strategy for both the companies, and reap the benefits of a stronger bargaining position vis-a-vis suppliers. And call all the shots in the industry.

The new board of Universal, with Piramal as chairman, includes Jatia and his two sons, Sudhir and Sanjay. Two chartered accountants N.K. Bafna and Satish Ajmera, Kamlesh Gandhi of Champaklal Investment and Finance Co Ltd, and P.B. Modi, a former employee of Morarjee Mills, are the other directors. Piramal is believed to have offered the managing director's post to Jal Engineer's 29-year-old son Pheroze, who relinquished charge as chairman and managing director of Universal last fortnight to make way for the new order.

All the parties involved in the deal — Piramal, the Jatias and the Engineer family — believe that the change in the ownership of Universal is a positive development for the industry as a whole. "In the long run, both the companies will do much better with the ownership pattern that exists today," says Pheroze. "Both the organisations can head in a really proper direction now. And financially, their bottom lines will read much better. In fact, it could lead to a larger expansion of the market." Increasing input costs over the past couple of years has pulled down the industry's growth rate from a healthy 20 to 25 per cent about two years ago to around 15 per cent now. Pheroze feels that the "obsessive competition" which has taken a heavy toll of the bottom lines, will ease and allow the companies to concentrate on expanding their businesses. Already, discounts have fallen by about 5 per cent and are expected to fall further in the coming months.

"There was a lot of unhealthy competition in the industry, unhealthy for the manufacturer, the retailer and the consumer as well," says Piramal. "For the dealers, there was a lot of uncertainty as manufacturers did not have stable pricing policies. The consumer feels cheated as the discounts are not always passed on fully by the trade. And for us, when the difference in the discounts offered by Blow Plast and Universal exceeded 10 per cent, it began to hurt." Although Piramal does not expect the "unhealthy practices" in the industry to disappear overnight, he is convinced that the new order in the industry will be beneficial to the manufacturer, the retailer, and the consumer.



Jal Engineer: no option but to sell

A END TO PRICE WARS

"There will be no need for price wars now," says Amul Mehta, managing director of Safari Industries (India) Ltd, the third largest player in the market, with a 13 per cent share. "I think the bottom lines will get better now."

Manufacturers are also likely to consolidate their positions in the various segments they operate in. Currently, Blow Plast, which is well represented in the upper, middle and lower segments of the market, commands a market share of between 46 and 50 per cent. Universal, which is strong in the middle and the lower segments, has a market share of about 38 per cent. Safari's mainstay is the middle segment of the market and the latest entrant, Gujarat B.D. Luggage Industries, which has a collaboration with the US-based American Tourister Inc, concentrates on the premium upper end, which is estimated to account for no more than five per cent of the total market. "The

market at the top is not very attractive," says Jatia. "Universal will concentrate its energies on the lower end of the moulded luggage market." Safari's Mehta, on the other hand, plans to step into the lower end of the market. "The discount wars will stop now," he says. "We will start exerting ourselves in the cheaper segments."

Even as the industry gears up to restructure its priorities, market watchers are surprised at Jal Engineer's decision to sell his family's stake in Universal at a time when the company had turned in a profit after a bad year. During the year ended 31 May 1988, the company posted a turnover of Rs.47.32 crores, a gross operating profit of Rs.5.71 crores and a net profit of Rs.2.87 crores (the company had incurred a net loss of Rs.4.13 crores the year before.) Universal hived off the marketing function to a subsidiary company last year — otherwise, the turnover of Rs.47.32 crores achieved in 1987-88 would have been equivalent to Rs.57 crores.

The market grapevine says that Jal Engineer's decision to sell his family's stake in Universal was against the wishes of his family members, and that differences of opinion between him and son Pheroze led to the sale. "There are no problems between me and my son," says Jal Engineer. "And as far as my family members' wishes go, they don't have to say anything. Only my decision goes." He says that pending excise claims against Universal totalling about Rs.6 crores and the intensifying price wars in the industry forced him to take the decision to sell his family's stake.

"When we started negotiating with Blow Plast on how to stop the discount war and maintain prices, it came to a situation where either I had to take over Blow Plast or he had to take over Universal," he says. "And I don't have the resources to take over Blow Plast. The monies of every family member had been sunk into Universal. There were no bank balances left. If we had to survive, it would have meant investing in new products. The banks would have been willing to lend us the money, but we would not have been able to put in our contribution of the margin money. There was no alternative but to sell."

Piramal: "there was a lot of unhealthy competition

Pheroze disagrees. "Personally, I feel we would have been able to survive the price wars without selling out," he says. "But my personal views did not come in the way of the family decision." He says that the price wars in the industry had come to a "stalemate situation" and that a "certain maturity" had already set in "long before the sale took place". For the family, the loss of Universal is a major blow. "It was our main investment," says Pheroze. "All the eggs were in one basket."

Although the price wars in the industry were threatening the profitability of both Blow Plast and Universal, the former weathered the rough days better. "We had a stronger brand name, and more expertise in handling the market," says Piramal. In fact, he claims that his company's diversifications into seating systems, toys and stationery did not provide any cushion. "On the contrary, they were a strain on our resources," he says.

BAD BARGAIN

Jal Engineer also feels that the Universal deal was a bad bargain. "I got a very bad deal," he says. "I got only Rs.3.5 crores for my shares which had a face value of Rs.1.8 crores." He feels that in spite of the burden of excise claims that the new owners will take on, he should have received at least Rs.5.5 to Rs.6 crores. "I had two other offers, and one party (believed to be Manu Chhabria) was willing to pay Rs.3.65 crores but he stopped negotiations suddenly. For an additional Rs.15 lakhs I did not want to sell to that party, because he was not a luggage manufacturer. If I had agreed to sell to him, the price wars would have continued, which I did not want." He is also sore that his family will have to bear an additional liability of about Rs.28 lakhs when the income tax assessments for the three proprietary satellite companies are opened— investment allowance claimed for these companies will have to be paid back.

The agreement with Piramal and the Jatias also ensures that Jal Engineer does not start another moulded luggage manufacturing unit for a 10-year period. Piramal is probably wiser after Jal Engineer started Universal one year after selling Blow Plast to the Piramals in the seventies. Piramal does not see anything unusual in attaching such conditions to a deal. "In an industry such as the moulded luggage, which has very few operators, such conditions are common," he says. "If he starts competition again, it goes against the spirit of the deal."

In the case of the moulded luggage industry, competition is something no manufacturer would yearn for. With the easing of pressure on the discount wars, margins will get better. In fact, Pheroze feels that the environment is now right for a price increase, which may be effected either by an increase in the listed price, or a reduction in the discounts. As Mehta of Safari puts it, "The consumer had a bonanza for the last two years. Now, he will have to pay up."

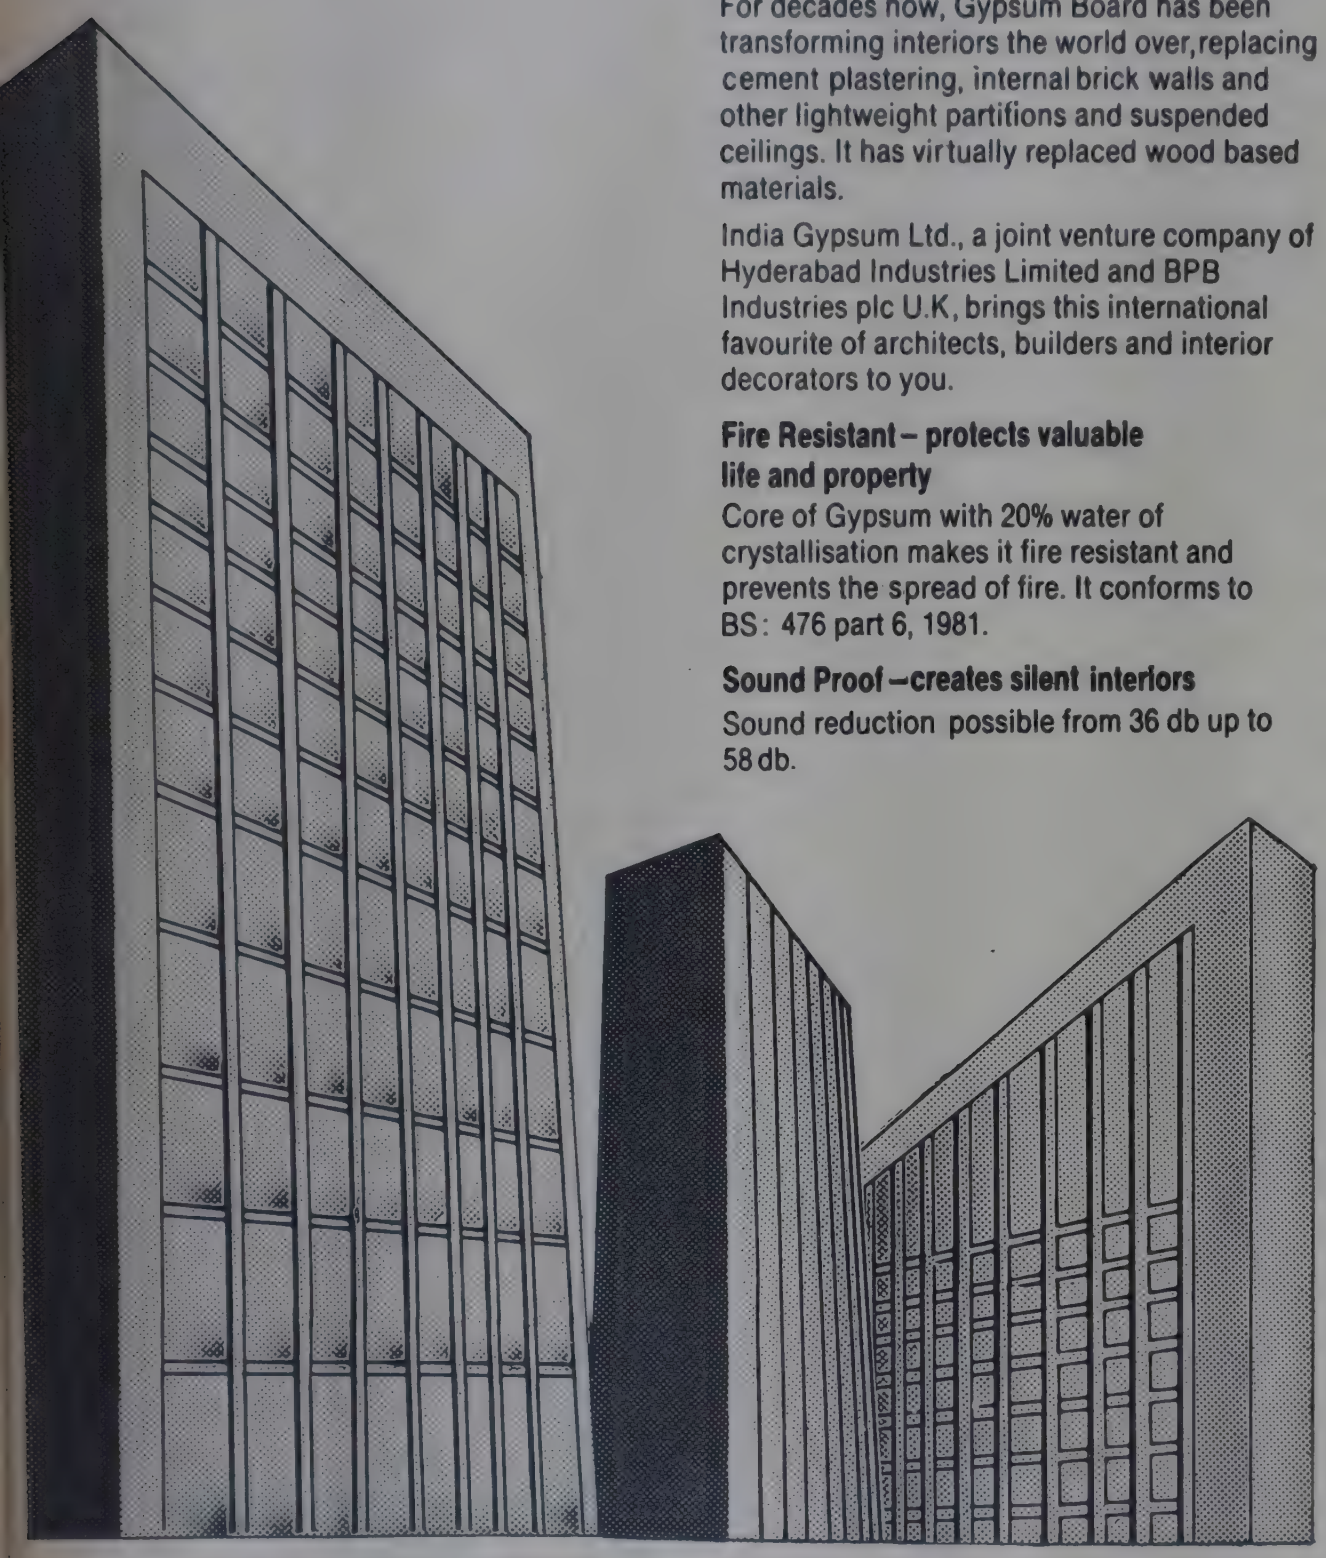
Now in India

The revolutionary building material for interiors

GYPBOARD

WALL LININGS, PARTITIONS AND SUSPENDED CEILINGS



For decades now, Gypsum Board has been transforming interiors the world over, replacing cement plastering, internal brick walls and other lightweight partitions and suspended ceilings. It has virtually replaced wood based materials.

India Gypsum Ltd., a joint venture company of Hyderabad Industries Limited and BPB Industries plc U.K, brings this international favourite of architects, builders and interior decorators to you.

Fire Resistant – protects valuable life and property
Core of Gypsum with 20% water of crystallisation makes it fire resistant and prevents the spread of fire. It conforms to BS: 476 part 6, 1981.

Sound Proof – creates silent interiors
Sound reduction possible from 36 db up to 58 db.

Thermal Insulating – saves energy
With a k value of 0.16 it is chosen for comfortable, cool interiors at low energy costs.

Smooth Surface – finishes excellent
It can be left as a conventional grooved panel or jointed as a seamless P.O.P. finish. The surface can be painted, wall papered or even laminated.

Labour Saving – speeds up erection
It is light, easy to carry and simple to erect with ordinary tools and projects can be completed before time.

Stable – has centuries of durability
Egyptian pyramids used it — today's advanced technology makes it dimensionally stable too.

Lightweight – saves structural costs
Partition walls with these light systems weigh only 20 kg/m², less than one tenth of a brick wall, thereby saving structural costs.

GYPBOARD Wall lining, Partitioning, and Suspended ceiling
Eliminates messy and time consuming construction practices and ushers in dry wall construction.

Complete Systems for Diverse Applications
Modern GYPBOARD systems come complete with technical services package from screws to framework, jointing materials to primers. GYPBOARD is backed with a technical pre and post sale service complemented by training centres located in important towns.

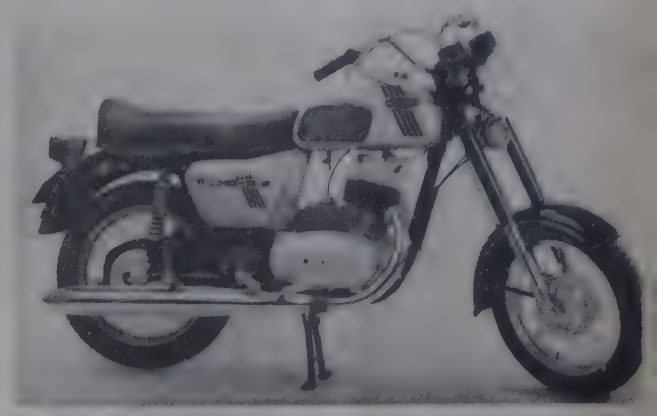
IDEAL JAWA

Out of gas

A favourite with youngsters till a few years ago, Ideal Jawa's Yezdi seems to have come to the end of the road. New generation Japanese two-wheelers left the company gasping, and finally last month it appears to have given up the ghost, with the abrupt closure of its factory



Ideal Jawa is idle now. At 7 am on 14 October, a piece of paper generated shock waves among the 2,000- odd employees of Ideal Jawa. The notice on the gate of the factory at Yadavagiri Industrial Estate, Mysore, announced the suspension of manufacturing activities. The only explanation: financial constraints.

On 9 September the management had served 998 workers with retrenchment notices with effect from December. According to the workers, these notices were issued without the state government's permission. But even before the retrenchment issue was sorted out, the company just shut down the factory. Tension prevailed at the factory and violence followed.

Business India tried to get in touch with the chairman, Noshir Irani, and officials of the company. But all attempts to talk to them over the telephone or in person were in vain.

It is learnt that the company, in its application to the state government seeking permission for retrenchment of 998 employees, stated that it was undergoing a serious crisis for the last two years with the increasing competition in the two-wheeler market. The management also explained that there was a steep fall in the sale of motorcycles in the last eight months which resulted in a cash loss of nearly Rs.30 lakhs per month.

Since 1986, the company could not deploy the majority of its workers, with falling production. From a peak of 3,000 bikes a month in 1984, during the last eight months, Ideal Jawa sold less than 1,000 motorcycles every month. In 1984 the company had to spend Rs.1,473 in labour costs on each motorcycle. By July 1988 it was spending over Rs.6,000 which became Rs.6,029 per motorcycle in August 1988. In 1981, its market share in motorcycles was 28.80 per cent; it dropped to 11.50 per cent in 1985 and in 1987, it fell to a mere 5.04 per cent.

TAKEOVER SUGGESTED

The Karnataka legislator (as well as the adviser to the Ideal Jawa Employees Association) M.S. Krishnan called the abrupt shutting down of the factory an "illegal closure". He said, " Mr Noshir had talked to me of the possible closure and I protested; in spite of this, Mr Irani closed down the operations." Krishnan said, "The Karnataka government should take over the company under the Karnataka Relief Undertakings Act. It was during the tenure of chief minister Devaraj Urs that the state government had taken over MEI (Mysore Electrical Industries); it is running fine now."

At the machine shop: swollen wage bills

Krishnan felt that the company could have regained its market with the launch of a 175 cc motorcycle. A few days before the closure, the company was planning to hit the market again with its new 175 cc vehicle. The snag was the non-availability of pistons. Dealers in various parts of the country were receiving enquiries about the motorcycle. Noshir Irani was also optimistic and its price was tentatively decided at Rs.14,000.

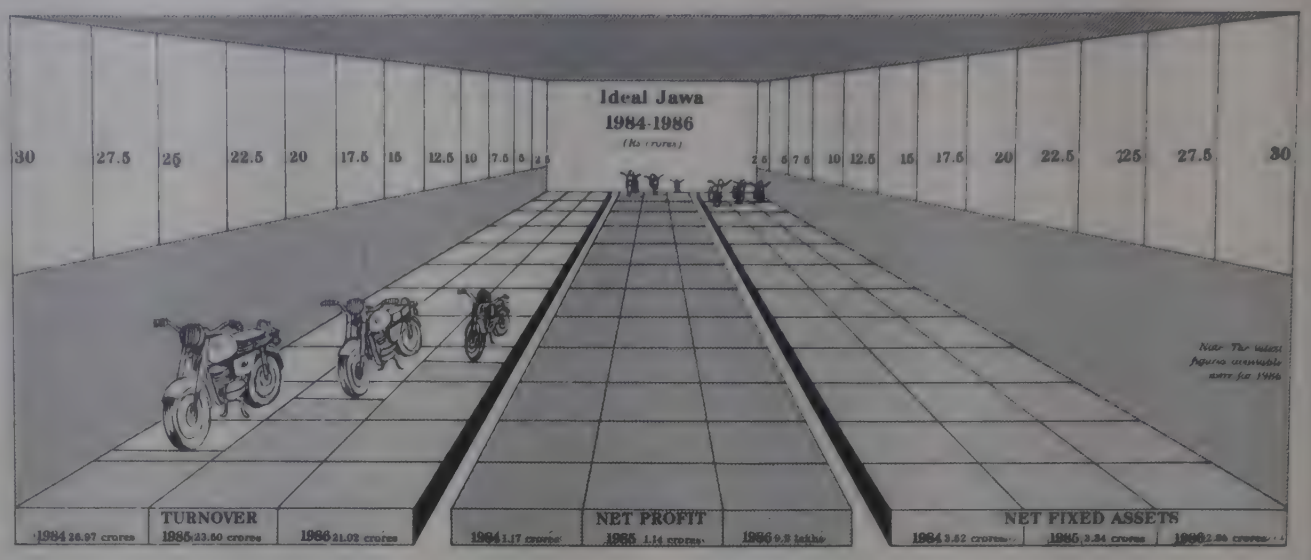
"You simply cannot survive on past glories," said Krishnan. He is of the opinion that the company would not have reached this stage if F.K. Irani, the founder-chairman, were alive today. For nearly 25 years, till 1985, Ideal Jawa was king of the roads.

Its motorcycles, especially Yezdi, had carved a niche for themselves in the domestic market. But with the onslaught of Indian two-wheelers manufactured in collaboration with well-known Japanese companies, the scenario changed. Ideal Jawa's profits as well as turnover dipped.

Says S.G. Rangaswamy, former general-manager of Ideal Jawa, "What took us 25 years to build is being destroyed in 24 months. The company would not have reached this messy stage if F.K. Irani were alive now. The Roadking was doing well and could have been improved, but nothing was done."

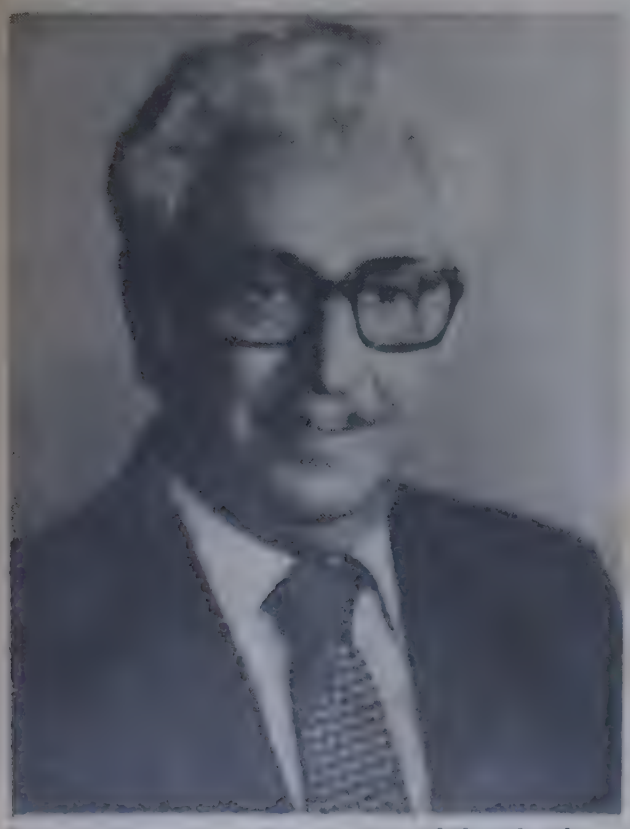
What went wrong? The president of the Ideal Jawa Employees' Association, S.K. Rahman, said, "The present state of affairs in Ideal Jawa is due to the absence of a diversification scheme; another reason is that the company's products are not fuel-efficient. For about 20 years, the company has made little investment on new equipment. Failure to supply raw materials in time to the respective departments has added to production difficulties. The most astonishing aspect is

that the chairman goes out of station for nearly 25 days in a month and during this period, no one is authorised to operate on his behalf." Also, Rahman says, "Selling 2,000 vehicles every month is not a problem if it is done against 60 days' bank guarantee." But the company insists on cash payments and the dealers complain.



FEEBLE ATTEMPTS

The management of Ideal Jawa has made half-hearted attempts to cut into the market. It has not bothered to increase its publicity budget, which at less than 1 per cent of its annual turnover is pathetically low. In 1985, the company spent just Rs.5 lakhs of its turnover of Rs.22.61 crores on publicity. The next year, it alloted Rs.7 lakhs for publicity while the turnover was Rs.19.92 crores. In 1987, on a turnover of Rs.14.79 crores, the allocation for publicity was a paltry Rs.9 lakhs. For 1988, Rs.10 lakhs have been earmarked for advertising, out of which the company has spent Rs.2 lakhs so far. Incredible as it may seem, the company inserted only one advertisement in each of the major national periodicals on 3 and 8 March 1987 to announce the arrival of its 350 cc vehicle. Similarly, during August 1987, Ideal Jawa released one advertisement in the south after Yezdi won the Mysore Rally. In September 1987 Yezdi achieved a similar feat at the Desert Himalayan Rally and the next advertisement followed. During January-April 1987, the company carried out a campaign in the rural areas of the north to boost the sales of 250 cc motorcycles; but it was not continued. Reportedly, Noshir Irani believed that advertising did not sell.



Noshir Irani at the centre of the feud

The running of the company was also affected by the discord in the Irani family (The company is closely held by the family and one outsider, Srikantadatta Wodeyar, MP and son of the former maharaja of Mysore). The feud, which began before founder-chairman F.K. Irani expired in October 1985, continues unabated. F.K. Irani wanted his son Raian to be his successor. But Rustom Irani, uncle of F.K. Irani (as well as a major shareholder of the company), wanted his adopted son Tehemten to take over. Both Rustom and his brother Boman put great pressure on the board of directors to accept Tehemten as the future managing director; and the board could not arrive at a unanimous decision for quite some time. But within a month of F.K. Irani's death, the board decided to nominate Noshir Irani, brother of F.K. Irani, to the post of managing director. Noshir is also the chairman now. This decision has affected the interests of Raian and Tehemten, who are chief executive officers of the company; the top management is thus further riven by dissension. As Raian once remarked: "What is the point of my coming to the factory if I don't have any decision-making authority?"

IN A MESS

Ideal Jawa vehicles are not very fuel-efficient. Besides, they are costlier than the others available in the market. Ideal Jawa cannot reduce the cost of production for the simple reason that it does not produce in as large numbers as do TVS-Suzuki, Kinetic Honda, Bajaj Auto etc. It has an installed capacity of 42,000 vehicles and a licensed capacity of 40,000. Production was down to 300 to 350 vehicles every month during the last few months.

The company does not have any marketing set-up worth talking about. It depends entirely on 150 independent dealers spread over the country and there is no proper interaction between the company and these dealers. The company also relies on the dealers' servicing facilities. Said a senior manager of TVS-Suzuki, "After F.K. Irani's demise, the management was not able to motivate the dealers who are still dedicated to the company. In fact, the dealers for Ideal Jawa did an excellent job, they never failed in their commitment." According to him, the company did not have any marketing department, barring a marketing manager (who also doubles as the PRO). "Simultaneously, the company was increasing its commitments without looking into the cash-inflow."

Interestingly, ten years ago, F.K. Irani had toyed with the idea of collaborating with Japanese companies for the manufacture of fuel-efficient vehicles. But Noshir Irani at that time said, "Going in for Japanese collaboration was not feasible for us. We did not modernise until now because of the old employees who would have to be dismissed."

Reacting to the complaints about the deteriorating quality of Ideal Jawa motorcycles, Noshir Irani had told *Business India* before the lockout, "It is not the quality of our vehicles but the quality of raw materials that we get that has gone down."

The two-wheeler market has become a buyers' market. There is a wide range of vehicles in the market to choose from. The Japanese two-wheelers have already driven out Scooters India, Chamundi Mopeds, and Brooke Bond (automotive division) and have left Enfield India lagging behind. To this unenviable list now will be added Ideal Jawa.

Only those who achieve a high rate of indigenisation and offer highly efficient vehicles, will survive.

How to get 8 quality brands of tea, 5 of coffee and over 10 varieties of spices - DIRECT from Brooke Bond

Brooke Bond's range of over 23 quality products that are trusted and enjoyed by households throughout India

ANNOUNCING THE BROOKE BOND INSTITUTIONAL BUSINESS SERVICE

What does Brooke Bond's Institutional Business Service mean to you?

Direct supplies from Brooke Bond

It means, that you can now get your complete requirements of tea, coffee blends and spices **DIRECT** from Brooke Bond. Indeed a convenience for the institutional buyer.

Competitive prices

Since your supplies will be made directly from the company depots, you are assured of the most competitive prices.

Wide product range

Brooke Bond offers you the widest choice of tea, coffee blends (both instant and filter), as well as spices. Take tea for example. The range peaks with 'Gold Label', a 100% Darjeeling leaf blend with the Tea Board Seal of Approval,to 'Taj Mahal Tea Bags', and a host of leaf and dust teas. A choice of blends in a variety of prices, each with a distinctive flavour that can fulfil every requirement of your institution.

Assured quality

All the products are backed by the Brooke Bond name. A name that spells value-for-money, and that is trusted by households in India and abroad.

Nationwide distribution

Dealing with a single source like Brooke Bonds's Institutional Business Service means more convenient ordering. Moreover, Brooke Bond has one of the most extensive distribution networks in the country, with over 1200 depots. This means wherever you are located, your order can be delivered at your door-step.

Special requirements

If your order is substantial, we could even arrange to print on the pack your company logo and legend.

Check us out : place your test order

Call Brooke Bond and place your trial order TODAY. We are confident you will find our services offer the convenience and quality you've been looking for. At prices that make it worth your while.

For further information, write or call:

Brooke Bond India Limited Institutional Business Service

Brooke Bond Products. Packed with care. Packed for consistent quality.

OBM 2766

This service is intended for institutions only and not for those interested in dealership or exports.

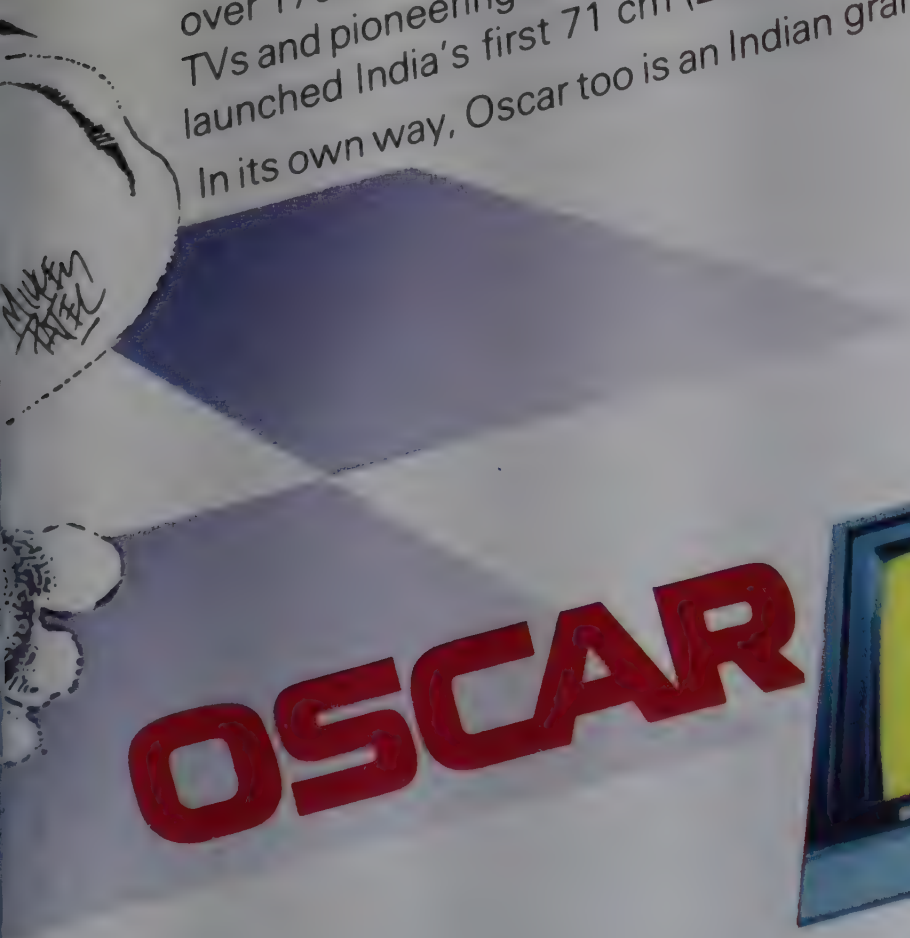
It is not by chance that Oscar is a grandmaster at 4.

In 1984, Oscar began as just another company in the booming, volatile world of consumer electronics.

In the 4 explosive years since, while many others have dropped out, Oscar has made corporate history.

Today, Oscar's turnover is reaching beyond the 50 crores mark. 7 factories Indiawide produce over 17000 perfect Oscars every month. The distinction of making the largest range of Core TVs and pioneering the concept of black & white Cores is Oscar's. And, Oscar has recently launched India's first 71 cm (28 inch) FST "PIP" set.

In its own way, Oscar too is an Indian grandmaster, and at only 4.



On our way

O'KEEFFES. ICARUS 325

CR INDUSTRY

Will it take off?

he government has finally selected four companies for the manufacture of CRs in the country. While the very basis of selection is being questioned, oubts are also being raised about the ability of the Japanese to transfer he technology required. More important, are they giving us a fair deal?

Quality control at BPL

After three years of dilly dallying, in June his year, the government gave the nod or the manufacture of video cassette recorders (VCRs) in the country. Four companies, one in the public sector and three n the private sector, have got the approval to manufacture VCRs with know-how from Japan.

But even as these companies warm up or the race, a number of controversies have cropped up. First, contenders who did not get approvals are questioning the basis on which the selections were made. Second, industry watchers wonder whether the Japanese can fulfil their promise to transfer VCR technology, and whether they will really give their Indian partners a good deal. These questions threaten to delay the setting up of the VCR industry in the country.

Already there has been considerable delay. The government issued a notification in October 1985 and 65 companies submitted their applications for VCR manufacture. Six private sector companies and one public sector company was shortlisted after about a year. Finally, only in June 1988, did the government announce the names of the companies.

Kalyani Sharp (a sister company of Bharat Forge), Videocon International (a Videocon group company) and BPL India are the three private sector companies that have received a letter of intent (LoI) to manufacture 300,000 VCR/VCPs each. The public sector unit, a Electronics Trade and Technology Development (ET&T) and Electronics Corporation India Ltd (ECIL) combine has received permission to manufacture 1 million pieces per annum.

ONLY HALF IN BUSINESS

In addition to this, the government had earlier licensed 45 parties to assemble 500 VCRs a year each with imported SKD kits. Only half of these are in business now, and assemble between 20,000 to 30,000 sets every year. Among these BPL India, which is now promoting BPL Sanyo, is a large assembler and claims to have sold 10,000 VCRs in 1987and 1988.

Those who were shortlisted but did not get the LoI finally are Sonodyne International of Calcutta, Peico Electronics (makers of Philips products) and Electronics Consortium Pvt Ltd (ECP), a consortium of eight TV manufacturers, which includes Crown, Weston, Televista, Dyanora and Salora.

These parties are quite unhappy about the government's decision. "We were not even told why our applications were rejected," says one. They see no basis for selecting three and rejecting the other three. "All six applications entirely fulfilled the conditions laid down by the government," says J.S. Jhaveri, managing director of Crown Electronics, makers of Crown TV. Says Ashok Mukherjee, director of Sonodyne International, "They probably just tossed a coin." Others, however, feel that political clout helped. "Kalyani of Bharat Forge and Dhoot of Videocon both have tremendous clout in Delhi; in the process Maharashtra gets two VCR units," says one.

"We were selected because we have a very good track record in TV manufacture and we have made significant investment in the tape deck mechanism the key component for a VCR," says Venugopal Dhoot, managing director of Videocon International Ltd. BPL too was selected on the same ground. Videocon has already invested about Rs.1.5 crores and BPL Sanyo had invested about Rs.8 crores on such facilities. Baba N. Kalyani, president of Bharat Forge Ltd, the company which promoted Kalyani Sharp Ltd (the makers of Optonica TVs), claims that his project got the clearance because his collaborator — Sharp Corporation of Japan — has offered the best technology for VCRs. Critics dismiss this, saying there is very little difference in technology among the Japanese companies.

JAPANESE TIE-UPS

Undeterred by the doubts and accusations, the LoI holders are getting ready to set up their plants. Videocon has tied up with Toshiba, BPL with Sanyo and Kalyani with Sharp, all three from Japan. In the case of BPL and Kalyani, the Japanese will take up 40 per cent of the equity of the new VCR company and in Videocon's project, Toshiba is taking 25 per cent. "We want to keep more controlling power

with ourselves," says Dhoot. Videocon and Kalyani are setting up plants in the Ahmednagar and Pune districts of Maharashtra, and BPL near Bangalore. All the three companies are expected to make a public issue in the first quarter of the next year.

The ET&T-ECIL combine has not been able to finalise a foreign partner. Negotiations with Matsushita Electric Co of Japan (which makes the National brand of products) have fallen through. ET&T is now talking to Hitachi, also of Japan. P.S. Deodhar, chairman of ET&T, however maintains, "We are still talking to both National and Hitachi and we will sign with one of them on terms suitable to us."

Transfer of VCR technology is another problem area. To ensure complete indigenisation in five years, the government has laid down a stricter phased manufacturing programme (PMP) for VCRs than it had for colour TVS. It has linked various stages of the PMP with output. The maximum time limit for complete indigenisation (at least up to 90 per cent) is five years and the manfuacturers are told to get an undertaking from their collaborators to this effect.

SENSITIVE ISSUE

Herein lies the problem. The co-ordinating committee on multilateral export controls (Cocom), an organisation of the NATO group of countries and Japan, restricts transfer of critical defense sensitive technology from its member countries to countries with friendly relations with the Socialist bloc countries *(see Box 2)*.

Since the technology for the hellical drum head (part of the video tape deck mechanism) can also be used for the production of guided missiles, the component is in Cocom's restricted list. Japanese companies will have to get approval from Cocom before they transfer the technology. (An application by Hitachi, which has tied up with a government company in China for the manufacture of VCRs, has been awaiting Cocom clearnace for more than a year now.)

India has friendly ties with many socialist countries. Will Cocom agree to the transfer of technology involved in the Indian VCR industry? The promoters of the VCR companies think so. "VCR technology is not defence sensitive and I am confident we will get it," says Kalyani. Dhoot who echoes this confidence. Surprisingly, the DoE, the nodal agency for the development of the electronics industry in the country, is not aware or refuses to accept the existence of any problem. Says K.P.P. Nambiar, secretary of the DoE, "Our knowledge is limited to the fact that the three parties have given us evidence and proof about valid collaboration and they have not indicated any problems about technology transfers."

But the Cocom approval is bound to be a hurdle. Moreover, according to Nobuhiko Iwata, chief representative of Sharp Corporation of Japan in India, not only the tape deck technology but all the critical components that go into the VCR are on Cocom's restricted list. "In effect, it means we cannot part with any technology concerning the VCR, without Cocom's permission," says Iwata. Furthermore, according to him, even the exports of SKD kits from Japan are not allowed.

The Japanese VCR manufacturers tied up with India are now talking to MITI (the ministry of international trade and industry in Japan) to get the approval from Cocom. Even if Cocom does agree, it may insist that the transfer of technology be phased over a much longer time period than the Indian government's stipulation of five years.

LIMITED SOURCE

Can we get the technology from else where? Probably not. Most of the leading European companies have tie-ups with the Japanese. And South Korean companies, which of late have given a beating to the Japanese in the lower end of the market, cannot pass on the technology either, because they too have developed their industry with Japanese assistance.

Another question, even if we assume a tape deck mechanism, which constitutes nearly 60 per cent of the whole VCR unit. A decision was taken to consider the proposals of such companies in a favourable manner because they would not be able to market their products and the whole investment would become infructous. In addition, Kalyani Sharp was selected because they had a good foreign collaboration.

Box 1

"VCR technology is not defence sensitive"

K.P.P. Nambiar, *secretary, Department of Electronics (DoE), played a major role in formulating the VCR policy in the country.*

What were the criteria for selecting the three private companies out of the six shortlisted?

We had 65 applicants, of which six were shortlisted. We took a decision that, of these, only one private sector party and one public sector company would be finally selected to be given letters of intent. It came to our knowledge that some companies had already invested in facilities to make the

Many people believe that LoIs should have been given on a regional basis.

Why? All the colour picture tubes factory are in the north. If there is any component (or equipment) which needed to be regionally set up it is the picture tube because it is large and transportation is difficult. But no TV manufacture has ever complained of non availability of picture tubes.

There are Cocom restrictions on the Japanese companies. Will this not be a hurdle in transfer of technology?

We will decide this issue as and when it rises. Our knowledge now is limited to the fact that the three parties had given us evidence and proof about valid collaboration agreements and they have not indicated any problems about technology transfers. As a technical man, my view is that VCR technology is not defence, sensitive in any way.

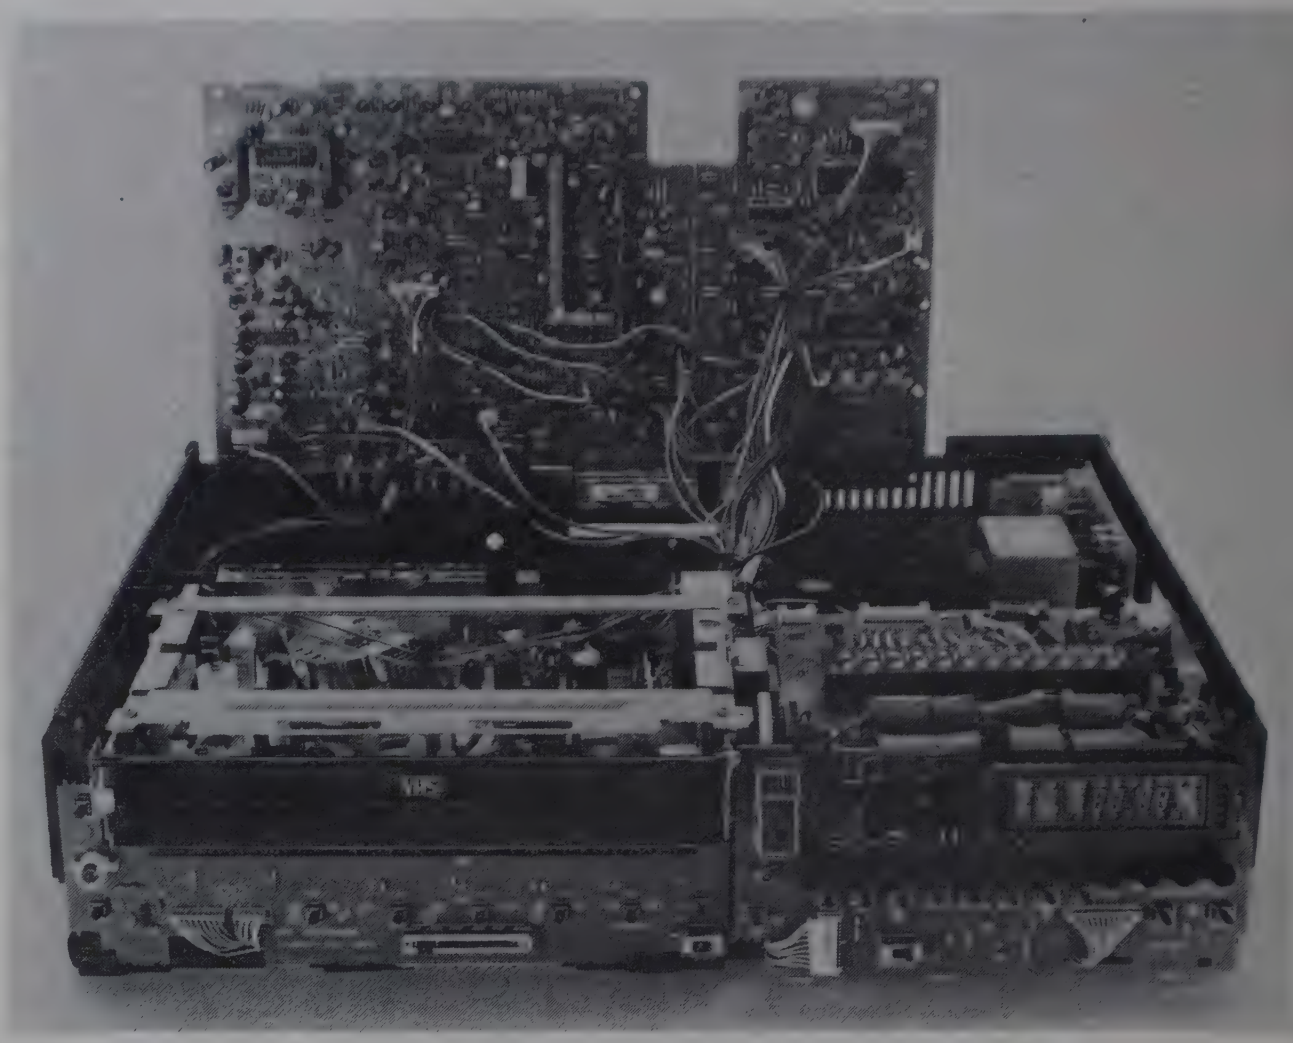
The Cocom cocoon

The Co-ordinating Committee on Multilateral Export Controls (Cocom) is the central organisation monitoring and controlling exports of technology from western countries to the socialist countries. Set up in 1949 and described as an extra-legal, non-treaty based informal group, Cocom comprises all the members of NATO group, plus Japan — 16 members in all. Its 30-strong secretariat operates from an annexe of the US embassy in Paris. The US obviously calls all the shots, purely by virtue of being the largest financier of Cocom's estimated budget of US $2 million a year.

The two main functions of Cocom are to update regularly the list of items that members must not export the technology of to the Soviet Union and other communist countries. And it meets every week to consider applications from members seeking permission for a company to sell a prohibited item. When governments support their companies in a proposal to sell some key technology, the agreement of other Cocom members must be obtained.

What happens when a company in the member country flouts Cocom regulations? The company is blacklisted and sometimes even heavily fined. For instance, Toshiba of Japan, with the Norwegian company Kongsberg Vaapenfabrikk, deliberately understated the capability of computer-controlled milling machines developed by Toshiba, which they sold to the Soviet Union between 1982 and 1984. It was alleged — although some experts dispute this — that the machines enabled the Soviet Union to make quieter submarine propellers, making them much harder to detect. As a result, the US says, it will have to spend billions of dollars to develop better detection devices. Once the contravention was detected, senior Toshiba officials (including the managing director) resigned and some executives were arrested. The company was fined heavily and the US congress was moved to prohibit the sale of Toshiba products in the US for up to five years.

■ DM



BPL-India's assembled VCR

smooth transfer of technology, will it make VCRs manufactured here cheaper? Deodhar of ET&T does not think so. Since Japan is the largest producer of VCRs in the world (it is expected to produce 35 million of the world's total of 45 million VCRs in 1988), its charges for technical assistance have been quite high. In fact, according to ET&T's calculations, over the next five years the foreign exchange outgo on every VCR made by the three private companies will be higher than the price at which the VCR can be bought in Japan. The import of machinery, components and knowhow will easily account for this. Moreover, the PMP for VCRs allows import of components in SKD and CKD form in large numbers and the Japanese companies are known to over-charge on components. "They are taking us for a ride. I will sign the agreement only if they agree on my terms," says Deodhar while discussing ET&T's plan to produce "cheaper and reliable but not exotic and sophisticated" VCRs.

SMALL VOLUMES

Another major problem in adopting Japanese technology is that, with their volumes of production being very large (National, for example, produces 5 million VCRs every year) the assembly job is almost entirely robotised. This technology has little significance to the Indian companies since the volume of production is much lower and robotics are not acceptable here.

Controversies apart, everybody agrees that the VCR market in the country is excellent. Despite the very high rates of import duty (nearly 200 per cent), 80,000 VCRs are imported every year as a part of personal baggage. Another 20,000 to 30,000 sets are assembled locally and these are clearly not enough. With the long tradition of feature films and the fact that most of Doordarshan's programmes are unappetising, the VCR is one of the most sought after consumer products in the country. Authoritative sources estimate that 10 million colour TVS and 200 million B&W sets will be available by 1990. This should provide a good market for the 2 million VCR/VCP sets licensed to be produced in the country.

Of course, the key factor is price. VCRs made here will have to be cheaper than the imported ones. As much as 80 per cent of VCRs imported are National's, which are not going to be made here. Indian VCRs will face stiff competition from them. On the other hand, although the domestic industry will need protection import duties on foreign VCRs will need to be revised to keep Indian manufacturers on their toes.

LUGGAGE TO BE SEEN WITH

Franchising Mickey Mouse

The party has just begun

In the make believe world of Mickey Mouse, Snow White, Uncle Scrooge and a host of other Disney characters, there is one thing for real — megaprofits that most people only dream about. In 1987, The Walt Disney Company recorded a revenue of $2.9 billion and a net income of $444.7 million. Of this a whopping third of the revenue came from licensing and franchising. Covering 3,000 companies around the world and 14,000 Disney licence products, the growth of this industry is estimated at 35 per cent per annum.

"Franchising and licensing the world over has been used as an effective marketing tool to catapult a product to centre stage," says Vinod Malhotra, a partner at Famous Communications, a private company which represents Walt Disney in India for licensing. Set up on 1 January 1988 with six licencees, Famous Communications to date has issued 18 licences. Explains Malhotra, "The correct selection of a company is critical, and it involves considerable research from various sources in industry. In evaluating a company we look for strong all-India representation, dynamic people running the company, a wide distribution system and most important — a first rate product."

This year, on 18 November Mickey Mouse will celebrate his 60th birthday. A big bash is being arranged for him in 15 cities in India, which will be co-sponsored by Kwality Frozen Foods Pvt Ltd, a Walt Disney licencee, and the Taj group of hotels. N.K. Seth, executive director of Kwality, justifies the Rs 1.25 crore expenditure. "In a span of 12 months starting October 1988, the exposure Kwality is going to get on account of the Mickey Mouse tie-up is going to be tremendous. Apart from the birthday parties, we are organising the Funtoon Contest on an all-India basis. We are identifying ourselves with something the kids care about; we are riding in on the universal appeal of Mickey Mouse." Seth is confident that the contest and the parties will result in a 30 per cent increase in annual turnover.

Hamid Vasi, a partner at Triace Print Creations, an organisation best known for its stickers, is one of the older licencees. "Not only has the tie-up resulted in a 200 per cent increase in our turnover, the variety and designs we now offer are larger and better than any other manufacturer in the country," he says. Another licencee who is equally enthusiastic about the tie-up is Harmeet Singh, president, Polo Toys, manufacturer of toys and melamine crockery. Says Singh, "I see myself not in the toys or crockery business, I am in the children's business." Singh estimates that the tie-up with Walt Disney will result in a 250 per cent increase in turnover and hopes to end the year with Rs 2.5 crores.

Are children the only target of this innovative marketing strategy? Looking at the range of products that have been licensed in India, it would seem so. But in countries in the West, where licensing has been around a good many years, children form only one part of the segment — stationery and designer clothes for grown ups abound with logos of Mickey Mouse and his gang.

There seems little doubt that using Mickey Mouse to sell your products is a prescription for instant success, but K.G. Dhurandhar, president, Dr Writers Food Products Pvt Ltd, a long time player in the franchising game, cautions the tyros in the business. "No licence is going to last forever. It is crucial that while the campaign is being run with the franchised characters or name, the product should create a separate identity that will be remembered long after the licence expires." Dhurandhar explains further, "The product rides piggyback on sixty years of Mickey's worldwide exposure, but it has to be remembered for itself. If this is not done, success will be temporary at best."

Be that as it may, right now most of the franchisees are rubbing their hands in glee at the thought of increased turnover and market share. Famous Communications, isn't doing too badly either. While Malhotra is reluctant to talk specific, informed sources estimate the royalty to be between 6 and 8 per cent on the revenue for most products, which can go up to 50 per cent in some cases. Famous Communications earns a percentage of the royalty and the rest goes to The Walt Disney Company. Apart from the royalties from publishing licences, with Living Media Publications and Frank Publishing, the Walt Disney share of the royalty has to be banked in India. The royalty on publications can be repatriated.

Speaking about the future of franchising and licensing, Malhotra says, "It's been only 10 months and we already have 18 licencees. While it may be a little too early to comment, I think there is great potential in this business. The real money spinners -- apparel, watches and shoes, have yet to be licensed out." From all accounts, the party has only just begun.

BASMATI RICE

Looming threats

Basmati rice exports from Punjab touched an amazing Rs.300 crores last year from almost nil eight years ago. This phenomenal achievement was due to the enterprise and skill of the miller-exporters in tapping the high-risk but lucrative markets of West Asia rather than the encouragement extended by the government, which has ignored the growing problems of this export-oriented industry.

The long-standing demand of the industry for the formation of a rice export promotion council has been treated with indifference. It was in October 1985, that then union commerce minister Khurshid Alam Khan had assured the basmati rice industry that the new organisation, the Agricultural Products Export Development Authority (APEDA), would take care of its interests. However, when APEDA was formed, all cereals, including rice, were kept out of its jurisdiction. Nevertheless, APEDA chairman Fateh Singh Jasol is reported to have taken up the case of the Punjab basmati industry with the commerce ministry. Jasol indicated his helplessness to Ashok Sachdeva, president, Punjab Rice Millers-Exporters Association, in a recent letter and urged him to "avoid a controversy on the matter pending some resolution of the anomaly that arises from the fact that these commodities are not scheduled products under the APED Act".

PAK CHALLENGE

Even as the bureaucrats dither on the critical decision of setting up some organisation to take care of the interests of the basmati rice industry, the challenge from Pakistan, Thailand, China and even Japan is gradually eroding the competitiveness of Indian basmati. In fact, the Japanese are reported to have vowed to flood the West Asia market with their own brand of basmati which, according to industry sources, is now in an advanced stage of development.

Contrary to the central government's policy that no sales tax would be imposed on products which are exported, the Punjab government and the state agriculture marketing board have imposed levies amounting to seven per cent on paddy, including basmati. The break-up is purchase tax, four per cent; market fee, two per cent; and cess, one per cent. The industry's demand for relaxation and abolition of the imports has been rejected on the ground that it would entail a massive revenue loss to the state exchequer. The state government has contended that since the entire gain from basmati exports accrues to the Centre, it must either compensate the industry or make good the revenue loss to the state government. Industry sources feel that the elimination of these taxes would result in a cost reduction to the extent of Rs.125 per quintal and enable the basmati exporters to fight off at least the Pakistani challenge.

Old basmati rice is a craze in West Asia and Pakistan has specialised in it. Since basmati is a seasonal crop and harvesting is completed in about two-and-a-half months, the millers have to resort to bulk purchases to keep the mills running throughout the year. This is done in stiff competition with trader-money lenders, who, millers say, have enormous sums of black money at their disposal. The rice industry says that it has time and again represented to the government to direct the banks to extend liberal credit facilities to them. The response, however, has been cool and no application for working capital for purchase of paddy is being entertained by commercial banks in Punjab, despite the severe resources crunch faced by industry due to the peculiar problems thrown up by terrorist activity.

Even as the bureaucrats dither on the critical decision of setting up some organisation to take care of the interests of the basmati rice industry, the challenge from Pakistan, Thailand, China and even Japan is gradually eroding the competitiveness of Indian basmati

PUBLICITY CAMPAIGNS

A positive development in basmati rice export has been that exporters have been able to popularise their own *desi* brand names. Some of them have become household names in the Gulf. However, efforts to sustain the brand names require massive doses of money in foreign exchange for advertisements and regular publicity campaigns. Requests by industry for special incentives to enable them to penetrate lucrative markets with the aid of publicity have fallen on deaf ears.

The industry contends that good quality basmati rice fetches as much as Rs.1200 per quintal in the international market compared with Rs.100 to Rs.115 per quintal for wheat and Rs.250 to Rs.300 for non-basmati rice. As such, there is an obvious advantage in raising the production of basmati paddy for export.

All rice exports have to be statutorily inspected and agmarked. Though this has been necessitated by rampant malpractices which have tarnished the image of the country, the Punjab rice millers feel that there is need for relaxation of this stringent rule in the case of non-specific grade (NSG) basmati rice, which is priced much lower and has a good demand in most of the overseas markets.

The government has reserved the rice milling industry for the small scale sector on the assumption that a unit does not cost more than Rs.35 lakhs. The criterion is sound if applied to units engaged purely in domestic activity, but it works to the detriment of the export-oriented ones because some of the machinery required for producing high quality rice is not available locally and has to be imported from hard currency areas. For example, the landed cost of a 'colour separator', which sifts discoloured and damaged grains from healthy ones, comes to around Rs.35 lakhs. It is a must for export units to enable them to be competitive in the highly sophisticated international markets. If rice export units continue to be treated as small ones, they would not be able to mobilise resources for urgent modernisation. Says Sachdeva, "The government must modify the rule so that export units are registered as medium or large scale projects and become entitled to import facilities."

Apparently, the perception of the state government differs from that of the Centre. But, in this situation, an industry which has proved its mettle on the export front is threatened with stagnation and, if things do not improve and wisdom does not dawn on the bureaucrats, retardation would not be far behind. It is only proper that the central government, which has been shouting from the roof tops that export should be priority number one for industry, intervenes and makes the state government see sense.

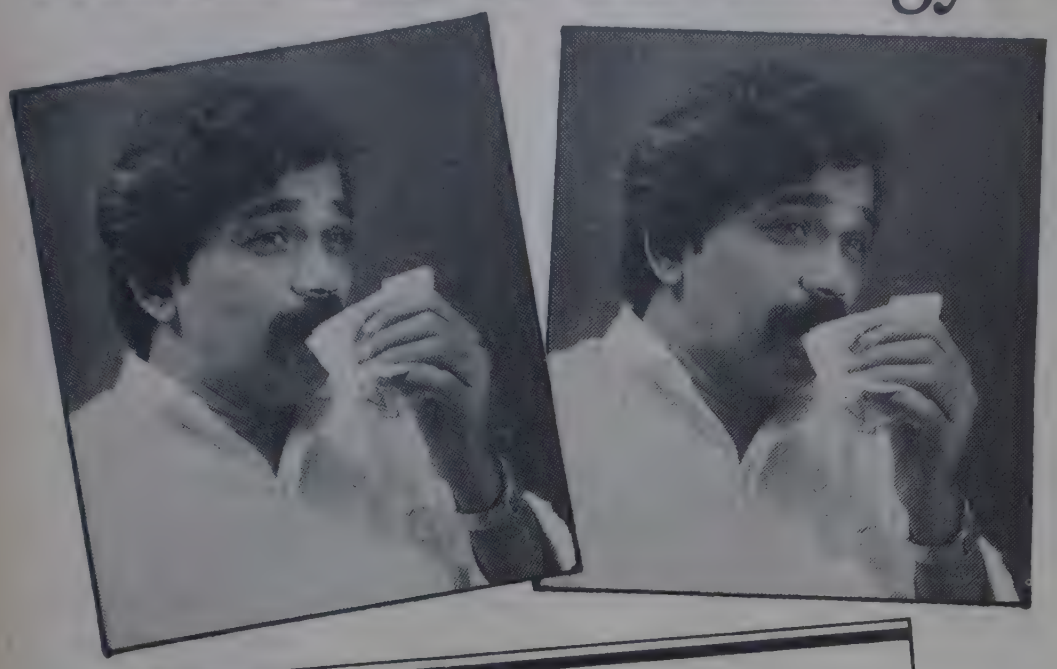
Spot the difference
Which one is the allergy?



If you suffer from:

- *Allergic asthma*
- *Allergic rhinitis*
- *Eczema*
- *Contact dermatitis*
- *Hives*
- *Food allergy*
- *Any other allergy*

maybe the Allergy Clinic can help you

How can you tell?

It isn't always easy. Because an allergy isn't always obvious. A persistent cough, for instance, could be a manifestation of allergic asthma. Sneezing could mean allergic rhinitis. A rash, a food allergy or contact dermatitis. And so on.

What causes allergies?

Allergies are caused by what you inhale, or ingest, or come in contact with. It depends on your body's sensitivity.

How do you treat it?

Only correct diagnosis can define the line of treatment. The earlier you identify the cause, the better the chances of cure.

Who can help you?

The Allergy Clinic can. The Clinic is geared to treat any case. Mild or severe. In adults or children. A highly qualified specialist, who will make a thorough study of your history, and the latest testing facilities the world has to offer make diagnosis doubly sure.

How much will it cost me?

Initial consultation: Rs. 100. Follow-up: Rs 50 per visit.
Blood tests: Rs. 200 (approx.)
Skin tests: Rs. 20 per allergen.

Can you spot
the Troublemaker?

The gentleman with the long ears is the troublemaker. He's the one who's been inciting other employees and formenting trouble in the organisation.

Littlemore, Detectives and Investigators, after investigation, identified the culprit and brought him to justice, saving the organisation lakhs of rupees.

Today, Littlemore is one of India's leading Investigation agency. With representatives and associates all over the world. And an unrivalled performance record that goes back 28 years.

So, whatever be your problem - **strike settlement, violence, wage negotiation, industrial investigation, leakage of technical information etc.**—pay Littlemore a visit today, to discuss the same in a confidential atmosphere.

You can also appoint Littlemore on a retainership basis, for just Rs. 2 per employee, per day.

A. RAMASWAMY

Towards greater productivity

While all organisations desire enhanced productivity, few strive for it systematically. The productivity question is shrouded in so much obfuscation that we must first clear the cobwebs before the issues can be faced squarely.

The most common misunderstanding is that money will buy performance. One often hears it said that workers should do their job because that is what they are paid for. This unfortunately does not happen. There are many intervening variables between money and performance which make impossible a simple and clearcut relationship between the two. That is why we find wage increases, bonus payments and all the rest enthusing employees only for a while, if at all. If people have to do their jobs with diligence, they have not only to be paid well, but motivated in other ways as well.

We must also get over the facile view that there is an invariant relationship between productivity and national character. This is an easy way to explain the industrial might of Japan and Germany and our own failures. After all, the Germans aren't productive merely because they happen to be Germans. Their organisations are also differently structured from ours. For example, they have practiced codetermination for decades. Likewise, we know that the sense of commitment which Japanese organisations evoke in their members contributes handsomely to productivity. We also know that our own people perform quite well in alien societies. It serves no purpose to ignore these realities and speak merely of national character.

The third blinker is the expectation that trade unions should enhance productivity. There is no dearth of managers who hold this view. What they want is that the union leader should use his power over his members to get them to do a decent day's work. The protagonists of this view misunderstand the nature of union power. The union leader is a popularly elected representative empowered to articulate the interests of his flock, and not a policeman authorised to punish members who go astray. It is also strange that managers should expect the union leader to do what they themselves, with their power to reward and punish, are not willing to do.

Even communist societies have failed in their effort to get the labour movement to raise productivity. In the early days of the Bolshevik revolution, this was believed to be the chief purpose of trade unionism. The Soviets built a cult around a coal miner by name Stakhanov, who had mined unprecedented qualities of coal, and Stakhanovism became the *summum bonum* of Soviet trade unionism. Even this did not raise the efficiency of Soviet industry.

What emerges when the cobwebs are cleared is that productivity is not a gift either of an obliging trade union or of workers fired by national fervour, but a consequence of the way the work organisation is built and managed. All other circumstances can play only a supportive role.

With this backdrop, we can examine how the quest for productivity has shaped over time. While the scene is by and large dismal, there are some bright spots which kindle hope.

The most rudimentary method of increasing productivity is the incentive scheme. Although the barter of money for performance sounds quite simple, the method is fraught with problems. If production norms are a bit low, the workers end up earning an incentive for work which they would have in any case done. And if they are a bit high, the scheme may evoke no response. Industrial engineering is expected to tell us where exactly to pitch the norm within these limits, but that unfortunately is not the case. Individual incentives tend to create inequalities in income between employees and sour relations. Group incentives are better from this point of view, but they are not as motivating.

If the method of computing the incentive is complicated, workers end up earning less than they expect to, with all the attendant problems. If materials supply, marketing and other allied services fail to sustain a high level of production, incentives become a problem instead of an advantage. With all these difficulties, one should expect the majority of incentive schemes to fail, which is exactly what happens.

The next step in evolution is productivity bargaining. Beginning sometime in the late seventies and early eighties, employers started to insist that workers should commit themselves to enhanced production norms as a quid pro quo for additional benefits. This was directly in response to the unprecedented demands which trade unions were making. Leaders like Datta Samant had much to do with the evolution of this trend. Till such leadership came on the scene, employers were not really concerned about the utilisation of labour. With the advent of the new leadership, long term settlements became the prime instrument for getting more out of labour.

Wage settlements, which clearly spell out what is expected of workmen, are now quite common in the private sector, especially in engineering, tyre building and similar industries where the production of individuals can be computed. Soon employers began to spell out penalty clauses as well. It was clearly stated in settle-

The author is chairman, Administrative Staff College of India, New Delhi Centre

ments that workers would lose certain benefits if the required production was not achieved for reasons which had nothing to do with management. One can find this provision in all of R.J. Mehta's settlements, although he is not the only one to agree to them.

The initial experience of employers with such settlements was certainly a happy one. Premier Automobiles which signed up a settlement with Datta Samant saw its productivity go up. With this, fear of the new brand of leadership also abated. If these leaders demanded fancy benefits, they also signed up for enhanced production norms.

But the euphoria was shortlived. Diminishing returns set in with successive settlements. Trade unions continued to pitch their demands high. Having got Rs.500 through one settlement, they could not settle for less in the next. On the other hand, a continuous increase in production was not feasible. Many organisations found that the problem lay not just with workmen and their willingness to work, but with support systems as well. The personnel manager of a multinational once remarked that materials procurement was one of the major black holes. With this came the realisation that there was more to productivity in Germany and Japan than the dedication of labour. Can we replicate the zero inventory for which the Japanese are famous?

It also became clear that our technology was not good enough to support continuous increases in the volume of production. Few organisations were making significant investments in machinery and equipment. All that they were expecting was that labour should improve its efficiency. Trade union leaders continued to sign for increased production norms, but implementation became more and more problematic. Even the penalty clause could not be applied because it became clear that want of effort by labour was not the problem. Even as this realisation was dawning, the trade unions continued to ask for more. How could these demands be met in a situation where productivity had already reached a plateau?

Clearly some other strategy was called for. Many organisations saw a way out in contract labour and loan licensing. The growth of these practices on a large scale coincides with growing labour cost and the inability of existing technology and support systems to sustain higher levels of production.

On the positive side, the inherent limitations of the continuous bargain for enhanced production norms has forced industry to look for other innovative methods. The most significant among them is what we may call flexibility bargaining. The thrust here is to identify the restrictive practices of labour and other sources of rigidity which hamper the efficient utilisation of resources.

The most pernicious of these restrictive practices are planned absenteeism, rigid job demarcation, refusal to perform overtime work, refusal to officiate, and rigidities in deployment arising from the unwillingness of workers to shift from one shop or duty shift to another. All these practices have obvious implications for productivity and significant improvements can be achieved by tackling them.

A perusal of some recent settlements shows increasing attention to these areas. Absenteeism is the major concern of many firms. Instead of lamenting the tendency of workmen to abstain from work or harping on standing orders which have atrophied through disuse, they make it expensive for workers to stay away. A number of benefits, including house rent and some miscellaneous allowances, are tied to days worked. It should be emphasised that the linkage is to days worked, and not to days absent, in order to avoid definititional problems over 'absence'. Together with production and attendance incentives, bonus payments and so on, the number of benefits linked to work becomes substantial and dissuades absence.

Other specific provisions are that workers would be deployed in any shop or shift as is necessary; that they would not refuse overtime when offered nor demand it as a matter of right; and that work would not be stopped because of insufficient crew strength. One organisation bargained to restrict canteen services to workers on duty and to enhance canteen prices. Those who are familiar with the problems caused by canteen services would appreciate the import of this provision.

Moving further afield, one needs to look at the content of work. It is simple common sense that the intrinsic satisfaction offered by work is a powerful motivator, and that dull and dreary jobs tend to be demotivating regardless of compensation. Human ingenuity has found some ways to humanise work, although there will always be some jobs which are dirty or dull. Group work, job enrichment, job rotation, flexitime and quality circles are some innovations. There are hardly any developments worth mentioning in our country, with the exception of some tentative beginnings with quality circles.

Beyond involvement in the work lies involvement in the enterprise itself. Although the relevance of a committed workforce to productivity is not immediately apparent, the linkages are profound and far-reaching. Interestingly, some of our own enterprises have been directing their energies to finding ways of bringing workers closer to the enterprise. That is something to be elaborated on a later occasion.

BLUE CHIP SECURITY

Businessmen who are used to taking professional risks that pay off, must have one solid asset to depend on. Try this 2" × 3" piece of blue chip plastic.

You don't have to carry any cash but it carries weight at 7,000 outlets across the country. It buys airline tickets, pays for hotel rooms, picks up restaurant and shopping bills. It welcomes you to the 'club' and offers you a host of advantages: free flight insurance for Rs. 1 lakh with every airline ticket, commission-free travellers' cheques, hotel discounts (upto 40%) in India and abroad, packages and personalised services from the travel agency that bears its name (it's a name that counts). Plus many little things that mean a lot. Like picking up the phone and sending flowers, fruit, chocolates, cakes or mithai to someone special. A world of services offered with style. In other words, the world of Diners Club. The blue chip card. Make the investment. Become a member. There are dividends in every way.

Type out 3 more copies... Now!

Should dull, repetitive jobs kill more productive work?

If your answer is 'No', call Team Xerox

You have to coordinate the new project. If you're to lead a team, you have to keep each member fully informed. So they can contribute and help get the project off the ground.

You ask your secretary to type out additional copies of the proposal. As she hurries through, you hope there are no mistakes. Misplaced decimal points, for instance, could cause disasters. All the while, valuable executive time is wasted as you fret and your secretary numbingly types away.

Does this sound all too familiar? Scenes like this occur every time typewriters and carbons are habitually used for distributing information, instead of creating it. Mistakes multiply and carbon copies are frequently illegible.

Consider : the information you need is already on paper or in print three-fourths of the time, usually in a convenient format. Think about computer output for example. Forcing your staff to recreate it ties them up needlessly, wasting enormous amounts of time and effort.

The answer is quick, effective communication of your data. And that's where a Modi Xerox photocopier comes in.

With a Modi Xerox copier, information can reach every team member as fast as it is created, without waiting for endless retyping.

Documentation is crisp, clear and can be communicated at the press of a button. A Modi Xerox copier spells an end to dull mechanical jobs, freeing your staff for more productive work.

Before you know it, efficiency improves dramatically.

So call Team Xerox. From manufacturing to after-sales support, we provide cost-effective solutions to communication problems.

You'll put an end to dull, repetitive jobs forever and let productivity flourish.

Fill in the coupon and post it today to :

When an advertiser is focused on creating awareness, what he really creates is a trap for himself.

So, to his dismay, he finds that advertising that gets noticed and scores high on awareness, often produces little result in the marketplace.

The reason is simple enough. Awareness, though vital, cannot be a goal by itself. It isn't enough if your prospect recognises the existence of your brand. He must *want* it.

At R K SWAMY, this is one thing we are constantly aware of. And our focus is on persuading prospects to consider buying the brand. And on strengthening their commitment to the brand. Increasing the brand's consumer franchise, ensuring its long-term success.

To help us make this qualitative difference to our advertising, we have a one-of-a-kind discipline: HANSYSTEM. A thought process enhanced by research techniques. Which imparts two key qualities to advertising – R & D. *Relevance* and *Difference*.

Relevance, so that the advertising is meaningful to the prospect. And difference, so that it breaks through the clutter, holds his interest.

Today, with the consumer being barraged by a flood of look-alike advertising, R & D alone can separate you from the crowd. Make your advertising work hard in the marketplace, to build your business.

So think about it. Is your advertising drawing attention to itself, without drawing consumers to your product? Is your advertising *Relevant* and *Different*?

Beware of the awareness trap

The roller coaster

It is probably the most difficult thing to predict short term future trends in the foreign exchange market, given the fact that out of the daily average trading volume of US$ 280 billion, almost 91 per cent is pure speculative position-taking without any underlying merchant transactions.

Nevertheless, most post facto analysis invariably attempts to rationalise the movement of currencies in a direction totally unexpected and divorced from projections.

The month of October started with the announcement of the US employment data for September which showed an unemployment rate of 5.4 per cent (0.2 per cent lower than the previous month's figure of 5.6 per cent, which was the highest since May), and an increase of only 225,000 in the non-farm payroll against an expectation of 300,000. The dollar weakened by one pfennig against the mark and nearly 40 points against the yen as the news revealed slower economic growth and removed immediate hopes of higher interest rates in the US.

DOWNWARD TREND

Even as the market pushed the dollar lower, the trade deficit figures for the month of August were announced at a larger-than-expected $ 12.18 billion, much higher than July's revised deficit of $ 9.47 billion. The dollar immediately fell by two pfennigs and 1.5 yen to a three month low against the mark and a near four month low against the yen. The dollar continued its downward trend ending at 1.7760 marks and 126.15 yen on 21 October. There is also a general belief that the dollar is likely to settle lower than its existing levels in 1989.

During this period, the data on the Indian trade deficit was also released, showing a trade deficit of Rs.66.25 billion for the year ended 31 March 1988. The trade deficit for the first quarter of 1988, however, is alarming at Rs.20.74 billion, which is 49 per cent higher than the corresponding period last year. The foreign exchange reserves fell by Rs.14.50 billion during this quarter. The Indian rupee appears to have a bleak future over the next two years, having lost almost 11 per cent flat in the last six months against the US dollar, and is projected to decline to Rs.18 per dollar by the end of 1989, according to most exchange pundits. The table gives the average monthly rates of major currencies against the US dollar for 1988.

During the month, the Reserve Bank of India devalued the rupee against the pound sterling. Even as this article goes into print, the mid rate has already risen to Rs.26.10, making the dollar reach a peak of $ 6.77 per Rs.100 (Rs.14.77).

The Indian rupee appears to have a bleak future over the next two years, having lost almost 11 per cent flat in the last six months against the US dollar, and is projected to decline to Rs.18 per dollar by the end of 1989, according to most exchange pundits

The British economy seems to be following an extremely tight monetary policy, and interest rates have been revised from 7.5 per cent per annum (June 1988) to 12 per cent per annum in an effort to curb inflation which is likely to exceed 8 per cent this year in the UK. Britain's current account deficit could remain large until 1990 according to the chancellor of the exchequer, Nigel Lawson, who recently forecast that the deficit would be around 2.5 per cent of the gross domestic product this year which would mean a gap of approximately £11 billion.

The West German economy registered a satisfactory growth rate of 3.9 per cent in the first half of 1988. According to Karl Poehl, president of the Bundesbank, West Germany would not like to see a stronger dollar. The Bundesbank has therefore intervened aggressively and sold the dollar each time it threatened to cross the 1.89 mark, reflecting West Germany's strong contention that the depreciation of the DM in the recent past was not justified by economic factors. The Stanford University estimates, (based on the purchasing power parity theory of Ronald Mckinnon), however, show that the long term equilibrium rate of the US dollar/mark is around DM 2.15, sharply in contrast to the bearish short run expectations regarding the US dollar.

The yen appreciated against the dollar and other major currencies during the month as prices of crude oil dropped sharply. The fundamentals of the Japanese economy continue to show a strong trend with the trade surplus registering $7.53 billion during the month of August. Lower oil and commodity prices will, in all likelihood, reduce the cost of imports, while strong overseas demand coupled with price increases are likely to inflate exports. Japan's trade surplus is expected to show a drop of only $ 5 billion in 1988/89 compared with a drop of $ 13.70 billion in the previous year which is primarily due to a double digit increase in exports. The economy is likely to show a real growth of between 4.5 per cent and 5.5 per cent in 1988 compared to 4.9 per cent last year.

The local premia market showed a rising trend to reach 10.5 per cent per annum at 36.5 cents for six months before retreating slightly to 32 cents for six months.

The outlook for the US dollar is very bullish against the Indian rupee over the forthcoming months, and the US dollar is expected to rise to 6.70 per Rs.100 by the end of December.

Importers with short term payables should cover their foreign exchange exposures. Import payments beyond November should be reviewed after the results of the US presidential election is known in November.

BCCI

Drug bust?

It had all the makings of a Hollywood thriller. Except that it was in dead earnest. An invitation to attend a stag party before a wedding should have meant some fun for nine bankers who work for the BCCI (Bank of Credit and Commerce International) group. Instead, when they flew into Tampa, Florida, from various parts of the world, they found themselves being arrested.

The charges were that they had engaged in "laundering" money for Colombian drug dealers. Law enforcement officials in Tampa filed three indictments of which, only one — relating to BCCI Holdings (Luxembourg) SA and its two subsidiaries, BCCI (Overseas) Ltd and BCCI SA, along with its nine officials — has been made public. The nine bankers were among 40 who were arrested and charged. Apparently a total of 85 BCCI officials were being watched under suspicion.

Further drama unfolded on 12 October when BCCI's three branches in Paris were raided by French customs officials at the request of their American counterparts. Subsequently, three officers stationed in Paris were arrested, one in London and two in Tampa. The documents seized allegedly corroborated charges made in the US.

The busts were a result of an elaborate undercover operation conducted over two years by US customs officials, along with their counterparts in Great Britian and France. The operation was an attempt by financial institutions to stem the legitimisation of $ 100 billion — according to one senate subcomittee estimate — of drug-related income by disguising its origin.

In this particular episode, US customs agents, posing as businessmen with high cash turnover, offered their services to a Colombian drug cartel. They offered to push drug money through their businesses and return it to drug traffickers, having disguised its source by issuing cheques drawn on bank accounts abroad.

JETSET LAUNDERING

The agents were in turn approached by a BCCI official in Panama who suggested funneling the money through the bank. According to the US customs, money was collected at a BCCI branch in Tampa, Florida, and then wired through a New York bank to BCCI's headquarters in Luxembourg and then on to London. There it was turned into a certificate of deposit (CD) which was used by BCCI to give a loan to a phony corporation. Returned to its original account in Florida, it was transferred to an account in Uruguay and then taken in cash to Colombia. The difference between the loan given and value of the CD was BCCI's profit.

While other banks, including Bank of America, First Bank of Boston and Crocker National Bank, have been charged with failing to follow US banking regulations of reporting cash deposits and withdrawals of more than $10,000, this is the first time that 400 charges have been brought against a bank. While the amounts were much larger — $2 billion in the case of First Bank of Boston, and $4 billion in case of Crocker National Bank — courts accepted the banks' claims that failure to report the transactions were honest mistakes and there was no conspiracy at a senior level to launder funds.

In the case of BCCI, however, customs officials claim that the conspiracy goes all the way to the top. BCCI spokesmen deny that its corporate managers, directors and shareholders had any knowledge of the episode. In addition, they say, the amounts involved — $14 million over two years — should be compared with their total deposit base of $19 billion and their pretax profit of $185 million.

According to BCCI spokesmen the whole episode is an act of "economic apartheid". BCCI is the most high-profile of the banks from the "south" and its rapid growth over the last two decades has made it the envy of more traditional banks. Set up by Agha Hassan Abedi, a Pakistani banker, in 1972 with a capital of $2.5 million, the bank today has a capital of $1.5 billion and a branch network in 73 countries worldwide.

NON-TRADITIONAL APPROACH

While almost 50 per cent of the shareholding in the bank is held by interests in the Gulf and its initial growth was a result of the tremendous increase in liquidity in the Gulf as a result of the oil boom, BCCI has consciously tried to diversify its deposit base. It has catered to the needs of migrant trading communities, especially from India and Pakistan. Though businessmen from these communities are not able to produce the traditional evidence of creditworthiness BCCI has considered them good credit risks. The bank has capitalised on this factor and its overall success has led to "envy".

According to bank spokesmen, while US officials have been quick to release news of indictments against BCCI, they have been slower to release news of such indictments against other banking institutions.

Be that as it may, the bank has acquired a reputation in both India and abroad of being aggressive, even at the cost of sailing close to the wind. In 1986 some executives of the bank were de-

A BCCI branch in UK: under suspicion

FACULTY OF MANAGEMENT STUDIES
UNIVERSITY OF DELHI

ANNOUNCES

M.B.A. PROGRAMMES FOR EXECUTIVES AND SENIOR GOVERNMENT FUNCTIONARIES BEGINNING JULY, 1989

1. M.B.A. (FULL-TIME) TWO-YEAR PUBLIC SYSTEMS MANAGEMENT PROGRAMME

The objective of this programme is to train and develop a cadre of **senior executives** to manage public systems, public utilities and State and Central Government undertakings. It is being conducted at **Shanti Prasad Jain Advanced Management Research Centre** located at **South Delhi Campus.**

Eligibility

Candidates with Bachelor's Degree from University of Delhi or any other University recognised by the University of Delhi with at least 50 percent marks in aggregate in the first degree examination and working in a public system organisation having at least five years full-time experience at an executive level are eligible. The candidate must be sponsored by the employer and be on leave for the duration of the programme.

2. M.B.A. (PART-TIME) THREE-YEAR PROGRAMME

This is a three-year integrated MBA Degree Programme with several streams of specialisation in various functional areas. Candidates pursuing studies on continuous basis can complete this programme in 3 years. However, this programme has an in-built flexibility for a terminal Diploma in specific area of specialisation at the end of the second year for candidates so desiring. The areas of specialisation are 1. Financial Management 2. Marketing Management, 3. Production and Operations Management, 4. Human Resource Management, 5. Small Business Management. Such candidates may be allowed to enter the third year within two years of completing the Diploma course provided they have secured 60% marks in the Diploma Examination. **All candidates will be required to complete the programme within 5 years.**

Eligibility

(a) Every candidate seeking admission shall have passed a Bachelor's Degree Examination in Arts, Commerce, Science and Engineering or Technology of the University of Delhi or any other University recognised as equivalent thereto with at least 45% of marks in aggregate in the First Degree Examination and possesses other qualifications mentioned hereunder. Relaxation from the minimum marks required in the First Degree Examination may be made for candidates who have obtained less than 45% marks in their first degree examination but 55% marks or more marks in aggregate in any Post-Graduate Degree or at least 60% marks in Post-Graduate Diploma either in Personnel Management or in Marketing and Sales Management or in Administrative Management of the University of Delhi conducted by the Faculty, prior to the implementation of this new integrated programme.

(b) Candidates should have at least five years of experience as an executive or administrator in a Commercial, Industrial or Government establishment after passing the Bachelor's Degree Examination.

(c) Five years experience shall be determined as on 1st August, of the year of admission.

(d) Candidates must be sponsored by the employer.

3. M.B.A. (PART-TIME) HEALTH CARE ADMINISTRATION THREE-YEAR PROGRAMME

This programme is meant for hospital and health care administrators.

Eligibility

(a) Every candidate seeking admission to the programme shall have passed a Bachelor's Degree Examination in Medicine of the University of Delhi or an examination recognised as equivalent thereto.

(b) He/She should have atleast five years of experience in hospital or health care administration after acquiring the Bachelor's Degree in Medicine. He/She should also be sponsored by his/her employer.

(c) Only those candidates who satisfy the above mentioned conditions will be called for interview.

Admission Test and Interview

The admission test for **MBA (Full-Time) Two-Year Public Systems Management Programme** will be conducted at Delhi, Bombay, Calcutta, Madras, Hyderabad, Kanpur, Patna and Bhopal on **Sunday, January 15, 1989.** However, the Faculty reserves the right to cancel any test centre. The Admission test for **MBA (Part-Time) Three-Year Programme** will be held on **January 29, 1989** at **Delhi** only. Candidates qualifying the admission test will be called for an interview. The selection in case of **MBA (Part-Time) Health Care Administration Programme** will be done on the basis of interview only.

Admission forms can be obtained from **October 3, 1988** from the **Administrative Officer, Faculty of Management Studies, University of Delhi, Delhi-110007** on payment of Rs. 10/- (non-refundable) at the counter or through mail by sending Bank Draft in favour of the REGISTRAR, UNIVERSITY OF DELHI **(Bank Draft not drawn in favour of the Registrar, Univeristy of Delhi, Delhi will not be accepted).** Candidates requesting forms by post must send a self addressed stamped (Rs. 2.50) envelope (size 10 cms × 23 cms approx). Last date for receipt of completed application forms in the Faculty Office will be **December 24, 1988.**

Reserved Seats

(i) 22.5% seats are reserved for Scheduled Caste/Tribe candidates.

(ii) 5% seats are reserved for children/widows of armed personnel killed/disabled in action during the hostilities.

NOTE 5% concession of marks is allowed to the above categories of candidates for purpose of determining their eligibility.

B.C. TANDON
DEAN

ained briefly under COFEPOSA here in ndia. The charges stemmed from trav-llers cheques issued to a travel agency, Al Saya Travels, on the basis of insuffi-cient, and in some cases false, documen-ation. A bank spokesman points out that no charges were actually served on S. Muram (the then manager). COFEPOSA charges against other staff members were also dropped. The bank and the travel agency were found guilty of FERA viola-tions by the enforcement directorate.

Whether the charges against the bank in Florida will affect its stability in India and abroad is still unclear. Though BCCI, headquartered in Luxembourg, has no "lender of the last resort", bank spokes-men claim that the bank's high liquidity — last year it had $17 billion in deposits and only $9 billion of loans — is its chief defence. It also expects the central bank of whichever country it operates in to come to its rescue if there is a crisis. Bank spokesmen firmly point out that talk of a crisis is baseless. In India, for example, 65 per cent of the bank's deposits are from NRIs and there is no evidence that funds have been taken out of the country. The future of the bank lies with an unknown factor — the ability of the US customs authorities to prove their charge of com-plicity of the top management and the heaviness with which regulatory authori-ties worldwide come down on the bank if they do.

EAPEN THOMAS

CORPORATE AFFAIRS

SMITH KLINE

Major restructuring

The US pharmaceuticals group, Smith Kline, has announced a $ 400-million re-structuring plan and a pruning of corpo-rate staff by 60 per cent. The company is hard-pressed because revenues from its anti-ulcer drug, Tagamet, are falling due to intense competition from a rival drug, Glaxo's Zantac.

CONSOLIDATED GOLDFIELDS

South African bid

The British mining and finance group, Consolidated Goldfields, is facing an un-welcome 2.9 million pound takeover bid from the South African Oppenheimer mining family, through their Lux-embourg-based investment company, Mi-norco. While the outcome of the bid will not be known for some time, there has been an accusation of insider trading in Consolidated Goldfields shares. The alle-gation is that clients of Swiss Bank Corporation traded in Consolidated Goldfields shares prior to the bid an-nouncement. Swiss Bank Corporation has strongly denied this.

AIR CANADA

Privatisation under way

Air Canada is joining the steadily length-ening list of former state-owned airlines which are making share issues for private subscription. The airline is offering 45 per cent of its shares to raise $ 300 million, which will be used for its fleet renewal programme. In view of the sluggish trend in the North American stock markets, the issue has been priced at $ 10 per share, which is lower than expected.

MGM-UNITED ARTISTS

US $ 200-million rights issue

The leading Hollywood film maker, MGM-United Artists, is planning a $ 200-mil-lion rights issue. In spite of its glorious past, the company has been losing money in recent years and the rights issue is required to improve its liquidity position. Funds were earlier expected to come through a private placement with two Hollywood producers, Bert Sugarman and John Peters. However, that deal fell through and the company is now approaching its own shareholders for money.

INTER CONTINENTAL HOTELS

Sold to Japan

Negotiations have been finalised for the sale of the Inter Continental Hotel chain to Saibu Saison, the Japanese conglome-rate. Inter Continental Hotels is currently owned by Grand Metropolitan, the British food, drinks and hotel group. The sale price is in the region of $ 2.3 billion.

QUANTAS

Preferred bidder for Air New Zealand

In a surprise announcement, the New Zealand government has stated that the Australian carrier, Quantas, would be the preferred bidder for the 25 per cent stake in Air New Zealand which is up for sale. The announcement was surprising be-cause Air New Zealand was known to prefer British Airways, the management believed that a tie-up with British Air-ways would be better for developing busi-ness on South East Asian routes. It is believed that the announcement favour-ing Quantas was made after considerable lobbying by the Australian government.

SAFRA REPUBLIC BANK

US $ 1 billion capital

One of the world's largest capitalised banks is being launched in Europe by Edmund Safra, a leading international banker and consultant to the Republic New York Bank and the New European Bank.

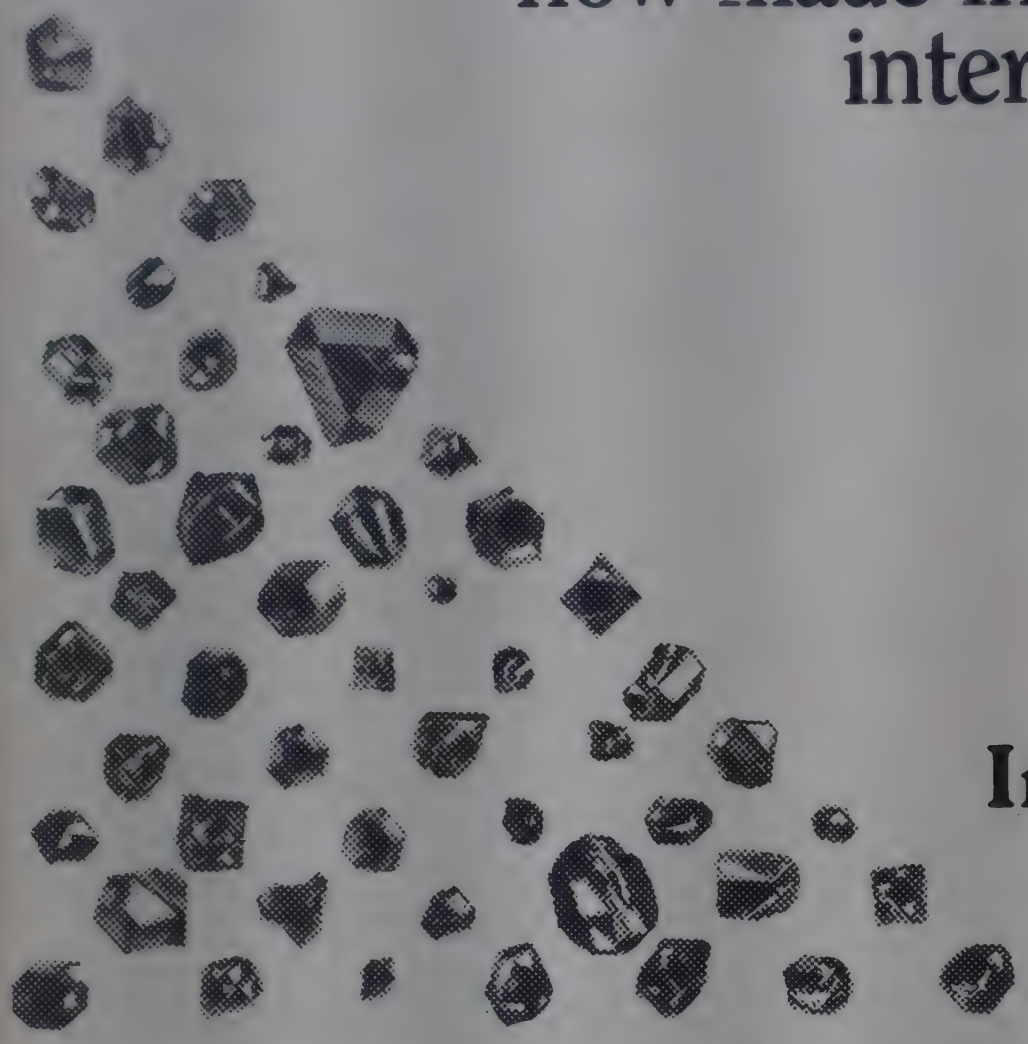
Safra Republic will be formed around the core of the branches of Republic New York Bank in various European coun-tries. Seventy per cent of the capital of US $ 1 billion will be financed by Safra and Republic New York Bank and 30 per cent through a public share offer underwritten by Shearson Lehman Hutton. With Safra Republic, Safra re-enters the European banking scene. In 1983 he had sold his Geneva-based trade development bank to American Express for $ 520 million.

YULE CATTO

Rise in profits

Yule, Catto and Co of London (previously the holding company of Andrew Yule & Co, India) has reported a 17 per cent rise in profits of 8 million pounds. The in-crease in profits is attributed to the en-hanced demand for and consequent rise in the price of natural rubber and latex; Yule Catto operates in both these areas. It is understood that in the years to come, the company intends to concentrate on chemicals.

All grades of Industrial Diamonds now made in India – to exacting international standards.



Now you don't have to look beyond the Indian borders for Industrial Diamonds.

Gujarat Ambuja Cements

Maiden dividend; various fiscal benefits give competitive edge in marketing; doubled capacity; proposal to set up downstream petrochemical project

Gujarat Ambuja Cements (GAC) has declared a maiden dividend of 10 per cent for the year ended 30 June 1988. Its 700,000 tonne cement plant (estimated to cost Rs.62.5 crores) began production in October 1986, six months behind schedule. To part finance the project cost, GAC had made a public issue in November 1985. The cost escalated by about 35 per cent due to higher investments in plant and machinery.

Various fiscal benefits have given a strong competitive edge to GAC in marketing its products. These benefits include octroi exemption and concessional power tariff for the first year of production, lower interest rates on term loan up to Rs.2 crores, and sales tax deferment for a period of 14 years. Thus, in spite of higher capital costs and a recessionary market situation, the above benefits enabled GAC to report profits in the first year of production and declare a maiden dividend in the second year.

For the year ended 30 June 1988, GAC produced 820,000 tonnes of cement (previous year: 370,000 tonnes) and sold 810,000 tonnes (350,000 tonnes). The capacity utilisation works out to 115 per cent. Due to severe drought conditions, the growth in demand for cement was lower, and input costs escalated sharply. Still, GAC has shown a 143 per cent jump in net profit to Rs.4.22 crores. Total income went up by 122 per cent to Rs.90.44 crores.

Due to a higher capital base of Rs.20 crores, the EPS works out to just Rs.2. GAC reduced its working capital by Rs.6.38 crores to keep interest costs under check. It repaid various term loans to reduce borrowings by Rs.7.33 crores. However, it has not provided for minimum tax (Rs.66 lakhs) under section 115 J of the Income Tax Act. As required by section 3 of the Act, the tax will be computed for the period from July 1987 to March 1989.

The excise rebate of Rs.50 per tonne granted during 1987 has resulted in savings of Rs.4 crores. The recent increase in levy cement price by Rs.47 per tonne and further excise rebate of approximately Rs.12 per tonne will partially offset the increases in input costs. GAC is implementing its plan to double the capacity to 1.4 million tonnes per annum. It is proposing to set up a downstream petrochemical project for which necessary clearances are awaited. The scrip, which has been shifted to the specified group of the Bombay stock exchange, has appreciated by more than 100 per cent from its 1988 low of Rs.11.

The cement industry is keenly awaiting the government's decision on total decontrol of cement. With the better monsoons this year, the prospects for the industry have improved.

Mukand Iron & Steel

Bonus issue declared; improved performance; interruption in orders from Indian Railways; sharp increases in cost of inputs

The company has paid a dividend of 23 per cent for the year ended June 1988, an increase of 5 points compared to last year. Mukund is celebrating its golden jubilee this year and shareholders are being rewarded with a bonus issue in the ratio of 1:2.

Turnover increased by 14 per cent to Rs.303.02 crores (previous year: Rs.266.26 crores). This was mainly due to a planned shift from production of mild steel to special steel; mild steel now accounts for only 20 per cent of the total output of steel.

1988: HIGH	114.00	
LOW	83.50	

The operating profits have gone up from Rs.27.95 crores to Rs.33.49 crores, an increase of 20 per cent; operating margins are more or less the same at 10 to 11 per cent. After interest charges of Rs.11.95 crores (Rs.11.72 crores) the gross profit is up by 33 per cent at Rs.21.54 crores (Rs.16.23 crores). After depreciation charges of Rs.7.33 crores (Rs.6.81 crores) and taxation provisions of Rs.2.30 crores (Rs.1.43 crores) the net profit works out 49 per cent higher at Rs.11.91 crores (Rs.7.99 crores).

Mukand's good performance was reflected in its six monthly result for the half year ended December 1987. The net profit was higher at Rs.4.03 crores, compared to Rs.3.83 crores in the corresponding period of the previous year on a higher turnover of Rs.141.68 crores (Rs.128.95 crores).

The company produced 240,282 tonnes (226,453 tonnes) of billets/blooms registering a capacity utilisation of 72 per cent (71 per cent). Production of finished steel castings dropped to 12,530 tonnes (13,688 tonnes).

Interruption in the flow of orders from the Indian Railways and frequent changes in their inspection parameters resulted in delays in approvals and in lower despatches. The company's Machine Building Division registered sales of Rs.20.30 crores (Rs.21.60 crores). Orders for 91 cranes valued at Rs.18.10 crores were received (47 cranes valued at

Rs.7.90 crores). The company also received repeat orders from the Visakhapatnam Steel Project.

The cost of major inputs — melting scrap and nickel — has registered sharp increases during the year. Scrap prices went up by 40 per cent. The price of nickel reached dizzy heights and is 274 per cent higher now than it was at the beginning of the year.

Operating practices for the ultra high power furnace installed in the previous year are being stabilised. These are expected to help the company increase production and reduce energy costs.

Bakelite Hylam Ltd

Improved dividend and sales; significant increase in profits; new plant to be commissioned this month; collaboration with Japanese company

For the year ended June 1985, the company has paid a dividend of 18 per cent (previous year: 16 per cent). The company has improved sales at Rs.67.03 crores by 14 per cent (Rs.58.71 crores). Operating profit has increased by 8 per cent to Rs.7.31 crores (Rs.6.74 crores). After interest of Rs.3.22 crores (Rs.3.13 crores) the profit at gross level is Rs.4.09 crores (Rs.3.61 crores). After depreciation of Rs.1.46 crores (Rs.1.36 crores) and taxation of Rs.1.19 crores (Rs.1.17 crores), there is a net profit of Rs.1.44 crores which is higher by 33 per cent (Rs.1.08 crores).

The company has spent Rs.4.64 crores on the continuous plant for the manufacture of thermal insulation foam based on phenolic resin which is under erection in the company's chemical division. This is expected to be commissioned this month.

The sales for the second six months of the year ended June 1988 were higher by 20 per cent at Rs.26.99 crores. At net level, the profit is Rs.96 lakhs up from Rs.43 lakhs.

The company produced 6,263 tonnes of laminate sheets which was 96 per cent of its installed capacity. The sale price has gone up from Rs.65.60 per kg to Rs.71.50 per kg in the year under review. The company introduced a few products such as refractory grades of phenol formaldehyde resins, fire retardant grades of unsaturated polyesters and FRA epoxy laminates for PCB applications.

Bakelite has signed an agreement with a Japanese company for transfer of technology for the manufacture of a complete range of decorative wall covering materials. The project will cost Rs.4 crores.

S.I. Viscose

Good performance; VSF unit does well after seven years

The company fared exceedingly well during the year ended 31 March 1988. It has stepped up the dividend by 5 points to 25 per cent on enlarged capital; last November, bonus shares were issued in the ratio of 1:2.

		(Rs crores)
Year ended March	**1988**	**1987**

EPS (%)	74.00	80.00
DIVIDEND (%)	25.00	20.00

Sales are up by 28 per cent to Rs.72.42 crores (previous year: Rs.56.76 crores). However, the operating profit failed to keep pace with the sales; it increased by 15 per cent to Rs.15.90 crores. The company has provided Rs.1.87 crores (Rs.1.33 crores) for interest charges, Rs.2.12 crores (Rs.2.28 crores) for depreciation and Rs.3.75 crores (Rs.4.30 crores) for taxation, leaving a net profit of Rs.8.16 crores (Rs.5.86 crores). After other adjustments the profit available for appropriation amounts to Rs.10.62 crores. Out of this the proposed dividend will take up Rs.2.76 crores.

The increase in the sales is mainly because of higher production and sales of viscose staple fibre (VSF). After a gap of seven years, this product has added substantially to the company's turnover. The production of VSF stood at 6,592 tonnes, earning Rs.18.19 crores. Though the cost of production of VSF has increased, its sales realisation has decreased. VSF accounts for 25 per cent of total sales today. There was a continued emphasis on cost reduction and productivity; production has increased in spite of a 40 per cent power cut because captive power capacity was augmented substantially during the year.

The company continued to produce rayon filament yarn at over 100 per cent capacity. It produced 4,491 tonnes whereas the installed capacity is 4,000 tpa. While the cost of production of rayon yarn has gone up so has the selling price.

The manufacture of polynosic staple fibre is still unremunerative; the company therefore plans to utilise this facility to manufacture coloured staple fibre in view of the higher demand for this product.

A major revamping of spinning machines at the rayon plant is being undertaken during the current year. Its capacity has already been raised from 9 tonnes per day to 14 over the last three years. Besides, the company is undertaking a project to manufacture 12,000 tonnes of lignosulfonates, using waste liquor obtained from wood pulp used in the existing viscose unit. This Rs.5-crore project has been set up in technical and financial collaboration with Dresser Industries, USA.

The company is carrying out feasibility studies for a number of new projects. Among them is a plan to set up a Rs.500 crore pulp and paper unit in collabor-

tion with an Australian company; the project will receive assistance from international financial institutions.

The price of viscose filament yarn has been shooting up in the local market mainly due to a strike in a competitor's plant. This will add to the profitability of the company.

TRENDS

Klockner Windsor

The company's performance in the first half year ended June 1988 is more than encouraging. Sales are significantly higher at Rs.21.09 crores (Rs.13.35 crores). The company has earned Rs.0.67 crores (Rs.0.25 crores) as miscellaneous income.

Costs too have kept pace with the rising sales. The cost of raw materials at Rs.13.84 crores (Rs.8.54 crores) is high. The expenditure on wages is Rs.2.21 crores (Rs.1.53 crores) while selling and administrative expenditure is Rs.2.12 crores (Rs.1.35 crores). Even so, the company was able to earn higher operating profits of Rs.3.59 crores (Rs.2.18 crores).

The interest burden is higher at Rs.0.41 crores (Rs.0.26 crores). After making substantially higher provisions for depreciation — Rs.0.78 crores (Rs.0.69 crores), and taxation — Rs.1.08 crores (Rs.0.57 crores), the company has managed to earn a much higher profit of Rs.1.32 crores (Rs.0.66 crores).

(Rs. crores)

	Jan-June 1988	Jan-June 1987	Jan-Dec 1987
SALES	21.09	13.35	31.79
OTHER INCOME	0.67	0.25	1.01
TOTAL INCOME	21.76	13.60	32.80
RAW MATERIAL COST	13.84	8.54	20.06
SALARY & WAGES	2.21	1.53	3.75
OTHER EXPENSES	2.12	1.35	3.30
OPERATING PROFIT	3.59	2.18	5.69
INTEREST	0.41	0.26	0.75
GROSS PROFIT	3.18	1.92	4.94
DEPRECIATION	0.78	0.69	1.71
TAX	1.08	0.57	1.26

OP/SALES (%)	17.02	16.32	17.89
RM/SALES (%)	65.62	63.97	63.10

Though the cost of raw materials as a percentage of sales went up to 65.62 per cent (63.97 per cent), the company was able to earn better working margins of 17.02 per cent (16.32 per cent). Meanwhile, the order book position is also better.

The production of ferromatik small range machines with open loop controls which began this year is reflected in the profits. The company plans to start production of the Desma range of machines.

The company's new plant at Chhatral (near Ahmedabad) is expected to start production of open and closed loop micro-processor controlled injection moulding machines in the ferromatik range by the end of the year. It will add Rs.15 crores to Rs.20 crores to the annual sales figure, at full capacity. This year the company has extended its accounting period to March 1989.

The annual results are expected to be much better as the new items will add to sales significantly, thereby sustaining the growth.

The company will have to service a higher equity capital this year because of the 1:2 bonus issue declared last year.

Hindalco

The company has reported encouraging results in the first six months ended June 1988. Net sales have increased by 12 per cent to Rs.156.37 crores (previous year: Rs.139.07 crores). However, the operating profits have leaped forward by 36 per cent to Rs.22.82 crores (Rs.16.76 crores). This is mainly due to the reduction in the cost of raw material and other direct and indirect expenses as a percentage of sales. Raw materials costs as a percentage of sales have decreased to 35.02 per cent (37.46 per cent). The operating margins have therefore increased to 14.44 per cent (12.05 per cent). The company has provided Rs.5.44 crores (Rs.5.67 crores) for interest and other financial charges, a significantly lower provision for depreciation of Rs.4.73 crores (Rs.Rs.8.08 crores) and a higher tax provision of Rs.4 crores (Rs.1.41 crores). The net profit of the company has jumped up to Rs.8.44 crores (Rs.1.40 crores).

However in the first six months, Hindalco had to face some reverses. Production at its rolled and extrusion plants at Renukoot stopped completely due to power failure caused by a fire which partially damaged the electric control system. This could have badly affected the company's commitments to its clients, but it managed to strike a deal with Indal to take up conversion jobs to manufacture rolled aluminium products.

** adjustments*

The company hopes that the technical support of its erstwhile partner, Kaiser Aluminium of Canada will continue even after disinvestment. The company is going to issue bonus shares soon after the rights allotment.

Samtel

Sales of the company have galloped to Rs.29.80 crores (previous year: Rs.17.85 crores) which is a 67 per cent jump. Profits have outpaced even the sales growth. Operating profits have jumped to Rs.4.47 crores (Rs.2.61 crores). There is a noticeable fall in the interest burden to Rs.79 lakhs (Rs.93 lakhs). After providing Rs.52 lakhs (same) for depreciation and a tax provision of Rs.60 lakhs (nil) the company has more than doubled its net profits to Rs.2.52 crores (Rs.1.16 crores).

All this is mainly due to increased sales, as margins have not shown any significant improvement at 14.72 per cent (14.62 per cent) of sales. Also, raw material costs per unit are higher at 72.82 per cent (70.98 per cent) of sales realisation.

The company is going ahead firmly with its export drive.

The company's new venture Samtel Colour Ltd is doing well and its products have been well received in the market. It manufactures 21" FST and 14" colour picture tubes.

The company is in the process of establishing another company Samcor Ltd to manufacture glass shells for television sets in collaboration with Corning Glass of US. Meanwhile, this year, the company will be servicing a higher equity capital, due to the bonus issued last year in the ratio of 1:3.

RESULTS ANNOUNCED

Titan Watches

Titan Watches Ltd has reported a total income of Rs.19.12 crores for the year ended 30 June 1988, its first full year of operation, compared with Rs.2.88 crores during the previous year, comprising four months of operations.

Profit before depreciation and interest for the year was Rs.2.51 crores (1986-87: Rs.18.25 lakhs). Interest for the year was Rs.1.36 crores (Rs.8.01 lakhs), resulting in a cash profit of Rs.1.15 crores (Rs.10.24 lakhs). After providing depreciation of Rs.84.80 lakhs (Rs.15.28 lakhs), the profit for the year amounts to Rs.30.11 lakhs as against a loss of Rs.5.04 lakhs After adjusting the brought-forward loss and a tax provision of Rs.4 lakhs, the profit carried forward amounts to Rs.21.07 lakhs. In view of the limited profits for the first full year of operations, the directors have not recommended any dividend.

Sales during 1988-89 are expected to be substantially higher than in the previous year. Sales in the first three months of the year were twice those achieved in the corresponding period of the previous year.

Indrol

Indrol Lubricants and Specialities Ltd has reported improved results for the year ended 30 June 1988. Sales and profit after taxes exceed the previous year's results by 25.8 and 53.7 per cent, respectively. The directors have recommended an equity dividend of Rs.2.60 per share of Rs.10 each (26 per cent) for the year on 5.08 million equity shares, up from the dividend of Rs.2 per share for the year 1986-87.

The company's sales and other income have risen from Rs.91.88 crores in 1986-87 to Rs.115.35 crores. The gross profit after providing for interest but before depreciation, has also increased from Rs.73.72 crores to Rs.88.36 crores.

After providing Rs.11.91 crores (Rs.18.79 crores) for depreciation and Rs.32 crores (Rs.26 crores) for taxation, there is a disposable surplus of Rs.4.44 crores (Rs.2.8 crores).

The proposed dividend will absorb Rs.13.22 crores (Rs.10.17 crores) and the balance sum of Rs.30.22 crores (Rs.17.75 crores) has been transferred to several reserves.

Steel Tubes of India

After disappointing results in 1986-87, Steel Tubes of India Ltd has come back registering an impressive growth. Sales accounted for Rs.48.72 crores (Rs.35.65 crores), registering a growth of 37 per cent. Production of tubes was 26,822 tonnes (24,682 tonnes) and strips 16,842 tonnes (6,962 tonnes). The gross profit for the year was Rs.5.98 crores (Rs.3.58 crores). After providing for higher interest at Rs.3.31 crores (Rs.2.84 crores) and depreciation at Rs.1.44 crores (Rs.1.20 crores), the profit before taxation was at Rs.1.22 crores. After adjusting the brought-forward loss of Rs.37.79 lakhs and providing for taxation liability of Rs.14.96 lakhs, the net profit works out to Rs.69.86 lakhs. The proposed dividend at 10 per cent on equity capital of Rs.3.7 crores will absorb Rs.36.90 lakhs.

IN BRIEF

Lloyds Steel Industries Ltd has shown improved results for the six-month period ended 30 September 1988. Sales increased to Rs.13.50 crores compared to last year's Rs.11.22 crores. Net profit was Rs.1.15 crores (Rs.52.59 lakhs) and gross profit was Rs.1.70 crores (Rs.1 crore). The company has orders on hand worth Rs.44.25 crores.

J.B. Chemicals and Pharmaceuticals Ltd's board of directors has recommended a dividend of 20 per cent for the year ended 30 June 1988. Sales went up from Rs.26.15 crores to Rs.31.78 crores. Gross profit was Rs.3.40 crores (Rs.2.81 crores) while net profit increased to Rs.1.30 crores (Rs.61.15 lakhs). Exports increased to Rs.3.93 crores from Rs.98.2 lakhs.

Standard Organics Ltd has registered an increase in sales, profits and exports for the year ended June 1988 and the board of directors has recommended a dividend of 22 per cent. Gross profits rose to Rs.2.81 crores from Rs.2.21 crores and net profits were Rs.87.78 lakhs. Exports increased to Rs.6.69 crores (Rs.2.64 crores) and the company has drawn up plans for growth.

Shri Ishar Alloy Steels Ltd has declared a dividend of 17 per cent. Gross profits earned were Rs.3.49 crores and net profits were Rs.1.90 crores. Turnover for the first five months of the current year was 17 per cent higher than the corresponding period last year.

Spartek Ceramics India Ltd has reported good working results for the half year ended 30 June 1988. The net sales was Rs.6.34 crores (corresponding period in the previous year: Rs.5.37 crores). Gross profit went up to Rs.2.45 crores (Rs.1.97 crores). The net profit is also higher at Rs.1.42 crores (Rs.1.14 crores). Spartek has also successfully implemented its expansion programme at a cost of Rs.7 crores, doubling the capacity to 26,000 tonnes. The company is also planning to launch a new company for setting up a 100 per cent export oriented unit for the manufacture of ceramic tiles for industrial application.

Widespread rise in stock prices

(For the period 10 October to 22 October 1988)

Stockmarkets continued to rise strongly through the fortnight under review. *The Economic Times* All-India Index of share prices recorded a gain of 5.6 per cent, rising from 334.9 to 353.7, although with a marginal dip to 332.3 midway through the fortnight on expectations of higher badla rates and on expectations of the announcement of the *pari passu* rule. Both expectations proved correct, but stock prices rebounded quickly thereafter. However, the BSE Index, weighed down by falling Reliance and weak Tata Locomotive shares, gained 1.6 per cent.

Transfer of Mastershares. The market was aided by the transfer of Mastershares to the forward list of the Bombay Stock Exchange, thus giving speculators a chance to trade in an "unaided" share that broadly reflects the market without the uncertainties of institutional support (since UTI is not permitted to trade in Mastershares). The gap between the net asset value (NAV) and the market price of Mastershares was as high as 40 per cent in September, when its market price was Rs.10.50 and NAV was Rs.14.76. That gap has now been closed with the market price of Mastershares crossing the most recently announced NAV of Rs.18 to close at Rs.18.50.

The announcement of the *pari passu* rule had earlier been specified for February but was deferred because of legal complications and, possibly, suspicions of its adverse effects on the depressed market of that time. Its activation from settlements after 12 October was better timed: some share prices which were directly affected because of unconverted rights shares fell off, but the decline was largely temporary, while the market was generally unaffected. The affected shares included Reliance which fell from Rs.198 to Rs.168, but recovered to Rs.186 at the close of the fortnight. Similarly, Escorts fell from Rs.66 to Rs.61 before recovering to close at Rs.68, while Ceat Tyres was a more permanent loser falling from Rs.130 to Rs.115.

The other temporary depressant was the prospect of higher badla rates, which averaged over 50 per cent per annum. The market, however, shrugged off this spectre as well. In fact, trading opened on the ex-badla day at rates that were almost exactly the sum of the previous closing price plus the badla charges. This happened even for shares like Century Enka in which the badla charge (which included a twenty rupee dividend) was as high as Rs.200 or almost 10 per cent for three weeks. Thus, Century Enka opened (ex-badla) at Rs.2,350 after closing the previous trading day at Rs.2,170. Similarly, SKF Bearings which had attracted badla charges of Rs.50, opened ex-badla at Rs.1,980 against the previous closing of Rs.1,930.

Useful signal. Such sharp jumps indicate a strong willingness to buy; a high badla rate should, therefore, be expected again in the coming settlement. This should not alarm anyone. Notwithstanding the allegations of manipulated badla rates that have been appearing in the financial press recently, it should be realised that a high badla rate is an effect of a rising market and not an externally imposed event. In this sense, the badla charge is the price of money which is determined by the market's need for funds. It, therefore, acts as a useful signal of the market's view of future prices. Badla rates are high because most traders believe that the market is set to rise sharply in excess of the badla rates and so are willing to pay the high rates. History supports this view, with badla rates averaging below 18 per cent in the bear phases of 1986 and 1987, but being over 25 per cent in 1985 and during the current upward movement of market prices. Nevertheless, badla rates are unlikely to rise to over 50 per cent in the coming settlement even if prices continue to rush upwards. This is because the high rates of the previous settlement caught money suppliers unawares to an extent. The flow of funds is likely to increase in the future which should keep badla rates lower, but still at an attractive level of over 30 per cent per annum. In fact, in unofficial badla trades after the official session, the flow of funds increased sufficiently to bring badla rates down significantly.

Notwithstanding the allegations of manipulated badla rates that have been appearing in the financial press recently, it should be realised that a high badla rate is an effect of a rising market and not an externally imposed event

Telco disappoints. Although most shares rose with the market, Larsen & Toubro, Reliance and Telco declined over the fortnight. L&T weakened after the formal announcement of the Ambani involvement, as speculators took profits, causing the share to fall from Rs.145 to Rs.128 before closing at Rs.136. Telco fell on expectations of poorer six monthly results than expected. Although announced six-monthly profits were almost double those of the previous year, the market, which is expecting a profit after tax of over rupees sixty crores from Telco this year, was disappointed with a six-monthly profit of rupees six crores. As a result, the share was marked down to Rs.700 upon announcement before recovering to close the fortnight at Rs.740, still below the fortnight's opening of Rs.752.50. Given that the results of the first six months of the financial year are no guide to Telco's performance in the upcoming six months when demand for trucks will peak, the market's expectations may yet be satisfied. Other automotive shares were strong, however, with Bajaj Auto in particular rising strongly from Rs.339.75 to Rs.400. With automotive companies expected to announce record results, the bearings industry is likely to be a big gainer. SKF Bearings continued its upward spiral to Rs.2,190, up from Rs.1,940, while Bimetal Bearings rose from Rs.80 to Rs.102.50 and Antifriction Bearings rose from Rs.26.50 to Rs.35.

Paint company shares were also in strong demand, with Asian Paints rising to Rs.227.50 from Rs.193.75, Berger Paints to Rs.135 from Rs.112.50 and Goodlass Nerolac to Rs.75 from Rs.67.50. Cement company shares were also strong on news of a further rise in cement prices by Rs.2.50 per 50 kg bag and the formation of a cement cartel. ACC rose to Rs.308 from Rs.260 and Gujarat Ambuja Cements from Rs.20 to Rs.26.50. Pharmaceuticals were in strong demand as the increased cash flow from the new drug price control order becomes more apparent. Glindia rose from Rs.72 to Rs.84, Pfizer from Rs.78 to Rs.88 and Boehringer Knoll from Rs.140 to Rs.185.

Good performance. Corporate results continued to be strong, with good performances by Rathi Alloys, Indrol and Procter and Gamble. The next most awaited corporate announcement is of Tata Steel's half-yearly results. Its market price rose to Rs.987.50 from Rs.960 over

Sintex - The only reliable and time-tested READYMADE WATER TANKS

SINTEX has proved its performance against all the tough and rough Indian conditions for more than a decade now. Dotting the Indian scene with lakhs and lakhs of installations — from Kashmir to Kanyakumari and Kutch to Kohima — Sintex Tanks are proving popular for all water storage and carriage applications.

Made by a unique moulding process on computer aided machines, Sintex Water Tanks offer a set of advantages unbeatable by others.

* Lightweight * Easy to install * Strong and Durable * Maintenance - free * 100% Leakproof and Rustproof * Most Hygienic * Available in wide range from 100 lits. to 20,000 lits. capacity and in different shapes. * Backed by excellent installation and after sales service through a wide network of dealers.

the fortnight in anticipation of good news. Although its expansion of capacity by a million tonnes of steel has reportedly been cleared by the government, there is some uncertainty about the exact effect of escalating labour costs on its current profitability. Siemens was also actively traded in anticipation of an Ambani involvement, rising to Rs.120 from Rs.88, before closing at Rs.110. With turnover crossing Rs.100 crores a day towards the end of the fortnight, and with the possibility of future takeovers or alliances by the Ambanis and other active participants to add to the effect of the expected inflow of continued good corporate news, the market could keep bubbling for a while.

■ RAFIQ DOSSANI

SBI NRI BONDS

A new savings instrument

For non-resident Indians, with long-term disposable surpluses who want to park their funds in India, the State Bank of India (SBI) is issuing NRI bonds, 1988. The issue opened on 14 October, and will close on 15 December.

By their very nature the bonds will compete with the Foreign Currency Non-Resident (FCNR) deposit scheme that the Reserve Bank of India (RBI) introduced a few years ago. (In recent months, deposits under the scheme swelled to an estimated Rs.7000 crores. Most of the money is by way of remittances by Indians working abroad.)

Under the 3-year FCNR scheme, the deposits currently earn interest at 10.5 per cent while being repatriable. Thus they have instant liquidity. The NRI bonds carry a one per cent higher interest, which makes for a current yield of 11.5 per cent. The interest would be compounded half-yearly in US dollars and would be payable along with the principal on maturity after seven years *in Indian rupees*. The catch is that the bonds are encashable after an initial lock-in period of three years from the date of allotment, "on agreed terms and conditions". (These have not been disclosed.)

Possible deterrent. You don't have to be a genius to know that any lock-in period is anathema to investors anywhere in the world. The first concern of any small to medium-sized investor would be "Will I be able to get my money out when I need to?"

Safety of investment in the case of the SBI NRI bonds is assured. But the seven year maturity could be perceived as a deterrent. It is felt that affluent NRI investors would perhaps not think too hard before adding the bonds to their portfolio. It remains to be seen how many of them would really be interested. Confesses D. Basu managing director SBI Capital Markets Ltd, the managers to the issue, "This is the first attempt of its kind. We are testing the waters. I don't know what the response is going to be like, so I would not like to hazard a guess."

What this means is that the SBI NRI bonds which the chairman of SBI D.N Ghosh describes as "another instrument of savings" will have to try really hard to find takers. Comments a stockbroker, "It will be important to concentrate on a particular segment of Indians working abroad who are today decided on returning to India in the near future." And who else but Indian banks with branches in West Asian countries are better equipped to identify and market to this lot of NRIs?

> Any lock-in period is anathema to investors. The first concern of any small to medium-sized investor would be "Will I be able to get my money out when I need to?"

But there is another point of view. As a financial analyst expresses it, "This could serve as a wonderful vehicle for laundering of funds as the bonds can be transferred to any other NRI by endorsement, delivery and registration with the issuing office without any permission or clearance from any authority."

What makes these bonds more attractive (in this regard) is that they will remain in US dollars till maturity even if the NRI becomes a resident in India. The analyst is confident these features will make it attractive for Indians here to bring back their money parked overseas.

Does SBI and SBI Cap share this view? None of the SBI officials were willing to comment.

If the NRI bonds do become a fast moving item, you won't have to look far to know how a market niche was carved out.

PARI-PASSU CLAUSE

The great leveller

With the introduction of the pari-passu clause on the Bombay Stock Exchange earlier this month, company managements can no longer play around with share prices to attract more investors. The decision to introduce the clause followed the Bansal Committee's recommendation earlier in the year.

The working group under G.L. Bansal had conmented on the disproportionate difference in prices of existing shares and new shares arising out of fresh issues of equity and convertible debentures. The group said that the unjustifiable difference in prices, largely attributable to manipulative operations, deprives investors of a fair price. The group recommended that this could be prevented by having only one quotation for both old and new shares, as soon as the new shares were listed, instead of two quotations. More importantly, it recommended that the new shares should be permitted to be delivered against old share quotations, after adjusting for dividend amount if any for the previous year.

Comments Mahendra Kampani, former president of the Bombay Stock Exchange, "For brokers this would increase the work load tremendously — at least initially. Everytime there is a delivery of share certificates we will have to verify whether it is eligible for dividend or not." Today this is not evident from the share certificates in every case. "The logical step would be to insist on different colours for old and new share certificates," he says. The implementation of the pari passu clause has started to level off differences in share prices in several scrips which include, Reliance, Bombay Silk Mills, Great Eastern, TISCO, etc.

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per shares for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price.

21 October 1988
The Ring

In Wall Street when the market indices touch new peaks, champagne corks pierce the air like missiles from a Bofors gun. Brokers dressed in button-down shirts and pink ties fantasise about their next vacation to Rio.

But Dalal Street has its own way of celebrating. The juicewallahs, channawallahs, and bhelpuri guys are working overtime handing out the stuff to jubilaint brokers and their ecstatic clients. And of course there is that compulsory bow to the Great God.

In Wall Street they thank the investors (the few that they still have, that is) but here we can't do the same because, as Lewis Carroll would tell you, there are no investors to thank. But that is a small price to pay and I would be the last one to complain. After all, what I've made in the last two months all the brokers in Wall Street could not have made in the past one year. Poor guys, they are still trying to get investors to return to the markets.

But we Indians are different. Thousands of years of history have made us not only thick-skinned but also quaintly philosophical. Our job is not to analyse what is causing this upsurge in equity prices or what will happen if the Great One stops carrying the world on his shoulders. That is the job of these foreign-educated so-called share analysts who have theories and hypotheses for everything — from market rises to sunrises. No, the job of any true Indian is to do his karma. Nothing more and nothing less.

Though I must confess that it was touch and go for a while. Those same fancy share analysts that I mentioned earlier were threatening to expose the conspiracy *a la* V. P. Singh. The analysts, my sources tell me, were all set to run a set of stories in a leading publication sympatheic to the bear cause (and I am not referring to the Russian bear) about how this market was correctly priced when the BSE Index was at the 390 level. These ivory-tower analysts were all set to make a case that Century Spinning was correctly priced at Rs.670, Tata Steel bearable at a price of Rs.720, and that Reliance was grossly overpriced even at Rs.85.

As fate would have it the monsoons seemed to be coming on time and the market took a fling at the 450 level before the first of these horrendous stories was to be released. Luckily for the good guys one of these flaky analysts leaked out their grandiose plan in exchange for a confirmed allotment of this large issue which was billed as the hottest thing since fire was invented. After "having looked into it", and "examining the problem", and "looking at it from all angles", the prime minister's office decided to crack down on the bear media by introducing the Defamation Bill. It was only after "assurances were received" that this nonsensical hype on the Great Indian Crash of 1986 would not be carried that the Bill was withdrawn and the markets were left to find their own level.

My sources also confide that this bear syndicate had a lot more hot stuff than V.P. Singh claims he has but probably not as much firepower as the Bofors field guns. There are rumours that the government has received various trade enquiries for exporting the draft of the Defamation Bill to the United States, U.K., Hong Kong, and Singapore. The governments of these countries, it is being suggested, may also use the threat of imposing this Bill on their media if they don't stop carrying stories on the Crash of 1987. Grapevine has it that, in order to drum up support for the clampdown on that section of the media who are still making a big thing out of little technical correction, an Indian ad agency has suggested printing posters, sleeveless t-shirts, and car stickers with mighty Rambo giving you the immortal line straight from his smoking bazooka: *"Teri nani yaad ayegi"*.

But seriously, having the west ape our style for a while won't hurt at all. In fact, after having continuously failed to curtail our growing trade deficits, New Delhi should view this as our last chance to earn ever-precious foreign exchange.

26 October 1988
Bada Miya

Jerry is an India-watcher with one of those think-tanks in America. Sometimes Jerry takes his job a bit too seriously. I mean. why would you want to eat this strange meat behind the Taj when you could be at the Taj eating slightly better food. But Jerry insisted that the Taj was not India and he would be wasting his time watching that small percentage of so-called Indians gliding in luxury.

"Well", said Jerry, "who are you voting for?"

"Fortunately, my good man, I cannot vote since I am not an American citizen. What a choice: Bush or Dukakis!"

"I am talking about your elections — in India."

"I seemed to have missed something in the papers", I remarked rather curtly irritated at the bones in the meat. "From what I have read we are not due for an election until January, 1990."

"Where have you been, my man? Why do you think your stock market is up? Everyone knows that the sure sign of any upcoming election is a sharp run-up in share prices."

"But our prime minister has categorically ruled out an early election."

"All the more reason to hold one then, don't you think? Indians do exactly the opposite of what they say they will do. It's part of your culture. Take the case of this guy here. He said he'd give us the best meat in town, not to worry. Who is he fooling? Lucky for me, I stopped by in Seoul and ate my share of dog-meat and snakes. Toughens the system."

"Really, Jerry. This guy has sharp knives. Do you mind passing your comments when I'm out of here?"

"Who do you think is buying shares in the market? Even your financial institutions know a ruse when they see one. The political parties are buying. They zone in on a group of eight or nine shares, bid up the prices to abnormal levels, attract the interest of your stairway speculators, and then get out in a jiffy. Come settlement time and they have made a huge profit which they give out on *badla*. Money, said a wise man, makes money."

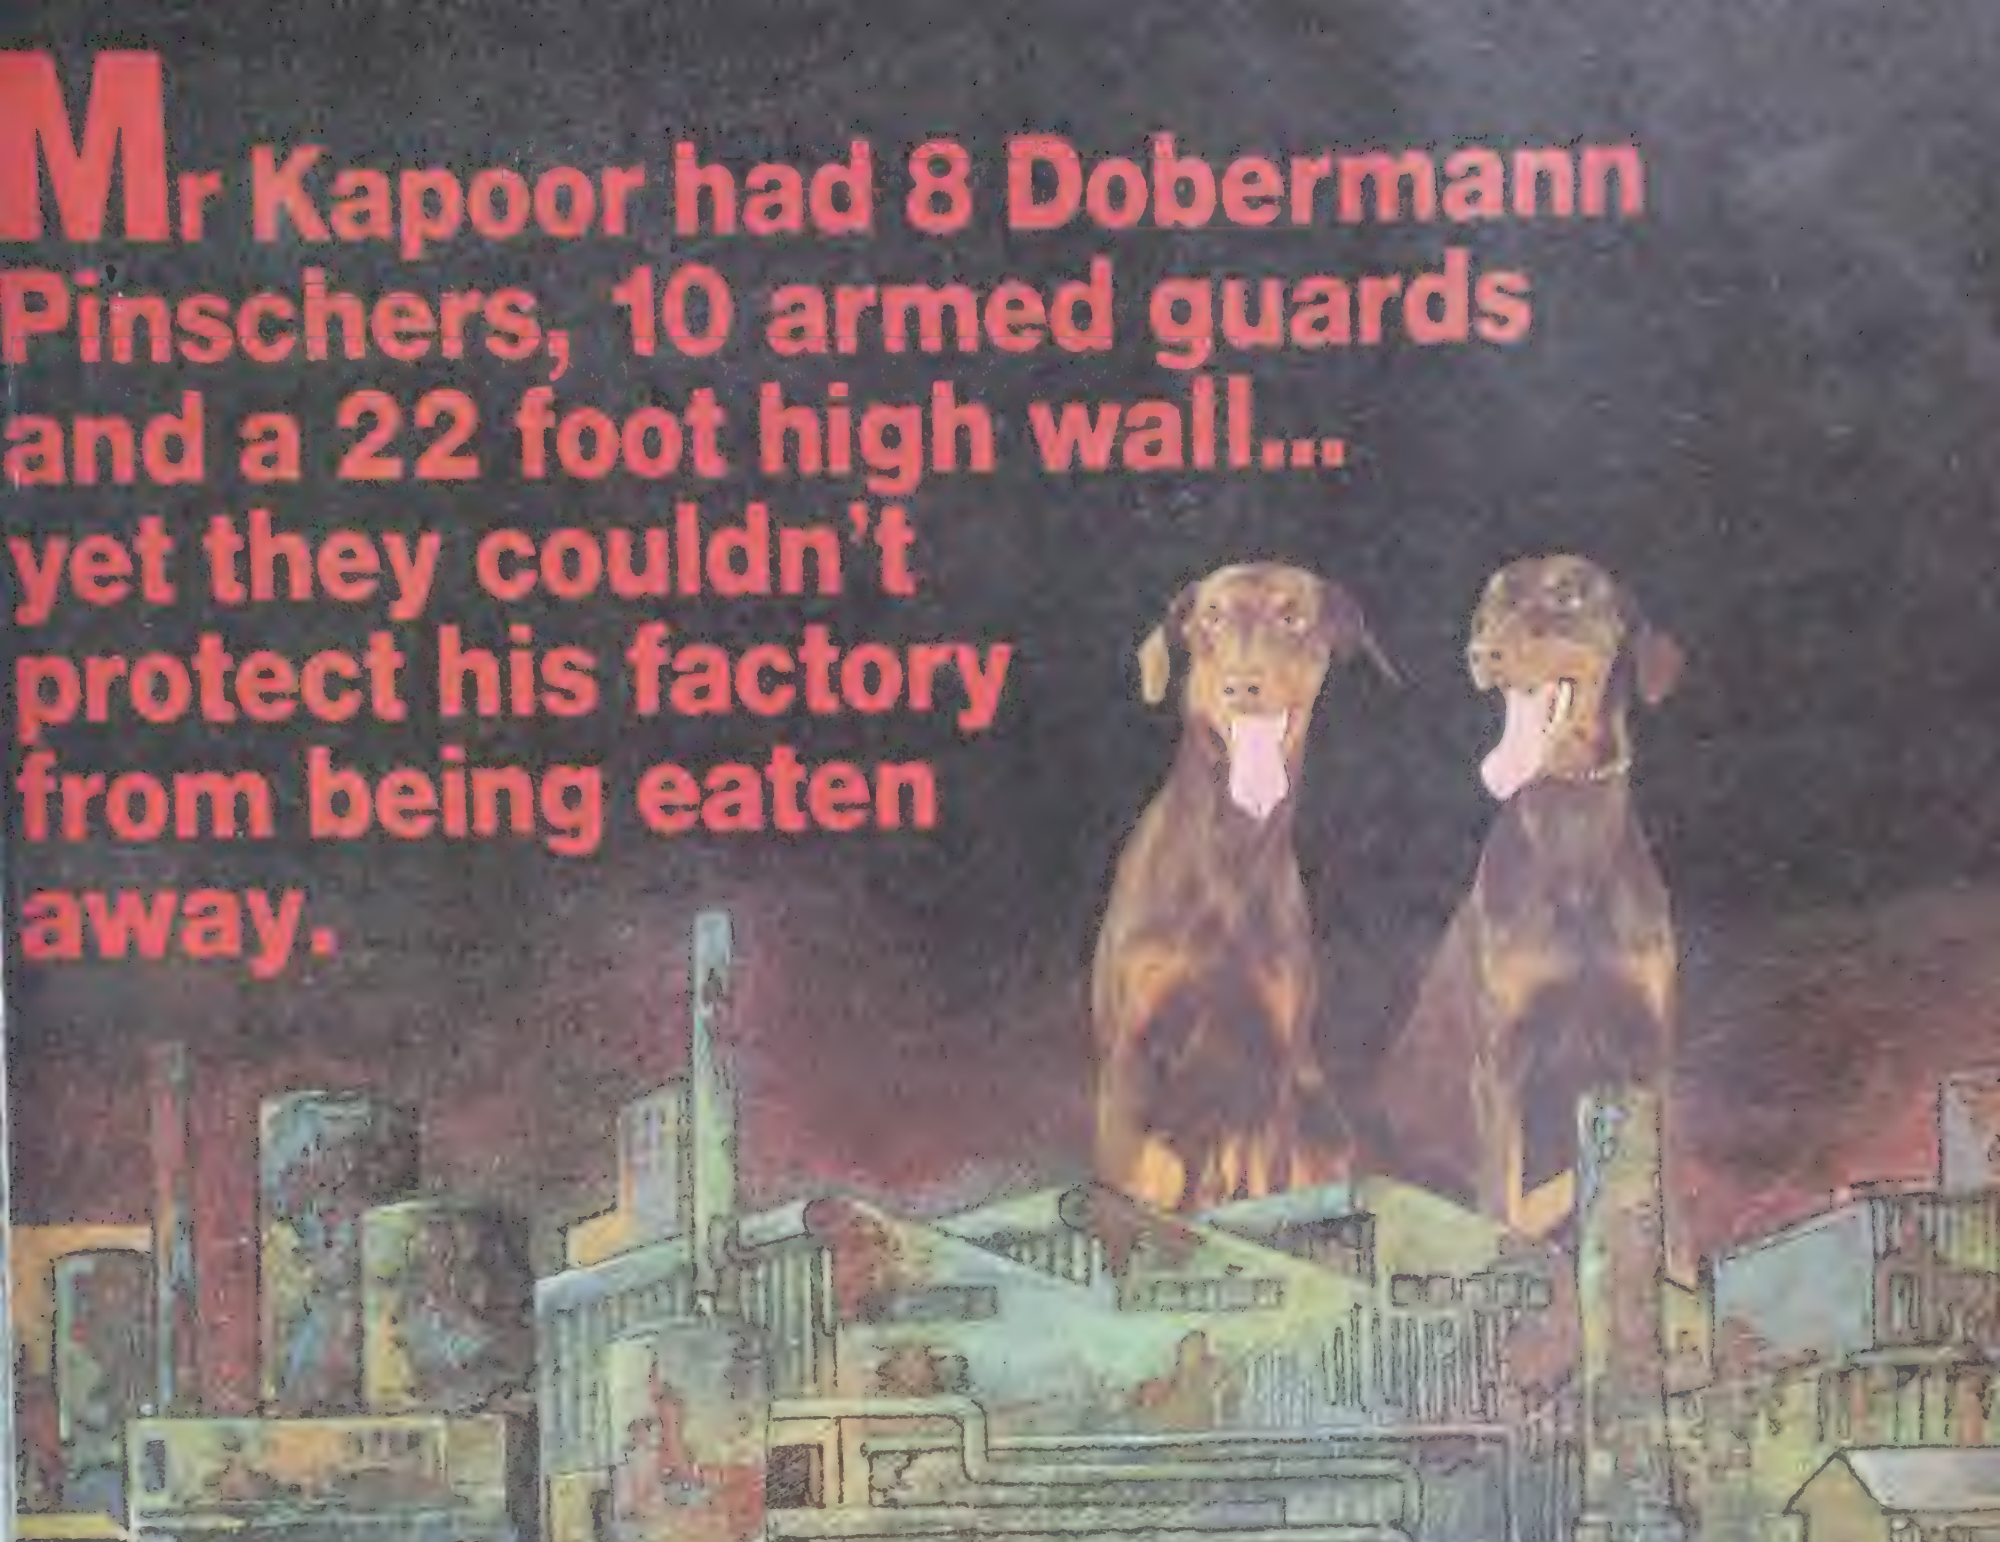
"Jerry, are you out of your mind or is it the meat?" I queried amazed at Jerry's Theory of Runaway Prices.

"You forget, my friend, I observe every move that goes on in your country", said Jerry, eyeing a vivacious eighteen year-old getting into her spruced-up Maruti.

"And, pray, where have you watched our politicians rehearse their moves to outwit the legendary shrewdness of my brethren on the floor of the BSE?"

Jerry turned to me in utter amazement: "You mean you don't know?! What do you think those guys have been doing in Parliament? They were not making laws out there for the last four years. Why do you think there has been all that yelling in Parliament? Oh, I assure you it's not for Fairfax and Bofors. Those were smokescreens to fool you guys. They have been rehearsing for the Great Day when they make their appearance on the floor of the BSE and push their way around."

Mr Kapoor had 8 Dobermann Pinschers, 10 armed guards and a 22 foot high wall... yet they couldn't protect his factory from being eaten away.



Yes, Mr Kapoor's factory was attacked by rust. Because he neglected one vitally important security measure: lasting protection against corrosion. So what with unending repairs and renovations over the years, his profits kept getting swallowed up.

Fortunately, 7250 factories, 310 dams, 1830 underwater structures and many other constructions in India have escaped the same fate... Thanks to STP Limited. The most trusted name in corrosion protection: pioneers and leaders for over 50 years. Only STP has developed such a wide range of durable products and systems. Like Tarstil Tar for general corrosion protection, Tankmastic for steel and concrete, and solutions to specific corrosion problems like Carseal.

STP Limited also offers a range of high-quality mastic asphalting treatments, both for roads and industrial floors. And it has an equally impressive record in pipe coating and waterproofing.

So, invest in STP protection for your factory today—and avoid the continuous maintenance expenses that eat away your money.

Because STP protection means the longest-lasting protection.

Zenith Technologies brings you the state of the art.

Long awaited news for all entrepreneurs, purchase managers and engineers in the electronics industry. Zenith Technologies is the single source that gives you trouble-free and speedy access to top-quality components, peripherals and media from the world's most quality-conscious manufacturers.

Texas Instruments
The corporation with net sales of $ 5 billion. Inventors of the Integrated Circuit and America's largest overseas semi-conductor manufacturer. With 50 manufacturing plants in 17 different countries and more than 90 sales/support offices in 40 nations worldwide.

Zenith Magnetics Ltd.
A sister concern of Zenith Technologies. India's premier manufacturer of floppy diskettes.

ESSEN Peripherals Pvt. Ltd.
Industry leaders in the manufacture of 150 cps, 300 cps dot matrix printers in collaboration with C. ITOH, Japan; flat-screen and colour monitors in collaboration with SAMSUNG, Korea; and PC/XT/AT keyboards.

Ramtek (U.K.) Ltd.
Pioneers in Raster scan colour graphics technology for computer graphic terminals and imaging applications.

Time Electronics
Manufacturers of DEC compatible VT 52, VT 100, VT 220, colour graphic terminals, and CAD/CAM systems.

QUME
Manufacturers of laser printers and VT 220 and colour graphic terminals.

Other Zenith Technologies branches:

Bangalore: 30/1, 3rd Floor, Leeman's Complex, Cunningham Rd., Bangalore 560 052. Tel: 76548, 24999. Tlx: 0845-8619. **Calcutta:** 27/1 Monoharpukar Rd., 1st Floor, Calcutta 700 029. Tel: 483561, 483872. **Hyderabad:** 2-2-18/18/3-19 Bagh Ambarpet, Hyderabad 500 013. Tel: 66102. **Madras:** 15/1 Narasinghapuram St., Mount Rd., Madras 600 002. Tel: 562063. **New Delhi:** 1108, Pragati Towers, 26, Rajendra Place, New Delhi 110 008. Tel: 5715250, 5724465. Tlx: 031-66781.

Harris Corporation
Producer of CMOS and military-grade ICs approved for space and defence applications in the US.

Graham Magnetics
The manufacturer of topmost quality computer magnetic tapes and data cartridges of $^1/_2$" and $^1/_4$" for data recording.

ICIM
India's single-largest computer company.
Manufacturers of heavy-duty 400 lpm and 800 lpm line printers.

Jalex
Largest manufacturer of superior-quality connectors for the electronics industry in collaboration with Molex, USA.

Celcon
Pioneers in developing axial cooling fans for computer - and instrument-cooling applications.

At Zenith Technologies, we do not handle products whose quality needs to be double-checked by the ultimate user. You can count on us for technological expertise to advise you on your best options.
Contact any of our offices for more details.

Business India

Bullish fervour

The stockmarkets are going up up and away. Market watchers are already saying that the 1985 boom will soon pale in comparison to what is happening currently. However, our contestants are a cautious lot. Against spectacular increases in all the six scrips for IC 275 their predictions did not match up.

How to enter

On the entry form given below are listed six popular scrips. All you have to do is to use your skills to predict the prices of each of these shares as on 25 November 1988, and send in your entry by 15 November 1988. The winner in accordance with the rules printed below, will get a prize of Rs.5,000. In the event there is no winner, the prize will not be carried over.

Every issue of **Business India** will contain a new contest. The entry which has all six correct answers will receive a prize of Rs.5,000. If no such entry is received, the entry which has 5 out of 6 correct answers will receive the prize. In the event of there being more than one winner, the prize will be shared equally. We repeat, if there are no winners, the prize money will not be carried forward.

Rules:

1 There is no entry fee.

2 The list has been selected on the basis of what we consider are actively traded and interesting scrips on Indian stockmarkets.

3 The price mentioned last in the official quotation list of the stock exchange (if there is a series of such prices against the name of the share) will be taken as the correct answer. The official list of the particular stock exchange, which will be referred to, is given against the name of each scrip. If for some reason the stockmarket is either closed on 25 November 1988, or there are no transactions for the six scrips chosen below, then the quotations for the nearest working day prior to 25 November 1988, will be used.

4 Variation from the correct answers are permitted within a range that is specified against the scrip.

5 Entries must be on the printed form given below. Any other entries will be disqualified.

6 Only one entry will be permitted per form.

7 Envelopes sent in should be marked Investor Contest. All entries must be received at **Business India,** Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, Tuesday, 15 November 1988.

8 **Business India** is not responsible for non-receipt of entries.

9 **Business India's** decision on the winning entries will be final and binding, and no correspondence in this regard will be entertained.

10 The contest is open to residents of India only. No employee (or any direct relation of any employee) of **the Business India group of publications** is entitled to enter the contest.

Name of scrip	Stockmarket official list to be used for comparing results	Prices as on Friday, 21 October 1988 (Rs)	Variations permitted from correct prices up to (Rs)	Prices as on Friday, 25 November 1988 (Please fill) (Rs)

The Chola Sheraton Business trip

There is a fine difference between a business trip completed and a complete business trip.

It takes more than just a hotel to prove it. It takes the Welcomgroup Chola Sheraton. And the discerning business traveller.

For whom we have created the **Executive Club,** a new world of hospitality with specially appointed rooms and suites, extensive business support facilities and personalised valet service.

And the **Executive Club Lounge.** Quiet, elegant and distinctive. Ideal for informal meetings and private entertainment.

But the 'complete' business trip means more than business. And we at the Chola know this.

The new, fully equipped **Health Club** not only smoothes away the creases of your hectic schedule, it also helps you unwind—for the leisure hours.

So that you can revel in the pleasures of dining at our speciality restaurants, and, of course, the **Peshawri**—the North-West Frontier restaurant that brings you an unforgettable gourmet experience!

All this in an environment which exudes the inimitable Chola warmth and hospitality.

WELCOMGROUP

Chola Sheraton

The complete business experience.

SENSATIONAL

Cool & Quiet Profile

Sealed cavities, EPDM gaskets and an effective glazing unit keep noise, heat and dust infiltration at its minimum. Ideal for airconditioned areas.

Hi-Fashion Profile

Profile is modern and elegant. Contemporary designs blended with traditional care.

Water-Resistant Profile

The double sealing and built-in drainage system do not let the rainwater come through. Profile is unaffected by water, salts, acids, alkalis, humidity and all other atmospheric pollutants.

Tough Profile

Its high impact base material, zinc galvanised steel insert and highly effective multi-point locking mechanism offer maximum durability and security. It is fire-resistant too.

Distributors **Ahmedabad**: KARTIK PATEL, 11, Nathalal Society "Kunwar Bhawan"-14 Ph 442180 **Bombay**: STAR ENTERPRISES, 307, Buss Udyog Bhawan, Torershi Juraj Road Sewree Ph (Off.) 413550 (Res.) 548897, 544146 **Hyderabad**: SOUTHERN AGENCIES, Flat No.103, Ph Lane Complex, Road No. 12 Banjara Hills Ph 227422 **Kanpur**: LAXMI ENTERPRISES, Vivek Cinema Buildings 1 Ph 210640, 210644. **Madras**: SOUTHERN AGENCIES, Flat No-2, 5, Cha... PROFILES

Care-Free Profile

Maintenance free, in effort and cost. Once installed, Profile is totally immune to rotting, swelling, warping, peeling, moths, termites and rust.

Perfect Profile

Doors & Windows that look elegant and perform wonders. Fabricated on highly sophisticated machinery with German technology. Installed by trained company personnel. A perfect need for every perfect setting.

10 years guarantee

PROFILE

"Magnifique"

That's how any Frenchman, wi his Gallic eye for beauty, woul describe Profile Doors & Windows. He'd be right of course, but there's much more than just beauty Profile Doors & Windows are a marvel of attention t technical details.

Profile Door & Window systems-created by expe German designers—are processed to high standard and skillfully assembled. Perfectly glazed with a foo proof locking mechanism and flawless hardware Strict quality assurance procedures ensure its incredib le strength and long term operational reliability.

Profile Doors & Windows are even installed by tra ned company personnel.

Profile's faultless technology is a must for every Hos pital, Hotel, Computer Centre, Food Processin Unit, sensitive Electronic and Chemical Industry Laboratory, Commercial and Public Building an any dust free environment and, of course... your home.

The wide range of Profile offers you Picture windows Open-out windows, Main doors, and Sliding doors.

Custom built doors and windows are fabricated withi 7 days.

Profile has a 10 years guarantee that says these doors & windows have come to stay.

"2" that's paved the way for "4"

The popular two-wheeler tyre — TVS Srichakra — now comes to you for your four-wheeler.

A tyre that will not only give you excellent mileage but will also offer you peace of mind: added safety.

'Lock-In Tread' for added safety

TVS Srichakra is designed with a unique tread pattern.

'Lock-in Tread'.

It provides the firmest grip on any surface.

On wet roads, it helps draw out water so that there's no slip, no skid. Its broader contact area holds tight dry roads. And gives your vehicle the stability you need on steep slopes and sharp corners. No shakes... no wobbles.

All that adds to that extra safety you need in today's driving conditions.

TVS Srichakra :

Safety you can trust

An open door approach

Nair with workers: a legend of sorts

P.M. Nair *is chief secretary of the Union Territory of Pondicherry; chairman and managing director of Anglo French Textiles (a subsidiary of the Pondicherry Textile Corporation, GOI)*

It is noon. P.M. Nair, chief secretary of the Union Territory of Pondicherry, drives into the rambling mill compound of Anglo French Textiles (AFT) at Mudaliarpet, dressed in a light blue on dark blue worker's uniform. Nair is the chairman and managing director of the mill as well. The 44-year-old IAS officer seems to manage his dual role easily and efficiently. It is evident that AFT, the mill which was given up as dead before he took over in 1985, is a pet project.

Serious misgivings. Efforts had been made at various levels to revive AFT, which had sustained over 7,000 workers for many years. Spread over 56 acres, the 90-year-old mill which produces 'cotton grey', closed down in July 1983, beleagured by mismanagement and labour problems. Expert bodies had expressed serious misgivings when the government of India agreed on nationalisation of the unit and set up the Pondicherry Textile Corporation to bring AFT under its umbrella. A development commissioner of the state, Nair had been familiar with its problems, but till two days prior to the takeover, he had no idea that the baby would land in his lap. Soon after, he was appointed chief secretary, and perforce the chairman of the mill.

When the new team entered the mill compound in December 1985, it encountered a veritable jungle, complete with snakes. There were trees growing out of derelict buildings and even through an abandoned vehicle. High tension cables had been snapped, the labour office had been ransacked, records stolen or mutilated. Nair and the joint managing director, P. Somasundaram, set up a task force with an action plan. They were given *carte blanche* to revive the mill.

No interference. A determined Nair laid down one condition — no interference. "I must admit they stuck to their word," he acknowledges. As many as 1,155 workers were retrenched. High productivity norms and rationalisation of labour were accepted by the workers — earlier the warehouse had over 700 hands, now it has 300. Today, no unions operate within the precincts of the mill. All decisions are taken in consultation with the workers based on an opinion poll, the results of which are publicly announced. The government of India sanctioned Rs.12.56 crores, of which Rs.7 crores have been handed over to the commissioner of payments for statutory liability. Earlier, the mill had worked only for six days — now the seven day week has been adopted.

When the new team entered the mill compound in December 1985, it encountered a veritable jungle, complete with snakes. There were trees growing out of derelict buildings and even through an abandoned vehicle. High tension cables had been snapped, the labour office had been ransacked, records stolen or mutilated

Another innovative approach was taken for overhauling plant and equipment. No outside contracting was done; even civil engineering jobs like re-building water tanks, etc, were done by staff engineers. Experts had estimated that the turnaround would take a year; Nair did it in six months. On 10 June 1986 when the mill re-opened, Nair walked in wearing his uniform, as a sign of his serious intent. The mill achieved a turnover of Rs.16 crores in the first year, making a profit of Rs.1.2 lakhs. In the second year, turnover touched Rs.31 crores. It is expected to be in the region of Rs.35 crores for the current year.

For the workers, Nair decided that the canteen would supply food round the clock. A complete meal costs just Rs.2. Part of the mill compound has been converted into a vegetable garden.

Welfare fund. The AFT runs a 24-hour dispensary for workers and their families, and Nair gets the best medicines for his dispensary. A death relief fund has been set up to which every worker contributes when a colleague dies. Up to Rs.1.5 lakhs used to be collected thus. Recently, through common consent, the amount has been reduced to Rs.75,000. There is a welfare fund too, with matching contributions from workers and management.

Last year, AFT declared a bonus in an unusual way — 50 workers were called at random and the balance sheet placed before them. The workers themselves indicated what should be set aside for machinery, expansion, depreciation, etc, and asked for a 10 per cent bonus. The management upped this to 14 per cent. The AFT chief executive is a legend of sorts in the union territory of Pondicherry. "I have no closed doors. From the top level manager to the shopfloor worker, everyone has access to me," he says

■ PADMA RAMNATH

SUSTAINED GROWTH THE SURE SIGN OF SUCCESS

CHAIRMAN-AND-MANAGING DIRECTOR MR.G. VITTAL'S SPEECH FOR THE 4TH ANNUAL GENERAL MEETING ON 29TH SEPTEMBER 1988.

Ladies & Gentlemen,

It gives me great pleasure to extend you a very warm welcome on the occasion of the Fourth Annual General Meeting of the Company. The Directors Report and Audited Accounts of the Company for the period ended 31st March, 1988 are already in your hands. In pursuance of provisions of Direct Tax Laws (Amendment) Act, 1987, regarding adoption of uniform Accounting Year, the accounts have been prepared for a period of fifteen months ie. from 1.1.1987 to 31.3 1988.

PROJECT IMPLEMENTATION:

The Factory was put into trial production by 7th December, 1987. The Japanese Technicians have provided the necessary job training to our technical staff in the Japanese art of weaving and operation of sophisticated Sulzer Ruti Rapier Looms. Now your Company is fully equipped to manufacture wide range of Silk Fabrics to meet the international standards.

HURDLES IN INITIAL STAGES:

The initial stages of any industry's set-up can be compared with the infant age of a child. In the erection stage of imported machinery and delivery of technical data and designs by the Japanese suppliers, there was some delay which led to delay in implementation of Project for about six months. Secondly the acute power-cut in the State and other teething troubles contributed their share in further delaying and the commercial production was therefore delayed upto 5th April, 1988.

Now, we could overcome the difficulties one by one. We have been assured uninterrupted supply of silk yarn from China by His Excellency He Wei, Commercial Consulate, Embassy of China. The alternative sources for purchase/procurement of raw materials have also been arranged. The purchase, production and marketing departments have been streamlined to ensure attainment of our turnover targets. We have made necessary tie-up arrangements with Agents both in India and overseas for sale of our major production.

Our unit has a licenced capacity of 5,00,000 metres per annum. However, it has the installed capacity of 15,00,000 metres per annum in three shifts. As the Polilcy of Government is to automatically endorse the licenced capacity taking the actual production in account, more so in case of EOU, our company has very bright chances to utilise the optimum installed capacity gradually.

DIVERSIFICATION

We have necessary infrastructure to process 30,00,000 metres of silk fabrics per annum whereas our weaving department requires only 15,00,000 metres processing capacity. We have applied to Government for importing grey fabrics and re-exporting after processing in our unit on job work basis, so that the processing capacity will be fully utilised without much additional capital involvement.

Considering the huge demand for silk garments and made-ups, we have submitted our plans to Government for the necessary approval for manufacturing and exporting the silk garments and made-ups. The production plan will no doubt boost the profitability and foreign exchange earnings of the Company.

Your Directors have taken a decision to set up modern Silk Reeling unit in Andhra Pradesh with a capital outlay of Rs.12.5 Crores with 20 NISSAN Automatic Machines and annual production of 120 tonnes raw silk yarn. The entire raw material requirement (silk yarn) of our Company can be easily met without depending on imports and if there is any surplus it can be sold at remunerative prices. As the demand for silk yarn is growing year after year and since World Bank is extending financial help for development of Sericulture in Andhra Pradesh also we foresee very bright pofitabilities for the unit.

Keeping in view for the demand of printed silk fabrics, your Company will be equipped with a modern design and printing unit to manufacture designed fabrics in near future.

OTHER PROJECTS:

A Letter of Intent has been obtained in the name of Richimen Synthetics Limited for setting up a Synthetic Fabric manufacturing Unit with 300 Looms. Land has been acquired for setting up of the project. Negotiations are in progress for purchasing Sulzer Looms from Switzerland and Finishing & Designed machinery from Japan.

INDIAN SILK INDUSTRY:

Foreign exchange earnings of the Indian Silk Industry during the year 1987 - 88 touched a new peak of Rs. 254.96 Crores consisting of Natural Silk goods Rs. 244.82 Crores, Mixed/Blended Silk Goods Rs. 6.95 Crores and Silk Waste Rs. 3.17 Crores. Indian Silk Goods Exports during the four months period from April to July, 1988 accounted for Rs. 93.54 Crores being 23.6% more than that of the previous year during the said four months. In case of Natural goods which constitutes major portion of Silk exports the increase in selling prices mainly contributed to increase in Foreign Exchange earnings. During April - July, 1988 export of Natural Silk Goods amounted to Rs. 89.24 Crores being 22.4% more than that of the last year during the same four months, though the increase in quantity was only 9.3%. The remunerative prices offered to Indian Silk goods really serves as stimulous for growth of our Silk Industry. The Company is striving its best to take advantage of these favourable factors. We are making every effort to meet the aspirations of shareholders who have reposed confidence in the Company.

It will not be out of place to mention that the Government is giving good encouragement for development of Sericulture in India and World Bank is extending its financial support. This is most welcome considering the social economic and industrial development of our country and particularly Indian Silk Industry.

I thank Central and State Governments, Bankers, Suppliers, Managers, and Staff Members of the Company and particularly the Shareholders for the support in implementation and take-off of the project.

THIS DOES NOT PURPORT TO BE A REPORT OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETINGS.

RICHIMEN SILKS LIMITED

t was the "puppy" party of the onth. When **Lalit Suri** de-ared his Holiday Inn in New elhi open, he flung the doors pen to the local smart set that romises to be his prime target roup.

The Suri mega-project was of ourse delayed by several years – it was one of the Asiad pro-cts some say. (Does anybody emember the Asiad anymore?) or Suri, the triumph of open-ng must have countered to an

extent the trauma of the Sum-itomo scandal that has just about blown over for the moment.

The Suri sway over the Delhi political circuit, that cuts across various regimes and power structures, was displayed adequately at the hotel's open-ing. Scene of the day — the PM's current chief advisor G.K. Arora being hugged by the old PM's main confidant R.K. Dhawan — both of whom made extremely rare public appearances for the gala event. If what they say of the Suris — here today, here tomorrow — works with the ho-tel as well, Holiday Inn may well be the hotel to watch in the race to conquer Delhi markets.

If presidents were Santa Clauses, wishes could well be horses — or at least reindeer. On his recent trip to Finland, it seems President **R. Ven-kataram** was actually received by Santa Claus. The head of state was visiting the Santa Claus workshop in the Artic cir-cle — no doubt the high point of the Finland visit. While official spokesmen are mum about the logic of this presidential foray, political pundits in New Delhi figure that it was Venkatra-man's way of ensuring that he kept the flag of a secular India flying high.

Whatever the logic may have been, having been to see old Father Christmas himself, gifts and presents were the least one could have expected when the president returned home. And a lot of good cheer — which the nation seemed in the interim to have been running short of.

Ad films sell dreams, some-times products, and more rarely win prizes. Creating films that sell and dreams that win is ad-mittedly a tough task. And one that novices and new initiates can hardly master. Film makers are usually a closed club with new entrants shooting miles of reels before their real stuff is accorded recognition.

Not so for **Simi Garewal.** Super Simi won an Australian award last month for her first ad film. And she's thrilled. Simi won in a contest that featured clapper boards from 40 coun-tries and included 1,660 entries.

Stumbling on such talent must make A.G. Krishnamurthy, the creativity-inspiring head of Mudra advertising, very happy. More so because having won the award Simi says: "More ad films are in the pipeline."

Will Gorbachev meet **Viren Shah** on his visit to Delhi? Maybe not. But Shah certainly has done his bit for Mikhail, having spent over Rs.5 lakhs publishing a speech in praise of perestroika. In his chairman's statement at the Mukand Iron annual meeting Viren Shah the businessman politician spoke entirely on the process of Pres-troika. "Inspired by the process of change that is sweeping the Soviet Union and China and be-cause I believe that many in India are totally unaware of these changes" is the only rea-son that Shah proffers for his impassioned delivery.

For those who missed the full page ads reporting the speech, Viren is printing more lengthy

booklets which could well be in the mail already. Shah says that his speech was read by the un-likeliest of people who have called to greet him. *The Hindu*, which refused to carry the Mukand chairman's statement on the grounds that it was "po-litical" and not strictly business, may therefore have barely made a dent in Shah's proselytising efforts. Earlier Shah statements have been on subjects like fam-ine and the North-South de-bate. This year's speech — which comes after a 5-year break — may soon be followed up by one on China where Shah is currently attending a world Business Leaders Conference. So Mikhail, have you made up your invitees list yet?

While **Pravin Gandhi's** own newspapers (he is managing trustee of the Saurashtra Trust, publishers of the Janmabhoomi group of newspapers) may only be local papers, as the new Pres-ident of the Indian Newspaper Society he will pack a pretty hefty punch. Which, given Gan-dhi's previous and well pub-licised experience with associations and chambers of commerce, will be effectively displayed during the year of his Presidency.

Gandhi's term had a fortu-itous start since the defamation bill was dropped on the day he took office. The new INS presi-dent modestly disclaims any credit for disarming the govern-ment's draconian option, "not on account of my appointment but purely coincidental" he beams.

Do you ask these questions before you buy a personal computer?

- Is it a 100% IBM hardware and software compatible top-of-line computer?
- Will I get a One-Year Comprehensive Guarantee and a 30-Day Money-Back Guarantee with the system?
- Will I get the opportunity to talk to a systems engineer who understands my immediate and future needs?
- Will I be able to choose the hardware that fits my particular needs rather than standard solutions available with you?
- As my needs grow, can I get upgrades, say from an XT to an AT, at just the cost of difference?
- Will I get licenced software and programs and/or turnkey solutions designed to my particular needs?
- Will I get at least 30 hours of training on the system, at no extra cost?
- Will I get service within 2 hours of my call, should my system ever fail?

Only Innovative Information Technology Pvt. Ltd. says "YES" to all these questions.

With over 150 installations in two years, it has been a quiet success for us. And very productive computing for our clients. For details on our '288, '286 and '386 get in touch with us, today, at: **2872100**.

Turning around, sick companies

Controlling corporate sickness (Lessons from experiences for managers and bankers)
By L.C. Gupta and Archana Sekhar;

Oxford University Press; Rs.90; pp 114.

In their book on controlling corporate sickness, L.C. Gupta and Archana Sekhar have rightly stated that the process of falling sick generally takes place over a period of years; rarely does sickness suddenly overtake a business.

The formal yardstick for identifying sickness, viz., the cash loss criterion, is misleading and, therefore, instrumental in delaying corrective action by several years. Rehabilitation efforts by promoters, the financial institutions and the government, concentrate too much on the financial aspects. There is, almost invariably an inadequate appreciation of the need for the right kind of backward and forward linkages relevant to a sick unit, and very little understanding of the perquisites for a successful turnaround.

It may be useful here to quote an instructive analogy given by John Argenti: "... the collapse of a company is in some ways similar to the sinking of a ship. If a ship is in good condition and the captain is competent, it is almost impossible for it to be sunk by a wave or a succession of waves. Even if there is a storm, the competent captain will have heard the weather forecast and taken whatever measures are needed. Only a freak storm for which quite inadequate notice has been given will sink the ship."

To enable a successful diagnosis of the "originating" causes, the entire process of falling sick needs to be understood. Frequently, there is a chain of causation with an originating cause. For example, the top management's inability to handle industrial relations results in low employee morale. Low morale leads to low productivity and high costs. This, in turn, leads to declining profits and, finally, to losses. Sooner rather than later this will affect the availibility of funds for conducting operations, which will, unless redressed, result in an irreversible slide down. The terminal cause might be a lack of funds but the true cause is management's poor handling of industrial relations. Unless it is objectively and incisively traced, the problem will remain unsolved and a turnaround would be wellnigh impossible.

The authors have quite perceptively suggested five basic typologies of corporate industrial sickness. These are:

- Operating: arising from managerial inability to conduct current operations efficiently, or from managerial corruption.
- Strategic: arising from lack of adaptability to long term environmental changes.
- Staying power deficiency: due to defective financial structure.
- Still-born: due to initially misconceived plans and, finally
- Catastrophic: caused by sheer bad luck.

One illustration relating to operating typology would be quite in order to underline the point. In the case of British Leyland, Edwardes says that when he took over in 1977, he found the internal control system in a horrible state. To quote: "There was no breakdown of cost information model by model... imagine trying to manage a business without knowing the cost of the individual products — it seemed unbelievable, and, yet, on investigation, quite explicable. Accountants can only work on information provided to them, and the organisation, including that at factory level, was a shambles. Putting in proper accounting yardsticks and controls was dependent on bringing the day-to-day business under control — without discipline nothing could be done, and very soon we realised that the sine qua non of survival was to reestablish the right to manage."

In passing, it may also be mentioned that insufficient staying-power, yet another typology, can threaten a firm's existence. Business is a game in which a player with a small "pile" may be out of the game before he has a chance to win. True staying power lies in the strength of a firm's net worth.

If we categorise a case of sickness into one (or more) of these typologies, the implications for remedial measures and strategy at once become clearer.

The next point the authors deal with is numerical indicators of corporate health. Financial ratios serve as forewarners in two ways: firstly, as sensitive measures of operational efficiency and, secondly, as an index of staying-power.

Two points have emerged from the various studies of corporate failures all over the world. First, the great majority of corporate failures are caused by inadequacies in top management, and, second, the process of failure does not take place overnight but generally extends over many years. It should, therefore, be possible to see the seeds of failure in inadequacies at the top long before they manifest as sickness.

Gupta and Sekhar have presented a succinct summary of important models developed by experts for assessing the attributes of top management which may have a bearing on performance in the short as well as in the long run.

The authors have expressed great confidence in operations audit as a preventive tool provided it is made an ongoing system in every business firm. A brief outline of operations audit has been provided in the book.

An important problem in India has been that even when it is known that a company is not performing satisfactorily, precise and specific data and analysis are usually not available about which parts are not functioning well and the reason for and the extent of malfunctioning. The board of directors, as well as financing institutions tend to swallow whatever explanations are offered by the management without verification. Operations audit can render a valuable service here.

A change of management is often a necessary condition for a successful turnaround in cases of severe and prolonged industrial sickness. The authors have emphasised four basic requirements for a successful turnaround. These are:

- A determined, motivating top management
- Potential viability of the firm's business
- Good planning and control and an integrated strategy, and
- Timely availability of adequate cash.

Most successful turnaround managers emphasise that "the most important part of getting a troubled company back to health was concerned with people". However, say Gupta and Sekhar, "Unless the cash requirements for carrying out a turnaround operation are accurately foreseen and arranged beforehand, the turnaround effort is unlikely to succeed." Many well-conceived and feasible turnaround plans have, as we know, got frustrated owing to procedural delays in making adequate funds available on time.

■ JAYANT KHER

CLEANING...
NO LONGER DIRTY WORK!

Here is the Ultimate Solution to all Cleaning problems

USHA Wap

High Pressure and Steam Jet Cleaning Machines

SALIENT FEATURES

HIGH PRESSURE

Water jet pressure upto 150 kg/cm^2 instantly dislodges dust, soot, mud, hard and sticky deposits. And reaches in to all corners, inaccessible points and complex assemblies.

HIGH TEMPERATURE

Heated spray of water/steam under pressure disintegrates greasy and oily deposits, loosens dried encrustations and dissolves otherwise insoluble chemical residues. As a result cleaning is fast and thorough.

DOSING OF CHEMICALS/ DETERGENTS.

Automatic addition of cleaning chemicals accelerates cleaning. Also simplifies disinfection, rust prevention, etc.

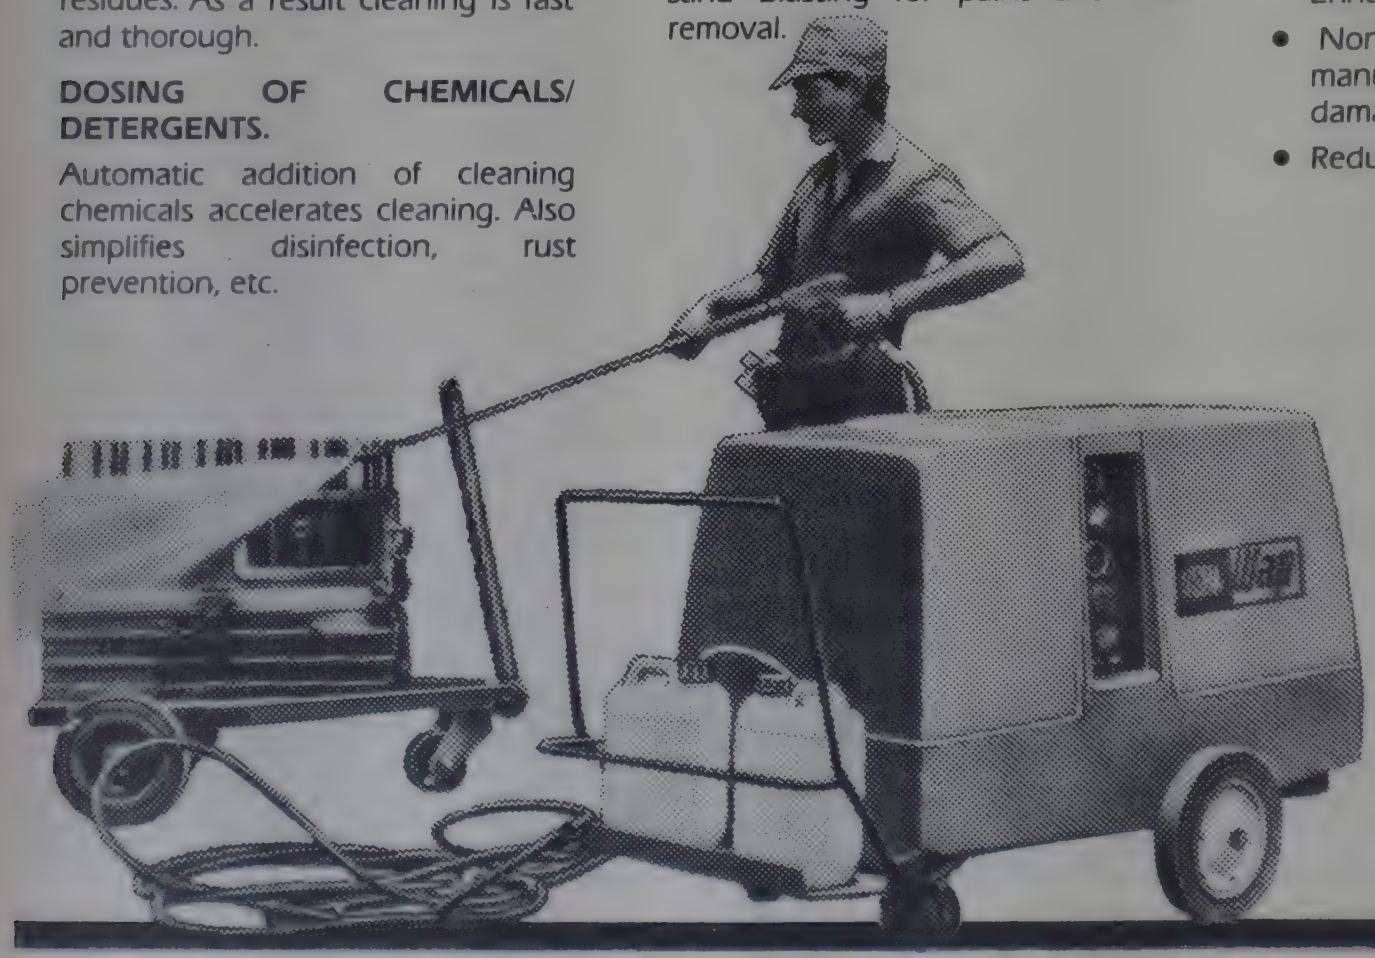
DESIGN FEATURES

Easy to use – Simply direct the spray gun on to the surface to be cleaned. Only one operator can accomplish all cleaning work. Pressure regulation provided in the gun-lance.

Mobile – Self contained, compact, light-weight and wheel mounted for easy movement.

Safe – Built in safety devices such as low-water cut-off, thermostatic control & pressure control device.

Versatile – Can be used for wet-sand blasting for paint and rust removal.



ADVANTAGES

- Cleaning is fast and thorough. Reduces downtime. Improves productivity.
- Enormous savings in time and labour.
- Intricate, inaccessible or densly clogged areas are also easily cleaned.
- Provides for Ease of maintenance after cleaning.
- Facilitates quick detection of faults that show-up only after cleaning. Enhances life of machines.
- 'Non-contact' process-eliminates manual scrubbing and resultant damage to job surfaces.
- Reduces water consumption.

Over 200 installations in India

In collaboration with WAP REINIGUNG-SSYSTEME & CO. of WEST GERMANY

• ILLUSTRATIVE APPLICATIONS.

- RAILWAY LOCOS, BOGIES & COMPONENTS • EARTH-MOVING MACHINERY • VEHICLES & ENGINES SERVICING.
- Process Equipment (Tanks, Vessels, Pipes etc.) • Garbage/waste Handling Equipment, etc. • Aircraft/Ship & their components.
- Metal Surface before painting • AC Plant (Fins & Filters of Air-handling unit) • Filters e.g. candle Polymer Filters in yarn industry
- Green Cutting of concrete surface during Construction • Oil Exploration/Processing Equipment & Installations.
- Shop floors • Poultry/Livestock cages • Food Processing Equipment • Hotels/Hospitals • Kitchens, Canteens & Lavatories.
- Disinfecting or Sterile Cleaning.

SOUTH INDIA VISCOSE LIMITED

Registerd Office:
"ROSE BED", 334, AVANASHI ROAD, COIMBATORE 641 018.

Statement of the Chairman, SHRI PALLONJI SHAPOORJI MISTRY at the Thirtieth Annual General Meeting of the Company on Saturday, the 24th September, 1988, at Coimbatore.

Ladies and Gentlemen,

It gives me great pleasure to extend a warm and cordial welcome to all of you to this 30th Annual General Meeting of your Company.

The Directors' Report and the audited Statement of Accounts for the year ended 31st March 1988 have been with you for some time and with your permission I shall take them as read.

THE ECONOMY

Last year was a very trying period for the Indian economy.

After successive failures of the monsoon, the country had gone through the worst drought of the century in 1987-88 and this had affected the GNP. The agricultural production is reported to have declined. Thanks to the large buffer stocks of food, built in the earlier years, it has been possible to avert crisis. The manner in which the Central and State Governments have managed the drought is commendable.

It is to be hoped that with timely onset of the monsoon and normal rainfall, the current year would be able to register a reasonable growth in the GNP.

INDUSTRIAL POLICY

The policy of liberalisation introduced by the present Government since 1984 has given big boost to industrial development in the country. The pace of industrial development is further sought to be accelerated through the liberalisation of licensing policies.

Recent amendments to MRTP Act will enable your Company to diversity its activities without much hindrances. The Government will also have to ensure that side by side with the liberalisation of industrial policy, certain measures are introduced which will ensure offtake of industrial products in the domestic and overseas markets.

POWER SUPPLY

In Tamil Nadu 40% power cut had been imposed throughout last year. Your Company took timely steps to augment its captive power generation to supplement the grid power which has enabled the Company to maintain its production levels. It is gratifying to note that the Tamil Nadu Government has just reduced power cut from 40% to 30% in view of good monsoon.

STATE GOVERNMENT LEVIES

Tamil Nadu is the most heavily taxed state in the country

The package of recent measure which include sales tax concessions, incentives to new units, etc., has been a welcome step in the right direction. But these concessions alone are not adequate. The Government should remove certain major irritants like the purchase tax and the additional sales tax.

OPERATIONS

You would have noted from the Annual Report and Accounts that the Company has had another successful year of Sales and Profits. Sales turnover has gone up from Rs. 57 crores to Rs. 72 crores and the gross profit from Rs. 12.44 crores to Rs. 14.04 crores. This is the highest achieved in the history of the Company. As you will recall, the Company restarted the Viscose Staple Fibre Plant in 1986-87 which operated throughout the year. The offtake of Staple fibre has been good and it has contributed to enlarge the sales volume.

Barring unforeseen circumstances, the Company hopes to improve its performance further during the current year.

EXPORTS

As a result of aggressive promotional efforts in the overseas market, the Company has achieved an export turnover of Rs. 6.74 crores in Rayon Filament Yarn as compared to Rs. 4.05 crores in the previous year. In pursuance of our commitment to national objectives, the Company is keen to increase its foreign exchange earnings on a continuous basis. However, these objectives can be fulfilled only if the Government, without any reservation, follows a consistent policy for the issue of export licences for the products for which there is a market in the countries.

Similarly, the procedure for exports needs to be simplified.

DIVERSIFICATION

Diversification is a major goal of the Company to reduce its dependence on the existing product lines. With this objective your Company has established a separate cell for devoting full attention to identify and implement new and viable projects to accelerate the Company's growth. Liberalisation of foreign collaboration recently announced by the Government should facilitate foreign tie-ups in some new areas.

FOREST DEVELOPMENT

The Company remains fully committed to the policy for conservation and regeneration of forest wealth. You are aware that the Company has already established R & D Centres and Nurseries at Ooty, Kodaikanal and Sirumugai. These Research stations are experimenting with various techniques to develop Agro Forestry systems to encourage planting of trees. Besides generating raw material for the Company, this will improve economic conditions of farmers and ecological conditions of the area.

MANAGING DIRECTOR

Mr G S Keshavamurthy, President & Chief Executive has been appointed as Managing Director effective from 29th July 1988, in consideration of his good work done in improving the productivity, profitability and development of people in your Company.

ACKNOWLEDGEMENT

Before I conclude, I would like to thank the Central Government, Tamil Nadu Government, all Financial Institutions, Banks and the Share-holders for their continued support and co-operation.

APPRECIATION

I would like to express my sincere thanks to our employees at all levels whose dedicated contribution has resulted in the improved performance of the Company in the year under review.

Thank you.

SHRI PALLONJI SHAPOORJI MISTRY
Chairman

(Note: This does not purport to be the proceedings of the Annual General Meeting)

Alice doesn't work here anymore

Every job hunter's dream is a "good company" with "excellent career prospects" and "upward mobility"; a place where one can shine in a competitive environment and climb corporate (snakes and) ladders and where "salary is not a constraint for the right candidate". But what is a "good company" and who is the "right candidate"? Is a company a good work place just because its products sell well or are known well? And is a particular applicant the right candidate for your organisation's culture just because he exudes a confidence that awes you?

These days, the number of "footloose" executives and "burnouts" on an eternal search for a "change", "break", "suitable opening" or just simply "better prospects" seems amazing. But, the questions that arise are, why can't organisations retain their executives?

For one, there is the rolling stone, perpetually on the look out for a job, attending interviews in a routine manner. He "sticks on" till he is weaned away by an overzealous recruiter to greener pastures, or just throws up his hands one fine day saying, "I have had enough of this." Come to think of it, most executives begin reading newspapers, or this magazine, back to front, starting with the appointments page. Though "better prospects" is usually the reason given for leaving, in reality, there is a wide range of reasons why executives leave or lose jobs. The findings of a study recently conducted in the US on reasons why executives lost their jobs (which appear to apply in India as well) were as follows:

- overly ambitious, thinking of the next job, playing politics;
- inability to think strategically or staff effectively;
- specific performance problems;
- overdependence on a mentor (who probably has quit, leaving him behind);
- or, inability to delegate, insensitivity to others.

Receiving the resignation of a recently recruited executive can come as a rude shock to a company that has spent a fortune on recruitment fees, advertising and training costs. But perhaps this is a signal for the organisation to devote a little more time on introspection. Sadly, selection of personnel does not get the importance it deserves in many organisations. Further, however rigorous the recruitment process, interviewers tend to be overawed by someone who says "It may be tough but I'll lick it".

The search for the "right candidate" could indeed be a difficult task. Then organisations expect excellent personnel to join them when their salaries dont match prevailing salary levels. Or perhaps, the company has the right man at the right price but is neither growing nor alive to the fact that it does not have the culture, professional environment, growth or ability to motivate and nurture that person. Then again, the company may have developed an image that it is not the "right" place to work or is a company "where no one stays".

Frustration or helplessness, as the case may be, reflects both on the executive and the organisation. There is a vast difference between enjoying one's work and merely tolerating it. If one is just doing job for what it pays, he is not likely to stick around for too long.

Experience shows that it is usually the stick-ons that rise in an organisation, either by performance or by default. Stability in a job is something most companies and recruiters look for. But this should not be a result of stagnation, in which case one is worse off than before. It would appear that in a career span of 30 to 35 years, 4 to 5 changes at the outer limit are acceptable but this is hardly any yardstick to go by.

Today, we are in a world where neither loyalty to an organisation nor changing jobs in quick succession to grow and perhaps burn out seem suitable. The latter seems particularly true in hi-pressure, hi-growth organisations where the hi-cholesterol executive rises very fast upto a point of time and reaches a plateau where he asks himself, "Now what? Where does this all lead to?" An interesting feature in advertisements these days is that the "preferred age" of applicants has come down significantly, leading to more competition for fewer positions at the top. Didn't someone say that bottlenecks are at the top of the bottle?

The executive who willingly stays in a job or has made a few strategic changes is one who is most likely to have been enthusiastic about his job, positive in his outlook, cool during temporary setbacks, and has stuck on (and therefore has perhaps become indispensable). He has been visible and noticed for his performance and adapted to the organisation's culture. He relates to the job and has a clear sense of direction on what he wants to be in the next ten years. And in reality, he may be only slightly above average in his education or performance and has learnt to delegate over the years. Successful executives do what comes to them most naturally, be it marketing, consultancy or advertising, and have also asked themselves the question: how important is money?

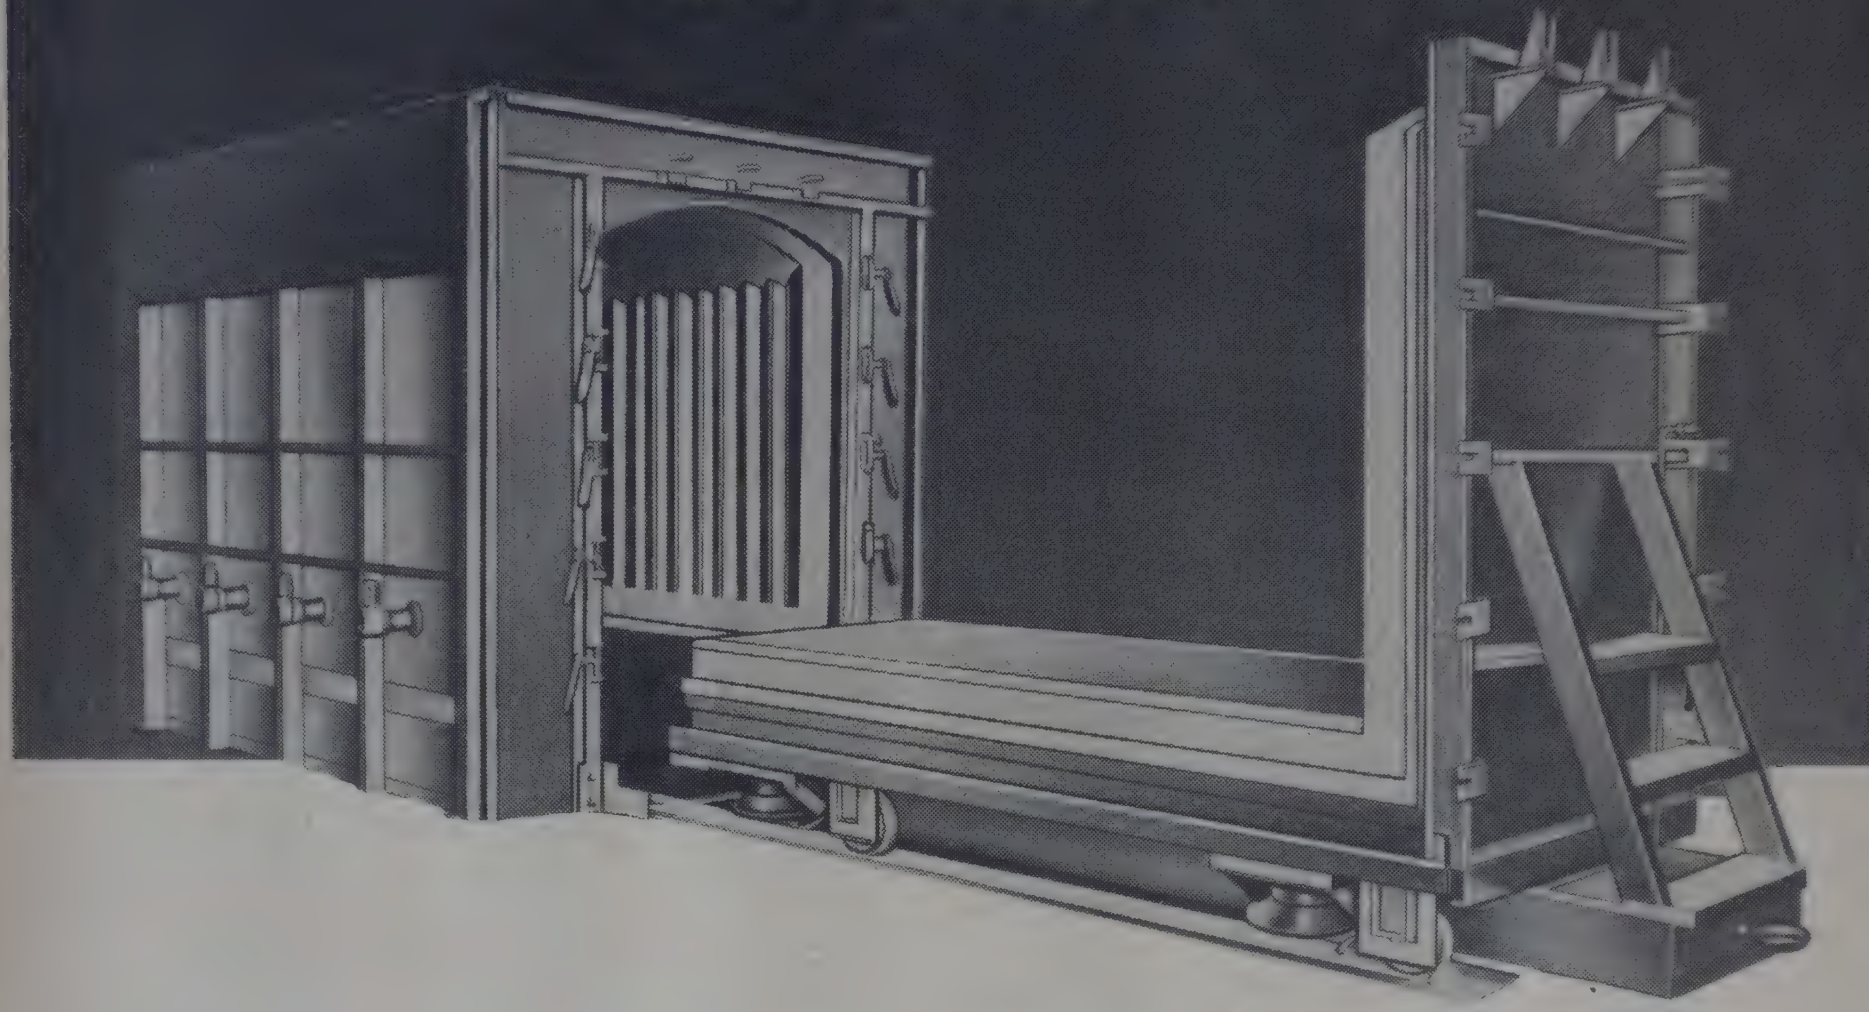
In the light of all this, before planning a change, the least that an executive could do is:

- learn more about the organisation he intends to join, its work culture, growth prospects, its employee turnover and, in the case of jobs abroad about the country, its cost of living, job security, repatriation benefits, etc;
- decide how long he proposes to be with that job and where does he expect to see himself in the next ten years;
- examine why does he really want to leave, is it just a transitory phenomenon that can be got over;
- and study the salary levels in that industry.

All this means is that there is a greater need for organisational and management development, the need for an organisation to stimulate the proper work environment and be alive to wage levels, perhaps by using pay surveys. Companies should also evolve strategies and solutions to tackle the problem of employee turnover, before it reaches crisis point. Many methods such as exit interviews, career planning, job rotation and re-inducting executives who have left earlier have been suggested, tried and implemented with partial success. What appears to be more relevant is the need to create an atmosphere that motivates rather than frustrates a person, the need to spend more top management time on selection of personnel who will fit in, given the organisation's work environment, though much depends on attitudes and interpersonal relationships. Informal organisations, have a better chance of retaining people, though this may not necessarily be true. Likewise, it is in the executive's interest to be clear in his sense of direction.

■ TUMULURU SRI RAMCHANDER

If you're looking for cost-effective and thermally efficient furnaces... ask Greaves



for Precimax.

Greaves Cotton, in its role as a marketing organisation, has brought to Indian industry, some of the finest equipment and machinery. Both from home and abroad

And now Greaves will market through its nationwide network, the rugged thermally efficient Precimax furnaces.

Precimax means high quality furnaces – a result of sound concept and effective engineering, coupled with careful manufacturing methods and rigid testing procedures.

Precimax furnaces from Greaves mean matching some of the world's best furnaces in terms of performance and reliability. So you get the best of both worlds – the cost advantages of Precimax engineered and manufactured in India and Greaves sales and service support.

Our range:

- Galvanizing Furnaces
- Bell Furnaces
- Pit Furnaces
- Roller Hearth Furnaces
- Bogie Hearth Furnaces
- Car Bottom Kilns
- Car Tunnel Kilns
- Pusher Furnaces
- Continuous Lines
- Rotary Hearth Furnaces
- Chamber Furnaces
- Ovens
- Accessories

Plus

- Other furnaces for a range of sophisticated applications

Managing hi-tech : the challenge ahead

General Optics (Asia) Limited is an Indo-American joint venture. It is a pioneer in the hi-tech field of photonics. General Optics manufactures extremely high precision opto-electronic and opto-mechanical instrument assemblies and components for applications in health-care, defence, projection, photography and computers.

All positions are located in Pondicherry – which is well known for its French flavour and cosmopolitan nature. Pondicherry also has excellent schools and colleges – medical, engineering, arts and science. The Company will help you secure good accommodation and admission into good schools for your children.

General Optics is looking for managers with a commitment to working in a 'leading-edge' company.

1. Manager-MIS & Costing

The candidate should be a Chartered Accountant and or a Cost Accountant with a minimum of 5 years' experience in a custom-built engineering and manufacturing environment. He should be able to independently devise and implement a system of perspective and physical controls. Experience in budgeting and costing are essential for this job and exposure to computerised information systems will be an advantage. An M.B.A. will be an added advantage.

2. Materials Manager

The candidate should be a graduate mechanical or electronics engineer, preferably with a post-graduate qualification in materials management or an M.B.A. He should be 30-35 years of age with at least 4-5 years' experience in the materials management function in a well-known engineering company. He will be in-charge of purchase, inventory control and vendor development.

Knowledge of computerised MRP will be an advantage.

3. Systems Executive/ Manager

The candidate should be a me[illegible]anical or electronics engineer with an M.B.A. or computer science/industrial engineering background, having worked in a leading light engineering company for at least 4-5 years.

The job will involve installation of computerised production planning and an MRP system using PCs and networking. He should be able to coordinate with all unit operating managers as well as external consultants to ensure successful installation within a period of 12 months.

Salary will not be a constraint for the right candidate as the salary structure of the Company is being re-designed effective January 1989.

Besides salary, the Company offers other benefits such as Provident Fund, Gratuity, Medical, Accident Insurance Cover etc. as per Company policy.

The Company also offers an excellent growth environment in an emerging area of technology.

Please mail your applications, in confidence, for all the posts to the Managing Director, superscribing the envelope with the position applied for and enclosing a resume of qualifications, experience, post held, salary last drawn and expected, to :

STEEL STRIPS GROUP

INDIAN ACRYLICS LIMITED, a Company jointly promoted by Steel Strips Group and Punjab State Industrial Development Corporation Limited (PSIDC), is implementing a Rs. 115 crores, ACRYLIC STAPLE FIBRE project of 12000 TPA near Sangrur (Pb) in technical collaboration with DUPONT of USA, who are world leaders in the field of synthetic fibres. The Company is professionally managed and the plant is expected to go on stream by end of 1990. Services of top class professionals are solicited to fill the following positions in the Management team.

CHIEF MARKETING MANAGER

The incumbent will be responsible for planning, organising, coordinating and control of marketing activities. The position specifically implies overall planning/administration of product seeding programme, formulation of marketing policy, distribution, logistics, credit management, market information systems and training of marketing personnel. The position requires high conceptual ability, creative thinking, excellence in communication and inter-personal skills for dealing not only with Governmental Agencies at a senior level, but also with senior specialists in the technological and product development field.

Applicants should have post-graduate qualification in management from a reputed institution with experience of 10-15 years in marketing of synthetic fibres.

MARKETING EXECUTIVES

We are looking for young and energetic Marketing Executives, who will take the responsibility for marketing and sales functions including assessment of region-wise product demand and assist in formulation of strategies etc. The candidates should be MBAs with 3-4 years of relevant experience in the synthetic fibre/hosiery industry. They will be accountable to the Chief Marketing Manager.

The remuneration package will be one of the best in the industry.

Detailed resume indicating career objectives, achievements, salary structure with a passport size photograph, may please be sent within 15 days to :

NOW THAT YOU'VE EXPER
TELEX, MAIL AND COURIE
THE IDEAL MESSAGING S

Getting the word across has never been easy. Surprisingly, even in this age of information, it remains fraught with problems. The mail can slow down to a crawl, or vanish entirely. Telex lines always seem to be down when a crisis comes up. Or a perfectly sensible message emerges as a hopeless scramble. So you pick

up the telephone. And by the time you've finished screaming across 1000 miles of noise, you've run up a hefty STD bill. Which might still be acceptable compared to what a courier charges.

THE IDEAL SOLUTION.

And now for the TEXTEL. The TEXTEL is really the optimal solution for messaging within any organisation having dispersed operations. It provides a quick, efficient and inexpensive link between any branches or offices in [illegible]. And it does this by

using the existing telephone line. The TEXTEL sends and receives messages at speeds up to 1200 bauds, nearly 20 times that of telex. While the money savings from this are obvious, they represent the mere tip of the iceberg.

IT REMEMBERS—TO SAVE YOU MONEY.

The automatic transmission functions of the TEXTEL make it possible to take full advantage of night-rates. A stack of messages could be stored in the memory and sent at the required time. Likewise, all incoming messages are stored in the memory for future recall and reference. In addition, all messages, whether incoming or outbound, are automatically printed out, complete with relevant details. A unique feature

is the battery-protected memory immune to power failure.

While the speed of sending ma the TEXTEL a perfect alternative long and wasteful STD conversa the importance of voice transmis is not lost. The TEXTEL retains f voice capabilities, and it is easy t switch back and forth between d and voice.

NO AC. NO RESTS.

Unlike other messaging syster the TEXTEL can function withou conditioning or expensive protec You can take it to ridiculous extremes—down to freezing poi up to a blistering 45°C. It will tak such conditions smoothly in its s In fact, the TEXTEL is rugged en to run non-stop for 365 days a ye

NO ERRORS.

Another unique feature of the TEXTEL is its ability to detect er and correct them automatically. TEXTEL even goes beyond this. compensates for any line fault o disturbance by slowing down transmission to the maximum ra that will result in no errors being generated. And it does all this

NCED THE TELEPHONE, OU'RE READY FOR TEM.

omatically, with no need for human rvention. Which also makes it a fect long-haul terminal.

AT ARE THE OPTIONS?

ll of which really stacks up to what said in the beginning. That the XTEL is the ideal messaging tem. But in all fairness, you should w what options you can find in market today.

here are, of course, the telephone, x, mail, and courier, which we've ady gone over. There is the magic chine—FAX. Even discounting its onomical cost, there remains the that only a miniscule portion of ssaging needs to be pictorial.

d there are other messaging ems. At least, they are called as ch. Even though they weren't gned for messaging in the first ce. Expensive and over-equipped, offer a great many features that are highly unlikely to use, while

ЯORS ERRO 3 ERRORS E

compromising on what is really your primary requirement—messaging. Rather than build up a case against these options, we'll just return you to the case we have stated above—for the TEXTEL.

DEDICATED TO THE JOB.

The TEXTEL's main advantage is the fact that from the very beginning it has been intended for one specific purpose—messaging. This single-minded application can be summed up in one word—dedication. TEXTEL is the ideal messaging solution because it is the only dedicated messaging system.

ITL—A DALMIA VENTURE.

This dedicated solution comes from India Tele-Comp Limited (ITL), a dynamic new company whose mission is the creation of effective telecom solutions. Born from the pioneering spirit of the Dalmia group, ITL is today poised to unveil several new products, of which the TEXTEL is the first.

BRITISH TELECOM.

The technology for the TEXTEL comes from a world leader in tele-communications—British Telecom. And the Dalmia experience in India is the best promise of support and after-sales attention the TEXTEL can have.

In sum, if your organisation needs messaging, just call us, or mail the coupon, and we'll get there as fast as your message allows us to.

|T|E|X|T|E|L|

The dedicated messaging system.

KRISONS

KRISONS ELECTRONIC SYSTEMS PVT. LTD. is a rapidly growing Company in consumer Electronics, manufacturing and marketing VCRs, VCPs and CTVs under the brand name 'KRISONS', which is the brand leader in the VCR and VCP market in India. The Company has had an excellent record of growth and is likely to achieve a turnover of Rs. 35 crores in the current financial year. It has highly ambitious expansion and diversification plans and would, therefore, like to strengthen and expand their existing Organisation. The Company is professionally managed where initiative is encouraged and merit alone is the key to growth. We have been retained to select the following Personnel:

DIVISIONAL MANAGER (PERS. & ADMN.)

(Code: MAS 8105)

DELHI ***Rs. 1.25 lacs + Perks.***

The Candidates must be graduates preferably MBAs with specialisation in Personnel Management from a recognised Institute. They should have at least 7-10 years experience in a reputed company with extensive exposure to managing HRD functions.

The Selected Candidate will head the Personnel Department and report directly to the Managing Director. He will be responsible for all Personnel & Administrative functions e.g. Recruitment and Selection, Training, designing and implementing effective Performance Appraisal Systems, Salary and Wage administration and Industrial Relations. He will also look after Administration including liaison with Govt. departments & Security. Age around 35 years.

MATERIALS MANAGER

(Code: MAS 8106)

DELHI ***Rs. 1.25 lacs + Perks.***

The Candidates should be Engineering graduates preferably in Electronics with around 10 years relevant experience in Materials Management of which at least 3 years should be in a Managerial position in a reputed company.

The incumbent will report to the Managing Director and be responsible for total management of Materials Functions in the Company. The responsibilities include Materials Planning, Development of Vendors for indigenous components, purchasing, inventory control and finalisation of purchase prices.

This position has good growth prospects and the Selected Candidate will be gradually given added responsibility for imports as well. Age around 35 years.

COMPANY SECRETARY

(Code: MAS 8107)

DELHI ***Rs. 75,000 + Perks.***

The Candidates must be qualified Company Secretaries with a degree in Law having a minimum experience of 2-3 years in managing Secretarial functions of a medium sized Company.

The Selected Candidate will report to Director—Finance and be responsible for legal, secretarial and taxation functions which include all matters relating to Income Tax, Excise and Sales Tax, handling of Stocks & Shares, Board meetings, statutory compliance of company Law matters, managing public issues and fixed deposits etc. Age around 30 years.

ACCOUNTS MANAGER

(Code: MAS 8108)

DELHI ***Rs. 75,000 + Perks.***

The Candidates should be qualified Chartered Accountants with post qualification experience of 3-4 years.

The Selected Candidate will be responsible for Financial Accounting functions of the Company which will include managing & controlling accounting functions of Company's various Branches, finalisation of Accounts, preparation of monthly trial balances, Profit & Loss Statements, cash flow statements and annual Balance Sheet. Age around 30 years.

Our Client is fully committed to managing the Company by de-centralisation of responsibility with authority to dedicated professionals who believe in achieving excellence. We are, therefore, looking for dynamic and highly result-oriented people with a potential to shoulder higher responsibilities with the rapid growth of the Company.

Besides the emoluments indicated above, the Perks include PF, LTA, Medical, Bonus, Gratuity etc. The salary, in any case, will not be a limiting factor for the right candidates.

Please apply in strict confidence within 10 days quoting job title and code number to:

GROUP PERSONNEL DIRECTOR

Bangalore **Excellent terms**

A professionally managed and rapidly growing group of diversified companies wishes to appoint a Group Personnel Director who will be in charge of the entire personnel and administration functions for all the group's constituent companies.

The position reports to the Chairman and will be responsible for policy formulation and implementation in all areas of human resources development, industrial relations and administration. Key senior managers in each of these areas will report to the Group Personnel Director and in addition, all personnel and administration heads of all the group companies will report functionally.

In light of the group's ambitious growth plans, this position is a crucial one and will be attractive to the very best talent in the profession.

Candidates should preferably be in their forties with a successful record of performance as senior managers in any functional area. A minimum of 3 years experience heading the personnel function in a large professionally managed and multi-divisional company or group would be desirable.

The remuneration package will not be a limiting factor for the right candidate and will include furnished housing, air-conditioned car and driver and other excellent perquisites consistent with the seniority and stature of the position.

Applications should be sent ref: (MS/4975) in strict confidence to:

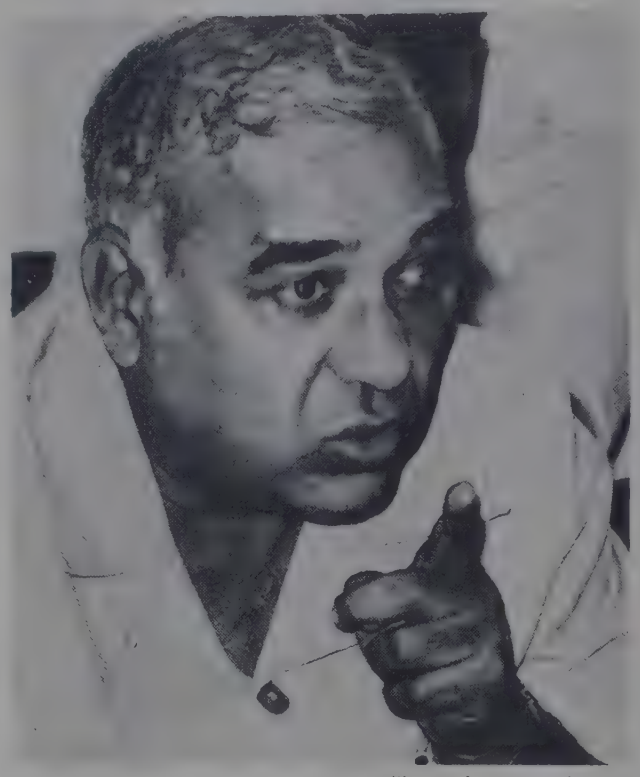
SULTANATE OF OMAN

"The tasks remain the same"



In the world of high finance, it is said that the more things seem to change the more they stay the same. In a sense, that is what has happened to **S.S. Nadkarni.** *Getting a five-year extension as chairman IDBI is a godsend to a banker like Nadkarni, who has been at the helm of the bank for three years already. As the country's prime development banker, Nadkarni's task is a tough one — to develop industry and yet stay comfortably on the prescribed growth path. This is a task he performs adroitly. Nadkarni was interviewed by Dilip Cherian of* Business India *in his office at New Delhi. Excerpts.*

Now that you have a five-year term, do you see yourself creating a whole new institutional banking environment?
Change and continuity, like ying and yang (to use the currently fashionable oriental examples) are part of the same whole. I recognise this very well because next year is IDBI's silver jubilee year and while reading T.T. Krishnamachari's speech made 25 years ago, he seems to say the same thing. He then expressed the hope that IDBI would look forward to going outwards to achieve its tasks rather than waiting. He referred even then to the challenges of a new environment. So you see, the tasks remain much the same.

Despite all that, how would you define the challenges of the new environment?
To my mind, a new aspect is the slow shift to export awareness rather than the old mechanistic import substitution approach. I use the term "export awareness" (rather than export-oriented) because the markets in India are large and cannot be ignored.

In becoming export aware, issues of quality, of quantity, of passing on lower costs to consumers and paying attention to marketing will become important. When import substituting, the question "at what cost" is not asked.

What changes of the liberalising variety do you see in the financial sector?
In financial services, change comes about more slowly. We have seen a boom in leasing, although it is not upbeat at present. Also, mutual funds are slowly arriving — though not yet in the private sector. We are seeing a reawakening of the primary capital markets. We now have CRISIL in place, while SEBI is on the anvil and more change is on the way.

I don't see a big mismatch in either the speed or the direction in which change is taking place. But I do believe that liberalisation is going to be much faster in future. And I believe that the financial institutions will have to adopt new approaches and adjust even faster

Would you be able to identify some of the key changes in IDBI that may illustrate such a potential for change?

I would like to look back a bit to explain the future. When I look back at my three years at IDBI we can say that we have achieved some things. For example, a greater degree of decentralisation of decision making, a greater degree of service orientation, and representation for ourselves in various fora.

Having achieved that in three years, what are your next set of tasks?
With an economy that is getting freer, our ability to lay greater emphasis on and obtain more out of market research — of the non-traditional variety — will be crucial. We have to evolve our approach to competitiven

Wouldn't you say that today one of the tasks that the IDBI was set up for is complete — namely the creation of a broad-based industria structure. So, what now?
Absolutely. What we need is a sense balance in all this talk of finance and markets. Most talk of capital markets not relevant to the small scale sector. And I see this sector absolutely clear as part of our role.

Now that we are 25 years old, it's time we had a child of our own. Thus SIDBI (the Small Industries Development Bank of India — a subsidiary of IDBI). Its task in turn w be the strengthening and if necessary the creation of state-level organisatio for the small sector. To succeed in th I feel we have to see continuity and accountability in this area and the creation of a cadre of small unit finance specialists within these organisations who can expect to gro in that area and have an interest in growth.

In a sense, the key link between increased competitiveness and the small sector is via venture capital. What is your role in this?
Small, but it exists. We are still learning the business through our ov small venture capital fund. We have done about 20 cases so far and we h an interesting mix. I do not know wh the end result will be though — its too early to say.

With problems of modernisation, increased competition and libreralisation, aren't you afraid, a banker, of your money getting stu ih companies that lose out in the new marketplace?
Luckily or unluckily, there are no revolutions in these areas. There is evolution. If you look back at the textile sector would we have predic that powerlooms would take over? It it has happened — over a period. B there were no shocks.

Our role as a development bank see such changes coming and to sta acting upon them. The pace may change but after all it cannot be at pace that we do not understand. Af all it is the humans who have to ma change and adapt to it.

LETTER FROM THE PUBLISHER

Clearly Indo-Soviet relations are on the threshold of a new beginning.

The USSR, over the years, has proved to be a key trading partner, as a supplier of heavy machinery, oil and armaments and a buyer of Indian consumer goods. But more important, it has proved to be a loyal political friend, particularly in times of need. Indo-Soviet friendship was built on mutual help and an identity of interests.

But several key elements on which this relationship was built are about to change. This is not to suggest that there has been an erosion of that relationship. But one must recognise that major social, economic and political changes have taken place both within the USSR and in the world surrounding it. As also in India. This requires both countries to re-examine some of fundamental tenets of the friendship — though neither will openly so admit.

Undoubtedly, *perestroika* and *glasnost* have completely changed the political and economic situation within the USSR. Not surprisingly this has changed the perception the West has of the USSR. Every major Western leader has visited the USSR. Equally important the Soviets are moving towards patching up with China.

Similarly, with liberalisation in India, our economic needs have changed. Currently we run a huge trade surplus with the USSR; we are not entirely dependent on the USSR for oil; and we are reluctant to have the USSR as our sole military supplier. Equally important, after the proposed pull out from Afghanistan and after Zia, the regional political balance has changed. With the recent changes in China, however slowly, we appear to be inching if not to a settlement, then at least to a *modus vivendi*.

In India, we have often been slow to recognise the changes in the world around us. What is more we have been reluctant to openly debate what is, and what is not, in our own national interest. Much too often we have been content to assume that our national interests, whatever they may be, will be zealously preserved by our political leaders.

It is only if both sides honestly examine their concerns, their interests and their aspirations, that there can be a lasting and true relationship. It is in this context that we must view Gorbachev's second visit to India.

JURAN.

The Mantra That Won Yokogawa Hewlett Packard Japan's Most Coveted Industrial Award – The Deming Prize

The Rags to Riches Story

When Yokogawa Electric Corporation and Hewlett Packard set up their joint venture in Japan, the fledging company languished during its first decade in both product quality and profitability.

Until 1975.

After which the upswing in the performance of Yokogawa Hewlett Packard was dramatic, almost magical. Just 7 years later, in 1982, the company won the Deming Prize.

By 1985, profits had soared 244% and market share shot up 195%.

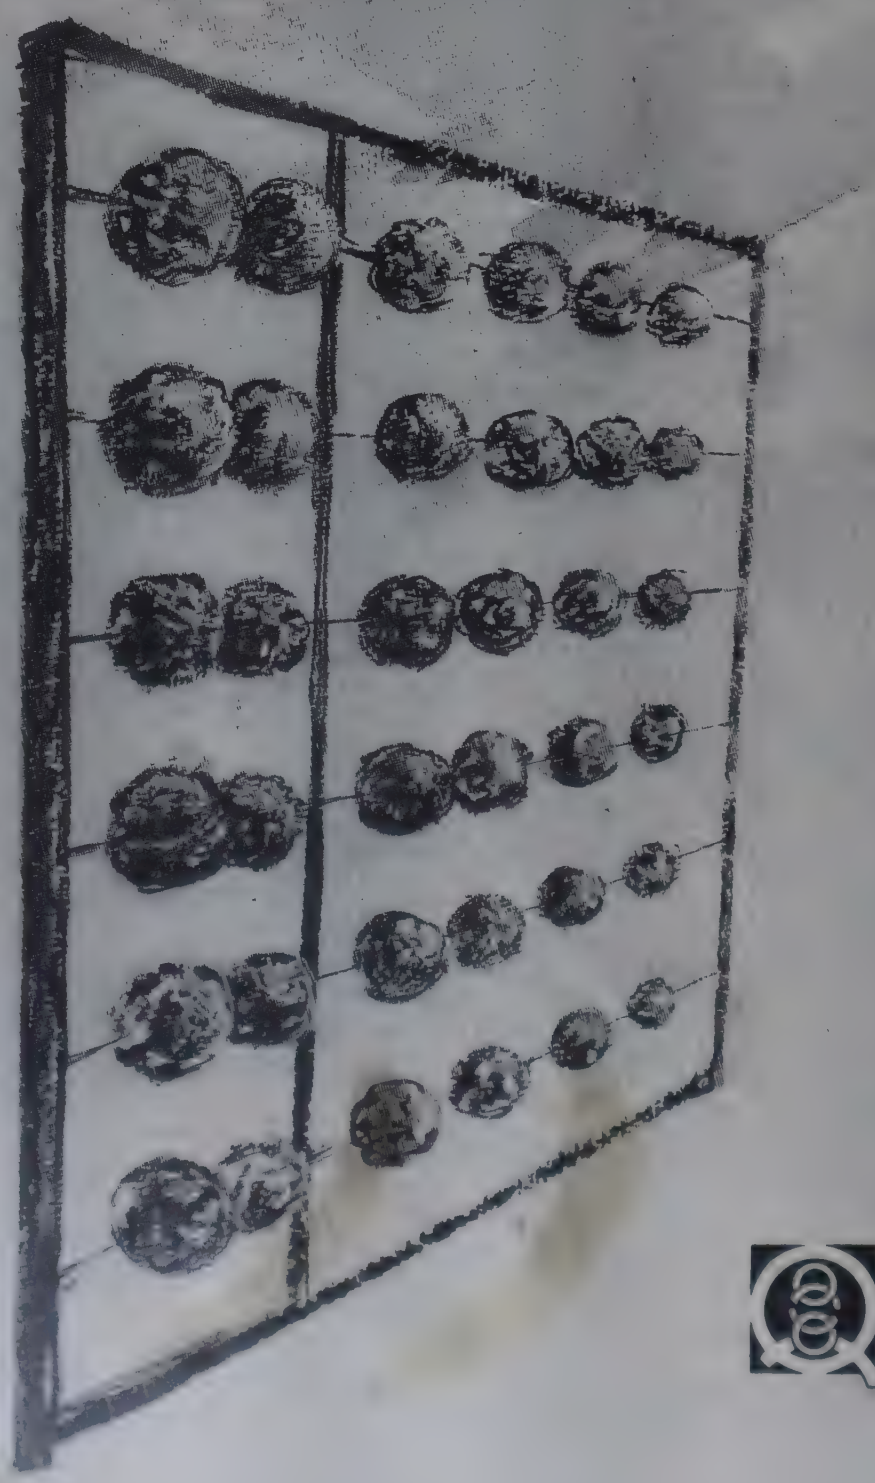
The mantra that brought about the turnaround was no esoteric chant from the Far East but an organized method – TQC (Total Quality Control), developed by Dr. J. M. Juran, the man who taught Japan how to manage for quality.

The Quality Guru

Dr. J. M. JURAN.
A preacher of the virtues of quality. Recepient of an extraordinary honour for a quality consultant: The Order of the Sacred Treasure awarded by the Emperor of Japan for "...the development of Quality Control in Japan...".

His decades of experience now find expression in a range of management-oriented products and services, based on the principle of the JURAN TRILOGY®:

* *Quality Planning*
* *Quality Control*
* *Quality Improvement*



Juran on Quality Improvement

This is a structured process that helps establis annual *improvement* in quality and annual *reducti* in quality-related costs.

Juran on Quality Improvement assures immediate and continuing results that impact favoura on the bottom-line. This programme has had a successful track record at Du Pont, AT&T, IBM, Tata Steel, Volvo, Hindustan Motors and Boeing, to name some.

Let Juran Work for You

Fourteen internationa affiliates form the global network of the Juran Institute. Qimpro Consultants Private Limi Bombay, is part of this network which provides access to Dr. Juran's programmes, including Quality Improvement.

What a fall, L&T!

fully agree with the sentiments xpressed in the 'Letter from the ublisher' on the L&T takeover by the mbanis (Cover Feature, 17 October). fact, it is with a sense of deep sgust that I read your story. The word ell-out' would have been much more ppropriate.

Isn't it strange that the whole deal as gone through without even a himper on the part of L&T's anagement? The only truly rofessionally managed company in the untry seems to have been sold out for asons not yet known.

Were the company's interests kept in ind? At no stage were either the areholders or the employees, the mpany's greatest asset, taken into nfidence. The entire deal seems one-ded. Reliance gains respectability vernight and L&T loses its dependence and credibility.

We have the company's chairman, .M. Desai, saying that Mukesh Ambani as inducted as he is a capable and sourceful young man. That may be so, ut isn't it strange that in a company hich has acknowledgedly some of the est managerial talent in the country, esai could not find even one person s capable as Mukesh Ambani?

In its Golden Jubilee Year, it seems ther tragic that this redoubtable ompany which has built a reputation r professionalism and honesty, will enceforth have to walk in the shadow f the biggest wheeler dealer of our mes.

What a fall!

• Peugeot engines

This has reference to the news item titled 'Peugeot Engines for Allwyn Nissan LCVs' (17 October).

The report is not factual. While it is true that M&M will collaborate with Automobiles Peugeot for the production of the XD-3 engine in India, this is mainly intended for use in M&M products.

The fact is that the characteristics of the SD-25 engine currently used in the Allwyn Nissan Cabstar and the XD-3 engine are substantially similar. However, every new application of the XD-3 engine has to be preceded by extensive and exhaustive tests. The only conclusion that can be drawn currently is that should Allwyn Nissan wish to offer an engine option to their customers, such an option may be possible sometime in the future.

G. JACOB
Executive Director, M&M

• A breath of country air

This refers to the article, 'Moving to green fields' by E.A. Ramaswamy (3 October).

No doubt the shifting of industries to the countryside offers comparatively better industrial relations. But is it true that employers who move out do so just because of cheap rural labour? Among other reasons they also do so because of the concessions offered to them by the government and from a sense of social responsibility towards the nation. I have had the experience of working with two industries in rural Maharashtra. Apart from showing an upward trend in profits, such industries aid the social and economic growth of the area. Besides providing jobs to the sons of the soil these enterprises also give an impetus to ancillary units.

• For whose benefit?

This refers to the article on bank computerisation (19 September). I feel the author has proferred only an overview of the problems vis-a-vis computerisation in banks.

While Dr. C. Rangarajan, deputy governor of the Reserve Bank, has taken a bold step in introducing mechanisation, the RBI's efforts at computerisation have been half-hearted, highlighted by its indifference towards software development.

At the branch level, infrastructural and environmental problems, as well as lack of emphasis prevent computers from being really useful. The focus has been on the number of machines installed; it should rather be on the number of branches totally computerised. The agreement with staff unions in favour of stand-alone machines for specific uses is a glaring example of lack of direction in banks, which seem to initiate any activity only at the behest of RBI. It is also pertinent to note that the prices fixed by RBI for vendors have been almost 80 per cent more than open-market prices.

The remedy obviously lies with RBI. It needs to revise its conceptual directions and upgrade its support, keeping in view the revolutionary capabilities of computers in terms of customer service and speedier and more effective feedback.

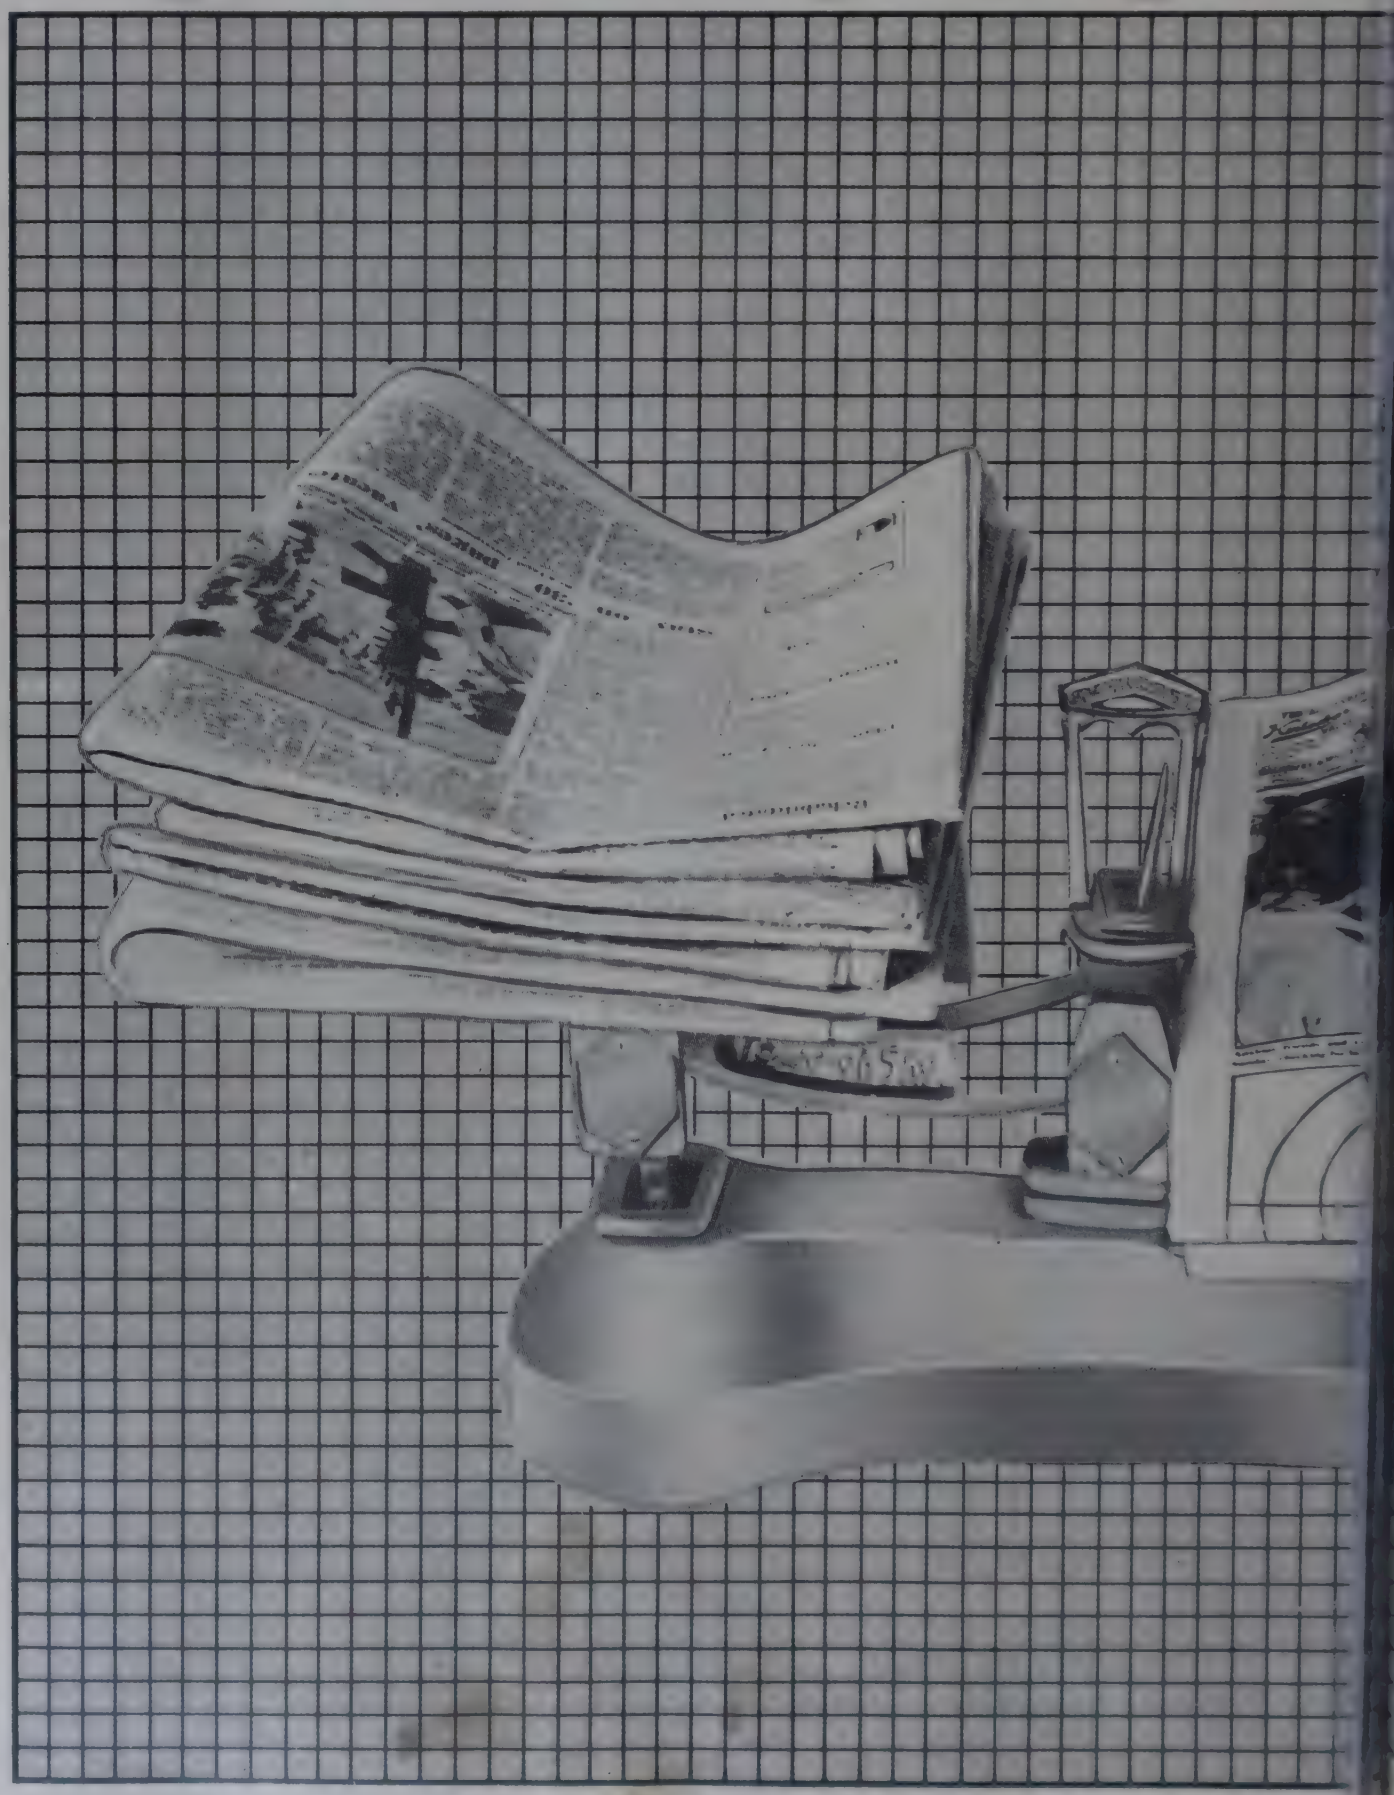
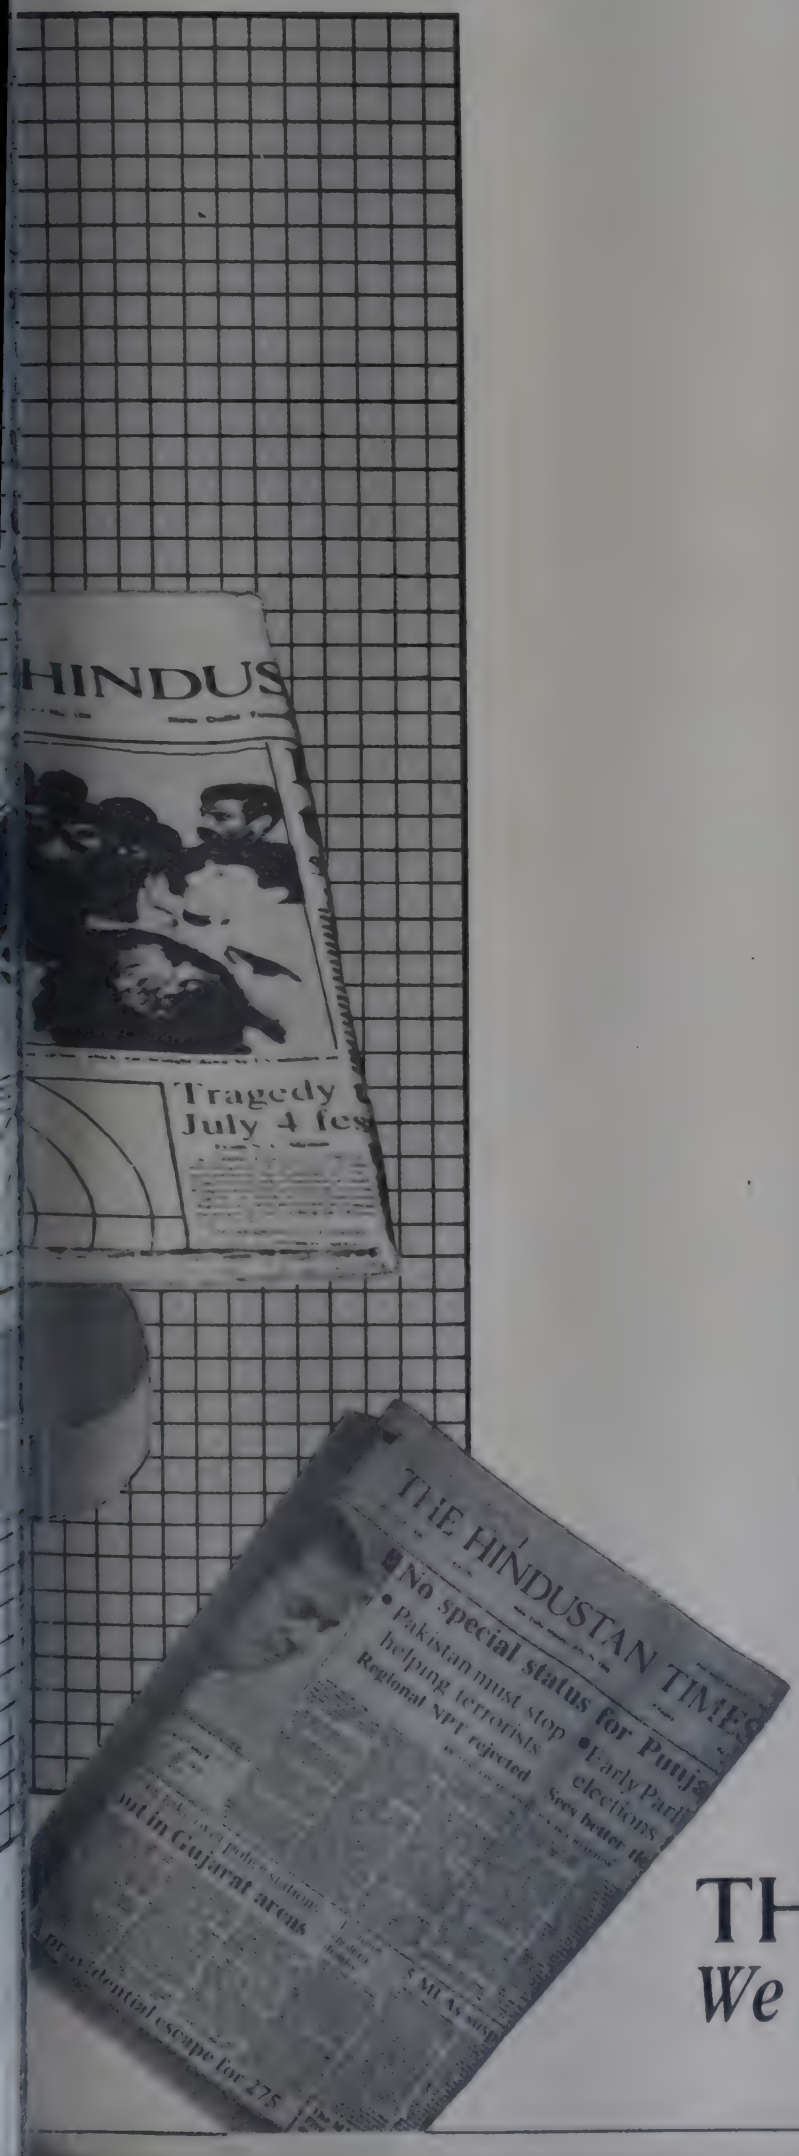
The Hindustan Times carri
weight in the Capital than
English dailies put togethe

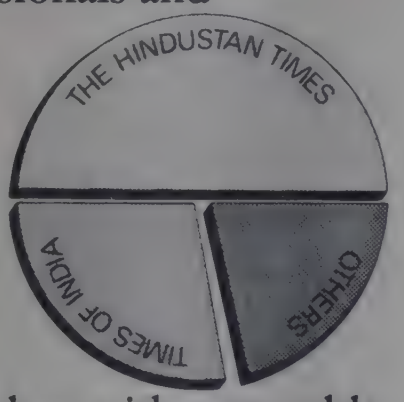


more
the other



With Delhi's largest-selling, most widely read national newspaper, you are in good company.

According to the National Readership Survey III, more than two thirds of English newspaper readers trust The Hindustan Times. Take a look at the HT readership profile:

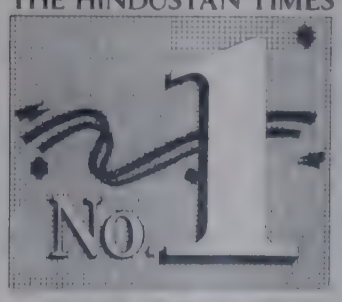


- 67% amongst professionals and executives,
- 67% amongst graduates and the higher educated segments,
- 78% of the student readers,
- 71% of the adult readers with a monthly income of Rs. 2501/- and above.

These figures show the influence that the HT wields amongst different segments of newspaper readers.

So if you're looking for a newspaper that carries weight, you know which way the scales are tilted.

THE HINDUSTAN TIMES



THE HINDUSTAN TIMES

We sell more. Because we tell more.

Visitors beware

The buses of the Pallavan Transport Corporation are guaranteed to strengthen the beliefs of fatalists. Recently, as a newcomer to Madras, I ventured out to meet a friend. An "ordinary" bus came, but it being the rush hour, the bus was overcrowded. I decided to board the next bus since I was told that there was a bus every 10 minutes to my destination. True, the next bus came, but it was an "express" bus which I was told would not stop at the place I wanted to go to. Another bus came, but it was a "V" service bus. On enquiry, I was told 'V' service buses would not stop at this stand. So, I waited for another bus. It did come, but it was a "Women's and Children special". By this time 30 minutes had passed. Then another bus came, which was a "cut service" which meant that it would terminate before my destination. To my utter surprise another bus of same number came, but that again did not stop. Later, I was told it was "VV Service" which too would not stop at that stand.

An hour passed by before another ordinary bus came. That too was overcrowded. However, I decided to board it. If I did not, I would have had to wait another hour!

B. CHANDRASEKARAN, *Madras*

Age old wisdom

Kautilya in his *Arthasastra*, (300 BC) seems, to have been as pessimistic about the possibility of putting an end to corruption among government officials as Girilal Jain, in his recent editorials in *The Times of India*.

"Just as it is impossible not to taste the honey or poison that finds itself at the tip of the tongue, so it is impossible for a government servant not to eat up, at least, a bit of the king's revenue. Just as fish moving under water cannot possibly be found out either as drinking or not drinking water, so government servants employed in the government work cannot be found out (while) taking money (for themselves).

"It is possible to mark the movements of birds flying high up in the sky; but not so is it possible to ascertain the movement of government servants of hidden purpose.

"Government servants shall not only be confiscated of their ill-earned hoards, but also be transferred from one work to another, so that they cannot either misappropriate government money or vomit what they have eaten up.

"Those who increase the king's revenue instead of eating it up, and are loyally devoted to him, shall be made permanent in service."

Same old story

Earlier, to engage a foreign technician, one had to get the approval of the concerned ministry, then obtain a no objection certificate (NoC) from the tax authorities for the payment of fees and finally produce the NoC to the Reserve Bank of India (RBI) for making the remittance.

To simplify the procedures and to cut down time, it is now proposed to empower the RBI to approve the engagement of foreign technicians, subject to some conditions such as payment being restricted to US $500 per day, engagement for only 12 man-months in a calendar year, etc. However, while framing the scheme, a basic fact has been ignored.

Under section 10(6A) of the Income Tax Act, fees paid to a foreign technician will not be grossed if the agreement is approved by the government. Also, in that case tax will be levied at a concessional rate of 30 per cent as against 60 per cent in other cases.

Thus, even though one does not have to approach the concerned ministry for approval of the agreement to make a remittance, one would still need approval to avail of the grossing concessional rate provisions of the Act.

Clearly, the idea of simplifying procedures is defeated. While it is nice to have options, why give with one hand, and take with the other?

RAVI PADAKI, *Bangalore*

Smart operator

In a nationalised bank, a businessman customer was purchasing gift cheques of high denominations almost every alternative day. The manager of the branch was happy that the old stock of gift cheques was fast dwindling and the branch was getting good business too.

A staff member, however, smelt a rat. On enquiry he found that the customer, unable to bear the ever increasing service charges and constantly worsening service, had latched on to a good thing. Instead of shelling out a minimum of Rs.5 as commission on every draft and waiting long hours, purchasing gift cheques, meant no commissions or waiting!

RAMANAND SHARMA, *Bangalore*

Impermanence, forever and ever

An advertisement released in September by the United Public Service Commission (UPSC) for seven computer [illegible] posts, 4 posts are permanent and 3 posts are temporary. The permanent posts will be filled on temporary basis and the temporary posts are likely to continue indefinitely.

While the three temporary posts may be taken up as a last resort by programmers who are in dire need of jobs, one wonders how government agencies can attract the best talent when it can offer no security, and makes no bones about the 'temporariness' of jobs.

The revenge of the first half

If you think its only women who suffer in wedlock, you've got another one coming. Battered, nagged, tortured and abused husbands have now founded a union to combat "atrocities and crimes" being committed against them by their wives, in-laws, and even by the police.

The Akhil Bharatiya Patni Atiyachar Virodhi Morcha has been founded in New Delhi following reports of physical and mental abuse of husbands, false implication in dowry cases, suicides due to marital discord and, in extreme cases, brutal murders of men by their wives in conspiracy with their paramours.

According to the honorary general secretary of the union, R.P. Chugh, the union has demanded the closure of the crime against women's cell, non-interference of police in matrimonial disputes, simplification of divorce proceedings and swift action in cases of husband beating.

Ah, so you want to hire!

Most people applying for jobs are willing to accommodate themselves to the demands made by the hiring firm. There are exceptions though. Robert Half, president of Robert Half Inc, a New York-based recruiting firm has made a list of zany demands made.

* One executive insisted that any company hiring him, must also pay to bring his prize winning horse by air from Australia.

* One manager insisted that his firm's medical plan must cover his visit to a faith healer.

* Several prospective employees demand specific days off with pay. Apart from the usual days off like birthdays, they include Elvis Presly's birthday, the first day of the World Series, Bastille Day and 29 February of every leap year.

* People are understandably protective about their possessions, but one middle manager, who commuted to work on a motorcycle, wanted to be allowed to park it in his office.

* And finally, one top executive wanted a large office with no windows because he found the view far too disturbing!

AVINASH AGARWAL, *New Delhi*

Say what?

A news item in a leading daily carried the following incomprehensibilities last month.

"Prof Probir Roy of TIFR, Bombay, was awarded the Bhatnagar Award for his contributions to theoretical high energy physics, especially to the *phenomenology of deep inelastic lepton-hadron-photon processes, ultralight neutrinos in super symmetric grand unified theories* and of *Higgs bason signals* and *mass limits in super gravity theories.*"

Phew!

K. RAMANI, *Kalpakkam*

Hanky-panky

A regular drama is played o Bangalore's K.R. Road. Many handkerchief vendors there hawk their wares pinned to the insides of huge umbrellas. Needless to say, selling on the pavement is illegal. So municipal teams arrive there often to clear the pavements. Not that they have had much success. When the vendors learn of the arrival of the eviction teams, they simply close their umbrellas and walk off.

P. BHARADWAJ, *Bombay*

Service with a difference

Fusion Polymers Ltd and Registrar Fin. AG. Consultancy Services, both of Baroda, have created history by sending all allotment-cum-refund orders, in respect of their recent public issue by private courier service, viz, Vintage Courier Service, also of Baroda. Preliminary enquiries indicate that about 275 applicants out of 350 from Pune had received their refund orders on 3 September, ie, the same date as that of the refund orders.

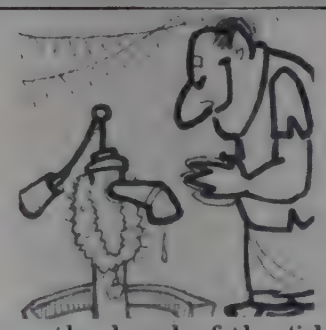
Now, that is a lesson in promptness.

D.V. JOGLEKAR, *Pune*

Pump puja

After the dead telephone yatra in Bangalore, here's another one from the south.

During Ayudha Puja, held every year, people worship those things — essentially material or, these days, mechanical — which are useful in day to day life. The residents of Kodambakkam in the waterless city of Madras decided that it was time to appease whatever god or gods oversee the proper functioning of their water supply. After some debate, the object of veneration was chosen — the neighbourhood water pump. A pandal was built to



cover the head of the 'idol', electric lights were strung and banana saplings were tied.

At last count, however, it did not seem that the 'god' of water supply had heard or noticed the desperate residents of Kodambakkam. Maybe their efforts were not grand enough. Next year they must do better.

R. BALAJI, *Madras*

Time out

Hongkongers work the most hours and get the fewest holidays a year. In other Asian capitals, like Seoul, Bangkok and Kuala Lumpur, people work almost as long. In Asia the average number of days of paid holiday is less than 15 a year. The same is true for both North and South America. In Europe, though, the average is over 25 days. Some northern Europeans take more than 30 days of holiday. Both the European and North American work-weeks are shorter than the world average: only 40 hours, compared with 44 in South America, 45 in the Middle East and 46 in East Asia. Brussels, home to most of the EEC's bureaucrats, a very short week.

Business India invites readers to send original, unpublished contributions to this page. The snippets can be humorous, insightful, outrageous or simply, informative. Each snippet must carry this coupon.

Rs.50 paid for each published contribution.

A walk into history

Hindustan Lever's Garden Reach Factory (GRF) is steeped in history that dates back to the last century. The old administration building was originally one of the many residences of Wajid Ali Shah, the last ruler of Avadh. It was, in fact, his pleasure house and known as the *naach ghar*. The Nawab, a connoisseur of the arts and an exponent of dance and music was one who popularised *thumri*, a lighter form of classical music. Under him, Lucknow, the capital of Avadh at the time, became a flourishing centre of the arts. Later, however, he was forced into exile.

When Wajid Ali died in 1887, Fateh Manzil (House of Victory), a building erected in 1870 to house his favourite begum, went to his grandsons — Jamshed and Sultan — who sold it to the Northwest Soap Company sometime during 1912 and 1919.

Levers, which acquired Northwest Soap Company, did not end its association with the Nawab's family there. It was able to persuade the family to sell it a 3.5 acre plot of land adjoining the factory. In a reference to the 108 years of friendship between his ancestors and GRF, Prince Anjum Quder, great grandson and successor of King Wajid Ali avers that Wajid Ali Shah himself and after his death his family, extended whole-hearted co operation for GRF's growth.

ASCU INDIA'S MULTI-DIMENSIONAL APPROACH TO SAVING

No matter what the industry — we help you save

For over 50 years Ascu India has been involved in saving. Saving forest resources, energy and money. That's because Ascu India invests in R&D and believes in innovation.

Forest Resources

When timber is treated with Ascu or PS-2 preservatives its life is extended by over 5 times. This results in less timber for replacement and trees in the forests get the opportunity to grow. This way Ascu India helps to save our forest resources.

Energy

Heat Pumps and Solar Drying Systems cut drying costs by over 60%. Heat Pumps are ideal for drying timber, ceramics, pharmaceuticals, paper, leather — anything where drying requirement is below 50°C. Solar Panel Dryers are applicable to timber, grain, leather, spices, pharmaceuticals and to maintain fluidity in L.S.H.S. oil and space heating for cold area. Solar Aqua Panels are suitable for industrial hot water system. These cost effective methods help to save our energy resources.

Money

Ascu India's expertise to convert waste timber to durable and economically viable timber is a positive cost saving proposition for the end users. Continuous R & D, impregnation plants and preservatives from Ascu India enhance the life of timber, several fold-ensuring real value for money.

Return on investment, consultancy service, etc. available.

lomecoming

th his recent success in obtaining gov-nment approval for the Pepsi-cola pro-t, Ramesh Vangal is clearly destined bigger and better things.

Although based in Bombay, Vangal is employee of the parent Pepsi-cola mpany, looking after some additional sponsibilities in the far east.

It is more than possible that Vangal ay be designated as the chief executive the new project.

Another case of a successful NRI re-rning home!

he real reason

is now known why the Thapars are ting out of Borosil Glass Works Ltd istening Post, 5-18 September). They e simply imitating the majority share-lder, Corning Glass Works USA. Cor-ng has decided to 'gift away' its 39.9 per nt equity stake in Borosil to the Cal-tta-based Kherukas of Window Glass d.

This highly unusual development is a nsequence of an out-of-court settle-ent reached between the two litigating mpanies. Apparently Corning failed to eliver on a collaboration agreement ith Window Glass to provide fusion chnology for a new project set up in jarat. With the court ruling in favour of e Kherukas, Corning apparently de-ded to pay up in kind rather than cash.

Data quest

the race to dismember DCM, the op-ons being considered are many and mplex. But, as some companies are scovering, in such adversity lies oppor-nity. A rather large computer company cently found itself the recipient of an fer it could not ignore.

Apparently, in a bid to dispose of CM's ailing data products division some mily members have started sounding t its potential buyers. Having gone rough the rather pointless exercise of viting tenders for the Kota sale, this me around the strategy seems a little fferent.

The opportunity of such a negotiated le was not lost on interested buyers. e computer company, which inciden-lly is New Delhi-based, believes that spite DCM Data Products' rather dead oduct range the company is worth buy-g. The reason — some key personnel and a quick market reach in some segments.

Whether family squabbles will actually allow DCM Data Products to be disposed of and whether MRTP considerations will thwart the alliance that is contemplated is not yet clear. In any case, the Delhi computer companies are watching the whole process with great interest.

Placing bets

Wahi: expected to promote many persons

With Col. Wahi's term as chairman of ONGC being extended for a year a number of long overdue changes are likely to come through too.

Reportedly, a vice-chairman will be appointed from amongst one of the members. This will naturally lead to a shuffling of portfolios among other members.

Also several persons are expected to be promoted to general managers. And it is even rumoured that at least one such hopeful will be promoted thereafter to being a full member. Not surprisingly the jockeying has begun for these coveted jobs.

Everyone in the oil and gas business is already placing bets on who will be the lucky ones.

Can you beat a Bajaj?

With the fierce winds of competition buffeting the two-wheeler market, Rahul Bajaj has been quietly working on plans to expand his product range.

Among the new products being mentioned is a 125 cc motorbike with a 4-stroke engine to take on the leaders in this segment of the market, Hero Honda. Reportedly, by using a high proportion of indigenous components, Bajaj will be able to keep the price low. And taking into consideration the fact that many women have expressed a preference for the lighter Kinetic Honda, Bajaj plans to produce a 50 cc scooter for women. One or two other products are also planned.

By increasing the product range, Bajaj wants to make sure you can't beat a Bajaj.

Too many court battles

One more family split, it seems, is being quietly fought out in the courts. Reportedly, the descendants of S.L. Kirloskar's brother are fighting the patriarch in court for their share of the group's business.

Apparently, while the initial disputes arose in respect of the Kirloskar-run Blue Diamond hotel, now they are taking pot shots at Kirloskar Oil Engines, one of the key companies in the group.

A pity that S.L. Kirloskar at this age and stage should have to face so many court battles.

Is election time here?

Business circles are increasingly beginning to believe that elections are around the corner.

Each state is now vying with the other to quickly push through mega projects. Every week one hears of a project larger than the last. Also, with urban land clearances being a key power in chief ministers' hands, large building projects are also being announced.

Naturally, there is a price for all these clearances — for the party of course.

Doesn't this mean that elections are around the corner? Or does it mean that many chief ministers don't see themselves continuing as chief ministers after the next elections?

Panel rejects task force suggestion on electronic components

The recommendations of a task force on the electronics components industry set up by the department of electronics (DoE) has been virtually rejected by the Committee of Secretaries.

While the various suggestions put forward by the task force included total duty abolition on imported materials, cheaper finance, *ad quantum* duty drawback rates and increased cash compensatory support (CCS), it is learnt that the suggestions have failed to evoke a positive response at the meeting of the committee of secretaries.

The members, sources said, felt that while the task force has done a satisfactory job in presenting the current status of the industry and pinpointing its ills, the remedial measures suggested to revive the industry were shortsighted and not in the best interests of the industry in the long run. Further, in the light of the present resource position, the concessions were unrealistic.

DCM plea for closure rejected

A decision to decline permission to the Delhi Cloth Mills (DCM) to close down its textile mills in the capital was taken by Delhi lieutenant governor Ramesh Bhandari following a meeting of the executive councillors.

The DCM management had sought permission for closure of the sick textile mills at Bara Hindu Rao and had decided to pay handsome compensation to the retrenched workers after selling the land belonging to the mills.

Action plan on urbanisation soon

[illegible] plan on fresh policy

Kidwai: specific steps for housing inputs

local bodies is likely to be incorporated in the Eighth Plan document. This was announced by the union urban development minister, Mohsina Kidwai, while inaugurating a seminar on the role of the government in development organised by the Vijaywada Municipal Corporation.

Kidwai said that the recently formulated national housing policy document introduced in Parliament in May outlined specific steps to provide housing inputs like serviced land, finance, building materials, etc. She said that the establishment of the National Housing Bank (NHB) in May last year was a major step towards providing financial and institutional support to the housing sector.

Further liberalisation for big houses ruled out

Following reservations expressed by the cabinet committee on economic affairs (CCAE), the industry ministry is understood to have withdrawn its liberalisation proposals for large houses and FERA companies. The minister had proposed that companies covered under section 20(A) of the Monopolies and Restrictive Trade Practices Act (MRTP) should be exempted from the Industrial Licensing Development and Regulations Act for projects involving an investment in fixed assets up to Rs.50 [illegible] provided the project

falls in Appendix I industries and is located in a centrally declared backward area. The ministry was of the view that the liberalisation move would help promote industrial growth, productivity and efficiency, but the CCAE expressed doubts about the move as the impact of liberalisation on non-MRTP and non-FERA companies was yet to be assessed properly.

The CCAE felt that there was no need now for extension of liberalisation measures to MRTP companies as it might result in smaller companies not being able to compete with the large houses. The CCAE also took the view that accepting the industry ministry's proposal now would amount to not giving enough time to non-MRTP and non-FERA companies to avail themselves of the existing concessions applicable to them.

Banks may extend credit against cash aid claims

The chief controller of imports and exports (CCI&E), P.L. Misra, promised to look into the proposal that exporters should be allowed the facility of bank credit against claims for cash-compensatory support as in the case of duty drawback. This is to help them get over their initial liquidity problems.

The government, said Misra, has an "open mind" and is willing to consider any additional incentives that would help boost export production. To expedite decision-making, the Madras office of CCI&E will be computerised by the month-end and gradually all the other offices will be computerised.

Exporters disallowed bank accounts overseas

The Reserve Bank of India (RBI) has stated that Indian exporters will not be allowed to maintain a bank account abroad for retention of their [illegible] due to certain restri

cal difficulties. The RBI h stated that the Patwardh Committee had examined t question of delegating pow to exporters to allow reduct in the invoice value. Cert proposals to enhance the ex ing monetary ceilings appli ble to cases of reduction invoice value are being cons ered by the RBI.

The RBI has stated that it h been exhorting bank mana ments to equip their branc handling foreign excha business with adequat trained staff and the necess telecommunication facilit The Foreign Exchange Deal Association of India (FED has been requested to iden the branches of banks requir such facilities.

Basic chemicals, dr exports up by 39%

Exports of basic chemic drugs and pharmaceutic amounted to Rs.783 crores d ing 1987-88, registering a 39 cent increase over the previ year. Due to an appreciatio the value of European and panese currencies and by w ning the confidence of buyer these countries by supply them quality products, ad ing to time-bound shipp schedules and good packag it has been possible to exp the export of basic chemi and drugs to these countrie

Exports of finished form tions, however, declined f Rs.106.59 crores in 1985-8 Rs.102.11 crores in 1986-87 Rs.88.24 crores in 1987-88. has been attributed to finan problems in the Middle E and African countries which the main buyers of finished mulations. The single lar buyer of chemical products the USSR accounting for 27 cent of the total exports.

Exchange reserves decline

The foreign exchange rese excluding gold and sp drawing rights (SDR)

od at Rs.7,287.14 crores on 31 rch decreased to Rs.5,461 res on 30 September and od at Rs.6,352.32 crores on October last, according to the nister of state for finance, Edrdo Faleiro. The decline in reves according to available lications, was due to bunch; of some import payments, usually high international ices for metals, edible oils, pechemicals and other ports.

The debt outstanding in rect of IMF borrowings, includg the IMF Trust Fund, as on 31 cember 1986 amounted to 5,827.78 crores.

nterest rates on CNR deposits cut

eeping in view the current inrest rates in the overseas marts, the RBI has reduced the tes of interest for certain catories of foreign currency desits and FCNR accounts. The terest rates for six month and e year periods have been reced by 0.25 per cent in case of llar deposits. Rates on deuchmark and yen deposits have en reduced by 0.25 to 0.75 per nt for various maturities. hange in interest rates for erling deposits however, has t been mentioned.

The new interest rates will be fective from 31 October 1988.

offee growers and raders strike ompromise

e dispute between the coffee owers and traders over the inimum release price (MRP) as been settled after a day long eeting of the Coffee Board at angalore. While the dealers ad boycotted pool auctions rotesting against the 28 per nt hike in MRP, the growers ere up in arms about the Cofe board's tampering with the ntrally fixed MRP.

At the Bangalore meet, the oard agreed to retain the new RP as the base. According to e resolution, the board chairman will decide the mode of calculation of points to arrive at the MRP, in consultation with the ministry, from January onwards.

All for nothing

It started with a bang and ended with a whimper. On October 25, the Bhartiya Kisan Union led by Tikait Singh moved thousands of farmers into Delhi for a rally on the Boat Club lawns. Their intention was clear. They were not going to budge until their demands were met. For six days Delhi was entertained by what appeared to be a medieval caravanserai which had magically materialised. Flanked by the ponderous bulk of South Block on one side and the imperial majesty of India Gate on the other, the farmers looked clearly out of place.

But if they felt it, they didn't show it. They smoked their hookahs, rigged up crude shelters and listened to speeches — any farmer had the option of speaking but their speeches were restricted to three minutes. But the sit-in achieved little beyond forcing the Congress-I to shift the venue of its massive rally to commemorate the death of Indira Gandhi from the Boat Club lawns to the Red Fort.

Though the BKV had made several demands, including remission of farmers' debts, an increase in the price of sugar cane and the inclusion of one of their representatives on the Agricultural Prices Commission, they got nothing more from the government than a promise of sympathetic consideration.

Along the way there were moments of high comedy. At one stage the police played rock music on their own loudspeakers to drown out the rallyists' speeches. The rallyists were enraged. An inquiry was ordered.

Universal Cables bags Soviet order

Universal Cables Ltd has just secured an order from the USSR for the supply of cables worth Rs.9 crores. The company has been a regular exporter of power cables to the Soviet Union and has established a reputation for the quality of its cables in the international market. It has received several awards from the Engineering Export Promotion Council.

Universal Cables was established in 1962 to manufacture paper insulated cables. Since then, the company has rapidly expanded its product range which now includes paper insulated cables upto 33 kV, XLPE cables upto 132 kV, PVC insulated power and control cables, special rubber cables, fluoroplastic insulated cables, flame retardant low smoke cables, fire survival cables, ABC conductors and numerous special types of cables conforming to national and international standards.

British Airways taps south Indian cargo market

Close on British Airways' introduction of a biweekly service between Madras and London, comes the airline's attempt to tap the cargo market in south India. The airline is offering shippers 20 tonnes of prime airfreight space (10 tonnes in either direction) as a small beginning. Air-India will handle ground services for British Airways. The International Airports Authority of India (IAAI) has been asked to provide warehousing space.

Thirumalai Chemicals begins work on new project

Thirumalai Chemicals Ltd has commenced work on its new maleic anhydride project with a capacity of 10,000 tonnes a year.

The plant will be located at Ranipet in Tamil Nadu where TCL already has facilities to produce phthalic anhydride and maleic anhydride. The company has already received the letter of intent, foreign collaboration approvals, and capital goods import clearances. Financing for the Rs.19-crore project is being tied up.

The new plant is expected to go on stream by January 1991 and will add more than Rs.20 crores to the company's net turnover at full capacity. Maleic anhydride, which is used in the manufacture of malathion, polyester resins, paints, epoxies, plasticisers, etc, enjoys good demand both in India and abroad.

Crompton Greaves bags Rs.8-crore order

Crompton Greaves has been awarded an order for the design, supply, erection, testing and commissioning of an 18-bay 220 kV switchyard at Auraiya in Uttar Pradesh for a gas-based combined cycle power project of the National Thermal Power Corporation (NTPC). The Rs.8-crore order for the switchyard has come from contractors Mitsubishi Heavy Industries, Japan.

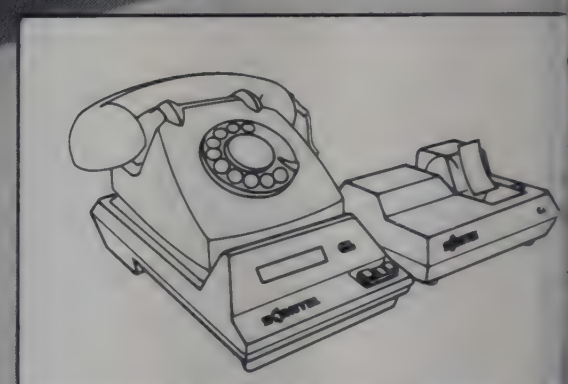
Crompton Greaves is also executing direct orders from NTPC. The recent ones under construction include 440 kV switchyards at Dadri, Manduala near Delhi, Munirabad in Karnataka, and Biharsharif in Bihar.

Crompton Greaves has also secured two other orders for switchyards — a 66 kV switchyard and main ring system for Essar Steel, Surat and a 220 kV switchyard and eight load centre substations at Bhandara near Nagpur for Sunflag Iron & Steel Industries. These orders are valued at Rs.8.40 crores.

Aurelec introduces telex on computers

Aurelec Data Processing Systems of Auroville near Pondicherry has introduced a convenient money-saving PC-telex card for PCs. The card could save Rs.6,000 in rental charges every year. It can also reduce inland telex charges by

INTRODUCING SCANTEL



The little instrument that helps cut big telephone bill.

Yes. New Scantel helps cut down phone bills.

What is Scantel?

- A microprocessor based device.
- Can be connected to direct and board lines.

What does Scantel do?

- Records all call details — the date, time, numbers and duration.
- Beeps after every 25 units indicating approximately Rs.20/- billed.
- Selection of STD and ISD stations.
- Bars STD & ISD calls after office hours.
- Records 'out-of-order' period.
- Monitors external tapping of lines.
- Can be connected to internal meter for exact and concessional charge read-out.
- Prevents misuse of lines.
- Cuts phone bills by upto 20% during first billing period after installation.

Scantel is brought to you by the Chowgule Group office automation equipment division. Offering you a nationwide network of sales and service centers . . . 1 branch offices, 32 service centers monitored by over 1 service engineers. To give you the very best.

Get new Scantel — today!

er cent by sending telexes matically after 7 pm when elex rates are half the nor- rate.

e telex card is an add-on for any PC compatible puter like the Aurelec 0, 2AT6 or 3AT6. It offers e advanced features than r telex teleprinters. If one a computer with the Au- PC-telex card, then one not even need a telex hine. The most important re of the card is that it will ve telexes clearly and accu- y even on bad telex lines usually distort messages. card has been fully tested approved for connection to c lines by the Telecom- ication Research Centre, Delhi.

laboration for nufacture of bulk gs

alakshmi Chemicals Pvt (RCPL) has entered into a boration with Intertech Re- ch Corporation, USA for the ufacture of bulk drugs. A ary vasodilator, di- damole, and two tran- sers, chlorpromazine HCI Trifluoperazine HCI, will be ufactured at RCPL's new t at Gummudipoondi in il Nadu. "At present these ucts are not manufactured

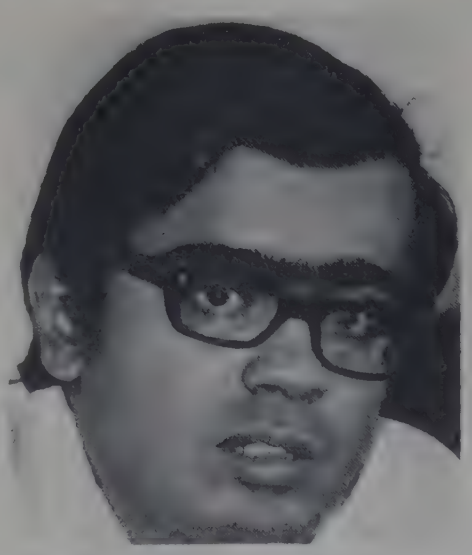
uting imports

in India and the country's needs are met by imports," explains K.C. Anki Reddy, managing director.

The project which is estimated to cost Rs.2.04 crores will begin production in July 1989. The company plans to export not less than 60 per cent of its production during the first five years.

The foreign collaborator will assist the company in getting Food and Drug Administration clearance for marketing these products in the USA. "This clearance is expected within nine months of beginning production," says Reddy. Until then the drugs will be exported to Canada which does not require such a clearance.

IMRB wins awards



Thadani: the best

Ramesh Thadani, general manager of Indian Market Research Bureau (IMRB) and Thomas Puliyel, manager of IMRB-Bombay received the award for the best paper and presentation at the recently held Readership Research Symposium in Barcelona, Spain.

The Barcelona Readership Research Symposium, the fourth in a series of international symposia sponsored every two years by the British Market Research Bureau and Research Services Ltd, discussed the challenges facing the print medium, the relationship between readership and circulation, and various technical aspects of readership research. It was attended by over 200 research and media professionals from the US, the UK, Europe, Canada and Asia.

The IMRB presented three papers on the fusion of TV audience and readership survey data; the measurement of reading intensity; and strategic analysis of National Readership Survey (NRS) data.

Indian engineering exhibition in Bangkok

An Indian engineering exhibition to promote joint ventures and capital goods exports will be held from 9 March 1989 at Bangkok. Organised by the Confederation of Engineering Industry (CEI) in collaboration with the Trade Fair Authority of India (TFAI) it is expected to formalise short and long-term business linkages with Thailand and other member countries of the Association of South-East Asian Nations (ASEAN).

Engineering trade fair in February

The week-long biggest-ever engineering exposition to be held on Indian soil, the Indian Engineering Trade Fair (IETF'89) will commence on 19 February 1989 at Pragati Maidan, New Delhi. The formal inauguration is on 18 February.

The IETF is organised biennially by the Confederation of Engineering Industry (CEI). This year's fair is being organised in partnership with the US.

Among the participants are top American companies from industries like telecommunications, electronics, food processing and packaging, electric power generation, transmission and distribution, mining and extraction, and oil and gas.

A high level of participation is also expected from the UK, France, the FRG, Canada and Sweden.

Shaw Wallace launches new whiskies

Shaw Wallace & Co is launching two new whiskies — Officer's Choice and 1000 Guineas — in the prestige and deluxe segments respectively, under the aegis of their wholly-owned subsidiary, Cruickshank & Co. Ltd.

The prestige and deluxe products are in the price range of Rs.70-80 and Rs.90-100. Other products on the drawing board are prestige rum, prestige brandy and beer.

J. Bhargava, who heads Cruickshank & Co, was vice-president at Shaw Wallace. Several key positions in C&C have been filled by executives who were previously with Shaw Wallace.

Bhargava says, "We hope to win a 5 per cent market share within a year. This will be in addition to Shaw Wallace's present market share of 25-26 per cent. We only hope that there

Bhargava, director of Cruickshank at the launch of the new whiskies

won't be too much internal competition between our brands."

Security software launched

A software information security system called Cryptic was launched on 2 November 1988 by the 15-month-old Chenab Information Technologies Pvt Ltd. Cryptic uses encryption techniques to prevent a computer programme from being pilfered or read by unauthorised people. The software translates a file that needs protection into an indecipherable set of data streams which can be decrypted by using a password.

AWARDS

Ramesh Gelli, chairman of the Vysya Bank Ltd, has been con-

ferred the Udyog Ratna for 1988. The award wa sented to Gelli by Madh Solanki, minister for pl at a special function i Delhi.

The Udyog Ratna awa stituted by the Indian In of Economic Studies, N lhi, is presented annu outstanding personalit services rendered to the in different sectors economy.

Imagine your product in this corrugated packaging.

Now imagine your product in GLOPAC laminated corrugated packaging.

Which packaging will sell your product better?

The difference speaks for itself. While ordinary corrugated packaging merely protects your product, GLOPAC works hard to sell your product.

It's high time you switch to GLOPAC. And see your sales graph shoot up.

What's more, it does not cost the earth. For only about 20% more than ordinary corrugated packaging, you get a look-at-me -again packaging. For this small additional cost imagine the tremendous value you will get in terms of increased sales.

Let's count the benefits of GLOPAC :

- Retains it's glossy look even after months of storage on dealer-shelf.
- Resists moisture and water.
- Has a wipe-clean smooth surface.
- Costs 15% lesser than any other laminated corrugated packaging.
- Does not crease, pipe, wrinkle etc. under normal conditions.

GLOPAC is ideal for most consumer durables, including :

Cooking Range, Computers, Luggage, Mixers, Non-stick Cookware, Pressure Cookers, Television, Two-in ones, Videos, Washing Machines and other domestic and kitchen appliances, Crystalware, Chinaware, Toys. The list is endless.

GLOPAC is your best Salesman

Whether it is Consumer Electronics or Kitchen Appliances, Glassware or any other consumer durables, your product is a winner. It is your business to make your consumers think the same way. Especially today, when you are neck deep in competition and only the fittest survive.

Packaging is a very important marketing tool. Attractive packaging commands attention and predisposes the customer favourably towards the quality of the product inside.

Displayed in shop windows and stacked on retail shelves it forms a very powerful Point-of-Purchase display. Far more effective than danglers, posters etc. which have a very short life and are dependent on the dealer for correct display.

Your present package only protects your product, GLOPAC also helps to sell it. IT IS YOUR BEST SALESMAN.

Cathay Pacific gratefully acknowledges the participation of Mr. Burke McKinney, in testing the New Marco Polo Business Class

THE NEW MARCO POLO BUSINESS CLASS

BUILT TO HELP THE CORPORATE BODY ARRIVE IN BETTER SHAPE

On July 10th, 1988, Mr. Burke McKinney, Regional Marketing Manager of a major worldwide company, tested the New Marco Polo Business Class.

He was the ideal choice — a frequent flyer who flies over 100,000 miles each year.

Our design team had created a business class to help executives like Mr. McKinney arrive relaxed and refreshed.

Wider, more comfortable seats. A new seven-abreast seating configuration. A more spacious environment. And, on long-haul flights, foot and leg-rests were just some of the changes that he experienced.

But there was one thing our design team did not change at all.

Our high standard of service. He found our stewardesses from ten Asian lands to be still as charming and attentive as before.

Arrive in better shape

CATHAY PACIFIC

Crude realities

Crude oil production has remained static over the last three years at around : million tonnes. However, in 1988-89, it is expected to increase by 6 per cent 32.18 million tonnes.

Production of crude oil in the past two years has fallen short of plann targets. In 1987-88 while the target was 31.48 million tonnes, production w only 30.36 million tonnes. How the current year's target of 32.18 million tonn will be reached is still a moot point. ONGC claims new finds in the Bombay Hig Krishna-Godavari and Cauvery basins, but these will add only about half million tonnes even if production goes ahead as planned.

Even the current production of crude oil is largely due to the off-sho Bombay High find. While on-shore production has increased only margina over the last decade, off-shore production has taken off. On-shore producti has increased from 8.5 million tonnes in 1976-77 to 10.5 million tonnes 1987-88 — a mere 2-million tonne increase. Offshore production on the oth hand increased from a mere 0.4 million tonnes in 1976-77 to 20 million tonnes 1987-88, the bulk of it from Bombay High.

But though crude production has been stagnant, the consumption of petr leum products has been on the increase. In 1980-81 the consumption was 32.: million tonnes. In 1987-88, it increased to 48.4 million tonnes — a 6 per ce compound annual rate of growth.

The increase in consumption has mainly been in liquefied petroleum g (LPG), high speed diesel (HSD), petrol and kerosene. These four items accou for about 60 per cent of total consumption. In 1986-87 the consumption kerosene and HSD was 22.66 million tonnes or 51.9 per cent of total consum tion. In the same year domestic production of these two items was only 4.91 ar 15.45 million tonnes respectively.

The gap between production and consumption has necessitated imports. 1970-71, imports of crude oil and petroleum products were 11.7 and 1.1 milli tonnes respectively. Over the years imports have increased significantly (both value and volume) to touch 21.1 million tonnes in 1987-88. The saving grace that in recent years, crude oil prices have been falling due to increas production in oil-producing countries and reduced consumption in industri countries. From a peak of US $ 34 reached in 1981, prices have fallen to around 12 a barrel and the medium term outlook is that it will stabilise between $ 15 ar $ 20. Inspite of this drastic fall in the price of crude, the net import of crude ar petroleum products in 1987-88 was valued at Rs.4,000 crores. And this year th value of imports may well cross Rs.5,000 crores.

Given that the country's difficult foreign exchange position and the volatili of crude oil price in the international market, there is certainly a need increase domestic production and curtail imports. But future production d pends on hydrocarbon reserves. India has prognosticated hydrocarbon reserv of 17 billion tonnes — about 13.5 billion tonnes of crude oil and 5.8 trillion cub metres of gas. However, proven reserves are only about 4 billion tonnes. Of thes only 25 per cent is recoverable.

Recoverable reserves of crude oil which in 1966 were only 153 million tonn have risen to 581 million tonnes. This is largely due to the discovery of Bomb High with reserves estimated to be about 345.5 million tonnes.

If India is to become self-sufficient in oil, its production will have to increa substantially. ONGC plans to step up production by 15 million tonnes during th Eighth Plan. The investment required is a massive Rs.11,000 crores. In order achieve this target it will have to first succeed in establishing geological reserv and then exploit them.

Crude oil production

(in million tonnes)

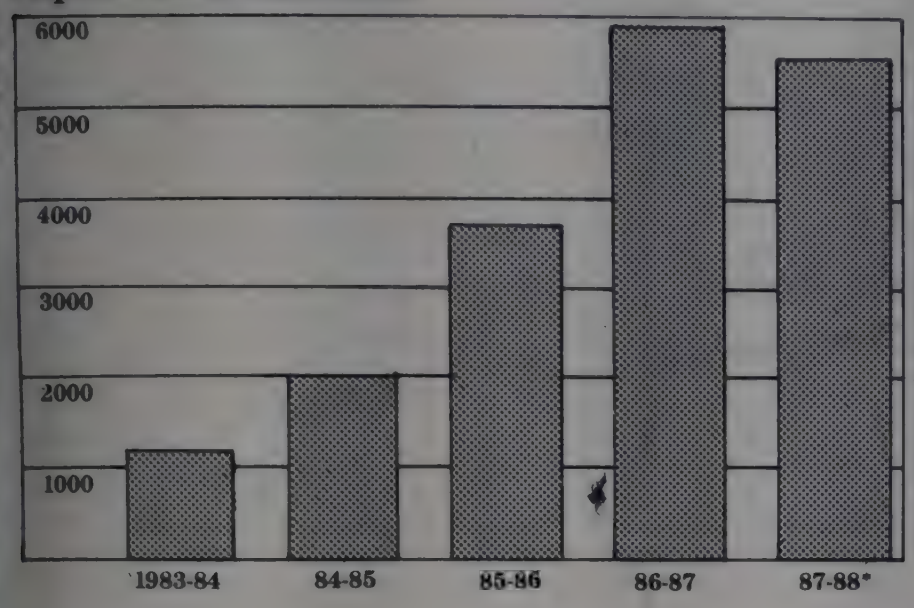
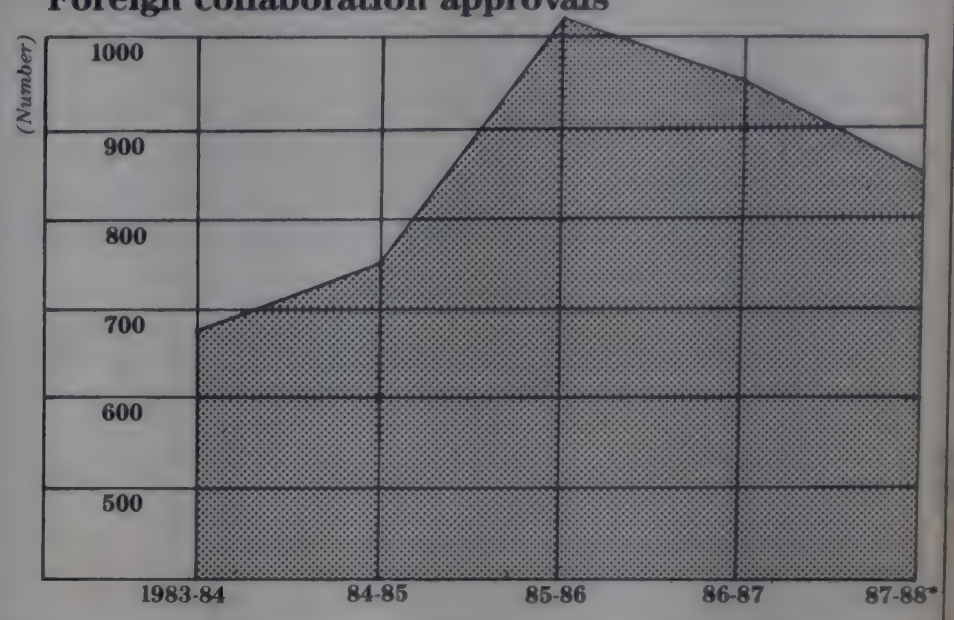
Capital issue sanctions



The capital issues market has boomed in recent years, especially after the economic liberalisation initiated in 1985. Even though in nominal terms the value of capital issues has been increasing, the rate of growth has tapered off. The estimate for 1987-88 of Rs.5,570 crores is 6 per cent less than that in the previous year.

* *estimate*

Foreign collaboration approvals



The number of foreign collaborations in 1986-87 increased to 957, a 27.3 per cent increase over the 1984-85 figure. But there was no change in the foreign investment approvals which remained at Rs.110 crores. The estimate for 1987-88 shows a 10 per cent decline in foreign collaboration approvals with no change in foreign investment approval over the previous year. The number of foreign collaborations peaked in 1985-86, when the number of approvals reached 1,024 and investment was Rs.130 crores.

* *estimate*

holesale price index: The WPI — all commodities has increased 1.08 per cent. The index for primary articles has moved up by 1.85 r cent. The increase in prices of pulses has been 7.8 per cent. In anufactured products, prices of drugs and medicines increased by 8 per cent, but that of jute, hemp and mesta textiles has fallen by 7 per cent.

* *Oct 1988* ** *9 Oct 1987*

Industrial production index and infrastructure: In June the industrial production index increased by 3.68 per cent as against a 2.10 per cent rise in May. Except mining and quarrying the other two constituents — manufacturing and electricity — recorded a slight deceleration in the rate of growth in June. Steel production in September is higher by 13.5 per cent, than in the corresponding period of the previous year.

	Latest month	Previous month	Year ago	% change on month	% change on year
Ind. prod. index (1986-87=100)	180.1(6)	173.70	156.00	3.68	15.45
Rly. freight (mn tonnes)	23.07(6)	24.96	23.71	−5.70	−0.76
Crude oil prodn ('000 tonnes)	2,632(7)	2,618	2,571	0.53	2.37
Power generation (mn units per day)	570(8)	584	549	−2.40	3.80
Coal production (lakh tonnes per day)	4.23(7)	4.62	3.95	−8.40	7.10
Steel producton ('000 tonnes)	778(9)	738	685	5.40	13.57
Cement production ('000 tonnes)	3,418(7)	3,613	3,000	−5.40	13.90

Bullion prices and stock market index: The price of gold and silver in the domestic market increased by 3.1 and 1.5 per cent respectively due to sustained seasonal demand. The stock exchange index ended Samvat 2044 on a cheerful note with the index closing at just below 700 mark.

	4 Nov 1988	4 Oct 1988	4 Nov 1987	% change on month	% change on year
Gold (Bombay)	3,180	3,085	3,265	3.08	−2.60

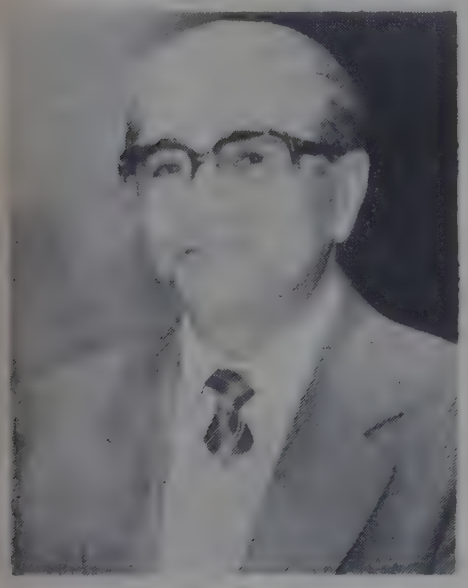
The price of gold is in rupees per 10 gms and silver in rupees per kg.

H.S. SANDHU

"Fifty per cent of our trade is with eastern Europe, in a wide range of products," says H.S. Sandhu, chairman of Chinar Exports Ltd. The company is one of the largest private trading houses in India and is targeted to reach a turnover of Rs.100 crores by 1989-90. "Apart from the Rs.30 crore textile deal with the USSR, we are also in the process of finalising a deal with a large north American



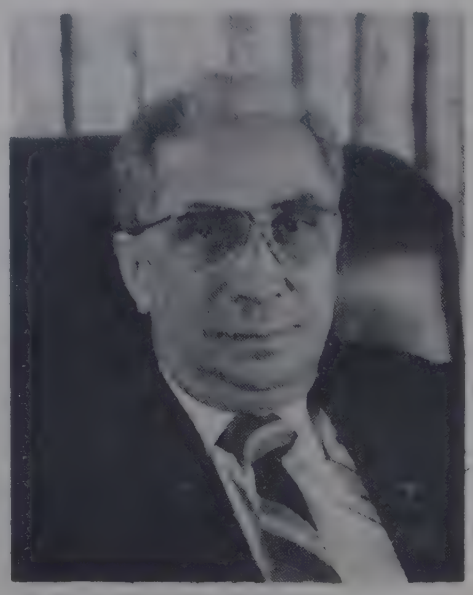
country," adds Sandhu.

Apart from textiles, which account for almost 50 per cent of Chinar's business, the company has diversified into areas like consumer durables and chemicals. "Last year chemicals accounted for Rs.20 crores of our turnover," says Sandhu. He adds that "our real success lies in the fact that we work very closely with Indian manufacturers and try and help them whenever we can — after all our success is tied to theirs," adds Sandhu.

A.N. SRINIVASA RAO

Solidaire is expanding its manufacturing base to meet the ever-growing demand for TVs, both colour and B&W, says A.N. Srinivasa Rao, chairman, Solidaire India Ltd (SIL)

To prepare for the public issue scheduled for late Novem ber, the company has changed its name from Hisbeam Elec



tronics Pvt Ltd to Solidaire India Ltd, so that "the company's name may be snynonymous with its popular brand name in the public mind". Rs.1.80 crores are to be raised through a public issue.

The issue will part finance the company's Rs.4.9-crore automatic tuner project — an attempt at import substitution. SIL will initially use the tuners inhouse, but could consider selling excess production to other users. "Production is scheduled to commence towards the end of January," says Rao.

SIL has also chalked up plans to set up a TV factory in Bangalore by June 1989. "The major part of the investment in this project will be internally generated," says Rao. The manufacture of domestic appliances is also on the cards.

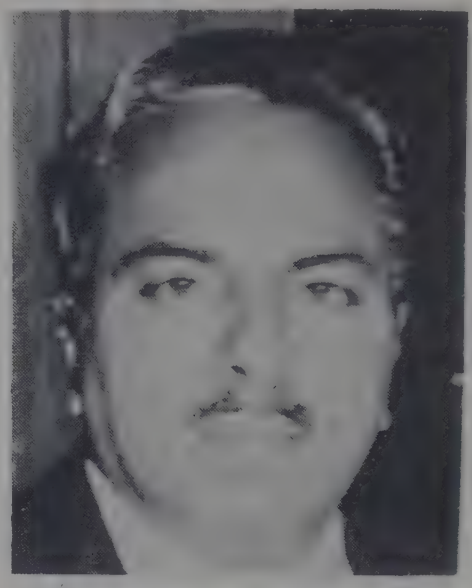
J. BHASKER RAO

The city of Hyderabad, with a population of over 3 million and a considerable influx of commercial and tourist traffic, offers only 300 de luxe rooms in two five-star hotels. Now, to this, the Hotel Bhasker Palace-Ashok will add 225 rooms when it opens in March 1989.

J. Bhasker Rao, managing director of Venkataramana Hotels Ltd, is promoting the new venture with ITDC. ITDC will provide the new hotel with reservation, marketing, advertisement and technical services. This is the first time that the corporation has entered into an agreement of the kind with a private promoter, Rao points out.

Rao expects a considerable film industry clientele, as the city has become an important base for the industry. Among the various facilities available will be a preview theatre and a sophisticated sound studio.

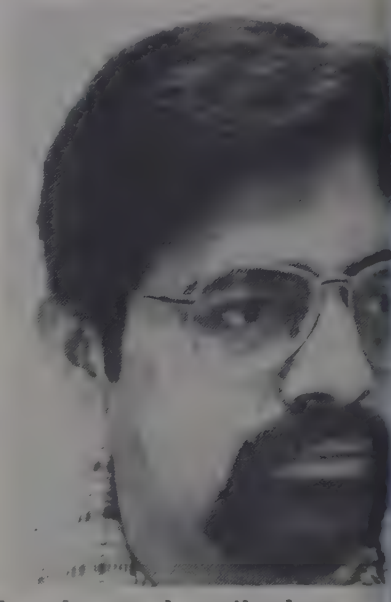
The project, estimated to cost Rs.18.90 crores, will be financed through equity share capital of Rs.7.55 crores, and term loans of Rs.11.35 crores. A Rs.3.45-crore public issue opens on 22 November for NRIs and 29 No-



vember for the Indian public. Rao expects that the new hotel will achieve a turnover of Rs.6 crores in the first year of its operation. "Our hotel is bound to be a runaway success and a most viable and profitable proposition. Our low project cost will enable us to achieve a break-even point at 50 per cent occupancy as against 75 per cent for other five-star hotels," says Rao confidently.

NIREN SUCHANTI

When State Bank of India (SBI) finalised the NRI bonds scheme, the hopefuls that queued up to make a presentation were a virtual who's who of agencies — Lintas, Mudra and Contract, Sobhagya, Pressman and Clea among others. Finally, when Pressman Advertising & Marketing bagged this prestigious account, it only re-established its credentials as a premier financial advertising agency. The



bonds are described as sa instruments with features lored to long-term investm

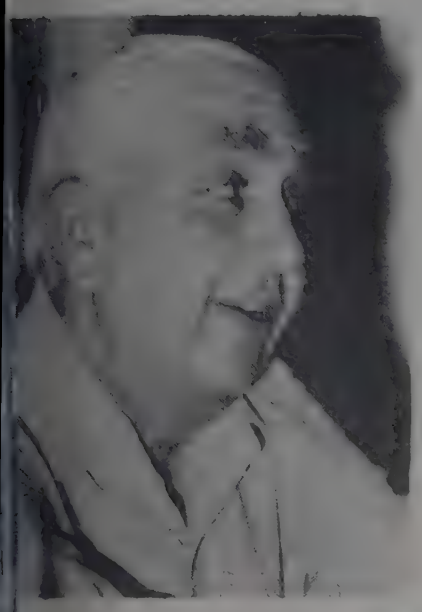
Says Niren Suchanti, dire Pressman, "It was closely fo and the final selection based on merit." Accordi him, Pressman made a pr tation based on its "ow search". This indicated tha Middle East region continue be be one with high pote for attracting investment long-term nature. Such states that he favoured ad tising the NRI bonds in I "as a large number of de dents of Indians working in Middle East live in India".

Suchanti , however, was in favour of advertisin foreign publications. The w age factor is very high, he s Clearly, Pressman's intir knowledge of the financia struments market clinched deal.

M.M. SABHARWAL

Though non-resident India the UK are keen on investi India, they shy away becaus takes much longer to ge turns on investment here t in Europe," says M.M. Sab wal, president of the I Chamber of Commerce Industry.

Sabharwal, who recently t an 18-member delegation t UK, has come back "more t satisfied". The objective, says, was not to sell goods apprise potential inves about the changing envi ment in India. The PHD Ch



team of leading
ustrialists and businessmen
n northern India has identi-
tourism and food process-
for a special thrust.
abharwal signed a protocol
l co-operation agreement

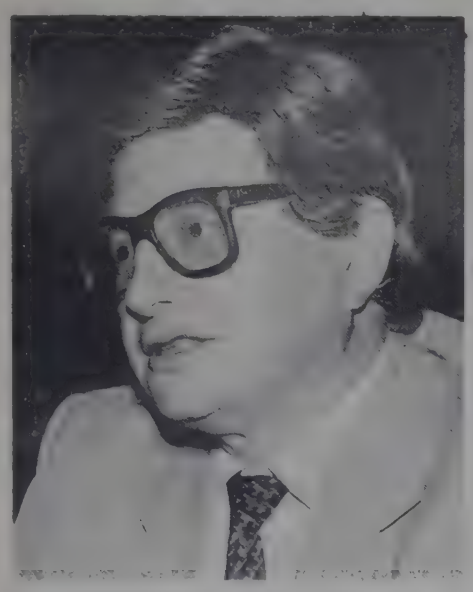
er in promotional activity.

JOSEPH D. ALVIANI

e Bostonians were in New
lhi last week to "open up op-
rtunities in business and in-
stry that were not so easily
ceivable".
oseph D. Alviani, secretary
economic affairs, Common-
alth of Massachusetts, USA
the hightech delegation
h representatives from a
ss-section of high tech in-
stries such as telecom-
nications, biotechnology,
tumentation, software, sig-
processing and fire detec-
systems. Alviani said that
y would endeavour to de-
p a level of familiarity with
ian businessmen to ensure
t the joint ventures to be
cretised were mutually ben-
ial. He felt that there were
ical areas where the Ameri-
s could learn from India. For
tance, computer applica-
ns in the steel and energy
ustries would be a mutually
eficial area of co-operation.
Even though the Bostonians
wed a lot of enthusiasm in
ng business with India, Al-
i felt that they "still looked
e undergoing process of lib-
eralisation rather sceptically". However, in his opinion, the problems existed "more in the realm of perception than reality". Even so, it would be a "tough job convincing American businessmen that the Indian desire to encourage trade was genuine". For example, the software companies feel "slightly hesitant" in view of the fact that India was not a signatory to the Paris Convention.

MARK FREY

"We are essentially a non-profit organisation which aims at facilitating transfer of technology



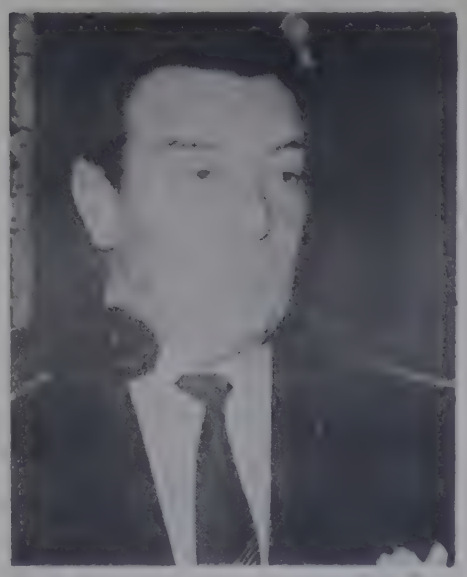
from Switzerland to developing countries," explains Mark Frey, deputy director, Technology For The People (TFTP), who was in Bombay recently. TFTP was playing host to a number of Swiss managers in various Asian cities as part of the Special Asian Business Development Mission For Swiss Managers.

"TFTP was set up 10 years ago, but it was only four years ago that we signed a contract with the Swiss government to finance our activities in the Asian subcontinent," says Frey. Frey sees TFTP's role as a "matchmaker" between small and medium sized Swiss companies with advanced technology and sophisticated know-how and companies in developing countries like India which are interested in acquiring such know-how. TFTP's success has been less than inspiring with only three successful tie-ups in India in the past four years. Says Frey, "It took us two years just to find a suitable representative in India. From now on we hope for a higher success rate as our basic infrastructure is now in place."

WILHELM F. KNOEDLER

Daimler-Benz AG is quite certain that its vehicles are the best. It is, however, worried that everybody thinks that they are also the most expensive. To dispel such notions, Wilhelm F. Knoedler, senior director, international government sales, was in Delhi last week to meet officials of the Indian Army. Mercedes Jeeps and trucks are the ideal choice of the Indian Army, insists Knoedler: "We have the best, and test results as always are bound to show this."

Benz is offering a bait this time round: it will permit its products to be manufactured in India. According to Knoedler, given the current advantage



that Benz has because of its Bajaj Tempo connection, the vehicles it proposes to sell, the half-tonne jeep and the two-and-a-half tonne truck could possibly be 80 per cent indigenous five years from now.

Indications are that the army is contemplating purchasing 20,000-30,000 jeeps and 5,000 trucks. Knoedler believes Benz will succeed in local manufacture because "it is already doing that in several countries around the globe."

MARINUS G. WISSE

The Dutch multinational giant, Vereingle Machine Fabrication Stork NV, Stork for short, has reaffirmed its faith in its Indian partner, the Associated Textile Engineers (ATE) group of companies headed by Atul Bhagwati. Stork Standard Pumps International (a Stork company) has entered into a financial and technical collaboration with ATE to form Stork Pumps (India) Private Ltd. The unit began production of process and chemical pumps on 24 October at Ahmedabad.

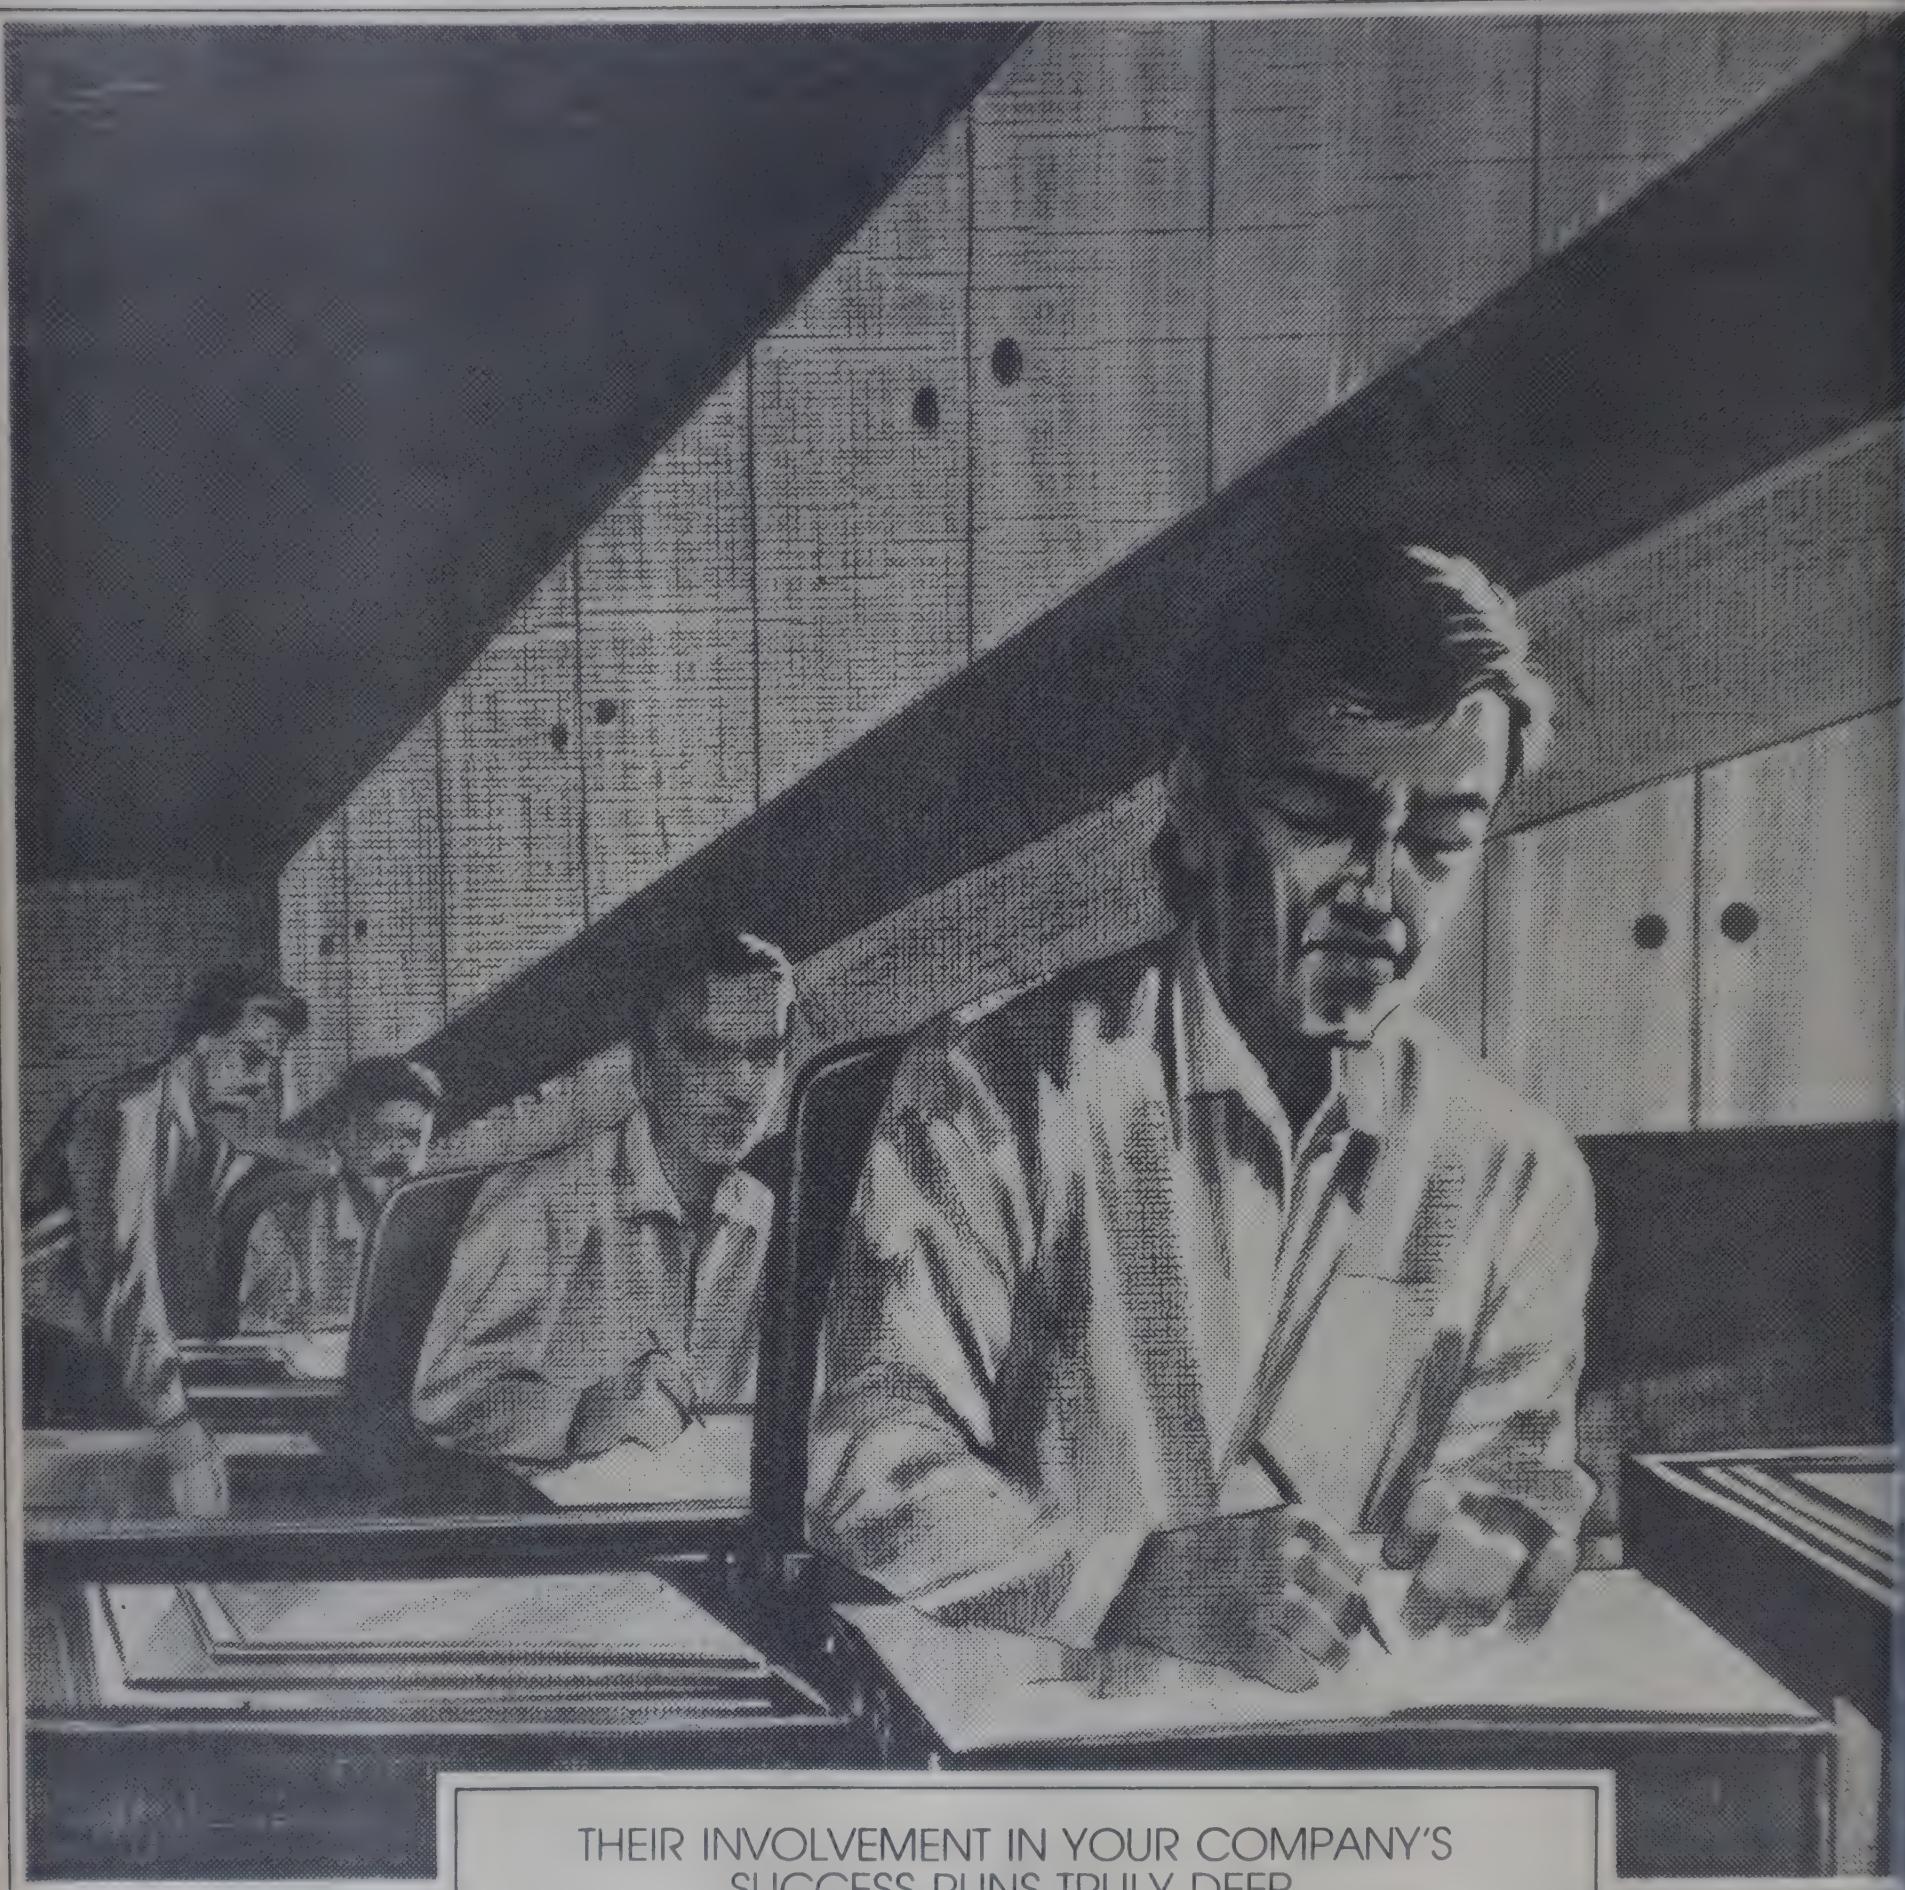
Stork of Netherlands specialises in capital equipment,

industrial consumables and industrial services. With 70 odd companies in its fold, the group turnover is around Rs.1,500 crores.

Wisse, a man with an infectious sense of optimism, was in India for the second time, after 35 years. He is excited about the tremendous marketing opportunities India offers.

The initiative to collaborate in pumps came from the Dutch, emboldened, no doubt, with their earlier successes. Stork will buy back a substantial part of the production for sale in Europe. It feels this will give it a definite edge over European competitors.

When asked about his experience in India, Wisse went into rhapsodies. Atul Bhagwati explained in a softer voice that the Dutch had never faced the fabled Indian bureaucracy. However, Stork seems to be serious.



THEIR INVOLVEMENT IN YOUR COMPANY'S
SUCCESS RUNS TRULY DEEP.

HOW ENLIGHTENED MANAGING DIRECTORS CAN INVEST IN THEIR PEOPLE AND WATCH THEIR ASSETS APPRECIATE FA

Now win your employees over completely.

Gift their wives a Singer Sewing Machine. They'll use it well for the rest of their lives. To be the best dressed family in the neighbourhood. Without spending any extra on their clothes. In fact saving quite a bit on tailoring bills.

They'll even earn a tidy sum of money, sewing clothes for neighbours, friends and contacts. Just give our Marketing Director a call and he'll work out an attractive deal for your company.

Call him today on 6443045 Delhi. Or drop him a note now. Our representative would love to visit you and explain the scheme. Just fill in coupon and mail it to us today. An start growing your assets faster than ever before

GREETING CARDS

Good wishes for a good cause

Soon after World War II, a seven-year-old Czechoslovakian girl who was being rehabilitated under a UNICEF programme drew a card and sent it to UNICEF's headquarters. This simple gesture of appreciation led to UNICEF making and selling its own cards. Other charitable organisations were quick to follow, and today greeting cards are a major source of funds for a whole lot of organisations supporting various causes.

In India, of the total greeting cards business worth Rs.12 to 15 crores, the share of the charitable organisations is as high as 30 to 40 per cent. And the business is growing at the rate of 20 per cent a year.

Significant earnings. "In 1960, when we launched our greeting cards operation in India, we were the first to do so," says Rajiv Jagtiani, UNICEF, whose organisation sold 7 million cards in 1987 and had a turnover of Rs.2.5 crores. Today, apart from UNICEF, there's Child Relief and You (CRY), which had a turnover of Rs.70 lakhs on 1.4 million cards in 1987, and World Wild Life Fund (WWF), which earned Rs.50 lakhs on card sales. There are also smaller organisations, like the Spastics Society, the National Association for the Blind (NAB) , Baba Amte's leprosy home, and many others who benefit from the greeting cards season.

"People like the idea of sending their good wishes and contributing to a worthy cause at the same time," says one executive who buys a few cards each from five different charitable organisations. Niloufer Bilimoria, public relations manager of Oberoi Hotels, who chooses the cards for her organisation each year, says, "I try to look for something exclusive. Everything else being more or less equal, I put a premium on exclusiveness and design." George Jacob, executive director of Mahindra and Mahindra, gives the final okay for card purchases. He says, "The cards we buy from charity are very elegant and economical and serve our purposes admirably. At the same time we are happy that we are making a small contribution to a good cause." Says V.K. Kapur, manager, public relations of Bharat Heavy Electricals Ltd (BHEL), "We follow a policy of buying cards from charitable organisations. Their cards might be a little costlier, but since they are of excellent quality, and the money collected is for a good cause, it's okay."

Large public sector companies for many years now have been the biggest customers. Their offtake often runs into tens of thousands of cards each year, accounting for as much as 60 per cent of the card business in a year.

Funding projects. Very few people aware of actually how much money g to charity. It is said that approximat 50 to 85 per cent of the money collec through card sales is used to fund ch table programmes and projects. At U CEF, Jagtiani estimates that they are a to utilise as much as 85 per cent for t projects, because almost everything subsidised. Says Pamela Stretch, hon ary secretary of the Spastics Society, " are able to use about 70 to 75 per cent our projects, as our running costs kept at the absolute minimum." W competition hotting up, effective mark ing has become crucial. Says a ser executive of a large private sector c pany, "Around this time of the year I g flood of men and women volunteers, urging me to buy their cards. It becor quite a difficult task as all the cards equally nice, their cause equally nc and the price differences very small."

CRY is quite aggressive in its mark ing effort. Anjali Bose, sales co-ordina laments the fact that they cannot be m professional in marketing their car "Professionalism costs money, and ev extra rupee spent on selling cards me less for our projects and activities." the Spastics Society, the largest share its revenue was from sales of greet cards and yet as Pamela Stretch, sa "We cannot afford to spend money advertising and have to rely on our sm staff (two people) and word of mout

Making a sale to a company for the fi time requires considerable effort and p suasion. Mala Biswas, marketing exec tive at WWF explains, "Once we h identified a company, a volunteer fr WWF drops in and leaves the brochu We follow this up a week later with telephone call and then a personal vis But finally, as Biswas admits, "It's t sically how far I can get into your hear

Other considerations. Marketing co take various forms. More often than no corporation's decision to buy cards fr a particular charity has very little to with the cause it supports. It depends the kind of pressure that is exerted trustees of the charitable organisation

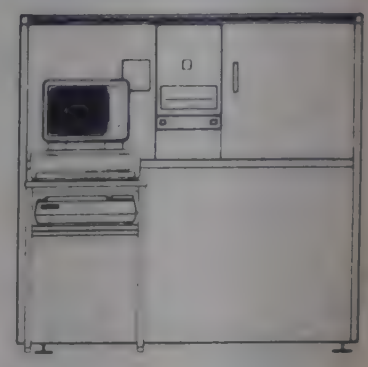
Increasing market share for charity

PHILIPS

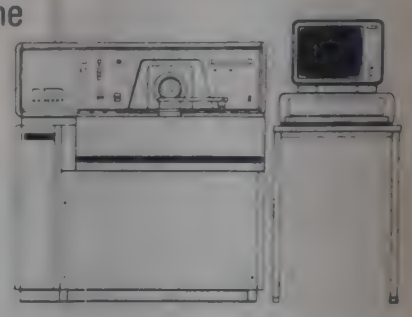
PHILIPS IS AT THE HEART OF IRON AND STEEL ANALYSIS

Philips Analytical

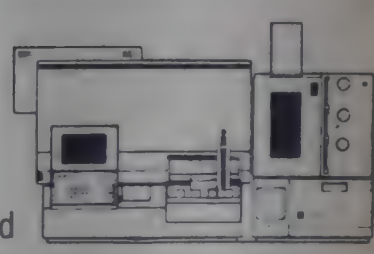
OPTICAL EMISSION SPECTROMETRY – fast, efficient method for low-cost, multi-element analysis of solid samples



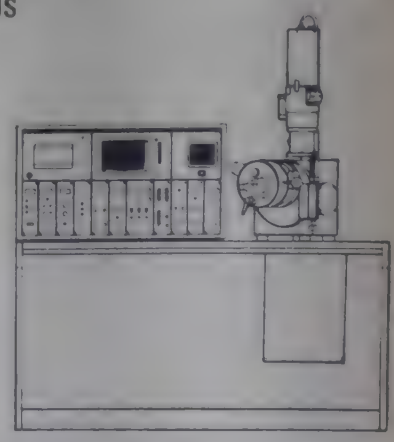
X-RAY FLUORESCENCE – an easily automated technique to determine the quantity and quality of the various elements in a sample



ATOMIC ABSORPTION/ INDUCTIVELY COUPLED PLASMA SPECTROMETRY – highly sensitive methods to determine the concentrations of around 70 metals and semi-metals, even at ultra-trace levels



SCANNING ELECTRON MICROSCOPY – the most versatile method for analysing the physical structure within metallurgical samples



PHILIPS – YOUR PARTNER IN PROGRESS

In the production of iron and steel, high standards of monitoring are vital at every stage. Philips Analytical offers the best choice of high technology equipment to ensure your success.

For more information on any of the above techniques mail this coupon rightaway to: Philips India, Industrial & Electro-Acoustic Systems Division, 39/43, Nesbit Road, Bombay 400 010

most of whom are people of eminence in society. Admits Bose of CRY, "Our trustees are individuals who have excelled themselves in their respective fields and are instrumental in securing large corporate orders for us through their network of contacts."

With more and more charitable organisations getting into the business, there has been the inevitable shakeout. For instance, Mobile Creche for Working Mothers' Children had to discontinue its cards business as the markets got too competitive. Others too had to close shop because the economies of scale were stacked against them.

However, Kalyanjibhai, a partner of Satyam Collections, a retail outlet in south Bombay with an annual turnover of over Rs.1 crore, feels that there will be enough room for everyone. He attributes this to changing attitudes: "Ten or twenty years ago, people visited each other on festive occasions. Today they don't have any time — they just send cards."

■ SHIV TANEJA

TAMIL NADU INDUSTRY

Another round of incentives

The second tranche of incentives for industry in the state announced by Tamil Nadu's governor, P.C. Alexander, has been welcomed even more warmly than the first that came in May 1988. In the back seat for almost a decade now, industry in the state can hardly believe its ears.

Several concepts new to Tamil Nadu have been introduced, for instance the pioneer industry concept to encourage industrialisation in the 34 backward taluks in the state, and what is called green channel clearance for small scale industries with a capital investment of less than Rs.10 crores. The intention is to woo large and medium industries into these taluks and to encourage a cluster of small scale units around them.

Fine tuning needed. Sources in the Confederation of Engineering Industries (CEI) feel that some fine tuning is necessary if Tamil Nadu industry is to be brought on par with Maharashtra and Gujarat in terms of incentives, especially since the pioneer industry concept is expected to bring in investment from larger units outside the state. Purchase tax has been abolished, but according to Lakshman, joint-managing director, F field India Ltd, "Additional sales t should be passed on to consumers order to make industry competitive, this levy erodes profitability and liquidi threatening in particular the survival loss-making units."

The present package has made an tempt at further rationalisation of t tax structure. Major features include ab lition of sales tax on the value of goo manufactured in Tamil Nadu but sent other states, and exemption of sales t on labour-oriented works contrac "These concessions will place electroni auto ancillaries, vehicles, tractors, text machinery, as well as the SSI units cat ing to these industries in a competit manufacturing position, which will h them compete in the national marke says S. Ram, southern region chairman CEI.

Engineering industry, which was nored in the previous package, is one the thrust areas this time round. In ad tion to leather and electronics, whi were granted higher rates of incentiv automobile ancillaries, food processi industries and drugs and pharmace cals have been identified as import thrust areas for the small scale indust

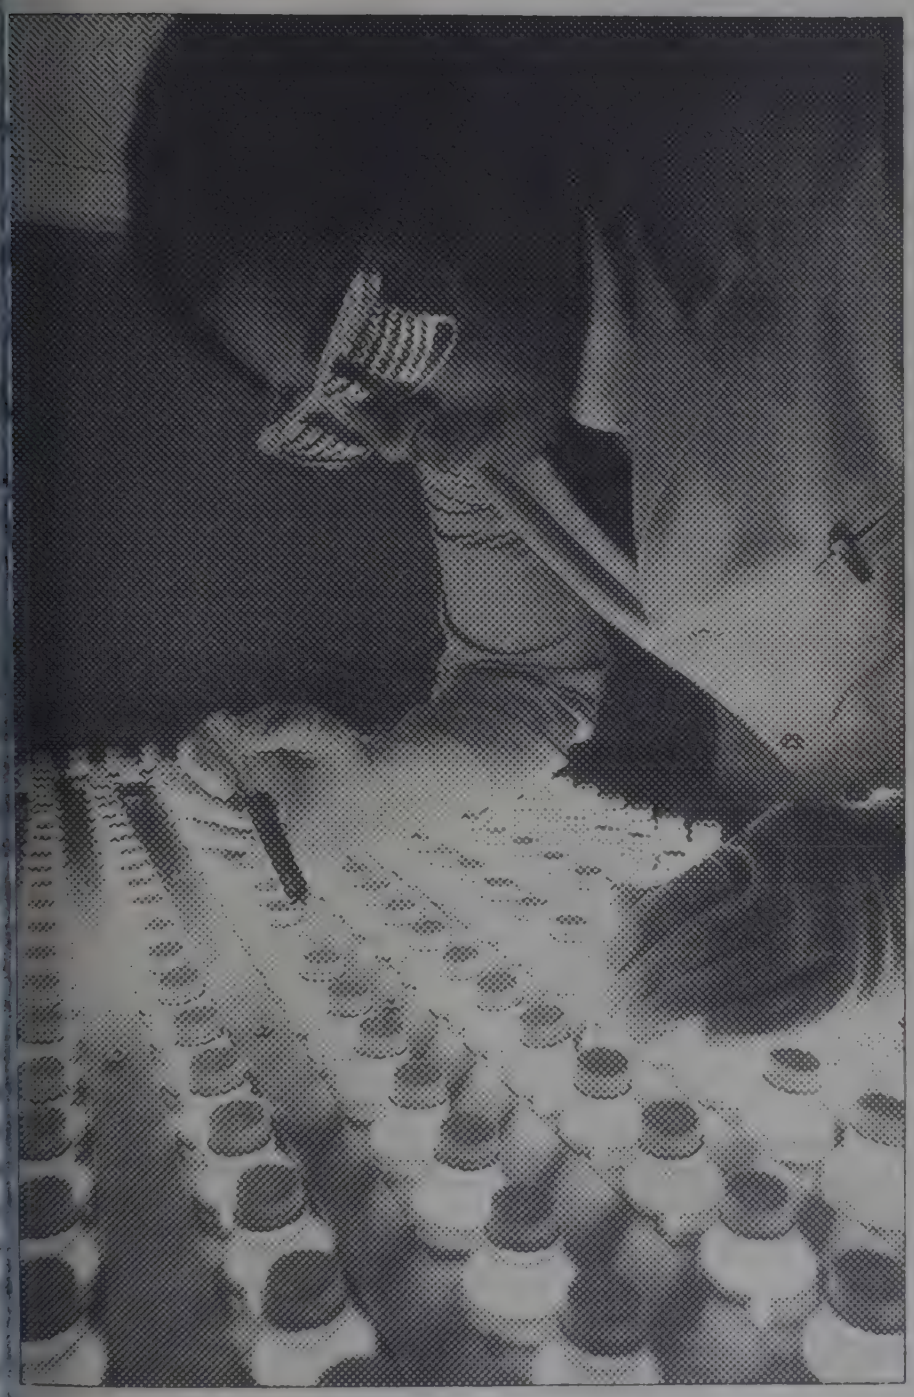
Power has received attention too. 1994-95 the shortage is expected to 2,000 MW. The government has thus cided to encourage private sector pov generation. "It is only a question of ti before the North Madras thermal pov project is implemented, though the m ter is pending before the Supreme Co over the pollution problem," says o government source. Also, from now new applicants will be told the proba date on which they will be sanction power. The base period for the calcu tion of power quota for HT industries h been increased too.

The loss to the exchequer from t sales tax concessions is estimated Rs.15 crores per year. The state gove ment, however, is confident that "with the next six months sufficient buoyan will be created to get back a major part such losses". The government has a cu ion in the Rs.25 crores a year that com from the Indian made foreign spirits th the government-owned Tamil Nadu M keting Corporation sells to retaile Therefore the government will not down on developmental expenditur However, it estimates that the new pa age will cost roughly Rs.10 crores in t

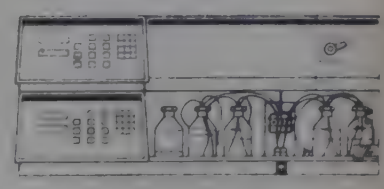
PHILIPS

PHILIPS IS AT THE HEART OF PHARMACEUTICAL ANALYSIS

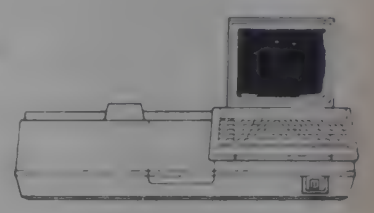
Philips Analytical



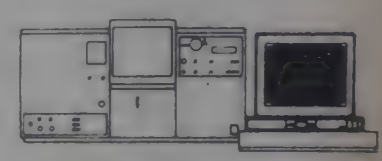
LIQUID CHROMATOGRAPHY – the most powerful chromatographic technique for drug development and monitoring



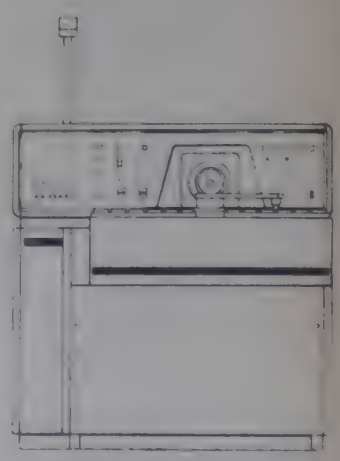
INFRARED SPECTROPHOTOMETRY – the most favoured method for the identification of organic compounds and trace contaminants



ATOMIC ABSORPTION – the best method for the determination of trace elements in cosmetics and heavy metals in pharmaceutical products



UV/VIS SPECTROPHOTOMETRY – this supremely versatile technique is used to determine the quality of many pharmaceutical preparations



ELECTRON MICROSCOPY – used extensively in product development and for research into the interaction of pharmaceuticals on biological tissue

X-RAY DIFFRACTION – a simple, non-destructive technique for the structural analysis of polycrystalline substances

PHILIPS – YOUR PARTNER IN PROGRESS

In pharmaceutical research and production, accuracy is vital at every stage. Philips Analytical offers the best choice of high technology equipment to ensure your success.

BIGGER IDEAS FOR BETTER ANALYSIS

Philips Analytical is a business division of Philips I & E Systems which offers additional expertise in Communications & Security systems, Test & Measurement equipment, Electronic Weighing equipment and Industrial Automation systems

remaining part of the current fiscal year.
Election connection. The Congress (I) undoubtedly has its eyes on the state election scheduled for early next year. Alexander has so far maintained that president's rule will not be continued beyond this term. "We have more than met our targets stated in the first package," says Alexander. And a government source adds, "Almost 1,842 sick units were resuscitated by August, against a target of 1,000." Industry however feels that "it is too early to assess the impact of the first package of incentives". Select industries like electronics, which the first package focused on, are witnessing greater activity.

"While enquiries have increased, the state government industries corporations must visit other states in order to sell this state, so that industries from outside may be attracted to Tamil Nadu," says M. Thangavelu, general manager, State Industries Promotion Corporation of Tamil Nadu (SIPCOT). As Lakshman sums up, "Ultimately, the success of such measures will depend on the implementation."

■ DHARANI K. PANI

ONGC

Southern prospects

Industry in Andhra Pradesh is beginning to reap the benefit of the Oil and Natural Gas Commission (ONGC) exploration efforts in the Krishna Godavari basin. At the last reckoning the estimated resource base in the basin was 337 million cubic metres of gas and 423 million tonnes of oil. However, in the case of the Cauvery basin in Tamil Nadu where estimates place resources at 148 million cubic metres of gas and 222 million tonnes of oil, the reaction of industry has been slower. As an ONGC official puts it, industry in Tamil Nadu has yet to fully realise the potential of the project.
